**FINAL ACTS
OF THE
WORLD ADMINISTRATIVE RADIO CONFERENCE, GENEVA, 1979**

The Plenipotentiary Conference of the International Telecommunication Union, Malaga-Torremolinos, 1973, in its Resolution No. 28, considering that, since 1959, various world administrative radio conferences had amended the Radio Regulations and Additional Radio Regulations on specific points without having been able to harmonize their decisions because of the limited nature of their agenda, resolved that a World Administrative Radio Conference be convened in 1979 in order to revise, as necessary, those regulations and instructed the Administrative Council to make preparations for convening that Conference.

At its 30th session (1975), the Administrative Council, in its Resolution No. 768, set up a group of experts from administrations to study a possible re-arrangement of the Radio Regulations and the Additional Radio Regulations.

The "Re-Arrangement of the Radio Regulations" as proposed by the group of experts was in principle endorsed by the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, in its Resolution No. Sat - 10 in which it urged Member countries to use that re-arranged form of the Radio Regulations and the present form of the Additional Radio Regulations as a basis for submitting proposals to the present Conference.

At its 32nd session (1977) the Administrative Council, in its Resolution No. 801, resolved that the World Administrative Radio Conference, 1979, be convened in Geneva on 24 September 1979 for a duration of ten weeks and adopted the agenda for that Conference.

The World Administrative Radio Conference, Geneva, 1979, accordingly convened, and, in conformity with its agenda and on the basis of the aforementioned "Re-Arrangement of the Radio Regulations" and of the proposals submitted to it by administrations, considered, re-arranged and partially revised as to their contents the provisions of the Radio Regulations. As a result of its work, it adopted the Radio Regulations, Geneva, 1979, the text of which is incorporated in these Final Acts as an Annex hereto.

The World Administrative Radio Conference, Geneva, 1979, authorizes the Secretary-General of the International Telecommunication Union to make the necessary final numbering of chapters, articles, sections, sub-sections, paragraphs, sub-paragraphs and marginal numbering, the final numbering of the appendices, and the consequential cross-references thereto, with regard to the Radio Regulations, Geneva, 1979, of which certified true copies shall be sent by him to the Members of the Union.

Members of the Union shall inform the Secretary-General of their approval of the Radio Regulations, Geneva, 1979, as adopted by the World Administrative Radio Conference, Geneva, 1979. The Secretary-General shall inform Members promptly regarding receipt of such notifications of approval.

The delegates of the Members of the International Telecommunication Union represented at the World Administrative Radio Conference, Geneva, 1979, having signed these Final Acts, hereby declare that, should an administration make reservations concerning the application of one or more of the provisions of the Radio Regulations, Geneva, 1979, no other administration shall be obliged to observe that provision, or those provisions, in its relations with that particular administration.

In witness whereof the delegates of the Members of the International Telecommunication Union represented at the World Administrative Radio Conference, Geneva, 1979, have signed in the name of their respective countries these Final Acts in a single copy which will remain in the archives of the International Telecommunication Union and of which a certified true copy will be transmitted to each member of the Union.

Done at Geneva, 6 December 1979

For the Democratic Republic of Afghanistan:

ENG. M. Z. TAHIRY
A. SATAR TOKHY
K. D. KAMRAN

**For Algeria
(Algerian Democratic and Popular Republic):**

N. BOUHIREN
M. ALI BELHADJ
ALI HAMZA
M. HARBI
M. KADI

For the Federal Republic of Germany:

HEINRICH L. VENHAUS
K. RUDOLF BINZ

For the People's Republic of Angola:

J. G. DE MATOS

For the Kingdom of Saudi Arabia:

FAISAL AHMED ZAIDAN
REDA A. H. JADA'A
A. M. BAPTAIN
MOHAMED K. EL NAHEDH
ABDULLAH M. AL-SANIE

For the Argentine Republic:

ROBERTO J. P. SEVERINI
RICARDO SAIDMAN
RUBEN PASCUAL
JORGE A. TABOADA
JOSE GUERRA
MARCELO OTERO MOSTEIRIN
OSVALDO MARTÍN BEUNZA

For Australia:

E. J. WILKINSON
P. D. BARNES
E. R. CRAIG

For Austria:

GERD LETTNER
ERNST STEINER

For the State of Bahrain:

MOHAMED REDHA AMIN

For the People's Republic of Bangladesh:

A. B. M. TAHER
M. HABIBULLAH
MD. RUHUL QUDDUS
MD. SOBHAN GANI MOLLA

For Belgium:

R. TASTENOY
GEWILLIG M. R. V

For the People's Republic of Benin:

TAOFIQI BOURAÏMA
AMOUSSOU C. EVARISTE
H. VIGNON
JULIEN LOKOSSI
ASSAVÈDO ZINSOU GILBERT

For the Byelorussian Soviet Socialist Republic:

I. M. GRITSOUK

For the Republic of Botswana:

D. P. T. DISELE
P. MAKGEKGENENE

For the Federative Republic of Brazil:

ROMULO VILLAR FURTADO
PAULO RICARDO HERMANO BALDUINO

For the People's Republic of Bulgaria:

I. I. IGNATOV

For the Republic of Burundi:

RUVUZAKINONO BERNARD

For the United Republic of Cameroon:

JEAN JIPGUEP
LT. CEL. SING JOSEPH
KAMDEM-KAMGA EMMANUEL
YANZE EMMANUEL
ESSESSE-DIKONGUE JEAN

For Canada:

GABRIEL I. WARREN
EDWARD D. DUCHARME

For the Republic of Cape Verde:

ANTÓNIO PEDRO BORJA SANTOS
BENCHIMOL DE SOUSA LOBO
HERMANO MARCIANO ALMEIDA

For the Central African Republic:

M. BEDAN
M. MBAYE

For Chile:

G. ECHAVARRIA M.
S. ANGELLOTTI C.
H. HERNANDEZ L.
E. CLAUDE F.

For the People's Republic of China:

LI LINCHUAN
LIU YUAN
J. QIAN
ZHANG CHENG
HE DAZHONG

For the Republic of Cyprus:

R. MICHAELIDES
A. MICHAELIDES

For the Vatican City State:

SABINO MAFFEO
GIUDICI PIER VINCENZO
PACIFICI COSTANTINO

For the Republic of Colombia:

HECTOR CHARRY SAMPER
O. GALLO SUAREZ
ALFREDO REY CÓRDOBA
G. PRADO BRAVO

ARTICLE 66.	Public Correspondence in the Maritime Mobile Service and the Maritime Mobile-Satellite Service	427
<i>Section I.</i>	General	427
<i>Section II.</i>	Accounting Authority	427
<i>Section III.</i>	Accounting	427
<i>Section IV.</i>	Payment of Balances	428
<i>Section V.</i>	Archives	428

CHAPTER XII.	Land Mobile Service	429
ARTICLE 67.	Conditions to Be Observed by Mobile Stations in the Land Mobile Service	430
ARTICLE 68.	General Radiotelephone Procedure in the Land Mobile Service – Calls	432
CHAPTER XIII.		
ARTICLE 69.	Entry into Force of the Radio Regulations	435

APPENDICES

No. *			
1	1	(See Article 12)	437
		<i>Section A.</i> Basic Characteristics to Be Furnished for Notification under Nos. 1214 to 1217 of the Radio Regulations	437
		<i>Section B.</i> Basic Characteristics to Be Furnished for Notification under No. 1219 of the Radio Regulations	440
		<i>Section C.</i> Basic Characteristics to Be Furnished for Notification under Nos. 1223 to 1227 of the Radio Regulations	440
		<i>Section D.</i> Information to Be Furnished for Notification under No. 1218 of the Radio Regulations	441
		<i>Section E.</i> Form of Notice	443
		<i>Section F.</i> General Instructions	444
2	2	(See Article 17)	454
3	1A	Notices Relating to Space Radiocommunications and Radio Astronomy Stations ..	458
		<i>Section A.</i> General Instructions	458
		<i>Section B.</i> Basic Characteristics to Be Furnished in Notices Relating to Frequencies Used by Earth Stations for Transmitting	459
		<i>Section C.</i> Basic Characteristics to Be Furnished in Notices Relating to Frequencies to Be Received by Earth Stations	462
		<i>Section D.</i> Basic Characteristics to Be Furnished in Notices Relating to Frequencies Used by Space Stations for Transmitting	464
		<i>Section E.</i> Basic Characteristics to Be Furnished in Notices Relating to Frequencies to Be Received by Space Stations	467
		<i>Section F.</i> Basic Characteristics to Be Furnished in Notices Relating to Frequencies to Be Received by Radio Astronomy Stations	470
		<i>Section G.</i> Forms of Notice (earth station)	471
		<i>Section H.</i> Forms of Notice (space station)	471
4	1B	Advance Publication Information to Be Furnished for a Satellite Network	473
		<i>Section A.</i> General Instructions	473
		<i>Section B.</i> General Characteristics to Be Furnished for a Satellite Network	473
		<i>Section C.</i> Characteristics of the Satellite Network in the Earth-to-Space Direction	474
		<i>Section D.</i> Characteristics of the Satellite Network in the Space-to-Earth Direction	475
		<i>Section E.</i> Characteristics to Be Furnished of Space-to-Space Relay	477
		<i>Section F.</i> Supplementary Information (if available)	477
5	1C	Information to Be Supplied in Accordance with Nos. 1682 to 1684	479

*First column: definitive numbers.
Second column: old numbers.

6	5	Additional Characteristics for the Classification of Emissions; Determination of Necessary Bandwidths Including Examples for their Calculation and Associated Examples for the Designation of Emissions	480
7	3	Table of Transmitter Frequency Tolerances	488
8	4	Table of Maximum Permitted Spurious Emission Power Levels	493
9	9	Service Documents	496
10	10	Service Document Symbols	506
11	11	Documents with Which Ship and Aircraft Stations Shall Be Provided	508
12	12	Hours of Service for Ship Stations of the Second and Third Categories	510
13	13	Miscellaneous Abbreviations and Signals to Be Used in Radiotelegraphy Communications Except in the Maritime Mobile Service	513
14	13A	Miscellaneous Abbreviations and Signals to Be Used for Radiocommunications in the Maritime Mobile Service	527
15	14	SINPO and SIMPFEMO Codes	543
16	17Rev.	Channelling of the Maritime Mobile Radiotelephone Bands Between 4 000 and 23 000 kHz	545
17	17A	Technical Characteristics of Single-Sideband Transmitters Used in the Maritime Mobile Service for Radiotelephony in the Bands Between 1 606.5 (1 605 Region 2) and 4 000 kHz and Between 4 000 and 23 000 kHz	550
18	18	Table of Transmitting Frequencies in the Band 156-174 MHz for Stations in the Maritime Mobile Service	552
19	19	Technical Characteristics for Transmitters and Receivers Used in the Maritime Mobile Service in the Band 156-174 MHz	555
20	19A	Characteristics of Equipment Used for On-Board Communication in the 450-470 MHz Bands	556
21	6	Reports of International Monitoring of Emissions	557
22	7	Report of an Irregularity or of an Infringement of the Convention or the Radio Regulations	560
23	8	Report of Harmful Interference	562
24	16	Phonetic Alphabet and Figure Code	563
25	25	Frequency Allotment Plan for Coast Radiotelephone Stations Operating in the Exclusive Maritime Mobile Bands Between 4 000 and 23 000 kHz	564
Mar2	Mar2		
26	26	Frequency Allotment Plan for the Aeronautical Mobile Service and Related Information	565
27	27	Frequency Allotment Plan for the Aeronautical Mobile (R) Service and Related Information Between 2 850 and 17 970 kHz	566
27	27	Frequency Allotment Plan for the Aeronautical Mobile (R) Service and Related Information Between 2 850 and 22 000 kHz	566
Aer2	Aer2		
28	28	Method for the Determination of the Coordination Area Around an Earth Station in Frequency Bands Between 1 GHz and 40 GHz Shared Between Space and Terrestrial Radiocommunication Services	567
29	29	Method of Calculation for Determining if Coordination is Required Between Geostationary-Satellite Networks Sharing the Same Frequency Bands	595
30	29A	Provisions for All Services and Associated Plan for the Broadcasting-Satellite Service in Frequency Bands 11.7-12.2 GHz (in Regions 2 and 3) and 11.7-12.5 GHz (in Region 1)	605
31	15	Table of Frequencies to be Used in the Bands Between 4 and 27.5 MHz Allocated Exclusively to the Maritime Mobile Service	685
32	15A	Channelling of the Maritime Mobile Bands Between 4 000 and 23 000 kHz Used for Narrow-Band Direct-Printing Telegraphy and Data Systems (Frequencies Paired)	692

33	15B	Channelling of the Maritime Mobile Bands Between 4 000 and 27 500 kHz Used for Narrow-Band Direct-Printing Telegraphy and Data Transmission (Non-Paired)	695
34	15C	Table of Calling Frequencies Assignable to Ship Stations for A1A Morse Telegraphy at Speeds Not Exceeding 40 Bauds	696
35	15D	Table of Working Frequencies, in kHz, Assignable to Ship Stations for A1A Morse Telegraphy at Speeds Not Exceeding 40 Bauds	698
36	20	Automatic Receiving Equipment for Radiotelegraph and Radiotelephone Alarm Signals	702
37	20A	Technical Characteristics of Emergency Position-Indicating Radiobeacons Operating on the Carrier Frequency 2 182 kHz	703
38	20B	Narrow-Band Direct-Printing Telegraph Equipment	704
39	20 C	Selective Calling System for Use in the International Maritime Mobile Service	706
40	20D	Linked Compressor and Expander Systems	709
41	23	Procedure for Obtaining Radio Direction-Finding Bearings and Positions	710
42	C	Table of Allocation of International Call Sign Series	714
43	CA	Maritime Mobile Service Identities	716
44	CB	Ship Station Selective Call Numbers and Coast Station Identification Numbers	718

FINAL PROTOCOL	721
----------------	-----

(Figures between parentheses indicate the order in which the statements appear in the Final Protocol)

Afghanistan (Democratic Republic of) (11)	Ghana (57)
Algeria (Algerian Democratic and Popular Republic) (4, 74)	Greece (14, 32, 36, 75)
Germany (Federal Republic of) (32, 35, 75)	Guatemala (Republic of) (2)
Angola (People's Republic of) (44)	Guinea (Revolutionary People's Republic of) (54)
Saudi Arabia (Kingdom of) (4, 36, 74)	Upper Volta (Republic of) (67)
Argentine Republic (45)	Honduras (Republic of) (1)
Australia (75)	India (Republic of) (22)
Austria (33, 43, 75)	Indonesia (Republic of) (42)
Bahrain (State of) (4, 74)	Iran (Islamic Republic of) (4, 10, 25, 70)
Bangladesh (People's Republic of) (4)	Iraq (Republic of) (4, 47, 74)
Belgium (5, 32, 73, 75)	Ireland (48, 75)
Benin (People's Republic of) (6)	Iceland (32)
Byelorussian Soviet Socialist Republic (34)	Israel (State of) (30)
Brazil (Federative Republic of) (29)	Italy (27, 32, 75)
Cameroon (United Republic of) (61)	Japan (16, 75, 81)
Canada (19, 75)	Jordan (Hashemite Kingdom of) (4, 68, 74)
Central African Republic (56)	Kenya (Republic of) (40, 69, 79)
Chile (7, 21)	Kuwait (State of) (4, 74)
China (People's Republic of) (20)	Lebanon (4, 68, 74)
Cyprus (Republic of) (36)	Liberia (Republic of) (59)
Vatican City State (27)	Libya (Socialist People's Libyan Arab Jamahiriya) (4, 74)
Colombia (Republic of) (40, 41, 79)	Liechtenstein (Principality of) (28, 33, 75)
Congo (People's Republic of the) (40, 53, 79)	Luxembourg (32, 73, 75)
Korea (Republic of) (37)	Mali (Republic of) (71)
Costa Rica (65)	Morocco (Kingdom of) (4, 74)
Ivory Coast (Republic of the) (24)	Mauritius (62)
Cuba (8, 9, 83)	Mauritania (Islamic Republic of) (12)
Denmark (32, 33, 75)	Mexico (23)
United Arab Emirates (4, 74)	Mozambique (People's Republic of) (50)
Ecuador (40, 66, 79)	Niger (Republic of the) (52)
Spain (33, 36)	Nigeria (Federal Republic of) (17)
United States of America (32, 36, 38, 39, 72, 75)	Norway (32, 33, 75)
Finland (33, 75)	New Zealand (75)
France (28, 33, 73, 75)	Oman (Sultanate of) (4, 74)
Gabon Republic (40, 79)	Uganda (Republic of) (40, 79)

Pakistan (Islamic Republic of) (4, 13)	Sweden (33, 75)
Papua New Guinea (75, 80)	Switzerland (Confederation of) (28, 33, 73, 75)
Netherlands (Kingdom of the) (32, 73, 75)	Tanzania (United Republic of) (49)
Philippines (Republic of the) (64)	Chad (Republic of the) (3)
Portugal (27, 32, 33, 75)	Thailand (60)
Qatar (State of) (4, 74)	Tunisia (4)
Syrian Arab Republic (4, 47, 68, 74)	Turkey (27, 31, 32)
Ukrainian Soviet Socialist Republic (34)	Union of Soviet Socialist Republics (34)
Roumania (Socialist Republic of) (58)	Uruguay (Oriental Republic of) (15)
United Kingdom of Great Britain and Northern Ireland (32, 36, 48, 75, 76, 77, 78)	Venezuela (Republic of) (26)
Singapore (Republic of) (63)	Yemen (People's Democratic Republic of) (4, 46, 74)
Somali Democratic Republic (4, 40, 74, 79, 82)	Yugoslavia (Socialist Federal Republic of) (14)
Sudan (Democratic Republic of the) (4, 74)	Zaire (Republic of) (18, 40, 79)
Sri Lanka (Democratic Socialist Republic of) (36, 55)	Zambia (Republic of) (36, 51)

RESOLUTIONS*

<i>No.</i> **		<i>Page</i>
1	CA Notification of Frequency Assignments	743
2	AY Equitable Use, by all Countries, with Equal Rights, of the Geostationary-Satellite Orbit and of Frequency Bands for Space Radiocommunication Services	743
3	BP Use of the Geostationary-Satellite Orbit and to the Planning of Space Services Utilizing It	744
4	BY Period of Validity of Frequency Assignments to Space Stations Using the Geostationary-Satellite Orbit	745
5	CG Technical Cooperation with the Developing Countries in the Study of Propagation in Tropical Areas	747
6	BW Preparation of a Handbook to Explain and Illustrate the Procedures of the Radio Regulations	748
7	AD Development of National Radio Frequency Management	749
8	CV Implementation of the Changes in Allocations in the Bands Between 4 000 kHz and 27 500 kHz	750
9	CT Revision of Entries in the Master International Frequency Register in the Bands Allocated to the Fixed Service Between 3 000 kHz and 27 500 kHz	756

* Resolutions and recommendations are grouped as follows:

1 – 99: General matters	
– General	1 – 29
– Procedures	30 – 59
– Technical questions	60 – 99
100 – 199: Fixed Service and Fixed-Satellite Service	
200 – 299: Mobile Service, Land Mobile Service and Mobile-Satellite Service	
300 – 399: Maritime Mobile Service and Maritime Mobile-Satellite Service	
400 – 499: Aeronautical Mobile Service and Aeronautical Mobile-Satellite Service	
500 – 599: Broadcasting and Broadcasting-Satellite Service	
600 – 699: Other Services	
– Radionavigation Service and Radiolocation Service	600 – 619
– Meteorological Service	620 – 639
– Amateur Service	640 – 699
700 – 799: Texts relating to more than one service	

** First column: definitive numbers.

Second column: provisional numbers.

10	AF	Use of Radiotelegraph and Radiotelephone Links by the Red Cross, Red Crescent, and Red Lion and Sun Organizations	759
11	CY	Use of Radiocommunications for Ensuring the Safety of Ships and Aircraft of States Not Parties to an Armed Conflict	759
12	DC	New Rules for the Formation of Call Signs	761
13	DE	Formation of Call Signs and the Allocation of New International Series	762
14	DG	Transfer of Technology	763
15	CZ	International Cooperation and Technical Assistance in the Field of Space Radiocommunications	764
16	CX	Role of Telecommunications in Integrated Rural Development	765
17	DF	Determination, on the Basis of the Agenda, of the Possible Committee Structure to Be Set Up at an Administrative Radio Conference	767
30	CU	Review of Entries in the Master International Frequency Register at the Request of Previous Conferences	768
31	CI	Application of Certain Provisions of the Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, to Take into Account Changes Made by the World Administrative Radio Conference, Geneva, 1979, to the Table of Frequency Allocations for Region 2 in the Band 11.7-12.7 GHz	769
32	AI	Use of Frequency Assignments to Terrestrial and Space Radiocommunication Stations in the Band 11.7-12.2 GHz in Region 3 and in the Band 11.7-12.5 GHz in Region 1	770
33	BO	Bringing into Use of Space Stations in the Broadcasting-Satellite Service, Prior to the Entry into Force of Agreements and Associated Plans for the Broadcasting-Satellite Service	771
34	CL	Establishment of the Broadcasting-Satellite Service in Region 3 in the 12.5-12.75 GHz Frequency Band and to Sharing with Space and Terrestrial Services in Regions 1, 2 and 3	775
35	AA	Procedure for Resolving a Disagreement over the Technical Standards or Rules of Procedure of the International Frequency Registration Board	776
36	AK	Preparation of Explanatory Information by the International Frequency Registration Board on the Application of the New Method for Designating Emissions in Notification Procedures and the Consequential Revision of the Master International Frequency Register	777
37	BX	Introduction and Development of Computer Assistance in Radio Frequency Management Within Administrations	778
38	BR	Reassignment of Frequencies of Stations in the Fixed and Mobile Services in the Bands Allocated to the Radiolocation and Amateur Services in Region 1	779
60	AJ	Information on the Propagation of Radio Waves Used in the Determination of the Coordination Area	780
61	BK	Division of the World into Climatic Zones for the Purpose of Calculation of Propagation Parameters	781
62	AM	Experimental Use of Radio Waves by Ionospheric Research Satellites	782
63	AG	Protection of Radiocommunication Services Against Interference Caused by Radiation from Industrial, Scientific and Medical (ISM) Equipment	783
64	CF	CCIR Study of Lightning Protection of Radio Equipment	784
65	AH	Circulation of Current Information on CCIR Recommendations Referred To in the Radio Regulations	785
66	AE	Division of the World into Regions for the Purposes of Allocating Frequency Bands	785
67	BJ	Improvements in the Design and Use of Radio Equipment	786
68	CD	Redefinition of Certain Terms Contained in Annex 2 to the International Telecommunication Convention (Malaga-Torremolinos, 1973) and Applicable to the Radio Regulations	787

100	BD	Coordination, Notification and Recording in the Master International Frequency Register of Assignments to Stations in the Fixed-Satellite Service with Respect to Stations in the Broadcasting-Satellite Service in Region 2	788
101	BQ	Drawing up of Agreements and of the Associated Plans for Feeder Links to Space Stations in the Broadcasting-Satellite Service Operating in the 12 GHz Band under the Plan Adopted by the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, for Regions 1 and 3	788
102	CS	Coordination among Administrations of the Technical Characteristics of Feeder Links to Space Stations in the Broadcasting-Satellite Service in the Band 11.7-12.5 GHz (Region 1) and 11.7-12.2 GHz (Region 3) During the Period Between the Entry into Force of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, and the Entry into Force of the Final Acts of a Future Conference on the Planning of Feeder Links to Such Space Stations	790
103	BZ	Improvements in Assistance to Developing Countries in Securing Access to the HF Bands for their Fixed Services and in Ensuring Protection of their Assignments from Harmful Interference	791
200	AN	Use of Class R3E and J3E Emissions for Distress and Safety Purposes on the Carrier Frequency 2 182 kHz	791
201	AB	Operational Provisions, Charging and Accounting for Public Correspondence in the Mobile Services	793
202	DH	Convening of a World Administrative Radio Conference for the Mobile Services	794
300	AZ	Use and Notification of Paired Frequencies Reserved for Narrow-Band Direct-Printing Telegraph and Data Transmission Systems in the HF Bands Allocated to the Maritime Mobile Service	795
301	BA	Notification of Non-Paired Ship Station Frequencies Used for Narrow-Band Direct-Printing Telegraph and Data Transmission Systems	796
302	AX	Manner in which the IFRB Shall Treat Notifications Dealing with Frequency Assignments to Oceanographic Stations	797
303	AV	Inter-Ship Frequencies in the Bands Between 1 605 kHz and 3 600 kHz in Region 1	798
304	AS	Implementation of the New Channelling Arrangement for A1A Morse Radiotelegraphy in the Bands Allocated to the Maritime Mobile Service Between 4 000 kHz and 27 500 kHz	798
305	AO	Use of Class R3E and J3E Emissions on the Carrier Frequencies 4 125 kHz and 6 215.5 kHz Used to Supplement the Carrier Frequency 2 182 kHz for Distress and Safety Purposes	799
306	AW	Use of Single-Sideband Technique in the Radiotelephone Maritime Mobile Service Bands Between 1 605 kHz and 4 000 kHz	800
307	AQ	Conversion to Single-Sideband Technique of Stations of the Radiotelephone Maritime Mobile Service Operating in the Bands Between 1 605 kHz and 4 000 kHz	801
308	BB	Channel Spacing of Frequencies Allocated to the Maritime Mobile Service in the Band 156-174 MHz	802
309	AT	Unauthorized Use of Frequencies in the Bands Allocated to the Maritime Mobile Service	804
310	CN	Frequency Provisions for Development and Future Implementation of Ship Movement Telemetry, Telecommand and Data Exchange Systems	805
311	DB	Introduction of a Digital Selective Calling System to Meet the Requirements of the Maritime Mobile Service	806
312	DA	Introduction of New Calling Procedures for HF A1A Morse Telegraphy	807
313	DD	Introduction of a New System for Identifying Stations in the Maritime Mobile and Maritime Mobile-Satellite Services (Maritime Mobile Service Identities)	809
314	AR	Establishment of a Coordinated Worldwide System for the Collection of Data Relating to Oceanography	810

THE RADIO REGULATIONS

ADD PREAMBLE

ADD 3000 1 The application of the provisions of these Regulations by the permanent organs of the International Telecommunication Union does not imply the expression of any opinion whatsoever on the part of the Union concerning the sovereignty or the legal status of any country, territory or geographical area.

PART A

NI CHAPTER I

NOC Terminology

NI/1 ARTICLE 1

NOC Terms and Definitions

MOD Introduction

MOD 3001 2 For the purposes of these Regulations, the following terms shall have the meanings defined below. These terms and definitions do not, however, necessarily apply for other purposes. Definitions identical to those contained in the International Telecommunication Convention (Malaga-Torremolinos, 1973) are marked "(CONV.)".

Note: If in the text of a definition below, a term is printed in italics, this means that the term itself is defined in this Article.

NOC Section I. General Terms

ADD 3001A 3 1.1 *Administration:* Any governmental department or service responsible for discharging the obligations undertaken in the Convention of the International Telecommunication Union and the Regulations (CONV.).

MOD 3002 4 1.2 *Telecommunication:* Any transmission, *emission* or reception of signs, signals, writing, images and sounds or intelligence of any nature by wire, *radio*, optical or other electromagnetic systems (CONV.).

NOC	3006 8	5	1.3	<i>Radio</i> : A general term applied to the use of <i>radio waves</i> (CONV.).
MOD	3005 7	6	1.4	<i>Radio Waves</i> or <i>Hertzian Waves</i> : Electromagnetic waves of frequencies arbitrarily lower than 3 000 GHz, propagated in space without artificial guide.
NOC	3004 9	7	1.5	<i>Radiocommunication</i> : <i>Telecommunication</i> by means of <i>radio waves</i> (CONV.).
NOC	3025 21D	8	1.6	<i>Terrestrial Radiocommunication</i> : Any <i>radiocommunication</i> other than <i>space radiocommunication</i> or <i>radio astronomy</i> .
MOD	3024 21C	9	1.7	<i>Space Radiocommunication</i> : Any <i>radiocommunication</i> involving the use of one or more <i>space stations</i> or the use of one or more <i>reflecting satellites</i> or other objects in space.
MOD	3026 45	10	1.8	<i>Radiodetermination</i> : The determination of the position, velocity and/or other characteristics of an object, or the obtaining of information relating to these parameters, by means of the propagation properties of <i>radio waves</i> .
NOC	3027 48	11	1.9	<i>Radionavigation</i> : <i>Radiodetermination</i> used for the purposes of navigation, including obstruction warning.
NOC	3028 54	12	1.10	<i>Radiolocation</i> : <i>Radiodetermination</i> used for purposes other than those of <i>radionavigation</i> .
NOC	3068 66	13	1.11	<i>Radio Direction-Finding</i> : <i>Radiodetermination</i> using the reception of <i>radio waves</i> for the purpose of determining the direction of a <i>station</i> or object.
NOC	3120 74	14	1.12	<i>Radio Astronomy</i> : Astronomy based on the reception of <i>radio waves</i> of cosmic origin.
ADD	3120A	15	1.13	<i>Coordinated Universal Time (UTC)</i> : Time scale, based on the second (SI), as defined and recommended by the CCIR ¹ , and maintained by the International Time Bureau (BIH).
				For most practical purposes associated with the Radio Regulations, UTC is equivalent to mean solar time at the prime meridian (0° longitude), formerly expressed in GMT.
ADD	3023A	16	1.14	<i>Industrial, Scientific and Medical (ISM) Applications</i> (of radio frequency energy): Operation of equipment or appliances designed to generate and use locally radiofrequency energy for industrial, scientific, medical, domestic or similar purposes, excluding applications in the field of <i>telecommunications</i> .

ADD 3120A.1 15.1

¹ The full definition is contained in CCIR Recommendation 460-2.

MOD

Section II. Specific Terms Related to Frequency Management

- ADD 3023B 17 2.1 *Allocation* (of a frequency band): Entry in the Table of Frequency Allocations of a given frequency band for the purpose of its use by one or more terrestrial or space *radiocommunication services* or the *radio astronomy service* under specified conditions. This term shall also be applied to the frequency band concerned.
- ADD 3023C 18 2.2 *Allotment* (of a radio frequency or radio frequency channel): Entry of a designated frequency channel in an agreed plan, adopted by a competent conference, for use by one or more administrations for a terrestrial or space *radiocommunication service* in one or more identified countries or geographical areas and under specified conditions.
- ADD 3023D 19 2.3 *Assignment* (of a radio frequency or radio frequency channel): Authorization given by an administration for a radio *station* to use a radio frequency or radio frequency channel under specified conditions.

MOD

Section III. Radio Services

- ADD 3023E 20 3.1 *Radiocommunication Service*: A service as defined in this Section involving the transmission, *emission* and/or reception of *radio waves* for specific *telecommunication* purposes.

In these Regulations, unless otherwise stated, any radiocommunication service relates to *terrestrial radiocommunication*.

- (MOD) 3036 21 3.2 *Fixed Service*: A *radiocommunication service* between specified fixed points.

- MOD 3102 22 3.3 *Fixed-Satellite Service*: A *radiocommunication service* between *earth stations* at specified fixed points when one or more *satellites* are used; in some cases this service includes satellite-to-satellite links, which may also be effected in the *inter-satellite service*; the fixed-satellite service may also include *feeder links* for other *space radiocommunication services*.

