Button functions

[Jump to bottom](#)

Armel FAUVEAU edited this page on Jun 13 · 20 revisions

Buttons have functions assigned to them, these functions can be activated by either pressing **F #** button first, then the function button (I will call it **F+ call**). The other method is by long pressing the function button alone without **F #**. Most buttons replicate the **F+** with long press, but some buttons might have assigned different functions for **F+** and long press.

Front keypad

M

- short press - enter menu
- short press while channel/frequency scanning - last found channel is preserved on the screen
- long press while channel scanning - temporarily exclude a memory channel (not working with * SCAN ALL)
- long press - user programmable in the menu: **M Long**

EXIT

- short press - exits current menu/function, deletes one digit in an input box
- long press - deletes all input, exits DTMF input box, exits monitor mode, exits **ScnRng**

UP and DOWN

- Move Upward/Downward in Menu, Frequency, Settings, etc.
- **F+** - increases or decreases the Squelch value.

1 BAND

- **F+**
 - in **frequency mode** - switches frequency bands 1-7, there is also band 7+ for >1GHz frequencies
 - in **channel mode** - channel settings are copied to frequency mode
- long press - same

2 A/B

- **F+** - switches main VFO upper/lower (marked by **►**)
- long press - same

- long press - same

3 VFO/MR

- F+ - switch between frequency and channel mode
- long press - same

4 FC

- F+ - turns on frequency and CTCSS copy mode, turn the scan on and start transmitting with the other radio, the frequency and CTCSS code will be detected, you can save those setting with **M** button
- long press - same

5 NOAA

- F+ - turns on spectrum analyzer
- long press
 - in **channel mode** - toggles scan lists that the selected channel is assigned to. You will see **I** and **II** symbols changing on the right side of the channel label
 - in **frequency mode** - activates [scan range function](#)

6 H/M/L

- F+ - toggles power levels for current channel
- long press - same

7 VOX

- F+ - turns on/off VOX mode
- long press - same

8 R

- F+ - enables the manual backlight management and switches the backlight on or off
- long press - turns on reverse mode for channel that have frequency offset set. It will replace TX frequency with RX frequency.

9 Call

-
- F+ - disables the manual backlight management
 - long press - switches current channel to the 1-Call channel set in the radio.

0 FM

- F+ - turns on FM radio
- long press - same

* SCAN

- short press - enters DTMF input mode
- F+ - turns on CTCSS scanner for current frequency
- long press
 - in **channel mode** - turns on channel scanner
 - in **frequency mode** - turns on frequency scanner (can use [scan range feature](#)).
- When pressed while channel scan is in progress toggles scan lists 1/2/ALL

F

- short press - toggles function option
- long press - turns on/off key lock all the keys of the Front keypad

Side buttons

PTT

- Push To Talk button. Note that, there are 2 modes : CLASSIC and ONEPUSH (take a look at menu SetPtt 56/63)
 - CLASSIC - PTT works as usual. Press the PTT to start transmitting and release it to stop.
 - ONEPUSH - PTT works like a switch. Press the PTT to start transmitting, and release it whenever you like. The transmission is still active ! Press the PTT again, when you want and release it to stop transmitting. It works like on OpenGD77 (if you know it). No more cramps.
- when this button is used to stop channel/frequency scanning, last found channel is

preserved on the screen

- held together with `Function button II` transmits tone 1750Hz
- held together with any of the front keypad buttons transmits DTMF codes

Side button

- short press - user programmable in the menu: `F1Shrt`
- long press - user programmable in the menu: `F1Long`
- `F+` - increases the Step value in VFO mode

Side button

- short press - user programmable in the menu: `F2Shrt`
- long press - user programmable in the menu: `F2Long`
- this button can also be used to send tone 1750Hz by holding it together with `PTT` button
- `F+` - decreases the Step value in VFO mode

External key/microphone

PTT

- Push To Talk button.
- The `PTT` on the external microphone works differently than the `internal PTT` (side) button.
 - When pressing the `PTT`, the TX waits until no RX signal is received (*observed with Radio-PCB revision V1.4 and OK with V1.6*). Works well when pressing the *internal PTT*.
 - A DTMF-tone (`key-press`) or 1750Hz-tone (`function button`) is cut off within a second. Works well when pressing the *internal PTT*.

Custom button functions

3 buttons can have its function changed. To change the function go to menu:

- `F1Shrt` - side button , short press
- `F1Long` - side button , long press

- F2Shrt - side button , short press
- F2Long - side button , long press
- M Long - menu button, long press

Available functions:

- NONE - no action
- FLASH LIGHT - switch to the next flashlight function: ON / OFF
- POWER - switch radio output power: L (Low) / M (Medium) / H (High)
- MONITOR - switch monitor mode ON / OFF
- SCAN - start channels/frequency scanning
- VOX - turn voice activation function ON / OFF
- FM RADIO - turn FM radio ON / OFF
- 1750Hz - send 1750Hz toneburst
- LOCK KEYPAD - lock / unlock the keypad
- VFO A VFO B - change main VFO to upper/lower
- VFO MEM - change current VFO mode, frequency mode or memory channel mode
- MODE - switch to the next demodulation mode FM / AM / USB
- RX MODE - switch display mode DW / DWR / XB / MO
- MAIN ONLY - switch display mode between [DW / DWR / XB] and MO
- PTT - switch PTT mode CLASSIC / ONEPUSH
- WIDE NARROW - switch between WIDE and NARROW