- MOD 3038 23 3.4 *Aeronautical Fixed Service*: A *radiocommunication service* between specified fixed points provided primarily for the safety of air navigation and for the regular, efficient and economical operation of air transport.

- NOC 3101 24 3.5 *Inter-Satellite Service*: A *radiocommunication service* providing links between artificial earth *satellites*.

- (MOD) 3100 25 3.6 *Space Operation Service*: A *radiocommunication service* concerned exclusively with the operation of *spacecraft*, in particular *space tracking*, *space telemetry* and *space telecommand*.

These functions will normally be provided within the service in which the *space station* is operating.

- (MOD) 3072 26 3.7 *Mobile Service: A radiocommunication service between mobile and land stations, or between mobile stations (CONV).*
- 30
- MOD 3115 27 3.8 *Mobile-Satellite Service: A radiocommunication service:*
- 84AGA
- between *mobile earth stations* and one or more *space stations*, or between *space stations* used by this service; or
 - between *mobile earth stations* by means of one or more *space stations*.
- This service may also include *feeder links* necessary for its operation.
- NOC 3087 28 3.9 *Land Mobile Service: A mobile service between base stations and land mobile stations, or between land mobile stations.*
- 42
- NOC 3119 29 3.10 *Land Mobile-Satellite Service: A mobile-satellite service in which mobile earth stations are located on land.*
- 84AGD
- MOD 3079 30 3.11 *Maritime Mobile Service: A mobile service between coast stations and ship stations, or between ship stations, or between associated on-board communication stations; survival craft stations and emergency position-indicating radiobeacon stations may also participate in this service.*
- 36
- (MOD) 3117 31 3.12 *Maritime Mobile-Satellite Service: A mobile-satellite service in which mobile earth stations are located on board ships; survival craft stations and emergency position-indicating radiobeacon stations may also participate in this service.*
- 84AGC
- NOC 3084 32 3.13 *Port Operations Service: A maritime mobile service in or near a port, between coast stations and ship stations, or between ship stations, in which messages are restricted to those relating to the operational handling, the movement and the safety of ships and, in emergency, to the safety of persons.*
- 37
- Messages which are of a *public correspondence* nature shall be excluded from this service.
- (MOD) 3086 33 3.14 *Ship Movement Service: A safety service in the maritime mobile service other than a port operations service, between coast stations and ship stations, or between ship stations, in which messages are restricted to those relating to the movement of ships.*
- 37A
- Messages which are of a *public correspondence* nature shall be excluded from this service.
- MOD 3076 34 3.15 *Aeronautical Mobile Service: A mobile service between aeronautical stations and aircraft stations, or between aircraft stations, in which survival craft stations may participate; emergency position-indicating radiobeacon stations may also participate in this service on designated distress and emergency frequencies.*
- 33
- (MOD) 3116 35 3.16 *Aeronautical Mobile-Satellite Service: A mobile-satellite service in which mobile earth stations are located on board aircraft; survival craft stations and emergency position-indicating radiobeacon stations may also participate in this service.*
- 84AGB

NOC	3040 28	36	3.17	<i>Broadcasting Service: A radiocommunication service in which the transmissions are intended for direct reception by the general public. This service may include sound transmissions, television transmissions or other types of transmission (CONV.).</i>
(MOD)	3103 84AP	37	3.18	<i>Broadcasting-Satellite Service: A radiocommunication service in which signals transmitted or retransmitted by space stations are intended for direct reception by the general public.</i>
				In the broadcasting-satellite service, the term “direct reception” shall encompass both <i>individual reception</i> and <i>community reception</i> .
(MOD)	3049 46	38	3.19	<i>Radiodetermination Service: A radiocommunication service for the purpose of radiodetermination.</i>
MOD	3111 84APC	39	3.20	<i>Radiodetermination-Satellite Service: A radiocommunication service for the purpose of radiodetermination involving the use of one or more space stations.</i>
(MOD)	3051 49	40	3.21	<i>Radionavigation Service: A radiodetermination service for the purpose of radionavigation.</i>
MOD	3112 84AQ	41	3.22	<i>Radionavigation-Satellite Service: A radiodetermination-satellite service used for the purpose of radionavigation.</i>
				This service may also include <i>feeder links</i> necessary for its operation.
MOD	3055 53	42	3.23	<i>Maritime Radionavigation Service: A radionavigation service intended for the benefit and for the safe operation of ships.</i>
MOD	3114 84AQB	43	3.24	<i>Maritime Radionavigation-Satellite Service: A radionavigation-satellite service in which earth stations are located on board ships.</i>
MOD	3054 52	44	3.25	<i>Aeronautical Radionavigation Service: A radionavigation service intended for the benefit and for the safe operation of aircraft.</i>
MOD	3113 84AQA	45	3.26	<i>Aeronautical Radionavigation-Satellite Service: A radionavigation-satellite service in which earth stations are located on board aircraft.</i>
(MOD)	3056 55	46	3.27	<i>Radiolocation Service: A radiodetermination service for the purpose of radiolocation.</i>
NOC	3042 76	47	3.28	<i>Meteorological Aids Service: A radiocommunication service used for meteorological, including hydrological, observations and exploration.</i>
MOD	3106 84ASA	48	3.29	<i>Earth Exploration-Satellite Service: A radiocommunication service between earth stations and one or more space stations, which may include links between space stations, in which:</i>

- information relating to the characteristics of the Earth and its natural phenomena is obtained from *active sensors* or *passive sensors* on earth satellites;

- similar information is collected from airborne or earth-based platforms;
- such information may be distributed to *earth stations* within the system concerned;
- platform interrogation may be included.

This service may also include *feeder links* necessary for its operation.

NOC	3107 84AT	49	3.30 <i>Meteorological-Satellite Service: An earth exploration-satellite service for meteorological purposes.</i>
MOD	3046 80	50	3.31 <i>Standard Frequency and Time Signal Service: A radiocommunication service for scientific, technical and other purposes, providing the transmission of specified frequencies, time signals, or both, of stated high precision, intended for general reception.</i>
MOD	3109 84ATB	51	3.32 <i>Standard Frequency and Time Signal-Satellite Service: A radiocommunication service using space stations on earth satellites for the same purposes as those of the standard frequency and time signal service.</i>
			This service may also include <i>feeder links</i> necessary for its operation.
NOC	3099 84ATD	52	3.33 <i>Space Research Service: A radiocommunication service in which spacecraft or other objects in space are used for scientific or technological research purposes.</i>
MOD	3044 78	53	3.34 <i>Amateur Service: A radiocommunication service for the purpose of self-training, intercommunication and technical investigations carried out by amateurs, that is, by duly authorized persons interested in radio technique solely with a personal aim and without pecuniary interest.</i>
NOC	3108 84ATA	54	3.35 <i>Amateur-Satellite Service: A radiocommunication service using space stations on earth satellites for the same purposes as those of the amateur service.</i>
NOC	3121 75	55	3.36 <i>Radio Astronomy Service: A service involving the use of radio astronomy.</i>
MOD	3029 69	56	3.37 <i>Safety Service: Any radiocommunication service used permanently or temporarily for the safeguarding of human life and property (CONV.).</i>
(MOD)	3030 84	57	3.38 <i>Special Service: A radiocommunication service, not otherwise defined in this Section, carried on exclusively for specific needs of general utility, and not open to public correspondence.</i>

MOD **Section IV. Radio Stations and Systems**

NOC	3031 21	58	4.1 <i>Station: One or more transmitters or receivers or a combination of transmitters and receivers, including the accessory equipment, necessary at one location for carrying on a radiocommunication service, or the radio astronomy service.</i>
-----	-------------------	-----------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Each station shall be classified by the service in which it operates permanently or temporarily.

MOD	3034 21E	59	4.2	<i>Terrestrial Station: A station effecting terrestrial radiocommunication.</i>
				In these Regulations, unless otherwise stated, any <i>station</i> is a terrestrial station.
MOD	3033 21B	60	4.3	<i>Earth Station: A station located either on the Earth's surface or within the major portion of the Earth's atmosphere and intended for communication:</i>
				– with one or more <i>space stations</i> ; or
				– with one or more <i>stations</i> of the same kind by means of one or more reflecting <i>satellites</i> or other objects in space.
NOC	3032 21A	61	4.4	<i>Space Station: A station located on an object which is beyond, is intended to go beyond, or has been beyond, the major portion of the Earth's atmosphere.</i>
(MOD)	3075 41	62	4.5	<i>Survival Craft Station: A mobile station in the maritime mobile service or the aeronautical mobile service intended solely for survival purposes and located on any lifeboat, life-raft or other survival equipment.</i>
NOC	3037 23	63	4.6	<i>Fixed Station: A station in the fixed service.</i>
NOC	3039 25	64	4.7	<i>Aeronautical Fixed Station: A station in the aeronautical fixed service.</i>
NOC	3074 32	65	4.8	<i>Mobile Station: A station in the mobile service intended to be used while in motion or during halts at unspecified points.</i>
ADD	3115A	66	4.9	<i>Mobile Earth Station: An earth station in the mobile-satellite service intended to be used while in motion or during halts at unspecified points.</i>
NOC	3073 31	67	4.10	<i>Land Station: A station in the mobile service not intended to be used while in motion.</i>
MOD	3088 43	68	4.11	<i>Base Station: A land station in the land mobile service.</i>
NOC	3089 44	69	4.12	<i>Land Mobile Station: A mobile station in the land mobile service capable of surface movement within the geographical limits of a country or continent.</i>
NOC	3080 38	70	4.13	<i>Coast Station: A land station in the maritime mobile service.</i>
ADD	3118A	71	4.14	<i>Coast Earth Station: An earth station in the fixed-satellite service or, in some cases, in the maritime mobile-satellite service, located at a specified fixed point on land to provide a feeder link for the maritime mobile-satellite service.</i>
(MOD)	3081 39	72	4.15	<i>Ship Station: A mobile station in the maritime mobile service located on board a vessel which is not permanently moored, other than a survival craft station.</i>

NOC	3118 84AGCA	73	4.16	<i>Ship Earth Station: A mobile earth station in the maritime mobile-satellite service located on board ship.</i>
NOC	3082 39A	74	4.17	<i>On-Board Communication Station: A low-powered mobile station in the maritime mobile service intended for use for internal communications on board a ship, or between a ship and its lifeboats and life-rafts during lifeboat drills or operations, or for communication within a group of vessels being towed or pushed, as well as for line handling and mooring instructions.</i>
NOC	3085 38A	75	4.18	<i>Port Station: A coast station in the port operations service.</i>
MOD	3077 34	76	4.19	<i>Aeronautical Station: A land station in the aeronautical mobile service.</i> In certain instances, an aeronautical station may be located, for example, on board ship or on a platform at sea.
ADD	3077A	77	4.20	<i>Aeronautical Earth Station: An earth station in the fixed-satellite service, or, in some cases, in the aeronautical mobile-satellite service, located at a specified fixed point on land to provide a feeder link for the aeronautical mobile-satellite service.</i>
MOD	3078 35	78	4.21	<i>Aircraft Station: A mobile station in the aeronautical mobile service, other than a survival craft station, located on board an aircraft.</i>
ADD	3116A	79	4.22	<i>Aircraft Earth Station: A mobile earth station in the aeronautical mobile-satellite service located on board an aircraft.</i>
NOC	3041 29	80	4.23	<i>Broadcasting Station: A station in the broadcasting service.</i>
NOC	3050 47	81	4.24	<i>Radiodetermination Station: A station in the radiodetermination service.</i>
NOC	3053 51	82	4.25	<i>Radionavigation Mobile Station: A station in the radionavigation service intended to be used while in motion or during halts at unspecified points.</i>
NOC	3052 50	83	4.26	<i>Radionavigation Land Station: A station in the radionavigation service not intended to be used while in motion.</i>
NOC	3058 57	84	4.27	<i>Radiolocation Mobile Station: A station in the radiolocation service intended to be used while in motion or during halts at unspecified points.</i>
NOC	3057 56	85	4.28	<i>Radiolocation Land Station: A station in the radiolocation service not intended to be used while in motion.</i>
NOC	3069 67	86	4.29	<i>Radio Direction-Finding Station: A radiodetermination station using radio direction-finding.</i>
NOC	3070 68	87	4.30	<i>Radiobeacon Station: A station in the radionavigation service the emissions of which are intended to enable a mobile station to determine its bearing or direction in relation to the radiobeacon station.</i>

NOC	3071 68A	88	4.31	<i>Emergency Position-Indicating Radiobeacon Station: A station in the mobile service the emissions of which are intended to facilitate search and rescue operations.</i>
MOD	3047 81	89	4.32	<i>Standard Frequency and Time Signal Station: A station in the standard frequency and time signal service.</i>
NOC	3045 79	90	4.33	<i>Amateur Station: A station in the amateur service.</i>
NOC	3122 75A	91	4.34	<i>Radio Astronomy Station: A station in the radio astronomy service.</i>
NOC	3035 83	92	4.35	<i>Experimental Station: A station utilizing radio waves in experiments with a view to the development of science or technique.</i>
This definition does not include <i>amateur stations</i> .				
NOC	3083 40	93	4.36	<i>Ship's Emergency Transmitter: A ship's transmitter to be used exclusively on a distress frequency for distress, urgency or safety purposes.</i>
NOC	3059 58	94	4.37	<i>Radar: A radiodetermination system based on the comparison of reference signals with radio signals reflected, or retransmitted, from the position to be determined.</i>
NOC	3060 59	95	4.38	<i>Primary Radar: A radiodetermination system based on the comparison of reference signals with radio signals reflected from the position to be determined.</i>
NOC	3061 60	96	4.39	<i>Secondary Radar: A radiodetermination system based on the comparison of reference signals with radio signals retransmitted from the position to be determined.</i>
MOD	3062 60A	97	4.40	<i>Radar Beacon (racon): A transmitter-receiver associated with a fixed navigational mark which, when triggered by a radar, automatically returns a distinctive signal which can appear on the display of the triggering radar, providing range, bearing and identification information.</i>
NOC	3063 61	98	4.41	<i>Instrument Landing System (ILS): A radionavigation system which provides aircraft with horizontal and vertical guidance just before and during landing and, at certain fixed points, indicates the distance to the reference point of landing.</i>
NOC	3064 62	99	4.42	<i>Instrument Landing System Localizer: A system of horizontal guidance embodied in the instrument landing system which indicates the horizontal deviation of the aircraft from its optimum path of descent along the axis of the runway.</i>
NOC	3065 63	100	4.43	<i>Instrument Landing System Glide Path: A system of vertical guidance embodied in the instrument landing system which indicates the vertical deviation of the aircraft from its optimum path of descent.</i>
NOC	3066 64	101	4.44	<i>Marker Beacon: A transmitter in the aeronautical radionavigation service which radiates vertically a distinctive pattern for providing position information to aircraft.</i>

MOD	3067 65	102	4.45	<i>Radio Altimeter: Radionavigation</i> equipment, on board an aircraft or <i>spacecraft</i> , used to determine the height of the aircraft or the <i>spacecraft</i> above the Earth's surface or another surface.
NOC	3043 77	103	4.46	<i>Radiosonde: An automatic radio transmitter in the meteorological aids service</i> usually carried on an aircraft, free balloon, kite or parachute, and which transmits meteorological data.
(MOD)	3090 84AF	104	4.47	<i>Space System: Any group of cooperating earth stations and/or space stations</i> employing <i>space radiocommunication</i> for specific purposes.
NOC	3091 84AFA	105	4.48	<i>Satellite System: A space system</i> using one or more artificial earth <i>satellites</i> .
NOC	3092 84AFB	106	4.49	<i>Satellite Network: A satellite system</i> or a part of a <i>satellite system</i> , consisting of only one <i>satellite</i> and the cooperating <i>earth stations</i> .
MOD	3093 84AFC	107	4.50	<i>Satellite Link: A radio link</i> between a transmitting <i>earth station</i> and a receiving <i>earth station</i> through one <i>satellite</i> .
				A satellite link comprises one up-link and one down-link.
MOD	3094 84AFD	108	4.51	<i>Multi-Satellite Link: A radio link</i> between a transmitting <i>earth station</i> and a receiving <i>earth station</i> through two or more <i>satellites</i> , without any intermediate <i>earth station</i> .
				A multi-satellite link comprises one up-link, one or more satellite-to-satellite links and one down-link.
ADD	3094A	109	4.52	<i>Feeder Link: A radio link</i> from an <i>earth station</i> at a specified fixed point to a <i>space station</i> , or vice versa, conveying information for a <i>space radiocommunication service</i> other than for the <i>fixed-satellite service</i> .

MOD

Section V. Operational Terms

ADD	3094B	110	5.1	<i>Public Correspondence: Any telecommunication</i> which the offices and <i>stations</i> must, by reason of their being at the disposal of the public, accept for transmission (CONV.).
MOD	3007 10	111	5.2	<i>Telegraphy*:</i> A form of <i>telecommunication</i> which is concerned in any process providing transmission and reproduction at a distance of documentary matter, such as written or printed matter or fixed images, or the reproduction at a distance of any kind of information in such a form. For the purposes of the Radio Regulations, unless otherwise specified therein, telegraphy shall mean a form of <i>telecommunication</i> for the transmission of written matter by the use of a signal code.

* See Resolution 68.

MOD 3010 112 5.3 *Telegram* *: Written matter intended to be transmitted by *telegraphy* for delivery to the addressee. This term also includes *radiotelegrams* unless otherwise specified (CONV.).

In this definition the term *telegraphy* has the same general meaning as defined in the Convention.

MOD 3011 113 5.4 *Radiotelegram*: A *telegram*, originating in or intended for a *mobile station* or a *mobile earth station* transmitted on all or part of its route over the *radiocommunication* channels of the *mobile service* or of the *mobile-satellite service*.

MOD 3012 114 5.5 *Radiotelex Call*: A telex call, originating in or intended for a *mobile station* or a *mobile earth station*, transmitted on all or part of its route over the *radiocommunication* channels of the *mobile service* or the *mobile-satellite service*.

MOD 3008 115 5.6 *Frequency-Shift Telegraphy*: *Telegraphy* by frequency modulation in which the telegraph signal shifts the frequency of the carrier between predetermined values.

MOD 3016 116 5.7 *Facsimile*: A form of *telegraphy* for the transmission of fixed images, with or without half-tones, with a view to their reproduction in a permanent form.

In this definition the term *telegraphy* has the same general meaning as defined in the Convention.

MOD 3013 117 5.8 *Telephony* *: A form of *telecommunication* set up for the transmission of speech or, in some cases, other sounds.

MOD 3014 118 5.9 *Radiotelephone Call*: A telephone call, originating in or intended for a *mobile station* or a *mobile earth station*, transmitted on all or part of its route over the *radiocommunication* channels of the *mobile service* or of the *mobile-satellite service*.

(MOD) 3019 119 5.10 *Simplex Operation*: Operating method in which transmission is made possible alternately in each direction of a *telecommunication* channel, for example, by means of manual control ¹.

(MOD) 3020 120 5.11 *Duplex Operation*: Operating method in which transmission is possible simultaneously in both directions of a *telecommunication* channel ¹.

(MOD) 3021 121 5.12 *Semi-Duplex Operation*: A method which is *simplex operation* at one end of the circuit and *duplex operation* at the other ¹.

* See Resolution 68.

(MOD)	3019.1	119.1	} ¹ In general, <i>duplex operation</i> and <i>semi-duplex operation</i> require two frequencies in <i>radiocommunication</i> ; <i>simplex operation</i> may use either one or two.
	4.1		
(MOD)	3020.1	120.1	
	5.1		
(MOD)	3021.1	121.1	
	6.1		

MOD	3015 19	122	5.13	<i>Television</i> : A form of <i>telecommunication</i> for the transmission of transient images of fixed or moving objects.
NOC	3104 84APA	123	5.14	<i>Individual Reception</i> (in the broadcasting-satellite service): The reception of <i>emissions</i> from a <i>space station</i> in the <i>broadcasting-satellite service</i> by simple domestic installations and in particular those possessing small antennae.
NOC	3105 84APB	124	5.15	<i>Community Reception</i> (in the broadcasting-satellite service): The reception of <i>emissions</i> from a <i>space station</i> in the <i>broadcasting-satellite service</i> by receiving equipment, which in some cases may be complex and have antennae larger than those used for <i>individual reception</i> , and intended for use: <ul style="list-style-type: none"> – by a group of the general public at one location; or – through a distribution system covering a limited area.
MOD	3017 15	125	5.16	<i>Telemetry</i> : The use of <i>telecommunication</i> for automatically indicating or recording measurements at a distance from the measuring instrument.
MOD	3018 16	126	5.17	<i>Radiotelemetry</i> : <i>Telemetry</i> by means of <i>radio waves</i> .
MOD	3095 84AW	127	5.18	<i>Space Telemetry</i> : The use of <i>telemetry</i> for the transmission from a <i>space station</i> of results of measurements made in a <i>spacecraft</i> , including those relating to the functioning of the <i>spacecraft</i> .
ADD	3018A	128	5.19	<i>Telecommand</i> : The use of <i>telecommunication</i> for the transmission of signals to initiate, modify or terminate functions of equipment at a distance.
(MOD)	3097 84AY	129	5.20	<i>Space Telecommand</i> : The use of <i>radiocommunication</i> for the transmission of signals to a <i>space station</i> to initiate, modify or terminate functions of equipment on an associated space object, including the <i>space station</i> .
NOC	3098 84AZ	130	5.21	<i>Space Tracking</i> : Determination of the <i>orbit</i> , velocity or instantaneous position of an object in space by means of <i>radiodetermination</i> , excluding <i>primary radar</i> , for the purpose of following the movement of the object.

MOD

Section VI. Characteristics of Emissions and Radio Equipment

ADD	3133B	131	6.1	<i>Radiation</i> : The outward flow of energy from any source in the form of <i>radio waves</i> .
ADD	3133C	132	6.2	<i>Emission</i> : <i>Radiation</i> produced, or the production of <i>radiation</i> , by a radio transmitting <i>station</i> .

For example, the energy radiated by the local oscillator of a radio receiver would not be an emission but a *radiation*.

ADD	3006A	133	6.3	<i>Class of Emission</i> : The set of characteristics of an <i>emission</i> , designated by standard symbols, e.g. type of modulation of the main carrier, modulating signal, type of information to be transmitted, and also if appropriate, any additional signal characteristics.
ADD	3021A	134	6.4	<i>Single-Sideband Emission</i> : An amplitude modulated <i>emission</i> with one sideband only.
ADD	3021B	135	6.5	<i>Full Carrier Single-Sideband Emission</i> : A <i>single-sideband emission</i> without reduction of the carrier.
ADD	3021C	136	6.6	<i>Reduced Carrier Single-Sideband Emission</i> : A <i>single-sideband emission</i> in which the degree of carrier suppression enables the carrier to be reconstituted and to be used for demodulation.
ADD	3021D	137	6.7	<i>Suppressed Carrier Single-Sideband Emission</i> : A <i>single-sideband emission</i> in which the carrier is virtually suppressed and not intended to be used for demodulation.
ADD	3133D	138	6.8	<i>Out-of-band Emission</i> *: <i>Emission</i> on a frequency or frequencies immediately outside the <i>necessary bandwidth</i> which results from the modulation process, but excluding <i>spurious emissions</i> .
MOD	3141 92	139	6.9	<i>Spurious Emission</i> *: <i>Emission</i> on a frequency or frequencies which are outside the <i>necessary bandwidth</i> and the level of which may be reduced without affecting the corresponding transmission of information. Spurious emissions include harmonic <i>emissions</i> , parasitic <i>emissions</i> , intermodulation products and frequency conversion products, but exclude <i>out-of-band emissions</i> .
ADD	3133F	140	6.10	<i>Unwanted Emissions</i> *: Consist of <i>spurious emissions</i> and <i>out-of-band emissions</i> .
MOD	3138 89	141	6.11	<i>Assigned Frequency Band</i> : The frequency band within which the <i>emission</i> of a <i>station</i> is authorized; the width of the band equals the <i>necessary bandwidth</i> plus twice the absolute value of the <i>frequency tolerance</i> . Where <i>space stations</i> are concerned, the assigned frequency band includes twice the maximum Doppler shift that may occur in relation to any point of the Earth's surface.
NOC	3134 85	142	6.12	<i>Assigned Frequency</i> : The centre of the frequency band assigned to a <i>station</i> .

* The terms associated with the definitions given by Nos. 138, 139 and 140 shall be expressed in the working languages as follows:

Numbers	In French	In English	In Spanish
138 (6.8)	Emission hors bande	Out-of-band emission	Emisión fuera de banda
139 (6.9)	Rayonnement non essentiel	Spurious emission	Emisión no esencial
140 (6.10)	Rayonnements non désirés	Unwanted emissions	Emisiones no deseadas

MOD	3135 86	143	6.13	<p><i>Characteristic Frequency:</i> A frequency which can be easily identified and measured in a given <i>emission</i>.</p> <p>A carrier frequency may, for example, be designated as the characteristic frequency.</p>
NOC	3136 87	144	6.14	<p><i>Reference Frequency:</i> A frequency having a fixed and specified position with respect to the <i>assigned frequency</i>. The displacement of this frequency with respect to the <i>assigned frequency</i> has the same absolute value and sign that the displacement of the <i>characteristic frequency</i> has with respect to the centre of the frequency band occupied by the <i>emission</i>.</p>
MOD	3137 88	145	6.15	<p><i>Frequency Tolerance:</i> The maximum permissible departure by the centre frequency of the frequency band occupied by an <i>emission</i> from the <i>assigned frequency</i> or, by the <i>characteristic frequency</i> of an <i>emission</i> from the <i>reference frequency</i>.</p> <p>The frequency tolerance is expressed in parts in 10^6 or in hertz.</p>
MOD	3140 91	146	6.16	<p><i>Necessary Bandwidth:</i> For a given <i>class of emission</i>, the width of the frequency band which is just sufficient to ensure the transmission of information at the rate and with the quality required under specified conditions.</p>
MOD	3139 90	147	6.17	<p><i>Occupied Bandwidth:</i> The width of a frequency band such that, below the lower and above the upper frequency limits, the <i>mean powers</i> emitted are each equal to a specified percentage $\beta/2$ of the total <i>mean power</i> of a given <i>emission</i>.</p> <p>Unless otherwise specified by the CCIR for the appropriate <i>class of emission</i>, the value of $\beta/2$ should be taken as 0.5%.</p>
ADD	3153C	148	6.18	<p><i>Right-Hand (or Clockwise) Polarized Wave:</i> An elliptically- or circularly-polarized wave, in which the electric field vector, observed in any fixed plane, normal to the direction of propagation, whilst looking in the direction of propagation, rotates with time in a right-hand or clockwise direction.</p>
ADD	3153D	149	6.19	<p><i>Left-Hand (or Anti-Clockwise) Polarized Wave:</i> An elliptically- or circularly-polarized wave, in which the electric field vector, observed in any fixed plane, normal to the direction of propagation, whilst looking in the direction of propagation, rotates with time in a left-hand or anti-clockwise direction.</p>
MOD	3143 94	150	6.20	<p><i>Power:</i> Whenever the power of a radio transmitter etc. is referred to it shall be expressed in one of the following forms, according to the <i>class of emission</i>, using the arbitrary symbols indicated:</p> <ul style="list-style-type: none"> – <i>peak envelope power</i> (PX or pX); – <i>mean power</i> (PY or pY); – <i>carrier power</i> (PZ or pZ). <p>For different <i>classes of emission</i>, the relationships between <i>peak envelope power</i>, <i>mean power</i> and <i>carrier power</i>, under the conditions of normal operation and of no modulation, are contained in CCIR Recommendations which may be used as a guide.</p> <p>For use in formulae, the symbol <i>p</i> denotes power expressed in watts and the symbol <i>P</i> denotes power expressed in decibels relative to a reference level.</p>

MOD	3144 95	151	6.21	<i>Peak Envelope Power</i> (of a radio transmitter): The average power supplied to the antenna transmission line by a transmitter during one radio frequency cycle at the crest of the modulation envelope taken under normal operating conditions.
MOD	3145 96	152	6.22	<i>Mean Power</i> (of a radio transmitter): The average power supplied to the antenna transmission line by a transmitter during an interval of time sufficiently long compared with the lowest frequency encountered in the modulation taken under normal operating conditions.
MOD	3146 97	153	6.23	<i>Carrier Power</i> (of a radio transmitter): The average power supplied to the antenna transmission line by a transmitter during one radio frequency cycle taken under the condition of no modulation.
MOD	3149 99	154	6.24	<i>Gain of an Antenna</i> : The ratio, usually expressed in decibels, of the power required at the input of a loss free reference antenna to the power supplied to the input of the given antenna to produce, in a given direction, the same field strength or the same power flux-density at the same distance. When not specified otherwise, the gain refers to the direction of maximum <i>radiation</i> . The gain may be considered for a specified polarization.

Depending on the choice of the reference antenna a distinction is made between:

- a) *absolute or isotropic gain* (G_i), when the reference antenna is an isotropic antenna isolated in space;
- b) *gain relative to a half-wave dipole* (G_d), when the reference antenna is a half-wave dipole isolated in space whose equatorial plane contains the given direction;
- c) *gain relative to a short vertical antenna* (G_v), when the reference antenna is a linear conductor, much shorter than one quarter of the wavelength, normal to the surface of a perfectly conducting plane which contains the given direction.

MOD	3148 98A	155	6.25	<i>Equivalent Isotropically Radiated Power (e.i.r.p.)</i> : The product of the power supplied to the antenna and the antenna gain in a given direction relative to an isotropic antenna (<i>absolute or isotropic gain</i>).
MOD	3147 98	156	6.26	<i>Effective Radiated Power (e.r.p.)</i> (in a given direction): The product of the power supplied to the antenna and its <i>gain relative to a half-wave dipole</i> in a given direction.
ADD	3147A	157	6.27	<i>Effective Monopole Radiated Power (e.m.r.p.)</i> (in a given direction): The product of the power supplied to the antenna and its <i>gain relative to a short vertical antenna</i> in a given direction.
NOC	3022 26	158	6.28	<i>Tropospheric Scatter</i> : The propagation of <i>radio waves</i> by scattering as a result of irregularities or discontinuities in the physical properties of the troposphere.
NOC	3023 27	159	6.29	<i>Ionospheric Scatter</i> : The propagation of <i>radio waves</i> by scattering as a result of irregularities or discontinuities in the ionization of the ionosphere.

ADD

Section VII. Frequency Sharing

- ADD 3140A 160 7.1 *Interference*: The effect of unwanted energy due to one or a combination of *emissions, radiations*, or inductions upon reception in a *radiocommunication* system, manifested by any performance degradation, misinterpretation, or loss of information which could be extracted in the absence of such unwanted energy.
- ADD 3142A 161 7.2 *Permissible Interference*¹: Observed or predicted *interference* which complies with quantitative *interference* and sharing criteria contained in these Regulations or in CCIR Recommendations or in special agreements as provided for in these Regulations.
- ADD 3140B 162 7.3 *Accepted Interference*¹: *Interference* at a higher level than that defined as *permissible interference* and which has been agreed upon between two or more administrations without prejudice to other administrations.
- MOD 3142 163 7.4 *Harmful Interference**: *Interference* which endangers the functioning of a *radionavigation service* or of other *safety services* or seriously degrades, obstructs, or repeatedly interrupts a *radiocommunication service* operating in accordance with these Regulations.

93
- ADD 3142B 164 7.5 *Protection Ratio (R.F.)*: The minimum value of the wanted-to-unwanted signal ratio, usually expressed in decibels, at the receiver input, determined under specified conditions such that a specified reception quality of the wanted signal is achieved at the receiver output.
- MOD 3157 165 7.6 *Coordination Area*: The area associated with an *earth station* outside of which a *terrestrial station* sharing the same frequency band neither causes nor is subject to interfering *emissions* greater than a permissible level.

103D
- MOD 3156 166 7.7 *Coordination Contour*: The line enclosing the *coordination area*.

103C
- MOD 3155 167 7.8 *Coordination Distance*: Distance on a given azimuth from an *earth station* beyond which a *terrestrial station* sharing the same frequency band neither causes nor is subject to interfering *emissions* greater than a permissible level.

103B
- MOD 3154 168 7.9 *Equivalent Satellite Link Noise Temperature*: The noise temperature referred to the output of the receiving antenna of the *earth station* corresponding to the radio frequency noise power which produces the total observed noise at the output of the *satellite link* excluding noise due to *interference* coming from *satellite links* using other *satellites* and from terrestrial systems.

103A

ADD 3142A.1 161.1 }
 ADD 3140B.1 162.1 } ¹ The terms “permissible interference” and “accepted interference” are used in the coordination of frequency assignments between administrations.

* See Resolution 68.

ADD		Section VIII. Technical Terms Relating to Space	
NOC	3123 84BA	169	8.1 <i>Deep Space</i> : Space at distances from the Earth approximately equal to, or greater than, the distance between the Earth and the Moon.
NOC	3124 84BAA	170	8.2 <i>Spacecraft</i> : A man-made vehicle which is intended to go beyond the major portion of the Earth's atmosphere.
(MOD)	3125 84BAB	171	8.3 <i>Satellite</i> : A body which revolves around another body of preponderant mass and which has a motion primarily and permanently determined by the force of attraction of that other body.
MOD	3126 84BAC	172	8.4 <i>Active Satellite</i> : A <i>satellite</i> carrying a <i>station</i> intended to transmit or retransmit radiocommunication signals.
MOD	3127 84BAD	173	8.5 <i>Reflecting Satellite</i> : A <i>satellite</i> intended to reflect radiocommunication signals.
ADD	3127A	174	8.6 <i>Active Sensor</i> : A measuring instrument in the <i>earth exploration-satellite service</i> or in the <i>space research service</i> by means of which information is obtained by transmission and reception of <i>radio waves</i> .
ADD	3127B	175	8.7 <i>Passive Sensor</i> : A measuring instrument in the <i>earth exploration-satellite service</i> or in the <i>space research service</i> by means of which information is obtained by reception of <i>radio waves</i> of natural origin.
MOD	3128 84BB	176	8.8 <i>Orbit</i> : The path, relative to a specified frame of reference, described by the centre of mass of a <i>satellite</i> or other object in space subjected primarily to natural forces, mainly the force of gravity.
MOD	3129 84BC	177	8.9 <i>Inclination of an Orbit</i> (of an earth satellite): The angle determined by the plane containing the <i>orbit</i> and the plane of the Earth's equator.
MOD	3130 84BD	178	8.10 <i>Period</i> (of a satellite): The time elapsing between two consecutive passages of a <i>satellite</i> through a characteristic point on its <i>orbit</i> .
(MOD)	3131 84BE	179	8.11 <i>Altitude of the Apogee or Perigee</i> : The altitude of the apogee or perigee above a specified reference surface serving to represent the surface of the Earth.
NOC	3132 84BFA	180	8.12 <i>Geosynchronous Satellite</i> : An earth <i>satellite</i> whose period of revolution is equal to the period of rotation of the Earth about its axis.
MOD	3133 84BG	181	8.13 <i>Geostationary Satellite</i> : A <i>geosynchronous satellite</i> whose circular and direct <i>orbit</i> lies in the plane of the Earth's equator and which thus remains fixed relative to the Earth; by extension, a <i>satellite</i> which remains approximately fixed relative to the Earth.
ADD	3133A	182	8.14 <i>Geostationary-satellite orbit</i> : The <i>orbit</i> in which a <i>satellite</i> must be placed to be a <i>geostationary satellite</i> .

**Nomenclature of the Frequency and Wavelength Bands
Used in Radiocommunication**

MOD 3183 208
112

§ 1. The radio spectrum shall be subdivided into nine frequency bands, which shall be designated by progressive whole numbers in accordance with the following table. As the unit of frequency is the hertz (Hz), frequencies shall be expressed:

- in kilohertz (kHz), up to and including 3 000 kHz;
- in megahertz (MHz), above 3 MHz, up to and including 3 000 MHz;
- in gigahertz (GHz), above 3 GHz, up to and including 3 000 GHz.

For bands above 3 000 GHz, i.e. centimillimetric waves, micrometric waves and decimicrometric waves, it would be appropriate to use "terahertz (THz)".

However, where adherence to these provisions would introduce serious difficulties, for example in connection with the notification and registration of frequencies, the lists of frequencies and related matters, reasonable departures may be made.

Band Number	Symbols	Frequency Range (lower limit exclusive, upper limit inclusive)	Corresponding Metric Subdivision	Metric Abbreviations for the Bands
4	VLF	3 to 30 kHz	Myriametric waves	B.Mam
5	LF	30 to 300 kHz	Kilometric waves	B.km
6	MF	300 to 3 000 kHz	Hectometric waves	B.hm
7	HF	3 to 30 MHz	Decametric waves	B.dam
8	VHF	30 to 300 MHz	Metric waves	B.m
9	UHF	300 to 3 000 MHz	Decimetric waves	B.dm
10	SHF	3 to 30 GHz	Centimetric waves	B.cm
11	EHF	30 to 300 GHz	Millimetric waves	B.mm
12		300 to 3 000 GHz	Decimillimetric waves	

Note 1: "Band Number N" (N = band number) extends from 0.3×10^N Hz to 3×10^N Hz.

Note 2: Prefix: k = kilo (10^3), M = mega (10^6), G = giga (10^9), T = tera (10^{12}).

ADD 3183A 209

§ 2. In communications between administrations and the ITU, no names, symbols or abbreviations should be used for the various frequency bands other than those specified in No. 208.

NOC

Designation of Emissions

SUP 3209
to
3216

inclusive together with associated section headings.

ADD 3209A 264

§ 1. (1) Emissions shall be designated according to their necessary bandwidth and their classification.

ADD 3209B 265

(2) Examples of emissions designated in accordance with this Article are given in Appendix 6, Part B. Further examples may appear in the latest CCIR Recommendations. These examples may also be published in the Preface to the International Frequency List.

ADD

Section I. Necessary Bandwidth

ADD 3210A 266

§ 2. (1) The necessary bandwidth, as defined in No. 146 and determined in accordance with Appendix 6, Part B, shall be expressed by three numerals and one letter. The letter occupies the position of the decimal point and represents the unit of bandwidth. The first character shall be neither zero nor K, M or G.

ADD 267

(2) Necessary bandwidths ¹:

between 0.001 and 999 Hz shall be expressed in Hz (letter H);
between 1.00 and 999 kHz shall be expressed in kHz (letter K);
between 1.00 and 999 MHz shall be expressed in MHz (letter M);
between 1.00 and 999 GHz shall be expressed in GHz (letter G).

ADD

Section II. Classification

ADD 3211A 268

§ 3. The class of emission is a set of characteristics conforming to No. 269.

ADD 3212A 269

§ 4. Emissions shall be classified and symbolized according to their basic characteristics as given in No. 270 and any optional additional characteristics as provided for in Appendix 6, Part A.

ADD 3210A.1 267.1

¹ Examples:

0.002 Hz = H002	6 kHz = 6K00	1.25 MHz = 1M25
0.1 Hz = H100	12.5 kHz = 12K5	2 MHz = 2M00
25.3 Hz = 25H3	180.4 kHz = 180K	10 MHz = 10M0
400 Hz = 400H	180.5 kHz = 181K	202 MHz = 202M
2.4 kHz = 2K40	180.7 kHz = 181K	5.65 GHz = 5G65

- ADD 3213A 270 § 5. The basic characteristics (see Nos. 271, 272, 273) are:
- (1) first symbol – type of modulation of the main carrier;
 - (2) second symbol – nature of signal(s) modulating the main carrier;
 - (3) third symbol – type of information to be transmitted.

Modulation used only for short periods and for incidental purposes (such as, in many cases, for identification or calling) may be ignored provided that the necessary bandwidth as indicated is not thereby increased.

- ADD 3214A 271 § 6. (1) First symbol – type of modulation of the main carrier
- (1.1) Emission of an unmodulated carrier N
 - (1.2) Emission in which the main carrier is amplitude-modulated (including cases where sub-carriers are angle-modulated)
 - (1.2.1) Double-sideband A
 - (1.2.2) Single-sideband, full carrier H
 - (1.2.3) Single-sideband, reduced or variable level carrier R
 - (1.2.4) Single-sideband, suppressed carrier J
 - (1.2.5) Independent sidebands B
 - (1.2.6) Vestigial sideband C
 - (1.3) Emission in which the main carrier is angle-modulated
 - (1.3.1) Frequency modulation F
 - (1.3.2) Phase modulation G
 - (1.4) Emission in which the main carrier is amplitude- and angle-modulated either simultaneously or in a pre-established sequence D
 - (1.5) Emission of pulses¹
 - (1.5.1) Sequence of unmodulated pulses P
 - (1.5.2) A sequence of pulses
 - (1.5.2.1) modulated in amplitude K
 - (1.5.2.2) modulated in width/duration L

ADD 3214A.1 271.1 ¹ Emissions, where the main carrier is directly modulated by a signal which has been coded into quantized form (e.g. pulse code modulation), should be designated under (1.2) or (1.3).

			(1.5.2.3) modulated in position/phase	M
			(1.5.2.4) in which the carrier is angle-modulated during the period of the pulse	Q
			(1.5.2.5) which is a combination of the foregoing or is produced by other means	V
			(1.6) Cases not covered above, in which an emission consists of the main carrier modulated, either simultaneously or in a pre-established sequence, in a combination of two or more of the following modes: amplitude, angle, pulse	W
			(1.7) Cases not otherwise covered	X
ADD	3215A	272	(2) Second symbol – nature of signal(s) modulating the main carrier	
			(2.1) No modulating signal	0
			(2.2) A single channel containing quantized or digital information without the use of a modulating sub-carrier ¹	1
			(2.3) A single channel containing quantized or digital information with the use of a modulating sub-carrier ¹	2
			(2.4) A single channel containing analogue information	3
			(2.5) Two or more channels containing quantized or digital information	7
			(2.6) Two or more channels containing analogue information	8
			(2.7) Composite system with one or more channels containing quantized or digital information, together with one or more channels containing analogue information	9
			(2.8) Cases not otherwise covered	X
ADD	3216A	273	(3) Third symbol – type of information to be transmitted ²	
			(3.1) No information transmitted	N
			(3.2) Telegraphy – for aural reception	A
			(3.3) Telegraphy – for automatic reception	B

ADD 3215A.1 272.1 ¹ This excludes time-division multiplex.

ADD 3216A.1 273.1 ² In this context the word “information” does not include information of a constant, unvarying nature such as provided by standard frequency emissions, continuous wave and pulse radars, etc.

- | | |
|-------------------------------------------------|---|
| (3.4) Facsimile | C |
| (3.5) Data transmission, telemetry, telecommand | D |
| (3.6) Telephony (including sound broadcasting) | E |

MOD

Technical Characteristics of Stations

NOC	3242 667	299	§ 1. (1) The choice and performance of equipment to be used in a station and any emissions therefrom shall satisfy the provisions of these Regulations.
NOC	3243 668	300	(2) Also, as far as is compatible with practical considerations, the choice of transmitting, receiving and measuring equipment shall be based on the most recent advances in the technique as indicated, inter alia, in CCIR Recommendations.
MOD	3244 669	301	§ 2. Transmitting and receiving equipment intended to be used in a given part of the frequency spectrum should be designed to take into account the technical characteristics of transmitting and receiving equipment likely to be employed in neighbouring and other parts of the spectrum, provided that all technically and economically justifiable measures have been taken to reduce the level of unwanted emissions from the latter transmitting equipment and to reduce the susceptibility to interference of the latter receiving equipment.
MOD	3245 670	302	§ 3. To the maximum extent possible, equipment to be used in a station should apply signal processing methods which enable the most efficient use of the frequency spectrum in accordance with the relevant CCIR Recommendations. These methods include, inter alia, certain bandwidth expansion techniques, and in particular, in amplitude-modulation systems, the use of the single-sideband technique.
NOC	3246 671	303	§ 4. (1) Transmitting stations shall conform to the frequency tolerances specified in Appendix 7.
MOD	3247 672	304	(2) Transmitting stations shall conform to the maximum permitted spurious emission power levels specified in Appendix 8.
ADD	3247A	305	(3) Transmitting stations shall conform to the maximum permitted power levels for out-of-band emissions specified for certain services and classes of emission in the present Regulations, e.g. Appendices 17 and 27 Aer2 *. In the absence of such specified maximum permitted power levels transmitting stations shall, to the maximum extent possible, satisfy the requirements relating to the limitation of the out-of-band emissions specified in the most recent CCIR Recommendations.

* Note by the General Secretariat: See No. 5189 and Resolution 400.

MOD	3248 673	306	(4) Moreover, every effort should be made to keep frequency tolerances and levels of unwanted emissions at the lowest values which the state of the technique and the nature of the service permit.
MOD	3249 674	307	§ 5. (1) The bandwidths of emissions also shall be such as to ensure the most efficient utilization of the spectrum; in general this requires that bandwidths be kept at the lowest values which the state of the technique and the nature of the service permit. Appendix 6 is provided as a guide for the determination of the necessary bandwidth.
ADD	3249A	308	(2) Where bandwidth-expansion techniques are used, the minimum spectral power density consistent with efficient spectrum utilization shall be employed.
ADD	3249B	309	§ 6. (1) Wherever necessary for efficient spectrum use, the receivers used by any service should comply as far as possible with the frequency tolerances of the transmitters of that service, due regard being paid to the Doppler effect where appropriate.
ADD	3249C	310	(2) Receiving stations should use equipment with technical characteristics appropriate for the class of emission concerned; in particular, selectivity should be appropriate having regard to No. 307 on the bandwidths of emissions.
ADD	3249D	311	(3) The performance characteristics of receivers should be adequate to ensure that they do not suffer from interference due to transmitters situated at a reasonable distance and which operate in accordance with these Regulations.
MOD	3250 675	312	§ 7. To ensure compliance with these Regulations, administrations shall arrange for frequent checks to be made of the emissions of stations under their jurisdiction. For this purpose, they shall use the means indicated in Article 20, if required. The technique of measurements and the intervals of measurements to be employed shall be, as far as is practicable, in accordance with the most recent CCIR Recommendations.
MOD	3251 677	313	§ 8. The use of damped wave emissions is forbidden in all stations.
		314 to 338	NOT allocated.

NOC NIII CHAPTER III

Frequencies

N5/3 ARTICLE 6

NOC General Rules for the Assignment and Use of Frequencies

ADD 3276A 339 § 1. Members shall endeavour to limit the number of frequencies and the spectrum space used to the minimum essential to provide in a satisfactory manner the necessary services. To that end they shall endeavour to apply the latest technical advances as soon as possible ¹.

MOD 3277 340 § 2. Members undertake that in assigning frequencies to stations which are capable of causing harmful interference to the services rendered by the stations of another country, such assignments are to be made in accordance with the Table of Frequency Allocations and other provisions of these Regulations.

NOC 3278 341 § 3. Any new assignment or any change of frequency or other basic characteristic of an existing assignment (see Appendix 1 or Appendix 3) shall be made in such a way as to avoid causing harmful interference to services rendered by stations using frequencies assigned in accordance with the Table of Frequency Allocations in this Chapter and the other provisions of these Regulations, the characteristics of which assignments are recorded in the Master International Frequency Register.

MOD 3279 342 § 4. Administrations of the Members shall not assign to a station any frequency in derogation of either the Table of Frequency Allocations given in this Chapter or the other provisions of these Regulations, except on the express condition that harmful interference shall not be caused to services carried on by stations operating in accordance with the provisions of the Convention and of these Regulations.

NOC 3280 343 § 5. The frequency assigned to a station of a given service shall be separated from the limits of the band allocated to this service in such a way that, taking account of the frequency band assigned to a station, no harmful interference is caused to services to which frequency bands immediately adjoining are allocated.

ADD 3276A.1 339.1 ¹ No. 130 of the International Telecommunication Convention (Malaga-Torremolinos, 1973).

NOC	3281 116A	344	§ 6. For the purpose of resolving cases of harmful interference, the radio astronomy service shall be treated as a radiocommunication service. However, protection from services in other bands shall be afforded the radio astronomy service only to the extent that such services are afforded protection from each other.
ADD	3281A	345	§ 7. For the purpose of resolving cases of harmful interference, the space research (passive) service and the earth exploration-satellite (passive) service shall be afforded protection from different services in other bands only to the extent that these different services are protected from each other.
MOD	3282 117	346	§ 8. Where, in adjacent Regions or sub-Regions, a band of frequencies is allocated to different services of the same category (see Sections I and II of Article 8), the basic principle is the equality of right to operate. Accordingly, the stations of each service in one Region or sub-Region must operate so as not to cause harmful interference to services in the other Regions or sub-Regions.
ADD	3283	347	§ 9. No provision of these Regulations prevents the use by a station in distress of any means of radiocommunication at its disposal to attract attention, make known its condition and location, and obtain assistance.
ADD	3284	348	§ 10. No provision of these Regulations prevents the use by a station, in the exceptional circumstances described in No. 347, of any means of radiocommunication at its disposal to assist a station in distress.
		349 to 373	NOT allocated.

Frequency Allocations

ADD

Introduction

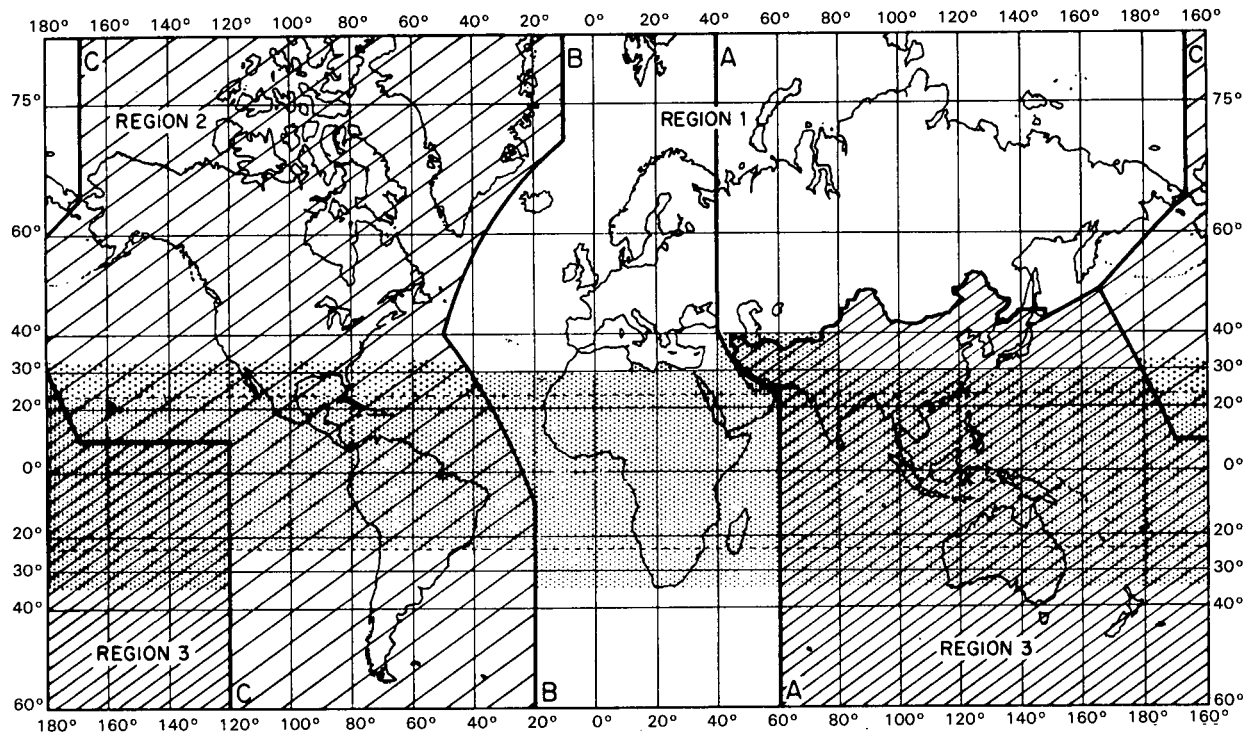

ADD **3414A** **391** § 1. In all documents of the Union where the terms ALLOCATION, ALLOTMENT and ASSIGNMENT are to be used, they shall have the meaning given them in Nos. 17 to 19, the terms used in the three working languages being as follows:

Frequency distribution to:	French	English	Spanish
Services	Attribution (attribuer)	Allocation (to allocate)	Atribución (atribuir)
Areas or countries	Allotissement (allotir)	Allotment (to allot)	Adjudicación (adjudicar)
Stations	Assiguation (assigner)	Assignment (to assign)	Asignación (asignar)

NOC

Section I. Regions and Areas

MOD 3415 392 § 2. For the allocation of frequencies the world has been divided into three
125 Regions¹ as shown in the following chart and described in Nos. 393 to 399:

The shaded part represents the Tropical Zone as defined in Nos. 406 to 410 and 411.

NOC 3416 393 *Region 1:*
126

Region 1 includes the area limited on the east by line A (lines A, B and C are defined below) and on the west by line B, excluding any of the territory of Iran which lies between these limits. It also includes that part of the territory of Turkey and the Union of Soviet Socialist Republics lying outside of these limits, the territory of the Mongolian People's Republic, and the area to the north of the U.S.S.R. which lies between lines A and C.

NOC 3417 394 *Region 2:*
127

Region 2 includes the area limited on the east by line B and on the west by line C.

NOC 3418 395 *Region 3:*
128

Region 3 includes the area limited on the east by line C and on the west by line A, except the territories of the Mongolian People's Republic, Turkey, the territory of the U.S.S.R. and the area to the north of the U.S.S.R. It also includes that part of the territory of Iran lying outside of those limits.

NOC 3415.1 392.1
125.1

¹ It should be noted that where the words "regions" or "regional" are without a capital "R" in these Regulations, they do not relate to the three Regions here defined for purposes of frequency allocation.

NOC	3419 129	396		The lines A, B and C are defined as follows:
NOC	3420 130	397	<i>Line A:</i>	
				Line A extends from the North Pole along meridian 40° East of Greenwich to parallel 40° North; thence by great circle arc to the intersection of meridian 60° East and the Tropic of Cancer; thence along the meridian 60° East to the South Pole.
NOC	3421 131	398	<i>Line B:</i>	
				Line B extends from the North Pole along meridian 10° West of Greenwich to its intersection with parallel 72° North; thence by great circle arc to the intersection of meridian 50° West and parallel 40° North; thence by great circle arc to the intersection of meridian 20° West and parallel 10° South; thence along meridian 20° West to the South Pole.
NOC	3422 132	399	<i>Line C:</i>	
				Line C extends from the North Pole by great circle arc to the intersection of parallel 65° 30' North with the international boundary in Bering Strait; thence by great circle arc to the intersection of meridian 165° East of Greenwich and parallel 50° North; thence by great circle arc to the intersection of meridian 170° West and parallel 10° North; thence along parallel 10° North to its intersection with meridian 120° West; thence along meridian 120° West to the South Pole.
ADD	3422A	400	§ 3.	For the purposes of these Regulations, the term "African Broadcasting Area" means:
		401	a)	African countries, parts of countries, territories and groups of territories situated between the parallels 40° South and 30° North;
		402	b)	islands in the Indian Ocean west of meridian 60° East of Greenwich, situated between the parallel 40° South and the great circle arc joining the points 45° East, 11° 30' North and 60° East, 15° North;
		403	c)	islands in the Atlantic Ocean east of Line B defined in No. 398 of these Regulations, situated between the parallels 40° South and 30° North.
MOD	3423 133	404	§ 4.	The "European Broadcasting Area" is bounded on the west by the western boundary of Region 1, on the east by the meridian 40° East of Greenwich and on the south by the parallel 30° North so as to include the western part of the U.S.S.R., the northern part of Saudi Arabia and that part of those countries bordering the Mediterranean within these limits. In addition, Iraq and Jordan are included in the European Broadcasting Area.
NOC	3424 134	405	§ 5.	The "European Maritime Area" is bounded on the north by a line extending along parallel 72° North from its intersection with meridian 55° East of Greenwich to its intersection with meridian 5° West, then along meridian 5° West to its intersection with parallel 67° North, thence along parallel 67° North to its intersection with meridian 30° West; on the west by a line extending along

meridian 30° West to its intersection with parallel 30° North; on the south by a line extending along parallel 30° North to its intersection with meridian 43° East; on the east by a line extending along meridian 43° East to its intersection with parallel 60° North, thence along parallel 60° North to its intersection with meridian 55° East and thence along meridian 55° East to its intersection with parallel 72° North.

MOD 3425 406 § 6. (1) The "Tropical Zone" (see chart in No. 392) is defined as:
 135
 407 a) the whole of that area in Region 2 between the Tropics of Cancer
 and Capricorn;
 408 b) the whole of that area in Regions 1 and 3 contained between the
 parallels 30° North and 35° South with the addition of:
 409 1) the area contained between the meridians 40° East and 80°
 East of Greenwich and the parallels 30° North and 40° North;
 410 2) that part of Libya north of parallel 30° North.

MOD 3426 411 (2) In Region 2, the Tropical Zone may be extended to parallel 33° North,
 136 subject to special agreements between the countries concerned in that Region (see
 Article 7).

ADD 3426A 412 § 7. A sub-Region is an area consisting of two or more countries in the same
 Region.

NOC **Section II. Categories of Services and Allocations**

MOD 3427 413 *Primary, Permitted and Secondary Services*

MOD 3428 414 § 8. (1) Where, in a box of the Table in Section IV of this Article, a band is
 137 indicated as allocated to more than one service, either on a worldwide or Regional
 basis, such services are listed in the following order:

- 415 a) services, the names of which are printed in "capitals" (example:
FIXED); these are called "primary" services;
- 416 b) services, the names of which are printed in "capitals between
oblique strokes" (example: /RADIOLOCATION/); these are called
"permitted" services (see No. 419);
- 417 c) services, the names of which are printed in "normal characters"
(example: Mobile); these are called "secondary" services (see
Nos. 420 to 423).

418 (2) Additional remarks shall be printed in normal characters (example:
MOBILE except aeronautical mobile).

NOC 3429 419 (3) Permitted and primary services have equal rights, except that, in the
 138 preparation of frequency plans, the primary service, as compared with the permitted
 service, shall have prior choice of frequencies.

NOC	3430 139	420	(4) Stations of a secondary service:
		421	a) shall not cause harmful interference to stations of primary or permitted services to which frequencies are already assigned or to which frequencies may be assigned at a later date;
		422	b) cannot claim protection from harmful interference from stations of a primary or permitted service to which frequencies are already assigned or may be assigned at a later date;
		423	c) can claim protection, however, from harmful interference from stations of the same or other secondary service(s) to which frequencies may be assigned at a later date.
MOD	3431 140	424	(5) Where a band is indicated in a footnote of the Table as allocated to a service “on a secondary basis” in an area smaller than a Region, or in a particular country, this is a secondary service (see Nos. 420 to 423).
MOD	3432 141	425	(6) Where a band is indicated in a footnote of the Table as allocated to a service “on a primary basis”, or “on a permitted basis” in an area smaller than a Region, or in a particular country, this is a primary service or a permitted service only in that area or country (see No. 419).
MOD	3433	426	<i>Additional Allocations</i>
MOD	3434 142	427	§ 9. (1) Where a band is indicated in a footnote of the Table as “also allocated” to a service in an area smaller than a Region, or in a particular country, this is an “additional” allocation, i.e. an allocation which is added in this area or in this country to the service or services which are indicated in the Table (see No. 428).
MOD	3435 143	428	(2) If the footnote does not include any restriction on the service or services concerned apart from the restriction to operate only in a particular area or country, stations of this service or these services shall have equality of right to operate with stations of the other primary service or services indicated in the Table.
MOD	3436 144	429	(3) If restrictions are imposed on an additional allocation in addition to the restriction to operate only in a particular area or country, this is indicated in the footnote of the Table.
NOC	3437	430	<i>Alternative Allocations</i>
MOD	3438 145	431	§ 10. (1) Where a band is indicated in a footnote of the Table as “allocated” to one or more services in an area smaller than a Region, or in a particular country, this is an “alternative” allocation, i.e. an allocation which replaces, in this area or in this country, the allocation indicated in the Table (see No. 432).
MOD	3439 146	432	(2) If the footnote does not include any restriction on stations of the service or services concerned, apart from the restriction to operate only in a particular area or country, these stations of such a service or services shall have an equality of right to operate with stations of the primary service or services, indicated in the Table, to which the band is allocated in other areas or countries.

NOC	3440 147	433	(3) If restrictions are imposed on stations of a service to which an alternative allocation is made, in addition to the restriction to operate only in a particular country or area, this is indicated in the footnote.
NOC	3441	434	<i>Miscellaneous Provisions</i>
NOC	3442 148	435	§ 11. (1) Where it is indicated in these Regulations that a service may operate in a specific frequency band subject to not causing harmful interference, this means also that this service cannot claim protection from harmful interference caused by other services to which the band is allocated under Chapter III of these Regulations.
NOC	3443 149	436	(2) Except if otherwise specified in a footnote, the term “fixed service”, where appearing in Section IV of this Article, does not include systems using ionospheric scatter propagation.
NOC			Section III. Description of the Table of Frequency Allocations
NOC	3444 150	437	§ 12. (1) The heading of the Table in Section IV of this Article includes three columns, each of which corresponds to one of the Regions (see No. 392). Where an allocation occupies the whole of the width of the Table or only one or two of the three columns, this is a worldwide allocation or a Regional allocation, respectively.
MOD	3445 151	438	(2) The frequency band referred to in each allocation is indicated in the left-hand top corner of the part of the Table concerned.
NOC	3446 152	439	(3) Within each of the categories specified in Nos. 415 to 417, services are listed in alphabetical order according to the French language. The order of listing does not indicate relative priority within each category.
ADD	3446A	440	(4) In the case where there is a parenthetical addition to an allocation in the Table, that service allocation is restricted to the type of operation so indicated.
NOC	3447 153	441	(5) The footnote references which appear in the Table below the allocated service or services apply to the whole of the allocation concerned.
NOC	3448 154	442	(6) The footnote references which appear to the right of the name of a service are applicable only to that particular service.
NOC	3449 155	443	(7) In certain cases, the names of countries appearing in the footnotes have been simplified in order to shorten the text.

Section IV. Table of Frequency Allocations
(See No. 208)

kHz
9 — 19.95

Allocation to Services		
Region 1	Region 2	Region 3
Below 9	(not allocated)	
	444 445	
9 — 14	RADIONAVIGATION	
14 — 19.95	FIXED	
	MARITIME MOBILE 448	
	446 447	

- MOD 3451 444 Administrations authorizing the use of frequencies below 9 kHz shall ensure that
157 no harmful interference is caused thereby to the services to which the bands above
9 kHz are allocated (see No. 1816).
- ADD 3451A 445 Administrations conducting scientific research using frequencies below 9 kHz are
urged to advise other administrations that may be concerned in order that such
research may be afforded all practicable protection from harmful interference.
- ADD 3452A 446 *Additional allocation:* in Bulgaria, Hungary, Poland, the German Democratic
Republic, Czechoslovakia and the U.S.S.R., the band 14 — 17 kHz is also allocated
to the radionavigation service on a permitted basis.
- MOD 3453 447 The stations of services to which the bands 14 — 19.95 kHz and 20.05 — 70 kHz
159 and in Region 1 also the bands 72 — 84 kHz and 86 — 90 kHz are allocated may
transmit standard frequency and time signals. Such stations shall be afforded protec-
tion from harmful interference. In Bulgaria, Hungary, Mongolia, Poland, Czechoslo-
vakia and the U.S.S.R., the frequencies 25 kHz and 50 kHz will be used for this pur-
pose under the same conditions.
- MOD 3452 448 The use of the bands 14 — 19.95 kHz, 20.05 — 70 kHz, 70 — 90 kHz (72 — 84
158 kHz and 86 — 90 kHz in Region 1) and 90 — 110 kHz by the maritime mobile service
is limited to coast radiotelegraph stations (A1A and F1B only). Exceptionally, the use
of class J2B or J7B emissions is authorized subject to the necessary bandwidth not
exceeding that normally used for class A1A or F1B emissions in the bands concerned.

- ADD 3455A 449 *Additional allocation:* in Bulgaria, Hungary, Poland, the German Democratic Republic, Czechoslovakia and the U.S.S.R., the band 67 — 70 kHz is also allocated to the radionavigation service on a permitted basis.
- MOD 3459 450 165 *Different category of service:* in Bangladesh, Iran and Pakistan, the allocation of the bands 70 — 72 kHz and 84 — 86 kHz to the fixed and maritime mobile services is on a primary basis (see No. 425).
- MOD 3456 451 162 The use of the bands 70 — 90 kHz (70 — 86 kHz in Region 1) and 110 — 130 kHz (112 — 130 kHz in Region 1) by the radionavigation service is limited to continuous wave systems.
- MOD 3458 452 164 In Region 2, the establishment and operation of stations in the maritime radionavigation service in the bands 70 — 90 kHz and 110 — 130 kHz shall be subject to agreement obtained under the procedure set forth in Article 14 with administrations whose services, operating in accordance with the Table, may be affected. However, stations of the fixed, maritime mobile and radiolocation services shall not cause harmful interference to stations in the maritime radionavigation service established under such agreements.

kHz
90 — 110

Allocation to Services		
Region 1	Region 2	Region 3
90 — 110 RADIONAVIGATION 453 Fixed Maritime Mobile 448 454		

- ADD 3461A 453 Administrations which operate stations in the radionavigation service in the band 90 — 110 kHz are urged to coordinate technical and operating characteristics in such a way as to avoid harmful interference to the services provided by these stations.
- MOD 3461 454 167 Only classes A1A or F1B, A2C, A3C, F1C or F3C emissions are authorized for stations of the fixed service in the bands allocated to this service between 90 kHz and 160 kHz (148.5 kHz in Region 1) and for stations of the maritime mobile service in the bands allocated to this service between 110 kHz and 160 kHz (148.5 kHz in Region 1). Exceptionally, class J2B or J7B emissions are also authorized in the bands between 110 kHz and 160 kHz (148.5 kHz in Region 1) for stations of the maritime mobile service.

kHz

- ADD 3466A 458 In Region 1, the change of the band limits from 150 kHz and 285 kHz to 148.5 kHz and 283.5 kHz respectively shall take place on 1 February 1986 for the lower limit and 1 February 1990 for the upper limit (see Resolution 500).
- MOD 3472 459 179 In the Region 2 polar areas (north of 60° N and south of 60° S), which are subject to auroral disturbances, the aeronautical fixed service is the primary service in the band 160 — 190 kHz.
- MOD 3469 460 176 *Alternative allocation:* in Angola, Botswana, Burundi, the Congo, Malawi, Rwanda, South Africa and Zaire, the band 160 — 200 kHz is allocated to the fixed service on a primary basis.
- ADD 3469AB 461 *Additional allocation:* in Somalia, the band 200 — 255 kHz is also allocated to the aeronautical radionavigation service on a primary basis.
- ADD 3469A 462 *Alternative allocation:* in Angola, Botswana, Burundi, Cameroon, the Central African Republic, the Congo, Ethiopia, Kenya, Lesotho, Madagascar, Malawi, Mozambique, Namibia, Nigeria, Oman, Rwanda, South Africa, Swaziland, Tanzania, Chad, Zaire, Zambia and Zimbabwe, the band 200 — 283.5 kHz is allocated to the aeronautical radionavigation service on a primary basis.
- ADD 3469AC 463 *Different category of service:* in Sudan and Yemen (P.D.R. of), the allocation of the band 255 — 283.5 kHz to the aeronautical radionavigation service is on a primary basis (see No. 425).
- ADD 3472A 464 *Alternative allocation:* in Tunisia, the band 255 — 283.5 kHz is allocated to the broadcasting service on a primary basis.

MOD 3466 457 173 *Additional allocation:* in Bulgaria, Hungary, Mongolia, Poland, the German Democratic Republic, Roumania, Czechoslovakia and the U.S.S.R., the band 130 — 148.5 kHz is also allocated to the radionavigation service on a secondary basis. Within and between these countries this service shall have an equal right to operate.

ADD 3472B 466

MOD 3473 180 467

In the band 285 — 325 kHz (283.5 — 325 kHz in Region 1), in the maritime radionavigation service, radiobeacon stations may also transmit supplementary navigational information using narrow-band techniques, on condition that the prime function of the beacon is not significantly degraded.

Different category of service: in the U.S.S.R. and the Black Sea areas of Bulgaria, Roumania and Turkey, the allocation of the band 315 — 325 kHz to the maritime radionavigation service is on a primary basis (see No. 425) under the following conditions:

a) in the Black Sea and White Sea areas, the maritime radionavigation service is the primary service and the aeronautical radionavigation service is the permitted service;

b) in the Baltic Sea area, the assignment of frequencies in this band to new stations in the maritime or aeronautical radionavigation services shall be subject to prior consultation between the administrations concerned.

MOD 3471 178 465

Norwegian stations of the fixed service situated in northern areas (north of 60° N) subject to auroral disturbances are allowed to continue operation on four frequencies in the bands 283.5 — 490 kHz and 510 — 526.5 kHz.

MOD 3475 182 468

The frequency 410 kHz is designated for radio direction-finding in the maritime radionavigation service. The other radionavigation services to which the band 405 — 415 kHz is allocated shall not cause harmful interference to radio direction-finding in the band 406.5 — 413.5 kHz.

ADD	3479A	469	<i>Additional allocation:</i> in Afghanistan, Australia, China, the Overseas French Territories of Region 3, India, Japan and Papua New Guinea, the band 415 — 495 kHz is also allocated to the aeronautical radionavigation service on a permitted basis.
MOD	3479 186	470	The use of the bands 415 — 495 kHz and 505 — 526.5 kHz (505 — 510 kHz in Region 2) by the maritime mobile service is limited to radiotelegraphy.
ADD	3479B	471	The bands 490 — 495 kHz and 505 — 510 kHz shall be subject to the provisions of No. 3018 until the provisions of Recommendation 200 have been implemented.
NOC	3480 187	472	The frequency 500 kHz is the international distress and calling frequency for radiotelegraphy. The conditions for its use are prescribed in Article 38.
MOD	3481 188	473	In Region 1, in the band 505 — 526.5 kHz, the administrations which operate stations of the aeronautical radionavigation service shall take the technical steps necessary to avoid harmful interference to the maritime mobile service.
ADD	3480A	474	In the Federal Republic of Germany, Belgium, Spain, France, Iceland, Italy, Norway, the Netherlands, the United Kingdom, Sweden and Yugoslavia, the frequency 518 kHz is used on an experimental basis for the transmission by coast stations of meteorological and navigational warnings to ships, by means of narrow-band direct-printing telegraphy.
MOD	3478 185	475	In the band 515.5 — 526.5 kHz, Austria may continue to operate only those broadcasting stations listed in Additional Protocol III to the Final Acts of the Regional Administrative LF/MF Broadcasting Conference (Regions 1 and 3), Geneva, 1975. This operation is allowed until the entry into force of a revision of the Geneva Plan, 1975, and subject to not causing harmful interference to the maritime mobile and aeronautical radionavigation services.
ADD	3478A	476	<i>Additional allocation:</i> in the United Kingdom, the band 519.5 — 526.5 kHz is also allocated to the broadcasting service on a secondary basis for the transmission of public utility information.
MOD	3484 191	477	In Region 2, in the band 525 — 535 kHz the carrier power of broadcasting stations shall not exceed 1 kilowatt during the day and 250 watts at night.
MOD	3483 190	478	<i>Additional allocation:</i> in Angola, Botswana, Lesotho, Malawi, Mozambique, Namibia, South Africa, Swaziland, Zambia and Zimbabwe, the band 526.5 — 535 kHz is also allocated to the mobile service on a secondary basis.
ADD	3484A	479	<i>Additional allocation:</i> in China, the band 526.5 — 535 kHz is also allocated to the aeronautical radionavigation service on a secondary basis.

kHz
1 605 — 1 800

ADD 3484B 480 In Region 2, the use of the band 1 605 — 1 705 kHz by stations of the broadcasting service shall be subject to a plan to be established by a regional administrative radio conference (see Recommendation 504).

ADD 3484C 481 In Region 2, until the dates decided by the regional administrative radio conference referred to in No. 480, the band 1 605 — 1 705 kHz is allocated to the fixed, mobile and aeronautical radionavigation services on a primary basis and to the radiolocation service on a secondary basis (see Recommendation 504).

ADD 3492B 482 *Additional allocation:* in Australia, Indonesia, New Zealand, the Philippines, Singapore, Sri Lanka and Thailand, the band 1 606.5 — 1 705 kHz is also allocated to the broadcasting service on a secondary basis.

ADD 3485A 483 *Different category of service:* in Bulgaria, Hungary, Mongolia, Nigeria, Poland, the German Democratic Republic, Chad, Czechoslovakia and the U.S.S.R., the allocation of the bands 1 606.5 — 1 625 kHz, 1 635 — 1 800 kHz and 2 107 — 2 160 kHz to the fixed and land mobile services is on a primary basis (see No. 425).

MOD 3490 195A 484 Some countries of Region 1 use radiodetermination systems in the bands 1 606.5 — 1 625 kHz, 1 635 — 1 800 kHz, 1 850 — 2 160 kHz, 2 194 — 2 300 kHz, 2 502 — 2 850 kHz and 3 500 — 3 800 kHz. The establishment and operation of such systems are subject to agreement obtained under the procedure set forth in Article 14. The radiated mean power of these stations shall not exceed 50 W.

ADD 3485B 485 *Additional allocation:* in Angola, Bulgaria, Hungary, Mongolia, Nigeria, Poland, the German Democratic Republic, Chad, Czechoslovakia and the U.S.S.R., the bands 1 625 — 1 635 kHz, 1 800 — 1 810 kHz and 2 160 — 2 170 kHz are also allocated to the fixed and land mobile services on a primary basis subject to agreement obtained under the procedure set forth in Article 14.

ADD 3490B 486 In Region 1, in the bands 1 625 — 1 635 kHz, 1 800 — 1 810 kHz and 2 160 — 2 170 kHz (except in the countries listed in No. 485 and those listed in No. 499 for the band 2 160 — 2 170 kHz), existing stations in the fixed and mobile, except aeronautical mobile, services (and stations of the aeronautical mobile (OR) service in the band 2 160 — 2 170 kHz) may continue to operate on a primary basis until satisfactory replacement assignments have been found and implemented in accordance with Resolution 38.

ADD 3490A 487 In Region 1, the establishment and operation of stations of the radiolocation service in the bands 1 625 — 1 635 kHz, 1 800 — 1 810 kHz and 2 160 — 2 170 kHz shall be subject to agreement obtained under the procedure set forth in Article 14 (see also No. 486). The radiated mean power of radiolocation stations shall not exceed 50 W. Pulse systems are prohibited.

MOD 3488 194 488 In the Federal Republic of Germany, Denmark, Finland, Hungary, Ireland, Israel, Jordan, Malta, Norway, Poland, the German Democratic Republic, the United Kingdom, Sweden, Czechoslovakia and the U.S.S.R., administrations may allocate up to 200 kHz to their amateur service in the bands 1 715 — 1 800 kHz and 1 850 — 2 000 kHz. However, when allocating the bands within this range to their amateur service, administrations shall, after prior consultation with administrations of neighbouring countries, take such steps as may be necessary to prevent harmful interference from their amateur service to the fixed and mobile services of other countries. The mean power of any amateur station shall not exceed 10 W.

ADD 3492D 490

Alternative allocation: in the Federal Republic of Germany, Angola, Austria, Belgium, Bulgaria, Cameroon, the Congo, Denmark, Egypt, Spain, Ethiopia, France, Greece, Italy, the Lebanon, Luxembourg, Malawi, the Netherlands, Portugal, Syria, the German Democratic Republic, Somalia, Tanzania, Tunisia, Turkey and the U.S.S.R., the band 1 810 — 1 830 kHz is allocated to the fixed and mobile, except aeronautical mobile, services on a primary basis.

ADD 3492E 491

Additional allocation: in Saudi Arabia, Iraq, Israel, Libya, Poland, Roumania, Chad, Czechoslovakia, Togo and Yugoslavia, the band 1 810 — 1 830 kHz is also allocated to the fixed and mobile, except aeronautical mobile, services on a primary basis.

ADD 3492C 492

In Region 1, the use of the band 1 810 — 1 850 kHz by the amateur service is subject to the condition that satisfactory replacement assignments have been found and implemented in accordance with Resolution 38, for frequencies to all existing stations of the fixed and mobile, except aeronautical mobile, services operating in this band (except for the stations of the countries listed in Nos. 490, 491 and 493). On completion of satisfactory transfer, the authorization to use the band 1 810 — 1 830 kHz by the amateur service in countries situated totally or partially north of 40° N shall be given only after consultation with the countries mentioned in Nos. 490 and 491 to define the necessary steps to be taken to prevent harmful interference between amateur stations and stations of other services operating in accordance with Nos. 490 and 491.

ADD 3492F 493

Alternative allocation: in Burundi and Lesotho, the band 1 810 — 1 850 kHz is allocated to the fixed and mobile, except aeronautical mobile, services on a primary basis.

ADD 3492A 494

Alternative allocation: in Argentina, Bolivia, Chile, Mexico, Paraguay, Peru, Uruguay and Venezuela, the band 1 850 — 2 000 kHz is allocated to the fixed, mobile except aeronautical mobile, radiolocation and radionavigation services on a primary basis.

MOD 3499 205 495

In Region 1, in making assignments to stations in the fixed and mobile services in the bands 1 850 — 2 045 kHz, 2 194 — 2 498 kHz, 2 502 — 2 625 kHz and 2 650 — 2 850 kHz, administrations should bear in mind the special requirements of the maritime mobile service.

MOD 3492 198 489

In Region 2, Loran stations operating in the band 1 800 — 2 000 kHz shall cease operation by 31 December 1982. In Region 3, the Loran system operates either on 1 850 kHz or 1 950 kHz, the bands occupied being 1 825 — 1 875 kHz and 1 925 — 1 975 kHz respectively. Other services to which the band 1 800 — 2 000 kHz is allocated may use any frequency therein on condition that no harmful interference is caused to the Loran system operating on 1 850 kHz or 1 950 kHz.

MOD 3493 497
200

In Region 2, except in Greenland, coast stations and ship stations using radiotelephony in the band 2 065 — 2 107 kHz shall be limited to class R3E or J3E emissions and to a peak envelope power not exceeding 1 kW. Preferably, the following carrier frequencies should be used ; 2 065.0 kHz, 2 079.0 kHz, 2 082.5 kHz, 2 086.0 kHz, 2 093.0 kHz, 2 096.5 kHz, 2 100.0 kHz and 2 103.5 kHz. In Argentina, Brazil and Uruguay, the carrier frequencies 2 068.5 kHz and 2 075.5 kHz are also used for this purpose, while the frequencies within the band 2 072 — 2 075.5 kHz are used as provided in No. 4245.

ADD 3493B 498

In Regions 2 and 3, provided no harmful interference is caused to the maritime mobile service, the frequencies between 2 065 kHz and 2 107 kHz may be used by stations of the fixed service communicating only within national borders and whose mean power does not exceed 50 W. In notifying the frequencies, the attention of the International Frequency Registration Board should be drawn to these provisions.

ADD 3493D 499

Additional allocation: in Saudi Arabia, Botswana, Ethiopia, Iraq, Lesotho, Libya, Malawi, Somalia, Swaziland and Zambia, the band 2 160 — 2 170 kHz is also allocated to the fixed and mobile, except aeronautical mobile (R), services on a primary basis. The mean power of stations in these services shall not exceed 50 W.

	500 501	
2 190.5 — 2 194	MARITIME MOBILE	

MOD 3494 500
201

The frequency 2 182 kHz is the international distress and calling frequency for radiotelephony. The conditions for the use of the band 2 173.5 — 2 190.5 kHz are prescribed in Articles 38 and 60.

NOC 3495 501
201A

The frequencies 2 182 kHz, 3 023 kHz, 5 680 kHz, 8 364 kHz, 121.5 MHz, 156.8 MHz and 243 MHz may also be used, in accordance with the procedures in force for terrestrial radiocommunication services, for search and rescue operations concerning manned space vehicles.

The same applies to the frequencies 10 003 kHz, 14 993 kHz and 19 993 kHz, but in each of these cases emissions must be confined in a band of ± 3 kHz about the frequency.

ADD 3493C 496 In Region 1, the use of the band 2 025 — 2 045 kHz by the meteorological aids service is limited to oceanographic buoy stations.

MOD 3500 505 The carrier (reference) frequencies 3 023 kHz and 5 680 kHz may also be used, in accordance with Nos. 2980 and 2984 respectively, by stations of the maritime mobile service engaged in coordinated search and rescue operations.

ADD 3496A 506 Administrations are urged to authorize the use of the band 3 155 — 3 195 kHz to provide a common worldwide channel for low power wireless hearing aids. Additional channels for these devices may be assigned by administrations in the bands between 3 155 kHz and 3 400 kHz to suit local needs.

It should be noted that frequencies in the range 3 000 kHz to 4 000 kHz are suitable for hearing aid devices which are designed to operate over short distances within the induction field.

ADD 3498A 507 *Alternative allocation:* in Belgium, Cameroon, Cyprus, the Ivory Coast, Denmark, Egypt, Spain, France, Greece, Iceland, Italy, Liberia, Malta, Norway, the Netherlands, the United Kingdom, Singapore, Sri Lanka, Sweden, Togo, Turkey and Yugoslavia, the band 3 155 — 3 200 kHz is allocated to the maritime mobile service on a primary basis and to the fixed and land mobile services on a permitted basis.

- ADD 3508A 524 The band 6 765 — 6 795 kHz (centre frequency 6 780 kHz) is designated for industrial, scientific and medical (ISM) applications. The use of this frequency band for ISM applications shall be subject to special authorization by the administration concerned, in agreement with other administrations whose radiocommunication services might be affected. In applying this provision, administrations shall have due regard to the latest relevant CCIR Recommendations.
- ADD 3508B 525 *Different category of service:* in Mongolia and the U.S.S.R., the allocation of the band 6 765 — 7 000 kHz to the land mobile service is on a primary basis (see No. 425).
- ADD 3508BA 526 *Additional allocation:* in Angola, Iraq, Kenya, Rwanda, Somalia and Togo, the band 7 000 — 7 050 kHz is also allocated to the fixed service on a primary basis.
- ADD 3508C 527 *Alternative allocation:* in Egypt, Ethiopia, Guinea, Libya, Madagascar, Malawi and Tanzania, the band 7 000 — 7 050 kHz is allocated to the fixed service on a primary basis.
- ADD 3508D 528 The use of the band 7 100 — 7 300 kHz in Region 2 by the amateur service shall not impose constraints on the broadcasting service intended for use within Region 1 and Region 3.

kHz
7 300 — 9 995

ADD 3510A 531

The bands 9 775 — 9 900 kHz, 11 650 — 11 700 kHz, 11 975 — 12 050 kHz, 13 600 — 13 800 kHz, 15 450 — 15 600 kHz, 17 550 — 17 700 kHz and 21 750 — 21 850 kHz are allocated to the fixed service on a primary basis subject to the procedure described in Resolution 8. The use of these bands by the broadcasting service shall be subject to provisions to be established by the world administrative radio conference for the planning of HF bands allocated to the broadcasting service (see Resolution 508). Within these bands, the date of commencement of operations in the broadcasting service on a planned channel shall not be earlier than the date of completion of satisfactory transfer, according to the procedures described in Resolution 8, of all assignments to stations in the fixed service operating in accordance with the Table and other provisions of the Radio Regulations, which are recorded in the Master Register and which may be affected by broadcasting operations on that channel.

ADD 3512A 533

In making assignments to stations of other services to which the band 13 360 — 13 410 kHz is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

MOD 3513 534
217

The band 13 553 — 13 567 kHz (centre frequency 13 560 kHz) is designated for industrial, scientific and medical (ISM) applications. Radiocommunication services operating within this band must accept harmful interference which may be caused by these applications. ISM equipment operating in this band is subject to the provisions of No. 1815.

MOD 3514 535
218

Additional allocation: in Afghanistan, China, the Ivory Coast, Iran and the U.S.S.R., the band 14 250 — 14 350 kHz is also allocated to the fixed service on a primary basis. Stations of the fixed service shall not use a radiated power exceeding 24 dBW.

ADD 3521B 545

The band 25 550 — 25 600 kHz is allocated to the fixed and mobile, except aeronautical mobile, service on a primary basis subject to the procedure described in Resolution 8. The use of this band by the radio astronomy service shall be subject to the completion of the satisfactory transfer of all assignments to stations in the fixed and mobile, except aeronautical mobile, services operating in this band and recorded in the Master Register, in accordance with the procedure described in Resolution 8. The band 25 600 — 25 670 kHz is allocated to the broadcasting service on a primary basis, subject to provisions to be established by the world administrative radio conference for the planning of HF bands allocated to the broadcasting service (see Resolution 508). After completion of all the above-mentioned provisions, all emissions capable of causing harmful interference to the radio astronomy service in the band 25 550 — 25 670 kHz shall be avoided. The use of passive sensors by other services will also be authorized.

MOD 3522 546
225

The band 26 957 — 27 283 kHz (centre frequency 27 120 kHz) is designated for industrial, scientific and medical (ISM) applications. Radiocommunication services operating within this band must accept harmful interference which may be caused by these applications. ISM equipment operating in this band is subject to the provisions of No. 1815.

ADD 3521A 544

The bands 25 110 — 25 210 kHz and 26 100 — 26 175 kHz are also allocated to the fixed and land mobile services on a primary basis subject to the procedure described in Resolution 8. The use of these bands on an exclusive basis by the maritime mobile service shall be subject to provisions to be decided by a competent world administrative radio conference. The date of commencement of operations in the maritime mobile service on a frequency in accordance with the above-mentioned provisions shall not be earlier than the date of completion of satisfactory transfer, in accordance with the procedure described in Resolution 8, of all assignments to stations in the fixed and land mobile services operating in accordance with the Table and other provisions of the Radio Regulations recorded in the Master Register and which may be affected by such maritime mobile operations on that frequency.

MOD 3546 565
248 *Alternative allocation:* in Mongolia and the U.S.S.R., the bands 68 — 73 MHz and 76 — 87.5 MHz are allocated to the broadcasting service on a primary basis. The services to which these bands are allocated in other countries and the broadcasting service in Mongolia and the U.S.S.R. are subject to agreements with the neighbouring countries concerned.

MOD 3553 566
254 *Additional allocation:* in Australia, China, the Republic of Korea, the Philippines, the Democratic People's Republic of Korea and Western Samoa, the band 68 — 74 MHz is also allocated to the broadcasting service on a primary basis.

ADD 3550A 567 *Additional allocation:* in Bulgaria, Hungary, Mongolia, Poland, Czechoslovakia and the U.S.S.R., the band 73 — 74 MHz is also allocated to the broadcasting service on a primary basis. The use of this band by the broadcasting service in Bulgaria, Hungary, Mongolia, Poland, Czechoslovakia and the U.S.S.R. is subject to agreement obtained under the procedure set forth in Article 14.

ADD 3531X 568 In making assignments to stations of other services to which the band 73 — 74.6 MHz is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

MOD 3551 569
253A In Region 2, the fixed, mobile and broadcasting services previously authorized in the band 73 — 74.6 MHz may continue to operate on a non-interference basis to the radio astronomy service until 31 December 1985.

MOD 3552 570
253B *Additional allocation:* in Colombia, Costa Rica, Cuba, El Salvador, Ecuador, Guatemala, Guyana, Honduras and Nicaragua, the band 73 — 74.6 MHz is also allocated to the fixed and mobile services on a secondary basis.

MOD 3550 571
252 *Additional allocation:* in Bulgaria, China, Hungary, Mongolia, Poland, Czechoslovakia and the U.S.S.R., the bands 74.6 — 74.8 MHz and 75.2 — 75.4 MHz are also allocated to the aeronautical radionavigation service, on a primary basis, for ground-based transmitters only.

MOD 3558 572
259 The frequency 75 MHz is assigned to aeronautical marker beacons. Administrations shall refrain from assigning frequencies close to the limits of the guardband to stations of other services which, because of their power or geographical position, might cause harmful interference or otherwise place a constraint on marker beacons.

Until 31 December 1989, administrations in Regions 2 and 3 should refrain from assigning frequencies to stations of other services in the bands 74.6 — 74.8 MHz and 75.2 — 75.4 MHz.

In the future every effort should be made to improve further the characteristics of airborne receivers and to limit the power of transmitting stations close to the limits 74.8 MHz and 75.2 MHz.

ADD 3548B 563 *Different category of service:* in Cuba, the French Overseas Departments in Region 2, Guyana, Jamaica and Mexico, the allocation of the band 68 — 72 MHz to the fixed and mobile services is on a primary basis (see No. 425).

MOD 3548 564
250 *Alternative allocation:* in Bulgaria, Hungary, Poland, Roumania and Czechoslovakia, the band 68 — 73 MHz is allocated to the broadcasting service on a primary basis and used in accordance with the decisions in the Final Acts of the Special Regional Conference, Geneva, 1960.

- ADD 3570A 584

Broadcasting stations in the band 100 — 108 MHz in Region 1 shall be established and operated in accordance with an agreement and associated plan for the band 87.5 — 108 MHz to be drawn up by a regional broadcasting conference (see Resolution 510). Prior to the date of entry into force of this agreement, broadcasting stations may be introduced subject to agreement between administrations concerned, on the understanding that such an operation shall in no case prejudice the establishment of the plan.

MOD 3571 585

272
- ADD 3566A 586

Additional allocation: in China, the Republic of Korea, the Philippines and Singapore, the band 100 — 108 MHz is also allocated to the fixed and mobile services on a permitted basis.

Alternative allocation: in New Zealand, the band 100 — 108 MHz is allocated to the land mobile service on a primary basis and to the broadcasting service on a secondary basis.

ADD 3570B 587
- ADD 3570D 588

Additional allocation: in Austria, Bulgaria, Hungary, Israel, Kenya, Mongolia, Poland, Syria, the German Democratic Republic, the United Kingdom, Somalia, Czechoslovakia and the U.S.S.R., the band 104 — 108 MHz is also allocated to the mobile, except aeronautical mobile (R), service on a permitted basis until 31 December 1995 and, thereafter, on a secondary basis.

ADD 3570C 589
- MOD 3566 580

Alternative allocation: in New Zealand, the band 87 — 88 MHz is allocated to the land mobile service on a primary basis.

ADD 3570CA 590
- MOD 3563 581

Additional allocation: in the Federal Republic of Germany, Spain, France, Ireland, Italy, Liechtenstein, Monaco, the United Kingdom, Switzerland and Yemen (P.D.R. of), the band 87.5 — 88 MHz is also allocated to the land mobile service on a permitted basis and subject to agreement obtained under the procedure set forth in Article 14.

ADD 3570C 589
- MOD 3564 582

Additional allocation: in the United Kingdom, the band 97.6 — 102.1 MHz is also allocated to the land mobile service on a permitted basis until 31 December 1989. The use of this band by the land mobile service is restricted to those stations in operation on 1 January 1980. The withdrawal of land mobile stations will be arranged in consultation with the administrations concerned.

ADD 3570CA 590
- ADD 3569A 583

In Region 1, existing systems in the fixed and mobile, except aeronautical mobile (R), services may continue to use the band 100 — 104 MHz on a primary basis until the date of entry into force of the new regional broadcasting agreement referred to in Resolution 510 or 1 January 1985, whichever is the earlier date.

	Mobile except aeronautical mobile (R)	
	596 597 598 599	

- MOD 3574 594 274 *Additional allocation:* in Angola, Bulgaria, Hungary, Iran, Iraq, Japan, Mongolia, Mozambique, Papua New Guinea, Poland, the German Democratic Republic, Roumania, Czechoslovakia and the U.S.S.R., the band 132 — 136 MHz is also allocated to the aeronautical mobile (OR) service on a permitted basis.
- ADD 3578A 595 Until 1 January 1990, the band 136 — 137 MHz is also allocated to the space operation service (space-to-Earth), meteorological-satellite service (space-to-Earth) and the space research service (space-to-Earth) on a primary basis. The introduction of stations of the aeronautical mobile (R) service shall only occur after that date and shall be effected in accordance with internationally agreed plans for that service. After 1 January 1990, the band 136 — 137 MHz will also be allocated to the above-mentioned space radiocommunication services on a secondary basis (see Recommendation 404).
- MOD 3584 596 281E *Different category of service:* in Afghanistan, Saudi Arabia, Bahrain, Brunei, China, the United Arab Emirates, India, Indonesia, Iran, Iraq, Kuwait, Malaysia, Oman, Pakistan, Qatar, Singapore, Thailand, Yemen A.R. and Yemen (P.D.R. of), the allocation of the band 137 — 138 MHz to the fixed and mobile, except aeronautical mobile (R), services is on a primary basis (see No. 425).
- ADD 3584A 597 *Different category of service:* in Israel, Jordan and Syria, the allocation of the band 137 — 138 MHz to the fixed and mobile, except aeronautical mobile, services is on a primary basis (see No. 425).
- MOD 3583 598 281C *Different category of service:* in Austria, Bulgaria, Egypt, Finland, Greece, Hungary, the Lebanon, Mongolia, Poland, the German Democratic Republic, Roumania, Czechoslovakia, the U.S.S.R. and Yugoslavia, the allocation of the band 137 — 138 MHz to the aeronautical mobile (OR) service is on a primary basis (see No. 425).
- MOD 3580 599 279A *Additional allocation:* in Australia, the band 137 — 144 MHz is also allocated to the broadcasting service on a primary basis until that service can be accommodated within regional broadcasting allocations.

- MOD 3573 591 273A Subject to agreement obtained under the procedure set forth in Article 14, the band 117.975 — 137 MHz is also allocated to the aeronautical mobile-satellite (R) service on a secondary basis and on the condition that harmful interference is not caused to the aeronautical mobile (R) service.
- ADD 3572A 592 The bands 121.45 — 121.55 MHz and 242.95 — 243.05 MHz are also allocated to the mobile-satellite service for the reception on board satellites of emissions from emergency position-indicating radiobeacons transmitting at 121.5 MHz and 243 MHz.
- NOC 3572 593 273 In the band 117.975 — 136 MHz, the frequency 121.5 MHz is the aeronautical emergency frequency and where required the frequency 123.1 MHz is the aeronautical frequency auxiliary to 121.5 MHz. Mobile stations of the maritime mobile service may communicate on these frequencies for safety purposes with stations of the aeronautical mobile service.

- ADD 3601C 619 *Additional allocation:* in China, the band 174 — 184 MHz is also allocated to the space research (space-to-Earth) and the space operation (space-to-Earth) services on a primary basis subject to agreement obtained under the procedure set forth in Article 14. These services shall not cause harmful interference to, or claim protection from, existing or planned broadcasting stations.
- ADD 3601B 620 *Different category of service:* in Mexico, the allocation of the band 174 — 216 MHz to the fixed and mobile services is on a primary basis (see No. 425).
- ADD 3601A 621 *Additional allocation:* in Austria, the Federal Republic of Germany, Belgium, Denmark, Finland, France, Italy, Liechtenstein, Monaco, Norway, the Netherlands, the United Kingdom, Sweden, Switzerland and Yemen (P.D.R. of), the band 174 — 223 MHz is also allocated to the land mobile service on a permitted basis. However, the stations of the land mobile service shall not cause harmful interference to, nor claim protection from, broadcasting stations, existing or planned, in countries other than those listed in this footnote.
- ADD 3601AA 622 *Different category of service:* in Austria, the Federal Republic of Germany, Belgium, Denmark, Spain, Finland, France, Israel, Italy, Liechtenstein, Luxembourg, Monaco, Norway, the Netherlands, Portugal, the United Kingdom, Sweden, Switzerland and Yemen (P.D.R. of), the band 223 — 230 MHz is allocated to the land mobile service on a permitted basis (see No. 425). However, the stations of the land mobile service shall not cause harmful interference to, nor claim protection from, broadcasting stations, existing or planned, in countries other than those listed in this footnote.
- MOD 3601 293 623 *Additional allocation:* in the Congo, Ethiopia, Gambia, Guinea, Kenya, Libya, Malawi, Mali, Uganda, Senegal, Sierra Leone, Somalia, Tanzania and Zimbabwe, the band 174 — 223 MHz is also allocated to the fixed and mobile services on a secondary basis.
- ADD 3602A 624 *Additional allocation:* in Bangladesh, India, Pakistan and the Philippines, the band 200 — 216 MHz is also allocated to the aeronautical radionavigation service on a primary basis.
- ADD 3602B 625 *Additional allocation:* in Australia and Papua New Guinea, the bands 204 — 208 MHz and 222 — 223 MHz are also allocated to the aeronautical radionavigation service on a primary basis.
- ADD 3608AB 626 *Additional allocation:* in China, India and Thailand, the band 216 — 223 MHz is also allocated to the aeronautical radionavigation service on a primary basis and to the radiolocation service on a secondary basis.
- ADD 3608AA 627 In Region 2, the band 216 — 225 MHz is allocated to the radiolocation service on a primary basis until 1 January 1990. On and after 1 January 1990, no new stations in that service may be authorized. Stations authorized prior to 1 January 1990 may continue to operate on a secondary basis.
- ADD 3608A 628 *Additional allocation:* in Somalia, the band 216 — 225 MHz is also allocated to the aeronautical radionavigation service on a primary basis, subject to not causing harmful interference to existing or planned broadcasting services in other countries.

MOD	3608 300	629	<i>Additional allocation:</i> in Oman, the United Kingdom and Turkey, the band 216 — 235 MHz is also allocated to the radiolocation service on a secondary basis.
ADD	3608AC	630	<i>Additional allocation:</i> in Japan, the band 222 — 223 MHz is also allocated to the aeronautical radionavigation service on a primary basis and to the radiolocation service on a secondary basis.
ADD	3612D	631	<i>Different category of service:</i> in Spain and Portugal, the band 223 — 230 MHz is allocated to the fixed service on a permitted basis (see No. 425). Stations of this service shall not cause harmful interference to, or claim protection from, broadcasting stations of other countries, whether existing or planned, that operate in accordance with the Table.
ADD	3608B	632	<i>Additional allocation:</i> in Saudi Arabia, Bahrain, the United Arab Emirates, Israel, Jordan, Oman, Qatar and Syria, the band 223 — 235 MHz is also allocated to the aeronautical radionavigation service on a permitted basis.
ADD	3608C	633	<i>Additional allocation:</i> in Spain and Portugal, the band 223 — 235 MHz is also allocated to the aeronautical radionavigation service on a permitted basis until 1 January 1990, subject to not causing harmful interference to existing or planned broadcasting stations in other countries.
ADD	3608CA	634	<i>Additional allocation:</i> in Sweden, the band 223 — 235 MHz is also allocated to the aeronautical radionavigation service on a permitted basis until 1 January 1990, subject to agreement obtained under the procedure set forth in Article 14, and on condition that no harmful interference is caused to existing and planned broadcasting stations in other countries.
MOD	3612 304	635	<i>Alternative allocation:</i> in Botswana, Lesotho, Namibia, South Africa, Swaziland and Zambia, the bands 223 — 238 MHz and 246 — 254 MHz are allocated to the broadcasting service on a primary basis subject to agreement obtained under the procedure set forth in Article 14.
ADD	3612A	636	<i>Alternative allocation:</i> in New Zealand, Western Samoa and the Niue and Cook Islands, the band 225 — 230 MHz is allocated to the fixed, mobile and aeronautical radionavigation services on a primary basis.
ADD	3612B	637	<i>Additional allocation:</i> in China, the band 225 — 235 MHz is also allocated to the radio astronomy service on a secondary basis.
ADD	3612C	638	<i>Additional allocation:</i> in Nigeria, the band 230 — 235 MHz is also allocated to the aeronautical radionavigation service on a primary basis, subject to agreement obtained under the procedure set forth in Article 14.
ADD	3612CA	639	<i>Additional allocation:</i> in Yugoslavia, the band 230 — 235 MHz is also allocated to the aeronautical radionavigation service on a primary basis, until 1 January 1995. The use of this band by the aeronautical radionavigation service in Yugoslavia is restricted to the stations in operation by 1 January 1980.

- MOD **3646** **656** *Alternative allocation:* in Denmark, Norway and Sweden, the bands 430 — 432 MHz and 438 — 440 MHz are allocated to the fixed and mobile, except aeronautical mobile, services on a primary basis.
- ADD **3646B** **657** *Additional allocation:* in Finland, Libya and Yugoslavia, the bands 430 — 432 MHz and 438 — 440 MHz are also allocated to the fixed and mobile, except aeronautical mobile, services on a primary basis.
- MOD **3643** **658** *Additional allocation:* in Afghanistan, Algeria, Saudi Arabia, Bahrain, Bangladesh, Brunei, Burundi, Egypt, the United Arab Emirates, Ecuador, Ethiopia, Greece, Guinea, India, Indonesia, Iran, Iraq, Israel, Italy, Jordan, Kenya, Kuwait, the Lebanon, Liechtenstein, Libya, Malaysia, Malta, Nigeria, Oman, Pakistan, the Philippines, Qatar, Syria, Singapore, Somalia, Switzerland, Tanzania, Thailand and Togo, the band 430 — 440 MHz is also allocated to the fixed service on a primary basis and the bands 430 — 435 MHz and 438 — 440 MHz are also allocated to the mobile, except aeronautical mobile, service on a primary basis.
- ADD **3646C** **659** *Additional allocation:* in Angola, Bulgaria, Cameroon, the Congo, Gabon, Hungary, Mali, Mongolia, Niger, Poland, the German Democratic Republic, Roumania, Rwanda, Chad, Czechoslovakia and the U.S.S.R., the band 430 — 440 MHz is also allocated to the fixed service on a primary basis.
- ADD **3640B** **660** *Different category of service:* in Argentina, Colombia, Costa Rica, Cuba, Guyana, Honduras, Panama and Venezuela, the allocation of the band 430 — 440 MHz to the amateur service is on a primary basis (see No. 425).

ADD	3645A	661	In Region 1, except in the countries mentioned in No. 662, the band 433.05 — 434.79 MHz (centre frequency 433.92 MHz) is designated for industrial, scientific and medical (ISM) applications. The use of this frequency band for ISM applications shall be subject to special authorization by the administration concerned, in agreement with other administrations whose radiocommunications services might be affected. In applying this provision, administrations shall have due regard to the latest relevant CCIR Recommendations.	NOC	3638 318B	669	In the maritime mobile service, the frequencies 457.525 MHz, 457.550 MHz, 457.575 MHz, 467.525 MHz, 467.550 MHz and 467.575 MHz may be used by on-board communication stations. The use of these frequencies in territorial waters may be subject to the national regulations of the administration concerned. The characteristics of the equipment used shall conform to those specified in Appendix 20.
MOD	3645 321	662	In the Federal Republic of Germany, Austria, Liechtenstein, Portugal, Switzerland and Yugoslavia, the band 433.05 — 434.79 MHz (centre frequency 433.92 MHz) is designated for industrial, scientific and medical (ISM) applications. Radiocommunication services of these countries operating within this band must accept harmful interference which may be caused by these applications. ISM equipment operating in this band is subject to the provisions of No. 1815.	NOC	3639 318C	670	In the territorial waters of Canada, the United States and the Philippines, the preferred frequencies for use by on-board communication stations shall be 457.525 MHz, 457.550 MHz, 457.575 MHz and 457.600 MHz paired, respectively, with 467.750 MHz, 467.775 MHz, 467.800 MHz and 467.825 MHz. The characteristics of the equipment used shall conform to those specified in Appendix 20.
MOD	3642 319B	663	<i>Additional allocation:</i> in Brazil, France and the French Overseas Departments in Region 2, and India, the band 433.75 — 434.25 MHz is also allocated to the space operation service (Earth-to-space) on a primary basis until 1 January 1990, subject to agreement obtained under the procedure set forth in Article 14. After 1 January 1990, the band 433.75 — 434.25 MHz will be allocated in the same countries to the same service on a secondary basis.	MOD	3650 324B	671	Earth exploration-satellite service applications, other than the meteorological-satellite service, may also be used in the bands 460 — 470 MHz and 1 690 — 1 710 MHz for space-to-Earth transmissions subject to not causing harmful interference to stations operating in accordance with the Table.
MOD	3644 320A	664	In the bands 435 — 438 MHz, 1 260 — 1 270 MHz, 2 400 — 2 450 MHz, 3 400 — 3 410 MHz (in Regions 2 and 3 only) and 5 650 — 5 670 MHz, the amateur-satellite service may operate subject to not causing harmful interference to other services operating in accordance with the Table (see No. 435). Administrations authorizing such use shall ensure that any harmful interference caused by emissions from a station in the amateur-satellite service is immediately eliminated in accordance with the provisions of No. 2741. The use of the bands 1 260 — 1 270 MHz and 5 650 — 5 670 MHz by the amateur-satellite service is limited to the Earth-to-space direction.	MOD	3637 318A	672	<i>Different category of service:</i> in Afghanistan, Bulgaria, China, Cuba, Hungary, Japan, Mongolia, Poland, Czechoslovakia and the U.S.S.R., the allocation of the band 460 — 470 MHz to the meteorological-satellite service (space-to-Earth) is on a primary basis (see No. 425) and is subject to agreement obtained under the procedure set forth in Article 14.
ADD	3646E	665	<i>Additional allocation:</i> in Austria, the band 438 — 440 MHz is also allocated to the fixed and mobile, except aeronautical mobile, services on a primary basis.				
ADD	3640C	666	<i>Additional allocation:</i> in Canada, New Zealand and Papua New Guinea, the band 440 — 450 MHz is also allocated to the amateur service on a secondary basis.				
ADD	3640D	667	<i>Different category of service:</i> in Canada, the allocation of the band 440 — 450 MHz to the radiolocation service is on a primary basis (see No. 425).				
MOD	3641 319A	668	Subject to agreement obtained under the procedure set forth in Article 14, the band 449.75 — 450.25 MHz may be used for the space operation service (Earth-to-space) and the space research service (Earth-to-space).

- ADD 3650C 673 *Additional allocation:* in China, the band 470 — 485 MHz is also allocated to the space research (space-to-Earth) and the space operation (space-to-Earth) services on a primary basis subject to agreement obtained under the procedure set forth in Article 14, subject to not causing harmful interference to existing and planned broadcasting stations.
- ADD 3650BA 674 *Different category of service:* in Mexico and Venezuela, the allocation of the band 470 — 512 MHz to the fixed and mobile services is on a primary basis (see No. 425), subject to agreement obtained under the procedure set forth in Article 14.
- ADD 3650B 675 *Different category of service:* in Chile, Colombia, Ecuador, the United States, Guyana and Jamaica, the allocation of the bands 470 — 512 MHz and 614 — 806 MHz to the fixed and mobile services is on a primary basis (see No. 425), subject to agreement obtained under the procedure set forth in Article 14.
- ADD 3650A 676 *Additional allocation:* in Burundi, Cameroon, the Congo, Ethiopia, Israel, Kenya, Libya, Senegal, Sudan, Syria, and Yemen (P.D.R. of), the band 470 — 582 MHz is also allocated to the fixed service on a secondary basis.
- MOD 3668 677 *Alternative allocation:* in Pakistan, the bands 470 — 582 MHz and 610 — 890 MHz are allocated to the broadcasting service on a primary basis.
- ADD 3650E 678 *Additional allocation:* in Costa Rica, El Salvador, Ecuador, the United States, Guatemala, Guyana, Honduras, Jamaica and Venezuela, the band 512 — 608 MHz is also allocated to the fixed and mobile services on a primary basis, subject to agreement obtained under the procedure set forth in Article 14.
- ADD 3650F 679 *Additional allocation:* in India, the band 549.75 — 550.25 MHz is also allocated to the space operation service (space-to-Earth) on a secondary basis.
- ADD 3651A 680 *Additional allocation:* in the United Kingdom, the following bands are also allocated to the aeronautical radionavigation service on a primary basis: 582 — 590 MHz until 31 December 1987; 598 — 606 MHz until 31 December 1994. All new assignments to stations in the aeronautical radionavigation service in these bands are subject to the agreement of the Administrations of the following countries: the Federal Republic of Germany, Belgium, Denmark, Spain, France, Ireland, Luxembourg, Morocco, Norway and the Netherlands.
- MOD 3653 681 *Additional allocation:* in Belgium, the band 582 — 606 MHz is also allocated to the radionavigation service on a primary basis until 31 December 1984.
- ADD 3653A 682 *Additional allocation:* in France and Italy, the band 582 — 606 MHz is also allocated to the radionavigation service on a permitted basis until 1 January 1990.
- ADD 3653AA 683 *Additional allocation:* in Oman, the band 582 — 606 MHz is also allocated to the radionavigation service on a secondary basis.
- MOD 3654 684 *Additional allocation:* in Israel, Libya, Syria and Sudan, the band 582 — 790 MHz is also allocated to the fixed and mobile, except aeronautical mobile, services on a secondary basis.

- ADD 3653B 685 *Additional allocation:* in Denmark and Kuwait, the band 590 — 598 MHz is also allocated to the aeronautical radionavigation service on a primary basis until 1 January 1995.
- MOD 3651 686 *Additional allocation:* in the United Kingdom, the band 590 — 598 MHz is also allocated to the aeronautical radionavigation service on a primary basis. All new assignments to stations in the aeronautical radionavigation service, including those transferred from the adjacent bands, shall be subject to coordination with the Administrations of the following countries: the Federal Republic of Germany, Belgium, Denmark, Spain, France, Ireland, Luxembourg, Morocco, Norway and the Netherlands.
- MOD 3657 687 *Additional allocation:* in the African Broadcasting Area (see Nos. 400 to 403), the band 606 — 614 MHz is also allocated to the radio astronomy service on a permitted basis.
- ADD 3660A 688 *Additional allocation:* in China, the band 606 — 614 MHz is also allocated to the radio astronomy service on a primary basis.
- MOD 3660 689 In Region 1, except in the African Broadcasting Area (see Nos. 400 to 403), and in Region 3, the band 608 — 614 MHz is also allocated to the radio astronomy service on a secondary basis. In making assignments to stations of other services to which the band is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).
- MOD 3658 690 *Additional allocation:* in India, the band 608 — 614 MHz is also allocated to the radio astronomy service on a primary basis.
- ADD 3657A 691 *Additional allocation:* in New Zealand, the band 610 — 620 MHz is also allocated to the amateur service on a secondary basis.
- ADD 3657B 692 *Different category of service:* in Costa Rica, El Salvador and Honduras, the allocation of the band 614 — 806 MHz to the fixed service is on a primary basis (see No. 425), subject to agreement obtained under the procedure set forth in Article 14.
- (MOD) 3661 693 Within the frequency band 620 — 790 MHz, assignments may be made to television stations using frequency modulation in the broadcasting-satellite service subject to agreement between the administrations concerned and those having services, operating in accordance with the Table, which may be affected (see Resolutions 33 and 507). Such stations shall not produce a power flux-density in excess of the value -129 dB (W/m^2) for angles of arrival less than 20° (see Recommendation 705) within the territories of other countries without the consent of the administrations of those countries.
- MOD 3659 694 *Additional allocation:* in Bulgaria, Hungary, Mongolia, Poland, the German Democratic Republic, Roumania, Czechoslovakia and the U.S.S.R., the band 645 — 862 MHz is also allocated to the aeronautical radionavigation service on a permitted basis.
- ADD 3662A 695 *Alternative allocation:* in Spain and France, the band 790 — 830 MHz is allocated to the broadcasting service on a primary basis.
- ADD 3661A 696 *Alternative allocation:* in Greece, Italy, Morocco and Tunisia, the band 790 — 838 MHz is allocated to the broadcasting service on a primary basis.
- ADD 3662B 697 *Additional allocation:* in the Federal Republic of Germany, Denmark, Finland, Israel, Liechtenstein, Norway, the Netherlands, Sweden, Switzerland and Yugoslavia, the band 790 — 830 MHz, and in these same countries and in Spain and France, the band 830 — 862 MHz are also allocated to the mobile, except aeronautical mobile, service on a primary basis. However, stations of the mobile service in the countries mentioned in connection with each band referred to in this footnote shall not cause harmful interference to, or claim protection from, stations of services operating in accordance with the Table in countries other than those mentioned in connection with the band.
- ADD 3662BA 698 *Additional allocation:* in Austria, the band 790 — 862 MHz is also allocated to the mobile, except aeronautical mobile, service on a secondary basis.
- ADD 3662CA 699 *Additional allocation:* in Norway and Sweden, the bands 806 — 890 MHz and 942 — 960 MHz are also allocated to the mobile-satellite, except aeronautical mobile-satellite, service on a primary basis. The use of this service is limited to operation within national boundaries and subject to agreement obtained under the procedure set forth in Article 14. This service shall not cause harmful interference to services operating in accordance with the Table.
- ADD 3670B 700 *Additional allocation:* in Region 2, the band 806 — 890 MHz is also allocated to the mobile-satellite, except aeronautical mobile-satellite, service on a primary basis. The use of this service is intended for operation within national boundaries and subject to agreement obtained under the procedure set forth in Article 14.
- ADD 3662C 701 *Additional allocation:* in Region 3, the bands 806 — 890 MHz and 942 — 960 MHz are also allocated to the mobile-satellite, except aeronautical mobile-satellite, service on a primary basis. The use of this service is limited to operation within national boundaries and subject to agreement obtained under the procedure set forth in Article 14. This service shall not cause harmful interference to services operating in accordance with the Table.
- ADD 3662DA 702 *Alternative allocation:* in Italy, the band 838 — 854 MHz is allocated to the broadcasting service on a primary basis as from 1 January 1995.
- ADD 3662E 703 In Region 1, in the band 862 — 960 MHz, stations of the broadcasting service shall be operated only in the African Broadcasting Area (see Nos. 400 to 403) excluding Algeria, Egypt, Libya and Morocco. Such operations shall be in accordance with the Final Acts of the African VHF/UHF Broadcasting Conference, Geneva, 1963.
- ADD 3659B 704 *Additional allocation:* in Bulgaria, Hungary, Mongolia, Poland, the German Democratic Republic, Roumania, Czechoslovakia and the U.S.S.R., the band 862 — 960 MHz is also allocated to the aeronautical radionavigation service on a permitted basis until 1 January 1998. Up to this date, the aeronautical radionavigation service may use the band, subject to agreement obtained under the procedure set forth in Article 14. After this date, the aeronautical radionavigation service may continue to operate on a secondary basis.

	722 727 729 730	

ADD 3695C 726 The allocation to the maritime mobile-satellite service in the band 1 530 — 1 535 MHz shall be effective from 1 January 1990. Up to that date the allocation to the fixed service shall be on a primary basis in Regions 1 and 3.

MOD 3688 727 *Additional allocation:* in Afghanistan, Saudi Arabia, Bahrain, Bangladesh, the Congo, Egypt, the United Arab Emirates, Ethiopia, Iran, Iraq, Israel, Jordan, Kuwait, the Lebanon, Malta, Morocco, Niger, Oman, Pakistan, Qatar, Sudan, Sri Lanka, Syria, Somalia, Chad, Thailand, Togo, Yemen (P.D.R. of) and Zambia, the bands 1 540 — 1 645.5 MHz and 1 646.5 — 1 660 MHz are also allocated to the fixed service on a secondary basis.

ADD 3695A 728 The use of the bands 1 544 — 1 545 MHz (space-to-Earth) and 1 645.5 — 1 646.5 MHz (Earth-to-space) by the mobile-satellite service is limited to distress and safety operations.

MOD 3691 729 Transmissions in the band 1 545 — 1 559 MHz from terrestrial aeronautical stations directly to aircraft stations, or between aircraft stations, in the aeronautical mobile (R) service are also authorized when such transmissions are used to extend or supplement the satellite-to-aircraft links.

MOD 3685 730 *Additional allocation:* in the Federal Republic of Germany, Austria, Bulgaria, Cameroon, Guinea, Hungary, Indonesia, Libya, Mali, Mongolia, Nigeria, Poland, the German Democratic Republic, Roumania, Senegal, Czechoslovakia and the U.S.S.R., the bands 1 550 — 1 645.5 MHz and 1 646.5 — 1 660 MHz are also allocated to the fixed service on a primary basis.

1 660 — 1 660.5	AERONAUTICAL MOBILE-SATELLITE (R) (Earth-to-space) RADIO ASTRONOMY 722 735 736	

ADD 3695B 731 *Alternative allocation:* in Sweden, the band 1 590 — 1 610 MHz is allocated to the aeronautical radionavigation service on a primary basis.

MOD 3686 732 The band 1 610 — 1 626.5 MHz is reserved on a worldwide basis for the use and development of airborne electronic aids to air navigation and any directly associated ground-based or satellite-borne facilities. Such satellite use is subject to agreement obtained under the procedure set forth in Article 14.

MOD 3687 733 The bands 1 610 — 1 626.5 MHz, 5 000 — 5 250 MHz and 15.4 — 15.7 GHz are also allocated to the aeronautical mobile-satellite (R) service on a primary basis. Such use is subject to agreement obtained under the procedure set forth in Article 14.

ADD 3695E 734 The band 1 610.6 — 1 613.8 MHz is also allocated to the radio astronomy service on a secondary basis for spectral line observations. In making assignments to stations of other services to which the band is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

MOD 3694 735 Transmissions in the band 1 646.5 — 1 660.5 MHz from aircraft stations in the aeronautical mobile (R) service directly to terrestrial aeronautical stations, or between aircraft stations, are also authorized when such transmissions are used to extend or supplement the aircraft-to-satellite links.

ADD 3696B 736 In making assignments to stations of other services to which the band 1 660 — 1 670 MHz is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

ADD 3707D 749

Subject to agreement obtained under the procedure set forth in Article 14, the band 2 110 — 2 120 MHz may also be used in Japan for the space research (Earth-to-space) and space operation (Earth-to-space) services until 31 December 1990.

ADD 3707C 750

Subject to agreement obtained under the procedure set forth in Article 14, the band 2 200 — 2 290 MHz may also be used for space-to-Earth and space-to-space transmissions in the space research, space operations and earth exploration-satellite services. These services shall operate in accordance with the provisions of Nos. 2557 to 2560; the space-to-space transmissions shall not cause harmful interference to the other space services.

MOD 3695 744 The band 1 718.8 — 1 722.2 MHz is also allocated to the radio astronomy service on a secondary basis for spectral line observations. In making assignments to stations of other services to which the band is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

352K

MOD 3703 745 Subject to agreement obtained under the procedure set forth in Article 14 and having particular regard to tropospheric scatter systems, the band 1 750 — 1 850 MHz may also be used for space operation (Earth-to-space) and space research (Earth-to-space) services in Region 2, in Afghanistan, Australia, India, Indonesia, Japan and Thailand.

356A

MOD 3704 746 *Additional allocation:* in Bulgaria, Cuba, Hungary, Mali, Mongolia, Poland, the German Democratic Republic, Roumania, Czechoslovakia and the U.S.S.R., the band 1 770 — 1 790 MHz is also allocated to the meteorological-satellite service on a primary basis, subject to agreement obtained under the procedure set forth in Article 14.

356AA

ADD 3707A 747 Subject to agreement obtained under the procedure set forth in Article 14, the band 2 025 — 2 110 MHz may also be used for Earth-to-space and space-to-space transmissions in the space research, space operation and earth exploration-satellite services. The services using space-to-space transmissions shall operate in accordance with the provisions of Nos. 2557 to 2560 and shall not cause harmful interference to the other space services.

ADD 3707B 748 Subject to agreement obtained under the procedure set forth in Article 14, the band 2 110 — 2 120 MHz may also be used for Earth-to-space transmissions in the space research (deep space) service.

In France, the band 2 450 — 2 550 MHz is allocated on a primary basis to the radiolocation service and on a secondary basis to the fixed and mobile services (see Nos. 424 and 425). Such use is subject to agreement with the administrations having services, operating or planned to operate in accordance with the Table, which may be affected.

ADD 3680A 751 In Australia, the United States and Papua New Guinea, the use of the band 2 310 — 2 390 MHz by the aeronautical mobile service for telemetry has priority over other uses by the mobile services.

MOD 3709 357 752 The band 2 400 — 2 500 MHz (centre frequency 2 450 MHz) is designated for industrial, scientific and medical (ISM) applications. Radio services operating within this band must accept harmful interference which may be caused by these applications. ISM equipment operating in this band is subject to the provisions of No. 1815.

MHz
4 200 — 4 400

Allocation to Services		
Region 1	Region 2	Region 3
4 200 — 4 400	AERONAUTICAL RADIONAVIGATION 789	
	788 790 791	

MOD 3748 788 *Additional allocation:* in the Federal Republic of Germany, Denmark, Norway and Sweden, the band 4 200 — 4 210 MHz is also allocated to the fixed service on a secondary basis.

ADD 3743A 789 Use of the band 4 200 — 4 400 MHz by the aeronautical radionavigation service is reserved exclusively for radio altimeters installed on board aircraft and for the associated transponders on the ground. However, passive sensing in the earth exploration-satellite and space research services may be authorized in this band on a secondary basis (no protection is provided by the radio altimeters).

MOD 3744 790 *Additional allocation:* in China, Iran, Libya, the Philippines and Sri Lanka, the band 4 200 — 4 400 MHz is also allocated to the fixed service on a secondary basis.

MOD 3743 791 The standard frequency and time signal-satellite service may be authorized to use the frequency 4 202 MHz for space-to-Earth transmissions and the frequency 6 427 MHz for Earth-to-space transmissions. Such transmissions shall be confined within the limits of ± 2 MHz of these frequencies and shall be subject to agreement obtained under the procedure set forth in Article 14.

ADD 3748B 792 *Alternative allocation:* in Belgium, Norway, the Netherlands and the United Kingdom, the band 4 500 — 4 800 MHz is allocated to the fixed and mobile services on a primary basis. Such use shall not impose power flux-density limitations on the fixed-satellite service greater than those given in No. 2566.

ADD 3746A 793 In the bands 4 825 — 4 835 MHz and 4 950 — 4 990 MHz, the allocation to the mobile service is restricted to the mobile, except aeronautical mobile, service.

ADD 3746B 794 *Different category of service:* in Argentina, Australia and Canada, the allocation of the bands 4 825 — 4 835 MHz and 4 950 — 4 990 MHz to the radio astronomy service is on a primary basis (see No. 425). In making assignments to stations of other services to which these bands are allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

5 460 — 5 470	RADIONAVIGATION 799 Radiolocation	

ADD 3750AA 796 The band 5 000 — 5 250 MHz is to be used for the operation of the international standard system (microwave landing system) for precision approach and landing. The requirements of this system shall take precedence over other uses of this band.

MOD 3750 383B 797 The bands 5 000 — 5 250 MHz and 15.4 — 15.7 GHz are also allocated to the fixed-satellite service and the inter-satellite service, for connection between one or more earth stations at specified fixed points on the Earth and space stations, when these services are used in conjunction with the aeronautical radionavigation and/or aeronautical mobile (R) service. Such use shall be subject to agreement obtained under the procedure set forth in Article 14.

MOD 3751 384 798 *Additional allocation:* in Austria, Bulgaria, Hungary, Libya, Mongolia, Poland, the German Democratic Republic, Roumania, Czechoslovakia and the U.S.S.R., the band 5 250 — 5 350 MHz is also allocated to the radionavigation service on a primary basis.

NOC 3753 385 799 The use of the band 5 350 — 5 470 MHz by the aeronautical radionavigation service is limited to airborne radars and associated airborne beacons.

MOBILE except aeronautical mobile	MOBILE except aeronautical mobile	

ADD 3783B 831 In the band 10.6 — 10.68 GHz, stations of the fixed and mobile, except aeronautical mobile, services shall be limited to a maximum equivalent isotropically radiated power of 40 dBW and the power delivered to the antenna shall not exceed -3 dBW. These limits may be exceeded subject to agreement obtained under the procedure set forth in Article 14. However, in Afghanistan, Saudi Arabia, Bahrain, Bangladesh, China, the United Arab Emirates, Finland, India, Indonesia, Iran, Iraq, Japan, Kuwait, the Lebanon, Nigeria, Pakistan, the Philippines, Qatar, Syria and the U.S.S.R., the restrictions on the fixed and mobile, except aeronautical mobile, services are not applicable.

ADD 3784A 835 In Region 1, the use of the band 10.7 — 11.7 GHz by the fixed-satellite service (Earth-to-space) is limited to feeder links for the broadcasting-satellite service.

ADD 3531A 832 In making assignments to stations of other services to which the band 10.6 — 10.68 GHz is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

ADD 3784B 833 All emissions in the band 10.68 — 10.7 GHz are prohibited, except for those provided for by No. 834.

- ADD 3787A 836** In Region 2, in the band 11.7 — 12.1 GHz, transponders on space stations in the fixed-satellite service may be used additionally for transmissions in the broadcasting-satellite service, provided that such transmissions do not have a maximum e.i.r.p. greater than 53 dBW per television channel and do not cause greater interference or require more protection from interference than the coordinated fixed-satellite service frequency assignments. With respect to the space services, this band shall be used principally for the fixed-satellite service. The upper limit of this band shall be modified in accordance with the decisions of the 1983 regional administrative radio conference for Region 2 (see No. **841**).
- ADD 3787G 837** *Different category of service:* in Canada, Mexico and the United States, the allocation of the band 11.7 — 12.2 GHz to the fixed service is on a secondary basis (see No. **424**).
- MOD 3785 838** **405BA** In the band 11.7 — 12.5 GHz in Regions 1 and 3 the fixed, fixed-satellite, mobile, except aeronautical mobile, and broadcasting services, in accordance with their respective allocations, shall not cause harmful interference to broadcasting-satellite stations operating in accordance with the provisions of Appendix 30.
- MOD 3787 839** **405BC** The use of the band 11.7 — 12.7 GHz in Region 2 by the fixed-satellite and broadcasting-satellite services is limited to national and sub-regional systems and is subject to previous agreement between the administrations concerned and those having services, operating or planned to operate in accordance with the Table, which may be affected (see Articles 11, 13, 14 and Resolution 33).
- ADD 3785H 840** For the use of the band 11.7 — 12.75 GHz in Regions 1, 2 and 3, see Resolutions **31, 34, 504, 700 and 701**.
- ADD 3787B 841** The 1983 regional administrative radio conference for Region 2 will divide the band 12.1 — 12.3 GHz into two sub-bands. It will allocate the lower sub-band to the fixed-satellite service and the upper sub-band to the broadcasting-satellite, broadcasting, mobile except aeronautical mobile, and fixed services, all services being on a primary basis.
- ADD 3787C 842** *Additional allocation:* the bands 12.1 — 12.3 GHz in Brazil and Peru, and 12.2 — 12.3 GHz in the United States, are also allocated to the fixed service on a primary basis.
- ADD 3787E 843** In the band 12.1 — 12.7 GHz, the Region 2 space services, existing or planned before the 1983 regional administrative radio conference for Region 2, shall not impose restrictions on the elaboration of the plan for the broadcasting-satellite service in Region 2 and shall be operated under the conditions set forth by that conference.
- ADD 3787D 844** In Region 2, in the band 12.1 — 12.7 GHz, existing and future terrestrial radio-communication services shall not cause harmful interference to the space services operating in accordance with the broadcasting-satellite plan to be prepared at the 1983 regional administrative radio conference for Region 2, and shall not impose restrictions on the elaboration of such a plan. The lower limit of this band shall be modified in accordance with the decisions of that conference for Region 2 (see No. **841**).

- ADD 3785B 845** In Region 3, the band 12.2 — 12.5 GHz is also allocated to the fixed-satellite (space-to-Earth) service limited to national and sub-regional systems. The power flux-density limits in No. 2574 shall apply to this frequency band. The introduction of the service in relation to the broadcasting-satellite service in Region 1 shall follow the procedures specified in Article 7 of Appendix 30, with the applicable frequency band extended to cover 12.2 — 12.5 GHz.
- ADD 3787F 846** In Region 2, in the band 12.3 — 12.7 GHz, assignments to stations of the broadcasting-satellite service made available in the plan to be established by the 1983 regional administrative radio conference for Region 2 may also be used for transmissions in the fixed-satellite service (space-to-Earth), provided that such transmissions do not cause more interference or require more protection from interference than the broadcasting-satellite service transmissions operating in accordance with that plan. With respect to the space services, this band shall be used principally for the broadcasting-satellite service. The lower limit of this band shall be modified in accordance with the decisions of that conference for Region 2 (see No. 841).
- ADD 3785A 847** The broadcasting-satellite service in the band 12.5 — 12.75 GHz in Region 3 is limited to community reception with a power flux-density not exceeding -111 dB(W/m²) as defined in Annex 8 of Appendix 30.
- MOD 3788 848**
405BD *Additional allocation:* in Algeria, Angola, Saudi Arabia, Bahrain, Cameroon, the Central African Republic, the Congo, the Ivory Coast, Egypt, the United Arab Emirates, Ethiopia, Gabon, Ghana, Guinea, Iraq, Israel, Jordan, Kenya, Kuwait, the Lebanon, Libya, Madagascar, Mali, Morocco, Mongolia, Niger, Nigeria, Qatar, Syria, Senegal, Somalia, Sudan, Chad, Togo, Yemen (P.D.R. of) and Zaire, the band 12.5 — 12.75 GHz is also allocated to the fixed and mobile, except aeronautical mobile, services on a primary basis.
- MOD 3789 849**
405BE *Additional allocation:* in the Federal Republic of Germany, Belgium, Denmark, Spain, Finland, France, Greece, Liechtenstein, Luxembourg, Monaco, Norway, Uganda, the Netherlands, Portugal, Roumania, Sweden, Switzerland, Tanzania, Tunisia and Yugoslavia, the band 12.5 — 12.75 GHz is also allocated to the fixed and mobile, except aeronautical mobile, services on a secondary basis.
- ADD 3788A 850** *Additional allocation:* in Austria, Bulgaria, Hungary, Poland, the German Democratic Republic, Czechoslovakia and the U.S.S.R., the band 12.5 — 12.75 GHz is also allocated to the fixed service and the mobile, except aeronautical mobile, service on a primary basis. However, stations in these services shall not cause harmful interference to fixed-satellite earth stations of countries in Region 1 other than those mentioned in this footnote. Coordination of these earth stations is not required with stations of the fixed and mobile services of the countries mentioned in this footnote. The power flux-density limit at the Earth's surface given in No. 2574 for the fixed-satellite service shall apply on the territory of the countries mentioned in this footnote.

ADD 3800A 871

In making assignments to stations in the fixed and mobile services, administrations are invited to take account of passive sensors in the earth-exploration satellite and space research services operating in the band 18.6 — 18.8 GHz. In this band, administrations should endeavour to limit as far as possible both the power delivered by the transmitter to the antenna and the e.i.r.p. in order to reduce the risk of interference to passive sensors to the minimum.

ADD 3800B 872

In assigning frequencies to stations in the fixed-satellite service in the direction space-to-Earth, administrations are requested to limit as far as practicable the power flux-density at the Earth's surface in the band 18.6 — 18.8 GHz, in order to reduce the risk of interference to passive sensors in the earth exploration-satellite and space research services.

ADD 3799A 870

The band 18.1 — 18.3 GHz is also allocated to the meteorological-satellite service (space-to-Earth) on a primary basis. Its use is limited to geostationary satellites and shall be in accordance with the provisions of No. 2578.

GHz
19.7 — 22

ADD 3802A 888 In Regions 1 and 3, in making assignments to stations of other services to which the band 31.5 — 31.8 GHz is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

In Region 2, all emissions in the band 31.5 — 31.8 GHz are prohibited.

ADD 3806A 889 *Different category of service:* in Bulgaria, Egypt, Hungary, Mongolia, Poland, the German Democratic Republic, Roumania, Czechoslovakia and U.S.S.R., the allocation of the band 31.5 — 31.8 GHz to the fixed and mobile, except aeronautical mobile, services is on a primary basis (see No. 425).

- ADD 3807E 890 *Different category of service:* in Australia, Spain and the United States, the allocation of the band 31.8 — 32.3 GHz to the space research service (deep space) in the space-to-Earth direction is on a primary basis (see No. 425). This use shall not impose power flux-density constraints on the inter-satellite service in the band 32 — 32.3 GHz.
- MOD 3807 891 *Different category of service:* in Bulgaria, Cuba, Hungary, Mongolia, Poland, the German Democratic Republic, Czechoslovakia and the U.S.S.R., the allocation of the band 31.8 — 32.3 GHz to the space research service is on a primary basis (see No. 425).
- ADD 3807D 892 Subject to agreement obtained under the procedure set forth in Article 14, the band 31.8 — 33.8 GHz may also be used in Japan for space-to-Earth transmissions in the fixed-satellite service up to 31 December 1990.
- ADD 3807A 893 In designing systems for the inter-satellite and radionavigation services in the band 32 — 33 GHz, administrations shall take all necessary measures to prevent harmful interference between these two services, bearing in mind the safety aspects of the radionavigation service (see Recommendation 707).

47.2 — 50.2	FIXED FIXED-SATELLITE (Earth-to-space) 901 MOBILE 905 904	

ADD 3814A 900 In making assignments to stations of other services to which the band 42.5 — 43.5 GHz is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference, especially in the bands 42.77 — 42.87 GHz, 43.07 — 43.17 GHz, and 43.37 — 43.47 GHz, which are used for spectral line observations of silicon monoxide. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

ADD 3814B 901 The allocation of the spectrum for the fixed-satellite service in the bands 42.5 — 43.5 GHz and 47.2 — 50.2 GHz for Earth-to-space transmission is greater than that in the band 37.5 — 39.5 GHz for space-to-Earth transmission in order to accommodate feeder links to broadcasting satellites. Administrations are urged to take all practicable steps to reserve the band 47.2 — 49.2 GHz for feeder links for the broadcasting-satellite service operating in the band 40.5 — 42.5 GHz.

ADD 3814CA 902 In the bands 43.5 — 47 GHz, 66 — 71 GHz, 95 — 100 GHz, 134 — 142 GHz, 190 — 200 GHz and 252 — 265 GHz, stations in the land mobile service may be operated subject to not causing harmful interference to the space radiocommunication services to which these bands are allocated (see No. 435).

ADD 3814C 903 In the bands 43.5 — 47 GHz, 66 — 71 GHz, 95 — 100 GHz, 134 — 142 GHz, 190 — 200 GHz and 252 — 265 GHz, satellite links connecting land stations at specified fixed points are also authorized when used in conjunction with the mobile-satellite service or the radionavigation-satellite service.

ADD 3814D 904 The bands 48.94 — 49.04 GHz and 97.88 — 98.08 GHz are also allocated to the radio astronomy service on a primary basis for spectral line observations. In making assignments to stations of other services to which these bands are allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

ADD 3814E 905 In the band 48.94 — 49.04 GHz, all emissions from airborne stations are prohibited.

In the Federal Republic of Germany, Argentina, Spain, Finland, France, India, Italy, the Netherlands and Sweden, the band 261 — 265 GHz is also allocated to the radio astronomy service on a primary basis. In making assignments to stations of other services to which the band is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

ADD 3816I 923 The bands 250 — 251 GHz and 262.24 — 262.76 GHz are also allocated to the radio astronomy service on a primary basis for spectral line observations. In making assignments to stations of other services to which these bands are allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

ADD 3816J 924 The band 257.5 — 258 GHz is also allocated to the radio astronomy service on a secondary basis for spectral line observations. In making assignments to stations of other services to which the band is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

**GHz
265 — 400**

Allocation to Services		
Region 1	Region 2	Region 3
265 — 275	FIXED FIXED-SATELLITE (Earth-to-space) MOBILE RADIO ASTRONOMY 926	
275 — 400	(Not allocated) 927	

ADD 3816L 926 In making assignments to stations of other services to which the band 265 — 275 GHz is allocated, administrations are urged to take all practicable steps to protect the radio astronomy service from harmful interference, especially in the bands 265.64 — 266.16 GHz, 267.34 — 267.86 GHz and 271.74 — 272.26 GHz, which are used for spectral line observations. Emissions from space or airborne stations can be particularly serious sources of interference to the radio astronomy service (see Nos. 343 and 344 and Article 36).

ADD 3816M 927 The frequency band 275 — 400 GHz may be used by administrations for experimentation with, and development of, various active and passive services. In this band a need has been identified for the following spectral line measurements for passive services:

Radio astronomy service: 278 — 280 GHz and 343 — 348 GHz;

Space research service (passive) and earth exploration-satellite service (passive): 275 — 277 GHz, 300 — 302 GHz, 324 — 326 GHz, 345 — 347 GHz, 363 — 365 GHz and 379 — 381 GHz.

Future research in this largely unexplored spectral region may yield additional spectral lines and continuum bands of interest to the passive services. Administrations are urged to take all practicable steps to protect these passive services from harmful interference until the next competent world administrative radio conference.

ARTICLE 9

NOC

Special Rules for the Assignment and Use of Frequencies

- ADD 3916A 953 § 1. Members recognize that the safety aspects of radionavigation and other safety services require special measures to ensure their freedom from harmful interference; it is necessary therefore to take this factor into account in the assignment and use of frequencies.
- MOD 3917 954 § 2. (1) Members recognize that among frequencies which have long-distance propagation characteristics, those in the bands between 5 MHz and 30 MHz are particularly useful for long-distance communications; they agree to make every possible effort to reserve these bands for such communications. Whenever frequencies in these bands are used for short or medium-distance communications, the minimum power necessary shall be employed.
- NOC 3918 955 (2) To reduce requirements for frequencies in the bands between 5 MHz and 30 MHz and thus to prevent harmful interference to long-distance radiocommunications, administrations are encouraged to use, whenever practicable, any other possible means of communication.
- MOD 3919 956 § 3. (1) When special circumstances make it indispensable to do so, an administration may, as an exception to the normal methods of working authorized by these Regulations, have recourse to the special methods of working enumerated below, on the sole condition that the characteristics of the stations still conform to those inserted in the Master International Frequency Register:
- 957 a) a station in the fixed service or an earth station in the fixed-satellite service may, under the conditions defined in Nos. 420 to 423, transmit to mobile stations on its normal frequencies;
- 958 b) a land station may communicate, under the conditions defined in Nos. 420 to 423, with fixed stations in the fixed service or earth stations in the fixed-satellite service or other land stations of the same category.
- NOC 3920 959 (2) However, in circumstances involving the safety of life, or the safety of a ship or aircraft, a land station may communicate with fixed stations or land stations of another category.
- NOC 3921 960 § 4. Any administration may assign a frequency in a band allocated to the fixed service or allocated to the fixed-satellite service to a station authorized to transmit, unilaterally, from one specified fixed point to one or more specified fixed points provided that such transmissions are not intended to be received directly by the general public.
- NOC 3922 961 § 5. Any mobile station using an emission which satisfies the frequency tolerance applicable to the coast station with which it is communicating may transmit on the same frequency as the coast station on condition that the latter requests such transmission and that no harmful interference is caused to other stations.

NOC	3923 419	962	§ 6. In certain cases provided for in Articles 38 and 59 , aircraft stations are authorized to use frequencies in the bands allocated to the maritime mobile service for the purpose of communicating with stations of that service (see No. 4148).
MOD	3924 419A	963	§ 7. Aircraft earth stations are authorized to use frequencies in the bands allocated to the maritime mobile-satellite service for the purpose of communicating, via the stations of that service, with the public telegraph and telephone networks.
MOD	3925 421	964	§ 8. Any emission capable of causing harmful interference to distress, alarm, urgency or safety communications on the international distress and emergency frequencies established for these purposes by these Regulations is prohibited. Supplementary distress frequencies available on less than a worldwide basis should be afforded adequate protection.

International Frequency Registration Board

ADD

Section 1. Functions of the Board

NOC	3951 471	990	§ 1.	The constitution and the essential duties of the International Frequency Registration Board are defined in the Convention.
NOC	3952 472	991	§ 2.	The functions of the Board shall include:
MOD	3953 473	992	a)	the processing of frequency assignment notices, including information about any associated orbital locations of geostationary satellites, received from administrations for recording in the Master International Frequency Register;
ADD	3953A	993	b)	the processing of information received from administrations in application of the advance publication, coordination and other procedures of the Radio Regulations and the Final Acts of administrative radio conferences; and the provision of assistance to administrations in these matters, at their request;
NOC	3954 474	994	c)	the processing and coordination of seasonal schedules of high frequency broadcasting with a view to accommodating requirements of all administrations for that service;
NOC	3955 475	995	d)	the compilation, for publication in suitable form and at appropriate intervals by the Secretary-General, of frequency lists reflecting the data recorded in the Master International Frequency Register, as well as other material relating to the assignment and use of frequencies;
NOC	3956 476	996	e)	the review of entries in the Master International Frequency Register with a view to amending or eliminating, as appropriate, those which do not reflect actual frequency usage, in agreement with the administrations which notified the assignments concerned;
NOC	3957 477	997	f)	the study, on a long-term basis, of the usage of the radio frequency spectrum, with a view to making recommendations for its more effective use;

NOC	3958 478	998	<i>g)</i> the investigation, at the request of one or more of the interested administrations, of harmful interference and the formulation of recommendations with respect thereto;
NOC	3959 479	999	<i>h)</i> the provision of assistance to administrations in the field of radio spectrum utilization, in particular to those administrations in need of special assistance, and the recommendation to administrations, where appropriate, of adjustments in their frequency assignments in order to obtain a better use of the radio spectrum;
NOC	3960 480	1000	<i>i)</i> the collection of such results of monitoring observations as administrations and organizations may be able to supply, and the making of arrangements, through the Secretary-General, for their publication in suitable form;
ADD	3960A	1001	<i>j)</i> the development of Technical Standards ¹ in accordance with Nos. 1454 and 1582 and of Rules of Procedure ¹ for internal use by the Board in the exercise of its functions;
NOC	3961 481	1002	<i>k)</i> the formulation and reference to the CCIR of all general technical questions arising from the Board's examination of frequency assignments;
MOD	3962 482	1003	<i>l)</i> the technical assistance in the preparation for and organisation of radio conferences in consultation, as appropriate, with the other permanent organs of the Union, and with due regard for the pertinent directives of the Administrative Council in accordance with the Convention;
NOC	3963 483	1004	<i>m)</i> the participation in an advisory capacity, upon invitation by the organizations or countries concerned, in conferences and meetings where questions relating to the assignment and utilization of frequencies are discussed;
ADD	3963A	1005	<i>n)</i> the provision of assistance to administrations, at their request, in the training of senior staff in the fields of spectrum management and utilization, particularly for those countries in special need;
ADD	3963B	1006	<i>o)</i> the discharge of such other functions as are specified in the Radio Regulations and in the Final Acts of administrative radio conferences.
SUP	3964 484		
MOD	3965 485	1007	§ 3. The specialized secretariat of the IFRB shall work under the immediate direction of the Board to enable it to discharge its prescribed duties and functions.

SUP ARTICLE N10/11

ADD **3960A.1** **1001.1** ¹ The Technical Standards and the Rules of Procedure of the IFRB shall be distributed to all Members of the Union and shall be open to comment from any administration. In the event of there being a disagreement which remains unresolved, the procedure to be followed is given in Resolution 35.

ADD

Section II. Methods of Work of the Board

- NOC **3991** **1008** § 4. The Board shall meet as frequently as necessary to deal expeditiously with its work and, normally, at least once a week.
659
- MOD **3992** **1009** § 5. (1) In accordance with the Convention, the members of the Board shall elect from among their number a Chairman and a Vice-Chairman, each to hold office for a term of one year. Thereafter, the Vice-Chairman shall succeed annually to the Chairmanship and a new Vice-Chairman shall be elected.
660
- NOC **3993** **1010** (2) In the unavoidable absence of the Chairman and Vice-Chairman, the Board shall elect a temporary Chairman for the occasion from among its members.
661
- NOC **3994** **1011** § 6. (1) Each member of the Board, including the Chairman, shall have one vote. Voting by proxy or by correspondence is not allowed.
662
- NOC **3995** **1012** (2) The minutes shall indicate whether a decision was unanimous or by a majority.
663
- NOC **3996** **1013** (3) A quorum of the Board shall be one-half of the number of members of the Board. If, however, the verdict of such a quorum on a question coming before it is not unanimous, the question shall be referred for decision at a later meeting at which at least two-thirds of the total number of members of the Board are present. If these calculations result in a fraction, the fraction shall be rounded up to a whole number.
664
- NOC **3997** **1014** (4) The Board shall endeavour to reach its decisions by unanimous agreement. If the Board fails in that endeavour, it shall thereafter decide the problem on the basis of a two-thirds majority vote of the members present and voting for or against.
665
- ADD **3997A** **1015** § 7. For its own guidance and for the efficient performance of its functions the Board may make such internal arrangements as it may consider necessary in accordance with the Convention and the Radio Regulations.
- NOC **3998** **1016** § 8. The documents of the Board, which shall comprise a complete record of its official actions and minutes of its meetings, shall be maintained by the Board in the working languages of the Union as defined in the Convention; for this purpose, as well as for the meetings of the Board, the necessary linguistic personnel, and such other facilities as may be required, shall be provided by the Secretary-General. A copy of all documents of the Board shall be available for public inspection at the offices of the Board.

MOD

**Coordination of Frequency Assignments to Stations in a Space
Radiocommunication Service Except Stations in the Broadcasting-
Satellite Service and to Appropriate Terrestrial Stations¹**

MOD

**Section I. Procedures for the Advance Publication of
Information on Planned Satellite Networks²**

NOC

4099**1041***Publication of Information*

MOD

4100
639AA**1042**

§ 1. (1) An administration (or one acting on behalf of a group of named administrations) which intends to establish a satellite system shall, prior to the coordination procedure in accordance with No. **1060** where applicable, send to the International Frequency Registration Board, not earlier than five years and preferably not later than two years before the date of bringing into service each satellite network of the planned system, the information listed in Appendix 4.

NOC

4101
639AB**1043**

(2) Any amendments to the information sent concerning a planned satellite system in accordance with No. **1042** shall also be sent to the Board as soon as they become available.

MOD

4102
639AC**1044**

(3) The Board shall publish the information sent under Nos. **1042** and **1043** in a special section of its weekly circular and shall also, when the weekly circular contains such information, so advise all administrations by circular telegram. The circular telegram shall include the frequency bands to be used and, in the case of a geostationary satellite, the orbital location of the space station.

ADD

4102A**1045**

(4) If the information is found to be incomplete, the Board shall publish it under No. **1044** and immediately seek, from the administration concerned, any clarification and information not provided. In such cases, the period of four months specified in No. **1047** shall count from the date of publication, under No. **1044**, of the complete information.

ADD

A.11.1

¹ For the coordination of frequency assignments to stations in the broadcasting-satellite service and other services in the frequency bands 11.7 - 12.2 GHz (in Regions 2 and 3) and 11.7 - 12.5 GHz (in Region 1), see also Article 15.

ADD

A.11.2

² These procedures may be applicable to stations on board satellite launching vehicles.

NOC	4103	1046	<i>Comments on Published Information</i>
MOD	4104 639AD	1047	§ 2. If, after studying the information published under No. 1044 , any administration is of the opinion that interference which may be unacceptable may be caused to its existing or planned space radiocommunication services, it shall, within four months after the date of the weekly circular publishing the complete information listed in Appendix 4, send its comments to the administration concerned. A copy of these comments shall also be sent to the Board. If no such comments are received from an administration within the period mentioned above, it may be assumed that that administration has no basic objections to the planned satellite network(s) of that system on which details have been published.
NOC	4105	1048	<i>Resolution of Difficulties</i>
MOD	4106 639AE	1049	§ 3. (1) An administration receiving comments sent in accordance with No. 1047 shall endeavour to resolve any difficulties that may arise and shall provide any additional information that may be available.
NOC	4107 639AF	1050	(2) In case of difficulties arising when any planned satellite network of a system is intended to use the geostationary-satellite orbit:
		1051	a) the administration responsible for the planned system shall first explore all possible means of meeting its requirements, taking into account the characteristics of the geostationary-satellite networks of other systems, and without considering the possibility of adjustment to systems of other administrations. If no such means can be found, the administration concerned is then free to apply to other administrations concerned to solve these difficulties;
		1052	b) an administration receiving a request under No. 1051 shall, in consultation with the requesting administration, explore all possible means of meeting the requirements of the requesting administration, for example, by relocating one or more of its own geostationary space stations involved, or by changing the emissions, frequency usage (including changes in frequency bands) or other technical or operational characteristics;
		1053	c) if after following the procedure outlined in Nos. 1051 and 1052 there are unresolved difficulties, the administrations concerned shall together make every possible effort to resolve these difficulties by means of mutually acceptable adjustments, for example, to geostationary space station locations and to other characteristics of the systems involved in order to provide for the normal operation of both the planned and existing systems.
NOC	4108 639AG	1054	(3) In their attempts to resolve the difficulties mentioned above administrations may seek the assistance of the Board.

NOC	4109	1055	<i>Results of Advance Publication</i>
MOD	4110 639AI	1056	§ 4. An administration on behalf of which details of planned satellite networks have been published in accordance with the provisions of Nos. 1042 to 1044 shall, after the period of four months specified in No. 1047 , inform the Board whether or not comments provided for in No. 1047 have been received and of the progress made in resolving any difficulties. Additional information on the progress made in resolving any remaining difficulties shall be sent to the Board at intervals not exceeding six months prior to the commencement of coordination or the sending of the notices to the Board. The Board shall publish this information in a special section of its weekly circular and shall also, when the weekly circular contains such information, so inform all administrations by circular telegram.
NOC	4111	1057	<i>Commencement of Coordination or Notification Procedures</i>
MOD	4112 639AH	1058	§ 5. In complying with the provisions of Nos. 1049 to 1054 , an administration responsible for a planned satellite system shall, if necessary, defer its commencement of the coordination procedure, or, where this is not applicable, the sending of its notices to the Board, by six months after the date of the weekly circular containing the information listed in Appendix 4 on the relevant satellite network. However, in respect of those administrations with which difficulties have been resolved or which have responded favourably, the coordination procedure, where applicable, may be commenced prior to the expiry of the six months mentioned above.
NOC			Section II. Coordination of Frequency Assignments to a Space Station on a Geostationary Satellite or an Earth Station Communicating with Such a Space Station in Relation to Stations of Other Geostationary-Satellite Networks
NOC	4113	1059	<i>Requirement for Coordination</i>
MOD	4114 639AJ	1060	§ 6. (1) Before an administration (or, in the case of a space station, one acting on behalf of a group of named administrations) notifies to the Board or brings into use any frequency assignment to a space station on a geostationary satellite or to an earth station that is to communicate with a space station on a geostationary satellite, it shall, except in the cases described in Nos. 1066 to 1071 , effect coordination of the assignment with any other administration whose assignment, for a space station on a geostationary satellite or for an earth station that communicates with a space station on a geostationary satellite, might be affected.
ADD	4114A	1061	(2) Frequency assignments to which the provisions of No. 1060 are applicable are those:
		1062	a) in the same frequency band as the planned assignment and in conformity with No. 1503 ; <i>and</i>
		1063	b) either recorded in the Master Register, or coordinated under the provisions of this Section; <i>or</i>

		1064	c) to be taken into account for coordination with effect from the date of receipt by the Board in accordance with No. 1074 , of the relevant information as annotated in Appendix 3; or
		1065	d) notified to the Board without any coordination in those cases where Nos. 1066 to 1071 apply.
MOD	4115 639AK	1066	(3) No coordination under No. 1060 is required:
		1067	a) when the use of a new frequency assignment will cause, to any service of another administration, an increase in the noise temperature of any space station receiver or earth station receiver, or an increase in the equivalent satellite link noise temperature, as appropriate, calculated in accordance with the method given in Appendix 29 , which does not exceed the threshold value defined therein;
MOD		1068	b) when the interference resulting from a modification to a frequency assignment which has previously been coordinated will not exceed that value agreed during coordination;
ADD		1069	c) when an administration proposes to notify or bring into use a new earth station within a service area of an existing satellite network, provided that the new earth station would not cause interference of a level greater than that which would be caused by an earth station pertaining to the same satellite network and whose characteristics have been published, together with the information concerning the space station, in accordance with No. 1078 ;
ADD		1070	d) when, for a new frequency assignment to a receiving station, the notifying administration states that it accepts the interference resulting from the frequency assignments referred to in Nos. 1061 to 1065 ;
ADD		1071	e) between earth stations using frequency assignments in the same direction (either Earth-to-space or space-to-Earth).
NOC	4116	1072	<i>Coordination Data</i>
MOD	4117 639AJ	1073	§ 7. (1) For the purpose of effecting coordination, the administration requesting coordination shall send to any other administration concerned under No. 1060 all the information listed in Appendix 3 required for the coordination. The request concerning coordination of a space station or an associated earth station may specify all or some of the frequency assignments expected to be used by that space station, but thereafter each assignment shall be dealt with individually.
MOD	4118 639AL	1074	(2) The administration requesting coordination shall at the same time send to the Board a copy of the request for coordination, with all the information listed in Appendix 3 required for coordination and the name(s) of the administration(s) with which coordination is sought. An administration believing that the provisions of Nos. 1066 to 1071 apply to its planned assignment may send to the Board the relevant information listed in Appendix 3, either under this provision or in accordance with Nos. 1488 to 1491 . In the latter case, the Board shall immediately inform all administrations by circular telegram.

ADD	4118A	1075	§ 8.	On receipt of the information referred to in No. 1074 , the Board shall:
ADD	4118B	1076		a) immediately examine this information with respect to its conformity with No. 1503 and, as soon as possible, send a telegram to all administrations indicating the identity of the satellite network, its findings with respect to No. 1503 and the date of receipt of the information; this date shall be considered as the date from which the assignment will be taken into account for coordination;
ADD	4118C	1077		b) examine the information received with a view to identifying those administrations whose services might be affected, in accordance with No. 1060 , and inform the administrations concerned by telegram;
ADD	4118D	1078		c) publish in a special section of its weekly circular the information received under No. 1074 and the result of the examination under Nos. 1076 and 1077 , together with a reference to the weekly circular in which details of the satellite network were published in accordance with Section I of this Article. When the weekly circular contains such information, the Board shall so inform all administrations by circular telegram.
NOC	4119	1079		<i>Requests for Inclusion in Coordination Procedure</i>
MOD	4120 639AM	1080	§ 9.	An administration believing that it should have been included in the coordination procedure under No. 1060 shall have the right to request that it be brought into the coordination procedure. Such a request shall be sent to the administration initiating the coordination procedure, with a copy to the Board, as soon as possible.
NOC	4121	1081		<i>Acknowledgement of Receipt of Coordination Data</i>
MOD	4122 639AO	1082	§ 10.	An administration with which coordination is sought under No. 1060 shall acknowledge receipt of the coordination data immediately by telegram. If no acknowledgement is received within thirty days after the date of the weekly circular publishing the information under No. 1078 , the administration seeking coordination shall dispatch a telegram requesting acknowledgement, to which the receiving administration shall reply within a further period of fifteen days.
NOC	4123	1083		<i>Examination of Coordination Data and Agreement Between Administrations</i>
MOD	4124 639AO	1084	§ 11. (1)	On receipt of the coordination data, an administration shall promptly examine the matter with regard to interference ¹ which would be caused to the service rendered by its stations in respect of which coordination is sought under
MOD	4124.1 639AO.1	1084.1		¹ The calculation methods and the criteria to be employed in evaluating the interference should be based on relevant CCIR Recommendations agreed by the administrations concerned either as a result of Resolution 703 or otherwise. In the event of disagreement on a CCIR Recommendation or in the absence of such Recommendations, the methods and criteria shall be agreed between the administrations concerned. Such agreements shall be concluded without prejudice to other administrations.

No. 1060 or caused by these stations. In so doing, it shall have regard to the proposed date of bringing into use of the assignment for which coordination was requested. It shall then, within four months from the date of the relevant weekly circular, notify the administration requesting coordination of its agreement. If, however, the administration with which coordination is sought does not agree, it shall, within the same period, send to the administration seeking coordination the technical details upon which its disagreement is based, including those relevant characteristics contained in Appendix 3 which have not previously been notified to the Board, and make such suggestions as it is able to offer with a view to a satisfactory solution of the problem. A copy of these comments shall also be sent to the Board.

MOD	4125 639AT	1085	(2) Either the administration seeking coordination or an administration with which coordination is sought may request additional information which it may require to assess the interference to the services concerned.
ADD	4125A	1086	<i>Results of Coordination</i>
ADD	4125B	1087	§ 12. An administration which has initiated a coordination procedure under the provisions of Nos. 1060 to 1074 shall communicate to the Board, on expiry of the period of four months following the date of the relevant weekly circular mentioned in No. 1078, the names of the administrations with which an agreement has been reached and any changes in the characteristics of its frequency assignment. It shall also inform the Board of the progress made in effecting coordination with the other administrations or of any difficulties. Such a communication shall be made to the Board every six months after the above-mentioned period. The Board shall publish this information in a special section of its weekly circular and, when the weekly circular contains information on changes in the characteristics published, it shall so inform all administrations by circular telegram.
MOD	4126	1088	<i>Requests to the IFRB for Assistance in Effecting Coordination</i>
MOD	4127 639AS	1089	§ 13. (1) An administration seeking coordination may request the Board to endeavour to effect coordination in those cases where:
		1090	a) an administration with which coordination is sought under No. 1060 fails to acknowledge receipt, under No. 1082, within forty-five days after the date of the weekly circular publishing the information relating to the request for coordination;
		1091	b) an administration has acknowledged receipt under No. 1082, but fails to give a decision within four months from the date of the relevant weekly circular;
		1092	c) there is disagreement between the administration seeking coordination and an administration with which coordination is sought as to the acceptable interference; <i>or</i>
		1093	d) coordination between administrations is not possible for any other reason.

- 1094** (2) In so doing, the administration shall furnish the necessary information to enable the Board to endeavour to effect such coordination.
- NOC **4128** **1095** *Action to Be Taken by the IFRB*
- NOC **4129** **1096** § 14. (1) Where the Board receives a request under No. **1090**, it shall forthwith send a telegram to the administration concerned requesting immediate acknowledgement.
639AU
- NOC **4130** **1097** (2) Where the Board receives an acknowledgement following its action under No. **1096**, or where the Board receives a request under No. **1091**, it shall forthwith send a telegram to the administration concerned requesting an early decision in the matter.
639AV
- MOD **4131** **1098** (3) Where the Board receives a request under No. **1093**, it shall endeavour to effect coordination in accordance with the provisions of No. **1060**. The Board shall also act in accordance with Nos. **1075** to **1078**. Where the Board receives no acknowledgement to its request for coordination within the periods specified in No. **1082** it shall act in accordance with No. **1096**.
639AW
- MOD **4132** **1099** (4) Where necessary, as part of the procedure under Nos. **1089** to **1094**, the Board shall assess the interference. In any case, the Board shall inform the administrations concerned of the results obtained.
639AY
- MOD **4133** **1100** (5) The Board may request additional information which it may require to assess the interference to the services concerned.
639AT
- (MOD) **4134** **1101** (6) Where an administration fails to reply within thirty days of dispatch of the Board's telegram requesting an acknowledgement sent under No. **1096**, or fails to give a decision in the matter within thirty days of dispatch of the Board's telegram of request under No. **1097**, it shall be deemed that the administration with which coordination was sought has undertaken:
639AX
- 1102** a) that no complaint will be made in respect of any harmful interference which may be caused to the services rendered by its space radiocommunication stations by the use of the assignment for which coordination was requested;
- 1103** b) that its space radiocommunication stations will not cause harmful interference to the use of the assignment for which coordination was requested.
- NOC **4135** **1104** *Notification of Frequency Assignments in the Event of Continuing Disagreement*
- MOD **4136** **1105** § 15. In the event of continuing disagreement between an administration seeking to effect coordination and one with which coordination has been sought, the administration seeking coordination shall, except in the cases where the assistance of the Board has been requested, defer the submission of its notice concerning the proposed assignment by six months from the date of publication of the request for coordination under No. **1078**, taking into consideration the provisions of No. **1496**.
639AZ

NOC **Section III. Coordination of Frequency Assignments to an Earth Station
in Relation to Terrestrial Stations**

NOC **4137** **1106** *Requirement for Coordination*

MOD **4138** **1107** § 16. (1) Before an administration notifies to the Board or brings into use any frequency assignment to an earth station, whether for transmitting or receiving, in a particular band allocated with equal rights to space and terrestrial radiocommunication services in the frequency spectrum above 1 GHz, it shall, except in the cases described in Nos. **1108** to **1111**, effect coordination of the assignment with each administration whose territory lies wholly or partly within the coordination area¹ of the planned earth station. The request for coordination concerning an earth station may specify all or some of the frequency assignments of the associated space station, but thereafter each assignment shall be dealt with individually.

639AN

MOD **4139** **1108** (2) No coordination under No. **1107** is required when an administration proposes:

639AR

1109 a) to bring into use an earth station the coordination area of which does not include any of the territory of any other country;

1110 b) to change the characteristics of an existing assignment in such a way as not to increase the interference to or from the terrestrial radiocommunication stations of other administrations;

1111 c) to operate a mobile earth station. However, if the coordination area associated with the operation of such a mobile earth station, in a frequency band referred to in No. **1107**, includes any of the territory of another country, the operation of such a station shall be subject to agreement on coordination between the administrations concerned. This agreement shall apply to the characteristics of the mobile earth station(s), or to the characteristics of a typical mobile earth station, and shall apply to a specified service area. Unless otherwise stipulated in the agreement, it shall apply to any mobile earth stations in the specified service area provided that interference caused by them shall not be greater than that caused by a typical earth station for which the technical characteristics appear in the notice and have been or are being submitted in accordance with No. **1494**.

MOD **4138.1** **1107.1** ¹ Appendix **28**, which shall be used for the calculation of the coordination area, contains criteria relating only to coordination between earth stations and stations in the fixed or mobile services. The criteria relating to other terrestrial radiocommunication services should be based on relevant CCIR Recommendations agreed by the administrations concerned either as a result of Resolution **703** or otherwise.

639AN.1

In the event of disagreement on a CCIR Recommendation or in the absence of such Recommendations, the methods and criteria shall be agreed between the administrations concerned. Such agreements shall be concluded without prejudice to other administrations.

SUP **4138.2**
639AN.2

NOC	4140	1112	<i>Coordination Data</i>
MOD	4141 639AN	1113	§ 17. For the purpose of effecting coordination, the administration requesting coordination shall send to each administration concerned under No. 1107 a copy of diagrams drawn to an appropriate scale indicating for both transmission and reception the location of the earth station and its associate coordination areas, or the coordination area related to the service area in which it is intended to operate the mobile earth station, and the data on which the diagrams are based, including all pertinent information concerning the proposed frequency assignment as listed in Appendix 3, and an indication of the approximate date on which it is planned to begin operations. A copy of this information with the date of dispatch of the request for coordination shall also be sent for the information of the Board.
NOC	4142	1114	<i>Acknowledgement of Receipt of Coordination Data</i>
MOD	4143 639AP	1115	§ 18. An administration with which coordination is sought under No. 1107 shall acknowledge receipt of the coordination data immediately by telegram. If no acknowledgement is received within thirty days of dispatch of the coordination data, the administration seeking coordination shall dispatch a telegram requesting acknowledgement, to which the receiving administration shall reply within a further period of fifteen days.
NOC	4144	1116	<i>Examination of Coordination Data and Agreement Between Administrations</i>
MOD	4145 639AP	1117	§ 19. (1) On receipt of the coordination data an administration shall, having regard to the proposed date of bringing into use of the assignment for which coordination was requested, promptly examine the matter with regard both to:
		1118	a) interference ¹ which would be caused to the service rendered by its terrestrial radiocommunication stations operating in accordance with the Convention and these Regulations, or to be so operated prior to the planned date of bringing the earth station assignment into service, or within the next three years, whichever is the longer; <i>and to</i>
		1119	b) interference ¹ which would be caused to reception at the earth station by the service rendered by its terrestrial radiocommunication stations operating in accordance with the Convention and these Regulations, or to be so operated prior to the planned date of bringing the earth station assignment into service, or within the next three years, whichever is the longer.
SUP	4141.2 639AN.2		
MOD	4145.1 639AP.1	1118.1 1119.1	¹ The calculation methods and the criteria to be employed in evaluating the interference should be based upon relevant CCIR Recommendations agreed by the administrations concerned either as a result of Resolution 703 or otherwise. In the event of disagreement on a CCIR Recommendation or in the absence of such Recommendations, the methods and criteria shall be agreed between the administrations concerned. Such agreements shall be concluded without prejudice to other administrations.

- 1120 (2) The periods referred to in Nos. 1118 and 1119 may be extended by agreement between the administrations concerned in order to take planned terrestrial networks into account.
- ADD 4145A 1121 (3) The administration with which coordination is sought shall, within four months from dispatch of the coordination data:
- 1122 a) notify the administration requesting coordination of its agreement with a copy to the Board, indicating, where appropriate, the part of the allocated frequency band containing the coordinated frequency assignments; or
- 1123 b) send to that administration a request for inclusion in coordination of the terrestrial radiocommunication stations mentioned in Nos. 1118 and 1119; or
- 1124 c) notify that administration of its disagreement.
- 1125 (4) In the cases mentioned in Nos. 1123 and 1124, the administration with which coordination is sought shall send to the administration requesting coordination a copy of a diagram drawn to an appropriate scale indicating the location of those terrestrial radiocommunication stations which are or will be within the coordination area of the earth transmitting or receiving station, as appropriate, together with all other relevant basic characteristics and make such suggestions as it may be able to offer with a view to a satisfactory solution of the problem.
- MOD 4146 1126 (5) When the administration with which coordination is sought sends to the administration seeking coordination the information required in the case of No. 1124, a copy thereof shall also be sent to the Board. The Board shall consider as notifications in accordance with Section I of Article 12 only that information relating to existing terrestrial radiocommunication stations or to those to be brought into use within the next three months.
- ADD 4146A 1127 (6) When an agreement on coordination is reached, as a consequence of Nos. 1121 to 1125, the administration responsible for the terrestrial stations may send to the Board the information concerning those terrestrial stations covered by the agreement which are intended to be notified in accordance with Section I of Article 12. The Board shall consider as notifications in accordance with that Section only that information relating to existing terrestrial radiocommunication stations or to those to be brought into use within the next three years.
- MOD 4147 1128 (7) The administration seeking coordination or an administration with which coordination is sought may request additional information which they may require to assess the interference to the services concerned.
- MOD 4148 1129 *Requests to the IFRB for Assistance in Effecting Coordination*
- MOD 4149 1130 § 20. (1) An administration seeking coordination may request the Board to endeavour to effect coordination in those cases where:
- 1131 a) an administration with which coordination is sought under No. 1107 fails to acknowledge receipt, under No. 1115, within forty-five days of dispatch of the coordination data;

- 1132 *b)* an administration has acknowledged receipt under No. 1115, but fails to give a decision within four months from dispatch of the coordination data under No. 1113;
- 1133 *c)* there is disagreement between the administration seeking coordination and an administration with which coordination is sought as to the acceptable interference; *or*
- 1134 *d)* coordination between administrations is not possible for any other reason.
- 1135 (2) In so doing, the administration shall furnish the necessary information to enable the Board to endeavour to effect such coordination.

NOC 4150 1136 *Action to Be Taken by the IFRB*

(MOD) 4151 1137 § 21. (1) Where the Board receives a request under No. 1131, it shall forthwith send a telegram to the administration concerned requesting immediate acknowledgment.
639AU

(MOD) 4152 1138 (2) Where the Board receives an acknowledgement following its action under No. 1137, or where the Board receives a request under No. 1132, it shall forthwith send a telegram to the administration concerned requesting an early decision in the matter.
639AV

(MOD) 4153 1139 (3) Where the Board receives a request under No. 1134, it shall endeavour to effect coordination in accordance with the provisions of No. 1107. Where the Board receives no acknowledgement to its request for coordination within the periods specified in No. 1115 it shall act in accordance with No. 1137.
639AW

MOD 4154 1140 (4) Where necessary, as part of the procedure under Nos. 1130 to 1135, the Board shall assess the interference. In any case, the Board shall inform the administrations concerned of the results obtained.
639AY

MOD 4155 1141 (5) The Board may request additional information which it may require to assess the interference to the services concerned.
639AT

NOC 4156 1142 (6) Where an administration fails to reply within thirty days of dispatch of the Board's telegram requesting an acknowledgement sent under No. 1137, or fails to give a decision in the matter within thirty days of dispatch of the Board's telegram of request under No. 1138, it shall be deemed that the administration with which coordination was sought has undertaken:
639AX

1143 *a)* that no complaint will be made in respect of any harmful interference which may be caused to the services rendered by its terrestrial stations by the use of the assignment for which coordination was requested;

1144 *b)* that its terrestrial stations will not cause harmful interference to the use of the assignment for which coordination was requested.

NOC	4157	1145	<i>Notification of Frequency Assignments in the Event of Continuing Disagreement</i>
MOD	4158 639AZ	1146	§ 22. In the event of continuing disagreement between an administration seeking to effect coordination and one with which coordination has been sought, the administration seeking coordination shall, except in the cases where the assistance of the Board has been requested, defer the submission of its notice concerning the proposed assignment by six months from the date of the request for coordination, taking into consideration the provisions of No. 1496 .
NOC			Section IV. Coordination of Frequency Assignments to a Terrestrial Station for Transmission in Relation to an Earth Station
NOC	4159	1147	<i>Requirement for Coordination</i>
MOD	4160 492A	1148	§ 23. (1) Before an administration notifies to the Board, or brings into use any frequency assignment to a terrestrial station within the coordination area ¹ of an earth station, in a band above 1 GHz allocated with equal rights to terrestrial radiocommunication services and space radiocommunication services (space-to-Earth), excepting the broadcasting-satellite service, it shall, except in cases described in Nos. 1155 to 1158 , effect coordination of the proposed assignment with the administration responsible for the earth station with respect of the frequency assignments which are:
		1149	a) in conformity with No. 1503 ; and
		1150	b) are either coordinated under No. 1107 ; or
		1151	c) to be taken into account for coordination with effect from the date of communication of the information referred to in No. 1107 ; or
		1152	d) recorded in the Master Register with a favourable finding with respect to No. 1505 ; or
		1153	e) recorded in the Master Register with an unfavourable finding with respect to No. 1505 and a favourable finding with respect to No. 1509 ; or
		1154	f) recorded in the Master Register with an unfavourable finding with respect to Nos. 1505 and 1509 , the notifying administration having stated that it has accepted the interference resulting from the existing terrestrial stations located within the coordination area of the earth station on the date of its recording.
MOD	4160.1 492A.1	1148.1	¹ Appendix 28, which shall be used for the calculation of the coordination area, contains criteria relating only to coordination between earth stations and stations in the fixed or mobile services. The criteria relating to other terrestrial radiocommunication services should be based on relevant CCIR Recommendations agreed by the administrations concerned either as a result of Resolution 703 or otherwise.

In the event of disagreement on a CCIR Recommendation or in the absence of such Recommendations, the methods and criteria shall be agreed between the administrations concerned. Such agreements shall be concluded without prejudice to other administrations.

MOD	4161 492C	1155	(2) No coordination under Nos. 1148 to 1154 is required when an administration proposes:
		1156	a) to bring into use a terrestrial station which is located, in relation to an earth station, outside the coordination area;
		1157	b) to change the characteristics of an existing assignment in such a way as not to increase the interference to the earth stations of other administrations;
ADD		1158	c) to bring into use a terrestrial station within the coordination area of an earth station, provided that the proposed terrestrial station assignment is outside any part of a frequency band coordinated under No. 1122 for reception by that earth station.
NOC	4162	1159	<i>Coordination Data</i>
MOD	4163 492A	1160	§ 24. For the purpose of effecting coordination, the administration requesting coordination shall send to any other administration concerned under Nos. 1148 to 1154, by the fastest possible means, a copy of a diagram drawn to an appropriate scale indicating the location of the terrestrial station and all other pertinent details of the proposed frequency assignment, and the approximate date on which it is planned to bring the station into use. The request for coordination may specify all or some of the frequency assignments expected to be used within the next three years by stations of a terrestrial network wholly or partly within the coordination area of the earth station. This period may be extended by agreement between the administrations concerned. Thereafter each assignment shall be dealt with individually.
NOC	4164	1161	<i>Acknowledgement of Receipt of Coordination Data</i>
MOD	4165 492B	1162	§ 25. An administration with which coordination is sought under Nos. 1148 to 1154 shall acknowledge receipt of the coordination data immediately by telegram. If no acknowledgement is received within thirty days of dispatch, the administration seeking coordination may dispatch a telegram requesting acknowledgement of receipt of the coordination data, to which the receiving administration shall reply within a further period of fifteen days.
NOC	4166	1163	<i>Examination of Coordination Data and Agreement Between Administrations</i>
MOD	4167 492B	1164	§ 26. (1) On receipt of the coordination data, the administration with which coordination is sought shall promptly examine the matter with regard to interference ¹ which would be caused to the services rendered by its earth stations covered by Nos. 1148 to 1154, which are operating, or are to be operated, within the next three years.
MOD	4167.1 492B.1	1164.1	¹ The calculation methods and the criteria to be employed in evaluating the interference should be based on relevant CCIR Recommendations agreed by the administrations concerned either as a result of Resolution 703 or otherwise. In the event of disagreement on a CCIR Recommendation or in the absence of such Recommendations, the methods and criteria shall be agreed between the administrations concerned. Such agreements shall be concluded without prejudice to other administrations.

1165 (2) In so doing, the administration may take into account any frequency assignment communicated to it for use more than three years in advance.

1166 (3) The administration with which coordination is sought shall, within an overall period of four months¹ from dispatch of the coordination data, either notify the administration requesting coordination of its agreement to the proposals or, if this is not possible, indicate the reasons therefor and make such suggestions as it may be able to offer with a view to a satisfactory solution of the problem.

MOD **4168** **1167** § 27. Either the administration seeking coordination or the administration with
492E which coordination is sought may request additional information which it may require to assess the interference to the services concerned.

MOD **4169** **1168** *Requests to the IFRB for Assistance in Effecting Coordination*

MOD **4170** **1169** § 28. (1) An administration seeking coordination may request the Board to endeavour
492D to effect coordination, in those cases where:

1170 a) an administration with which coordination is sought under Nos. **1148** to **1154** fails to acknowledge receipt under No. **1162** within thirty days of dispatch of the coordination data;

1171 b) an administration has acknowledged receipt under No. **1162** but fails to give a decision within four months of dispatch of the coordination data;

1172 c) there is disagreement between the administration seeking coordination and an administration with which coordination is sought as to the acceptable interference; *or*

1173 d) coordination between administrations is not possible for any other reason.

1174 (2) In so doing, the administration shall furnish the necessary information to enable the Board to endeavour to effect such coordination.

NOC **4171** **1175** *Action to Be Taken by the IFRB*

NOC **4172** **1176** § 29. (1) Where the Board receives a request under No. **1170**, it shall forthwith
492F send a telegram to the administration concerned requesting immediate acknowledgement.

NOC **4173** **1177** (2) Where the Board receives an acknowledgement following its action
492FA under No. **1176**, or where the Board receives a request under No. **1171**, it shall forthwith send a telegram to the administration concerned requesting an early decision in the matter.

ADD **4167.2** **1166.1** ¹ This period may be extended with the agreement of the administration which requested the coordination.

NOC	4174 492FB	1178	(3) Where the Board receives a request under No. 1173, it shall endeavour to effect coordination in accordance with the provisions of Nos. 1148 to 1154. Where the Board receives no acknowledgement of its request for coordination within the period specified in No. 1162, it shall act in accordance with No. 1176.
MOD	4175 492G	1179	(4) Where necessary, as part of the procedure under Nos. 1169 to 1174, the Board shall assess the interference. In any case, the Board shall inform the administrations concerned of the results obtained.
MOD	4176 492E	1180	(5) The Board may request additional information which it may require to assess the interference to the services concerned.
NOC	4177 492FC	1181	(6) Where an administration fails to reply within thirty days of dispatch of the Board's telegram sent under No. 1176 requesting an acknowledgement, or fails to give a decision in the matter within two months of dispatch of the Board's telegram of request sent under No. 1177, it shall be deemed that the administration with which coordination was sought has undertaken that no complaint will be made in respect of any harmful interference which may be caused by the terrestrial station being coordinated to the service rendered by its earth station.
NOC	4178	1182	<i>Notification of Frequency Assignments in the Event of Continuing Disagreement</i>
MOD	4179 492GA	1183	§ 30. In the event of continuing disagreement between an administration seeking to effect coordination and one with which coordination has been sought, the administration seeking coordination shall, except in the cases where the assistance of the Board has been requested, defer the submission of its notice concerning the proposed assignment by six months from the date of the request for coordination, taking into consideration the provisions of Nos. 1230 and 1496.
ADD			Section V. Special Assistance by the IFRB
ADD	4179A	1184	§ 31. (1) If it is requested by an administration, particularly by an administration of a country in need of special assistance, the Board, using such means at its disposal as are appropriate in the circumstances, shall render the following assistance:
		1185	a) computation of the increases in noise temperatures in accordance with No. 1066;
		1186	b) preparation of diagrams showing the coordination areas as in No. 1113;
		1187	c) any other assistance of a technical nature for completion of the procedures in this Article.
ADD	4179B	1188	(2) In making a request to the Board under Nos. 1184 to 1187, the administration shall furnish the Board with the necessary information.
		1189 to 1213	NOT allocated.

N12/9

ARTICLE 12

Notification and Recording in the Master International Frequency Register of Frequency Assignments¹ to Terrestrial Radiocommunication Stations^{2,3}

Section I. Notification of Frequency Assignments

- | | | | |
|-----|-------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MOD | 4280
486 | 1214 | § 1. (1) Any frequency assignment ⁴ to a fixed, land, broadcasting ⁵ , radionavigation land, radiolocation land or a standard frequency and time signal station, or to a ground-based station in the meteorological aids service, shall be notified to the International Frequency Registration Board: |
| | | 1215 | a) if the use of the frequency concerned is capable of causing harmful interference to any service of another administration ⁶ ; <i>or</i> |
| | | 1216 | b) if the frequency is to be used for international radiocommunication; <i>or</i> |
| | | 1217 | c) if it is desired to obtain international recognition of the use of the frequency ⁶ . |

NOC	A.12.1	¹ The expression <i>frequency assignment</i> , wherever it appears in this Article, shall be understood to refer either to a new frequency assignment or to a change in an assignment already recorded in the Master International Frequency Register (hereinafter called the <i>Master Register</i>).
-----	--------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC	A.12.2	² For the notification and recording in the Master International Frequency Register of frequency assignments to radio astronomy and space radiocommunication stations, see Article 13.
-----	--------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

ADD	A.12.3	³ For the notification and recording in frequency assignments to terrestrial stations in the frequency bands 11.7 - 12.2 GHz (in Regions 2 and 3) and 11.7 - 12.5 GHz (in Region 1), so far as their relationship to the broadcasting-satellite service in these bands is concerned, see also Article 15.
-----	--------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

(MOD)	4280.1 486.1	1214.1	⁴ In the case where a frequency is used by numerous stations under the jurisdiction of the same administration, see Appendix 1 (Section F, II, Column 5a, paragraphs 3 and 4).
-------	-----------------	--------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC	4280.2 486.2	1214.2	⁵ With respect to assignments to broadcasting stations in the bands allocated exclusively to the broadcasting service between 5 950 kHz and 26 100 kHz, see Article 17.
-----	-----------------	--------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC	4280.3 486.3	1215.1 1217.1	}	⁶ The attention of administrations is specifically drawn to the application of the provisions of Nos. 1215 and 1217 in those cases where they make a frequency assignment to a terrestrial station, located within the coordination area of an earth station (see Nos. 1148 to 1154), in a band which terrestrial radiocommunication services share with equal rights with space radiocommunication services in the frequency spectrum above 1 GHz.
-----	-----------------	------------------	---	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

ADD	4280A	1218	(2) Similar notice ¹ shall be given when an administration desires to request the assistance of the Board in selecting a frequency assignment to a station of the fixed service in any of the bands allocated exclusively, or on a shared basis, to that service between 3 000 kHz and 27 500 kHz, or when an administration wishes to use for the same type of station a predetermined frequency assignment; in the latter case, the administration shall indicate the reasons on which the request is based together with the possible modifications which could be made to the characteristics of its assignment, and the Board will take account of this information when searching for a satisfactory solution. For this purpose an individual notice shall be drawn up as specified in Section D of Appendix 1. It is recommended that the notifying administration should provide the additional information called for in that Appendix, together with such further information as it may consider appropriate. The procedure to be followed is given in Nos. 1275 to 1304.
NOC	4281 487	1219	(3) Similar notice shall be given for any frequency to be used for the reception of mobile stations by a particular land station in each case where one or more of the conditions specified in Nos. 1214 to 1217 are applicable.
MOD	4282 488	1220	(4) Specific frequencies listed in the Preface to the International Frequency List which are prescribed by these Regulations for common use by stations of a given service (for example, international distress frequencies 500 kHz and 2 182 kHz, frequencies of ship radiotelegraph stations operating in their exclusive high frequency bands, etc.), shall not be notified to the Board.
MOD	4283 489	1221	§ 2. (1) For any notification under Nos. 1214 to 1217 or 1219 an individual notice for each frequency assignment shall be drawn up as prescribed in Sections A or B of Appendix 1, which specify the basic characteristics to be furnished, according to the case. It is recommended that the notifying administration should also supply the additional information called for in that Appendix, together with such further information as it may consider appropriate.
ADD	4283A	1222	(2) Notices concerning assignments to stations of the fixed service in the bands allocated to that service between 3 000 kHz and 27 500 kHz that are submitted under Nos. 1214 to 1217 or 1218 shall also indicate the class of operation of the assignment, with the use of the following symbols: Symbol A – assignment for regular operational use which is not provided by another satisfactory means of telecommunication; <i>or</i> Symbol B – assignment for use as a standby to some other means of telecommunication; <i>or</i> Symbol C – assignment for occasional use on a reserve basis and not requiring internationally recognized protection from harmful interference.

ADD 4280A.1 1218.1

¹ See Resolution 103.

MOD	4284 490	1223	(3) When stations of the same service, such as the land mobile service, use a band of frequencies above 28 000 kHz in a specific area or areas, an individual notice should be drawn up, as prescribed in Section C of Appendix 1, which specifies the basic characteristics to be furnished, for each frequency on which there are assignments within the band; however, the particulars should relate only to a typical station. This does not apply:
		1224	a) to broadcasting stations;
		1225	b) to other terrestrial stations to which the provisions of Sub-Section IIE of this Article apply;
		1226	c) to other stations of the fixed or mobile service which operate in the frequency bands listed in Table II of Appendix 28 with equivalent isotropically radiated power exceeding the corresponding values listed in the table;
		1227	d) to the terrestrial stations in the frequency bands listed in Nos. 2509, 2510 and 2511.
MOD	4285 491	1228	§ 3. (1) Whenever practicable, each notice under Nos. 1214 to 1217, 1219 or 1223 to 1227 should reach the Board before the date on which the assignment is brought into use. It must reach the Board not earlier than three months before the date on which it is to be brought into use, but in any case not later than thirty days after the date it is actually brought into use.
ADD	4285A	1229	(2) A notice under No. 1218 must reach the Board not earlier than one year before the date on which the requested frequency is to be brought into use.
ADD	4285B	1230	(3) A notice concerning a frequency assignment to one of the terrestrial stations mentioned in Sub-Section IIE of this Article must reach the Board not earlier than three years and not later than three months before the date on which the assignment is to be brought into use.
MOD	4286 492	1231	(4) Except for cases covered by Nos. 1218 and 1229 any frequency assignment the notice of which reaches the Board more than thirty days after the notified date of bringing into use, or in the case of a terrestrial station mentioned in Sub-Section IIE of this Article, any frequency assignment the notice of which reaches the Board less than three months before it is brought into use, shall, where it is to be recorded, bear a remark in the Master Register to indicate that it is not in conformity with No. 1228 or 1230. However, such a remark will not be made in the Master Register against an assignment to a terrestrial station which has not been notified under Nos. 1214 to 1217 but which is required to be notified after its entry into use as a result of coordination for or notification of an earth station assignment.
SUP	4287 492GB		

(MOD) 4288 1232 § 4. Whatever the means of communication, including telegraph, by which a notice is sent to the Board, it shall be considered complete if it contains at least those appropriate basic characteristics specified in Appendix 1.
493

SUP 4289
494

NOC 4290 1233 § 5. When a service or regional agreement has been concluded, the Board shall be informed of the details of this agreement.
495

NOC **Section II. Procedure for the Examination of Notices and the Recording of Frequency Assignments in the Master Register**

MOD 4291 1234 § 6. Any notice submitted under Nos. 1214 to 1217, 1219 or 1223 to 1227 which does not contain at least those basic characteristics specified in Appendix 1 shall be returned by the Board, by airmail, to the notifying administration with the reasons therefor, unless the information not provided is immediately forthcoming in response to an enquiry of the Board. The Board shall advise the administration by telegram when a notice is returned under this provision.
496

MOD 4292 1235 § 7. On receipt of a complete notice, the Board shall include the particulars thereof, with the date of receipt, in a weekly circular to be published within a period of forty days after receipt of the notice and sent by airmail to all administrations. When the Board is not in a position to comply with this time-limit, it shall, as soon as possible, so inform the administrations concerned giving the reasons therefor.
497

MOD 4293 1236 § 8. The circular shall contain the full particulars of all such notices received since the publication of the previous circular and shall constitute the acknowledgement to each notifying administration of the receipt of the complete notice.
498

ADD 4293A 1237 § 9. For the purpose of Nos. 1235 and 1236, notices submitted under No. 1218 in the form of a request for assistance of the Board shall be grouped together and specially identified.

MOD 4294 1238 § 10. Complete notices shall be considered by the Board in the order of their receipt; however, notices submitted under No. 1218 shall be treated immediately on receipt. The Board may not postpone the formulation of a finding unless it lacks sufficient data to render a decision in connection therewith; moreover, the Board shall not act upon any notice which has a technical bearing on an earlier notice still under consideration by the Board, until it has reached a finding with respect to such an earlier notice.
499

NOC

**Sub-Section IIA. Procedure to Be
Followed in Cases Not Covered
by Sub-Sections IIB to IIE of this Article**

MOD	4295 500	1239	§ 11. (1) Except for notices referred to in No. 1218 which are dealt with in Nos. 1275 to 1304 the Board shall examine each notice with respect to:
MOD	4296 501	1240	a) its conformity with the Convention, the Table of Frequency Allocations and the other provisions of the Radio Regulations with the exception of those provisions relating to the probability of harmful interference which are the subject of Nos. 1241 and 1242 ;
(MOD)	4297 502	1241	b) the probability of harmful interference to the service rendered by a station for which a frequency assignment already recorded in the Master Register: <ol style="list-style-type: none"> 1) bears a date in Column 2a (see No. 1416); <i>or</i> 2) is in conformity with the provisions of No. 1240 and bears a date in Column 2b (see No. 1417), but has not, in fact, caused harmful interference to any frequency assignment with a date in Column 2a or to any assignment in conformity with No. 1240 with an earlier date in Column 2b;
NOC	4298 503	1242	c) the probability of harmful interference to the service rendered by a station for which a frequency assignment already recorded in the Master Register: <ol style="list-style-type: none"> 1) is in conformity with the provisions of No. 1240 and was recorded in the Master Register with a date in Column 2d as a result of a favourable finding with respect to No. 1242; <i>or</i> 2) is in conformity with the provisions of No. 1240 and was recorded in the Master Register with a date in Column 2d after an unfavourable finding with respect to No. 1242, but has not, in fact, caused harmful interference to any frequency assignment previously recorded in the Master Register and which is in conformity with No. 1240.
ADD	4298A	1243	(2) In conducting the examination under No. 1241 or 1242 , the Board shall apply protection criteria for class of operation A higher than for class of operation B ¹ . The Board shall disregard the probability of interference to frequency assignments of class of operation C.

SUP **4298.1**
503.1

ADD **4298A.1** **1243.1**

¹ The different protection criteria to be applied by the Board for classes of operation A and B shall be published in the Technical Standards of the Board (see No. **1001**).

MOD	4299 504	1244	(3) When the notice relates to a frequency above 28 000 kHz, the Board shall only make the examination specified in No. 1242 at the request of an administration directly concerned or affected when coordination has not been possible between the administrations involved.
NOC	4300 505	1245	(4) Where appropriate, the Board shall also examine the notice with respect to its conformity with a regional or service agreement. The procedure to be followed in connection with frequency assignments made pursuant to such an agreement shall be as specified in Nos. 1240 and 1241 or 1242 except that the Board shall not consider the question of the probability of harmful interference among the parties to such agreement. Similarly, the Board shall not consider the probability of harmful interference to the assignments of any administration with which coordination has been effected.
MOD	4301 506	1246	§ 12. Depending upon the findings of the Board subsequent to the examination prescribed in Nos. 1240 and 1241 or 1242, and the result of the action undertaken by the Board pursuant to Nos. 1275 to 1278 and 1279, further action shall be as follows:
NOC	4302 507	1247	§ 13. (1) <i>Finding Favourable with Respect to No. 1240 in Cases Where the Provisions of No. 1241 or 1242 Are Not Applicable (see No. 1248).</i>
NOC	4303 508	1248	(2) The assignment shall be recorded in the Master Register. The date to be entered in the appropriate part of Column 2 according to the relevant provisions of Section III of this Article shall be the date of receipt of the notice by the Board.
NOC	4304 509	1249	§ 14. (1) <i>Finding Favourable with Respect to Nos. 1240 and 1241 or 1242.</i>
NOC	4305 510	1250	(2) The assignment shall be recorded in the Master Register. The date to be entered in the appropriate part of Column 2 according to the relevant provisions of Section III of this Article shall be the date of receipt of the notice by the Board.
NOC	4306 511	1251	(3) However, should the examination show that the probability of harmful interference for certain hours, seasons, or periods of solar activity is slightly greater than is considered desirable, a remark shall be included in the Master Register to show that there exists a slight probability of harmful interference and hence precautions must be taken in the use of the assignment to avoid harmful interference to assignments already recorded in the Master Register.
NOC	4307 512	1252	§ 15. (1) <i>Finding Favourable with Respect to No. 1240 but Unfavourable with Respect to No. 1241 or 1242.</i>
MOD	4308 513	1253	(2) The notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem in respect of those administrations it has identified.

NOC	4309 514	1254	(3) Should the notifying administration resubmit the notice with modifications which result, after re-examination, in a favourable finding by the Board with respect to No. 1241 or 1242 , the assignment shall be recorded in the Master Register. The date to be entered in the appropriate part of Column 2 according to the relevant provisions of Section III of this Article shall be the date of receipt by the Board of the original notice. The date of receipt by the Board of the resubmitted notice shall be indicated in the Remarks Column.
MOD	4310 515	1255	(4) The notifying administration may resubmit the notice either unchanged, or with modifications which decrease the probability of harmful interference. In cases where there are no modifications or the modifications do not permit the application of No. 1254 and the Board's finding remains unchanged, should the notifying administration insist on reconsideration of its notice and state that it has brought its assignment into use, the Board shall:
ADD	4310A	1256	a) publish the information contained in the notice received under No. 1255 in the weekly circular indicating all the administrations which are likely to be affected;
ADD	4310B	1257	b) simultaneously send a telegram to each of the administrations referred to in No. 1256 advising them of the notice and requesting them to inform the Board:
		1258	1) if the recorded assignment is still in use and, if so, whether it is being used with the notified basic characteristics;
		1259	2) of any harmful interference that occurs within a period of two months from the date of publication of the weekly circular referred to in No. 1256 ;
ADD	4310BA	1260	c) take appropriate action in conformity with Nos. 1964 to 1966 , if the assignment which is the basis of the unfavourable finding had been submitted under No. 1218 ;
ADD	4310C	1261	d) record the assignment in the Master Register if, on expiry of the period referred to in No. 1259 , the Board has received no information that harmful interference has occurred; the date to be entered in the appropriate part of Column 2 according to the relevant provision of Section III of this Article shall be the date of receipt by the Board of the original notice;
ADD	4310D	1262	e) immediately return the notice to the notifying administration informing it of the reported interference and shall make such suggestions as it is able to offer for the elimination of the interference, if the Board receives information that harmful interference has occurred during the two months mentioned in No. 1259 .
ADD	4310E	1263	(5) If the Board receives information that harmful interference has occurred after the recording of an assignment under the provisions of No. 1261 , the Board shall investigate the matter and, where appropriate, shall enter a special remark against such an assignment to show that it will not be taken into account when acting on any later notice.

MOD	4311 516	1264	(6) If, as a result of the information received under Nos. 1257 to 1259, the Board is able to reach a favourable finding with respect to No. 1241 or 1242 with regard to any assignment recorded under the provisions of Nos. 1255 and 1261, the appropriate changes shall be made in respect of the entry of that assignment in the Master Register. If the finding remains unfavourable, the Board shall enter suitable remarks in the Master Register for the entry or entries concerned which describe the situation as found by the Board.
SUP	4312 517		
MOD	4313 518	1265	(7) Should the notifying administration resubmit the notice with modifications which increase the probability of harmful interference, and should the Board's finding remain unchanged, the resubmitted notice shall be treated under No. 1253.
NOC	4314 519	1266	§ 16. (1) <i>Finding Unfavourable with Respect to No. 1240 in Cases Where the Provisions of No. 1241 or 1242 Are Not Applicable (see No. 1244).</i>
MOD	4315 520	1267	(2) Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of these Regulations, the assignment shall be recorded in the Master Register subject to the provisions of No. 1419 or 1420. The date to be entered in the appropriate part of Column 2 according to the relevant provisions of Section III of this Article shall be the date of receipt by the Board of the notice.
(MOD)	4316 521	1268	(3) Where the notice does not include a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of these Regulations, it shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board is able to offer with a view to the satisfactory solution of the problem.
SUP	4317 522		
NOC	4318 523	1269	§ 17. (1) <i>Finding Unfavourable with Respect to No. 1240 in Cases Where the Provisions of No. 1241 or 1242 Are Applicable.</i>
NOC	4319 524	1270	(2) Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of these Regulations, it shall be examined immediately with respect to No. 1241 or 1242, and the provisions of No. 1271 or 1272 shall be applied, as appropriate.
MOD	4320 525	1271	(3) If the finding is favourable with respect to No. 1241 or 1242, the assignment shall be recorded in the Master Register subject to the provisions of No. 1419. The date to be entered in the appropriate part of Column 2 according to the relevant provisions of Section III of this Article shall be the date of receipt by the Board of the notice.

MOD	4321 526	1272	(4) If the finding is unfavourable with respect to No. 1241 or 1242, the notice shall be returned immediately by airmail to the notifying administration. Should the administration insist on reconsideration of the notice, the frequency assignment shall be recorded, for information only, with an appropriate remark referring to No. 1419.
MOD	4322 527	1273	(5) Where the notice does not include a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of these Regulations, it shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.

ADD	4326Bis	1274	§ 18. <i>Procedure to Be Followed in Respect of Notices under No. 1218.</i>
ADD	4326A	1275	(1) In the case of a notice under No. 1218 relating to the selection of a frequency assignment for regular operational use (class of operation A), the Board shall, as quickly as possible, select an appropriate frequency which shall:
		1276	a) be capable of providing the service required;
		1277	b) be in conformity with Nos. 1240 and 1241 or 1242 as appropriate to ensure a favourable finding;
		1278	c) be free from harmful interference from any assignment recorded in the Master Register which is itself in conformity with No. 1240.
ADD	4326AA	1279	(2) In the case of a notice submitted under No. 1218 relating to a predetermined frequency, the notifying administration may request the Board, in addition to the examination under Nos. 1240 and 1241 or 1242, to examine the notice to assess the probability of harmful interference to the assignment from assignments recorded in the Master Register. The Board shall advise the notifying administration of the results of the examination and where necessary shall make suggestions to avoid any possible harmful interference to the assignment.
ADD	4326B	1280	(3) In the case of difficulty in applying the provisions of Nos. 1275 to 1278 and 1279, the procedure given below shall be followed:
ADD	4326BA	1281	a) the Board shall first seek access to one of the least loaded parts of an appropriate band, without considering the possibility of adjustment to any existing recorded assignment;

- ADD 4326BB 1282 b) if necessary the Board shall consult the administration having sent a notice under No. 1218 as to the possibility of modifying the characteristics of the required assignment;
- ADD 4326BC 1283 c) should action under Nos. 1281 and 1282 fail, and should the requesting administration find the selected frequency acceptable, the Board shall consider whether the required assignment could be found by suppressing or downgrading an existing recorded assignment. The enquiries to be made in such an event are those described in Section VII of this Article;
- ADD 4326BD 1284 d) should action under No. 1283 fail, the Board shall then seek alternative means of finding the required assignment in such a way as to involve the minimum necessary modification of the characteristics of any existing recorded assignment;
- ADD 4326BE 1285 e) for the purposes of the action envisaged under No. 1284 the Board shall concentrate its enquiries upon the older recorded assignments for which the Board believes there to be satisfactory alternative means of telecommunications;
- ADD 4326BF 1286 f) the Board, having identified in such a case the minimum modification to the characteristics of an existing recorded assignment that would be needed to accommodate a new assignment requested under No. 1218, shall invoke the relevant provisions of the Convention and shall seek the assistance of the appropriate administration to agree to make, at the appropriate stage, that modification to its recorded assignment;
- ADD 4326BG 1287 g) should action under No. 1286 fail, the Board shall bring to the attention of the administration concerned the fact that in such a case there is then an obligation to reduce the assigned bandwidth, if operationally feasible, or to move the assigned frequency by an amount not exceeding the assigned bandwidth of the recorded frequency assignment, on the condition that no harmful interference is caused to adjacent frequency assignments;
- ADD 4326BH 1288 h) the administration concerned shall then either:
- 1289 1) give its agreement to effect the necessary modification to its existing recorded assignment together with the date upon which this will be effected; *or*
- 1290 2) give any reasons why such a modification cannot be made;
- ADD 4326BI 1291 i) in the event of such a case remaining unresolved within three months of the request for an assignment being made under No. 1218, the Board shall publish a report on the matter for the information of all Members of the Union;
- ADD 4326BJ 1292 j) the Board shall, when appropriate during this procedure, consult the administration requesting an assignment under No. 1218 as to the acceptability of the selected frequency;
- ADD 4326BK 1293 k) if, in application of this paragraph, an administration agrees to a change in the basic characteristics of its frequency assignment, that change shall be recorded in the Master Register without change in the original date or dates.

- ADD 4326C 1294 (4) Administrations are urged to afford all possible assistance through their monitoring stations to help the Board in the successful discharge of its duties under this sub-section.
- ADD 4326D 1295 § 19. (1) *Result of the Action of the Board under Nos. 1275 to 1278 Relating to a Request for Assistance under No. 1218.*
- ADD 4326E 1296 (2) Having selected a frequency under Nos. 1275 to 1278 the Board shall forthwith submit the selected frequency by telegram for the approval of the notifying administration, and shall make a provisional entry in the Master Register in accordance with No. 1311. The date of receipt of the request to the Board under No. 1218 shall be entered in the appropriate part of Column 2.
- ADD 4326F 1297 (3) The notifying administration, on receipt of the telegram mentioned in No. 1296, shall promptly examine the matter and in the event of non-acceptance of the selected frequency shall notify the Board thereof and shall give its reasons for such rejection.
- ADD 4326G 1298 (4) In the circumstances mentioned in No. 1297, the Board shall cancel that entry and inform the administration concerned accordingly. In such a case, if the notifying administration so requests, the Board shall make a further attempt to select an acceptable frequency but the request shall be regarded as a new notice under No. 1218.
- ADD 4326H 1299 (5) The notifying administration, on accepting a frequency selected by the Board, shall, as soon as possible, inform the Board thereof.
- ADD 4326I 1300 (6) If the Board receives no reply within two months to its telegram, sent under No. 1296, seeking approval for the selected frequency, the provisional entry shall be cancelled and the Board shall inform the other administrations accordingly.
- ADD 4326J 1301 § 20. (1) *Result of the Action of the Board under No. 1280 Relating to a Request for Assistance under No. 1218.*
- ADD 4326K 1302 (2) Having selected a frequency under No. 1280, and if the necessary modifications to the previously recorded assignment are accepted in accordance with No. 1289, the Board shall treat the selected assignment in accordance with No. 1295.
- ADD 4326L 1303 (3) Having selected a frequency under No. 1280, if the necessary modification to this previously recorded assignment cannot be made as the result of acting under No. 1290 and if the selected frequency is still acceptable to the requesting administration, the Board shall make an entry in the Master Register in the name of the requesting administration. The date of receipt of the request sent to the Board under No. 1218 shall be entered in the appropriate part of Column 2.

ADD	4326M	1304	(4) Any harmful interference which results from the simultaneous use of both assignments shall be the subject of consultations between the administrations concerned.
NOC	4327 532	1305	§ 21. (1) <i>Change in the Basic Characteristics of Assignments Already Recorded in the Master Register.</i>
MOD	4328 533	1306	(2) A notice of a change in the basic characteristics of an assignment already recorded, as specified in Appendix 1 (except those entered in Columns 2c, 3, 4a and 11 of the Master Register), shall be examined by the Board according to Nos. 1240 and 1241 , 1242 or 1244 , as appropriate, and the provisions of Nos. 1247 to 1273 inclusive applied. Where the change should be recorded, the assignment shall be amended according to the notice.
NOC	4329 534	1307	(3) However, in the case of a change in the basic characteristics of an assignment (except a change of the assigned frequency which exceeds half of the frequency band originally assigned, as defined in No. 141) which is in conformity with No. 1240 , should the Board reach a favourable finding with respect to No. 1241 or 1242 , or find that the change does not increase the probability of harmful interference to assignments already recorded, the amended assignment shall retain the original date in the appropriate part of Column 2. In addition, the date of receipt by the Board of the notice relating to the change shall be entered in the Remarks Column.
ADD	4329A	1308	(4) The projected date of bringing into use of a frequency assignment may be extended on request of the notifying administration by three months. In the case where the administration states that, due to exceptional circumstances, it needs a further extension of this period, such extension may be provided but it shall in no case exceed six months from the original projected date of bringing into use.
MOD	4330 535	1309	§ 22. <i>In applying the provisions of the whole of Sub-Sections IIA to IIC, any resubmitted notice which is received by the Board more than six months after the date of its return by the Board shall be considered as a new notice.</i>
NOC	4331 536	1310	§ 23. (1) <i>Recording of Frequency Assignments Notified Before Being Brought into Use.</i>
NOC	4332 537	1311	(2) If a frequency assignment notified in advance of bringing into use has received favourable findings by the Board with respect to Nos. 1240 and 1241 or 1242 , it shall be entered provisionally in the Master Register with a special symbol in the Remarks Column indicating the provisional nature of that entry.
MOD	4333 538	1312	(3) Within thirty days (see No. 1228) after the date of bringing into use, either as originally notified or as modified in application of No. 1308 , the notifying administration shall confirm that the frequency assignment has been brought into use. When the Board is informed that the assignment has been brought into use, the special symbol shall be deleted from the Remarks Column.

MOD	4334 539	1313	(4) If the Board does not receive this confirmation within the period referred to in No. 1312, the entry concerned shall be cancelled. The Board shall consult the administration concerned before taking such action.
MOD	4335 540	1314	(5) The provisions of Nos. 1311 to 1313 do not apply to frequency assignments which are in conformity with the Allotment Plans appearing in Appendices 25 Mar2, 26, 27 * and 27 Aer2 * to these Regulations; such frequency assignments shall be entered in the Master Register on receipt of the notice by the Board.
NOC			Sub-Section IIB. Procedure to Be Followed for Coast Radiotelephone Stations Operating in the Bands Allocated Exclusively to the Maritime Mobile Service Between 4 000 kHz and 23 000 kHz
NOC	4336 541	1315	§ 24. (1) <i>Examination of Notices Concerning Frequency Assignments to Coast Radiotelephone Stations in the Bands Allocated Exclusively to the Maritime Mobile Service Between 4 000 kHz and 23 000 kHz for Coast Radiotelephone Stations (see No. 1239).</i>
NOC	4337 542	1316	(2) The Board shall examine each notice covered by No. 1315:
NOC	4338 542A	1317	a) with respect to the provisions of No. 1240 and in particular those of No. 4373;
NOC	4339 542B	1318	b) in order to determine whether the notified assignment is in conformity with an allotment in the Allotment Plan contained in Appendix 25 Mar2 to these Regulations.
NOC	4340 543	1319	(3) Any frequency assignment for which the finding is favourable with respect to Nos. 1317 and 1318 shall be recorded in the Master Register (see also No. 1314). The date to be entered in Column 2a shall be that determined according to the relevant provisions of Section III of this Article.
NOC	4341 543A	1320	(4) Any frequency assignment for which the finding is unfavourable with respect to No. 1317 shall be examined with respect to Nos. 1267 and 1268. The date to be entered in Column 2b shall be determined according to the relevant provisions of Section III of this Article.
NOC	4342 545	1321	(5) In the case of a notice which has received a favourable finding with respect to No. 1317 but unfavourable with respect to No. 1318, the Board shall examine this notice with respect to the probability of harmful interference to the service rendered by a radiotelephone coast station for which a frequency assignment:
		1322	a) is in conformity with an allotment in the Allotment Plan and is already recorded in the Master Register or may be so recorded in the future; or
SUP	4336.1 541.1		

* Note by the General Secretariat: See No. 5189 and Resolution 400.

		1323	b) was recorded in the Master Register on a frequency specified in Appendix 16, as a result of a favourable finding with respect to Nos. 1321 to 1324; or
		1324	c) was recorded in the Master Register on a frequency specified in Appendix 16, after an unfavourable finding with respect to Nos. 1321 to 1324, but has not, in fact, caused harmful interference to any frequency assignment to a coast radiotelephone station previously recorded in the Master Register.
NOC	4343 546	1325	(6) According to the finding of the Board with respect to Nos. 1321 to 1324, further action shall be in accordance with the provisions of Nos. 1249 to 1265 inclusive, or Nos. 1305 to 1307 inclusive, as appropriate, it being understood that in those provisions Nos. 1321 to 1324 shall be read for No. 1241.
NOC	4344 547	1326	§ 25. (1) <i>Examination of Notices Concerning Frequencies Used for Reception by Coast Radiotelephone Stations in the Bands Allocated Exclusively to the Maritime Mobile Service Between 4 000 kHz and 23 000 kHz for Ship Radiotelephone Stations (see Nos. 1219 and 1239).</i>
NOC	4345 548	1327	(2) The Board shall examine each notice covered by No. 1326:
NOC	4346 548A	1328	a) with respect to the provisions of No. 1240 and in particular those of No. 4374;
NOC	4347 548B	1329	b) in order to determine whether the notified assignment corresponds to a frequency associated, according to Appendix 16, with a frequency allotted to the notifying administration in the Allotment Plan contained in Appendix 25 Mar2 to these Regulations.
(MOD)	4348 549	1330	(3) Any frequency assignment for reception by a coast radiotelephone station for which the finding is favourable with respect to Nos. 1328 and 1329 shall be recorded in the Master Register. The date to be entered in Column 2a shall be that determined according to the relevant provisions of Section III of this Article.
NOC	4349 549A	1331	(4) Any frequency assignment for reception by a coast radiotelephone station for which the finding is unfavourable with respect to No. 1328 shall be examined with respect to Nos. 1267 and 1268. The date to be entered in Column 2b shall be that determined according to the relevant provisions of Section III of this Article.
(MOD)	4350 551	1332	(5) Any assignment of a frequency for reception by a coast radiotelephone station which has received a favourable finding with respect to No. 1328 but unfavourable with respect to No. 1329 shall be recorded in the Master Register. The date to be entered in Column 2b shall be that determined according to the relevant provisions of Section III of this Article.
SUP	4344.1 547.1		

NOC			Sub-Section IIC. Procedure to Be Followed for Aeronautical Stations Operating in the Bands Allocated Exclusively to the Aeronautical Mobile Services Between 2 850 kHz and 22 000 kHz
NOC	4351 552	1333	§ 26. (1) <i>Examination of Notices Concerning Frequency Assignments to Aeronautical Stations in the Aeronautical Mobile (R) Service in the Bands Allocated Exclusively to that Service Between 2 850 kHz and 22 000 kHz (see No. 1239).</i>
NOC	4352 553	1334	(2) The Board shall examine each notice covered by No. 1333 to determine whether:
NOC	4352A 553A	1335	a) the notice is in conformity with the provisions of No. 1240;
NOC	4353 554	1336	b) the frequency corresponds to one of the frequencies specified in Column 1 of the Allotment Plan for the aeronautical mobile (R) service contained in Appendix 27 Aer2* (Part II, Section II, Article 2), or the assignment is the result of a permissive change from one class of emission to another and the necessary bandwidth is within the channelling arrangement provided for in Appendix 27 Aer2*;
NOC	4354 555	1337	c) the limitations of use set forth in Column 3 of the Plan have been appropriately observed;
NOC	4355 556	1338	d) the notice is in conformity with the technical principles of the Plan set forth in Appendix 27 Aer2*;
NOC	4356 557	1339	e) the area of use is within the boundaries of the Areas as set forth in Column 2 of the Plan.
NOC	4356A 557A	1340	(3) A notice which is not in conformity with the provisions of No. 1335 shall be examined with respect to Nos. 1267 and 1268. The date to be entered in Column 2b shall be determined in accordance with the relevant provisions of Section III of this Article.
NOC	4357 558	1341	(4) In the case of a notice in conformity with the provisions of Nos. 1335 to 1338, but not with those of No. 1339, the Board shall examine whether the protection specified in Appendix 27 Aer2* (Part I, Section IIA, paragraph 5) is afforded to the allotments in the Plan. In doing so, the Board shall assume that the frequency will be used in accordance with the “Sharing conditions between areas” specified in Appendix 27 Aer2* (Part I, Section IIB, paragraph 4).
NOC	4358 560	1342	(5) All frequency assignments referred to in No. 1333 shall be recorded in the Master Register according to the findings reached by the Board. The date to be entered in Column 2a or 2b shall be that determined according to the relevant provisions of Section III of this Article.

* Note by the General Secretariat: See No. 5189 and Resolution 400.

NOC	4359 561	1343	§ 27. (1) <i>Examination of Notices Concerning Frequency Assignments to Aeronautical Stations in the Aeronautical Mobile (OR) Service in the Bands Allocated Exclusively to that Service Between 3 025 kHz and 18 030 kHz (see No. 1239).</i>
NOC	4360 562	1344	(2) The Board shall examine each notice covered by No. 1343 to determine whether:
NOC	4361 563	1345	a) the assignment is in conformity with the primary allotments in the Allotment Plan for the aeronautical mobile (OR) service and the conditions specified in Appendix 26 (Parts III and IV);
NOC	4362 564	1346	b) the assignment is in conformity with or satisfies the requirements for secondary allotments in the Allotment Plan for the aeronautical mobile (OR) service and the conditions specified in Appendix 26 (Part III, Section II, paragraph 4, sub-paragraph <i>d</i>), and Part IV). In applying these provisions, the Board shall assume that the frequency will be used on a day-time basis;
NOC	4363 565	1347	c) the assignment is the result of a permitted change from one class of emission to another, its occupied bandwidth is within the channelling arrangement provided for in Appendix 26 (Part III, Section II, paragraphs 1 and 2), and it meets all the conditions for a primary or secondary allotment in the Plan, except that the assigned frequency does not correspond numerically with one of the frequencies specified therein.
NOC	4364 566	1348	(3) The technical criteria to be employed by the Board in its examination of these notices shall be those in Appendix 26 (Part III).
NOC	4365 567	1349	(4) All frequency assignments referred to in No. 1343 shall be recorded in the Master Register according to the findings reached by the Board. The date to be entered in Column 2a or 2b shall be that determined according to the relevant provisions of Section III of this Article.
NOC			Sub-Section IID. Procedure to Be Followed for Broadcasting Stations Operating in the Bands Allocated Exclusively to the Broadcasting Service Between 5 950 kHz and 26 100 kHz
MOD	4366 568	1350	§ 28. Frequency assignments to broadcasting stations in the bands allocated exclusively to the broadcasting service between 5 950 kHz and 26 100 kHz shall be dealt with in accordance with the provisions of Article 17 and shall be included only in the annual list referred to in No. 1769, which shall be considered as a supplement to the International Frequency List.
SUP	4367 569

		Sub-Section IIE. Procedure to Be Followed in Cases Where Terrestrial Stations Are in the Same Frequency Band as an Existing Earth Station or One for Which Coordination Has Been Effectuated or Initiated and Are Within its Coordination Area	
NOC			
NOC	4369 570AA	1351	§ 29. The Board shall examine each notice:
MOD	4370 570AB	1352	a) with respect to its conformity with the Convention, the Table of Frequency Allocations and the other provisions of the Radio Regulations with the exception of those provisions relating to the coordination procedure and the probability of harmful interference which are the subject of Nos. 1353 and 1354;
NOC	4371 570AC	1353	b) with respect to its conformity with the provisions of Nos. 1148 to 1154 relating to coordination of the use of the frequency assignment with the other administrations concerned;
NOC	4372 570AD	1354	c) where appropriate, with respect to the probability of harmful interference to the service rendered by an earth receiving station for which a frequency assignment already recorded in the Master Register is in conformity with the provisions of No. 1503 and if the corresponding frequency assignment to the space transmitting station has not, in fact, caused harmful interference to any frequency assignment in conformity with No. 1240 or 1352, as appropriate, previously recorded in the Master Register.
NOC	4373 570AE	1355	§ 30. Depending on the findings of the Board subsequent to the examination prescribed in Nos. 1352, 1353 and 1354, further action shall be as follows:
NOC	4374 570AF	1356	§ 31. (1) <i>Finding Unfavourable with Respect to No. 1352.</i>
MOD	4375 570AG	1357	(2) Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342, and the finding is favourable with respect to No. 1353 or 1354, as appropriate, the assignment shall be recorded in the Master Register subject to the provisions of No. 1420. The date of receipt by the Board of the notice shall be entered in Column 2d.
SUP	4376 570AGA		
MOD	4377 570AGB	1358	(3) If the finding is unfavourable with respect to No. 1353 or 1354, as appropriate, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding. Should the notifying administration insist on reconsideration of the notice, the assignment shall be recorded in the Master Register with the understanding that the provisions of No. 1420 shall be applied. The date of receipt by the Board of the original notice shall be entered in Column 2d.
SUP	4378 570AGC		

MOD	4379 570AH	1359	(4) Where the notice does not include a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342, it shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.
SUP	4380 570AI		
MOD	4381 570AJ	1360	(5) If the notifying administration resubmits the notice with a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342, it shall be treated as a new notice.
SUP	4382 570AK		
NOC	4383 570AL	1361	§ 32. (1) <i>Finding Favourable with Respect to No. 1352.</i>
NOC	4384 570AM	1362	(2) Where the Board finds that the coordination procedure mentioned in No. 1353 has been successfully completed with all administrations whose earth stations may be affected, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.
MOD	4385 570AN	1363	(3) Where the Board finds that the coordination procedure mentioned in No. 1353 has not been applied, and:
ADD	4385A	1364	a) if the notifying administration requests the Board to effect the required coordination, the Board shall take the appropriate action; if the Board's efforts toward securing agreement are successful, it shall so inform the administrations concerned and shall treat the notice in accordance with No. 1362;
ADD	4385B	1365	b) if the Board's efforts toward securing agreement in application of Nos. 1364 or 1169 to 1174 are unsuccessful, or if, when notifying the assignment, the administration states that it has been unsuccessful and does not request the Board to effect the required coordination, the Board shall examine the notice with respect to the provisions of No. 1354. At the same time, the Board shall so inform the administrations concerned;
MOD	4386 570AO	1366	c) if the notifying administration does not request the Board to effect the required coordination, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this action and with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.
NOC	4387 570AP	1367	(4) Where the notifying administration resubmits the notice and the Board finds that the coordination procedure mentioned in No. 1353 has been successfully completed with all administrations whose earth stations may be affected, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column.

MOD	4388 570AQ	1368	(5) Where the notifying administration resubmits the notice with a request that the Board effect the required coordination, it shall be treated in accordance with the provisions of Nos. 1363, 1364 or 1365. However, in any subsequent recording of the assignment in the Master Register, the date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column.
SUP	4389 570AR		
NOC	4390 570AS	1369	§ 33. (1) <i>Finding Favourable with Respect to Nos. 1352 and 1354.</i>
NOC	4391 570AT	1370	(2) The assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.
NOC	4392 570AU	1371	§ 34. (1) <i>Finding Favourable with Respect to No. 1352 but Unfavourable with Respect to No. 1354.</i>
MOD	4393 570AV	1372	(2) The notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.
NOC	4394 570AW	1373	(3) Should the notifying administration resubmit the notice with modifications which result, after re-examination, in a favourable finding by the Board with respect to No. 1354, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the resubmitted notice shall be indicated in the Remarks Column.
MOD	4395 570AX	1374	(4) Should the notifying administration resubmit the notice, either unchanged, or with modifications which decrease the probability of harmful interference, but not sufficiently to permit the provisions of No. 1373 to be applied, and should that administration insist on reconsideration of the notice, but should the Board's finding remain unchanged, the assignment shall be recorded in the Master Register. However, this entry shall be made only if the notifying administration informs the Board that the assignment has been in use for at least four months, counting from the date when both are in service, without any complaint of harmful interference having been received. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the advice that no complaint of harmful interference has been received shall be indicated in the Remarks Column.
ADD	4395A	1375	(5) An administration may request the Board to make a provisional entry for that assignment in the Master Register when it is unable to inform the Board about the interference mentioned in No. 1374 because the assignment liable to suffer interference has not yet been brought into service. The Board shall then enter that assignment with a special symbol in the Remarks Column to indicate its provisional character.
NOC	4396 570AZ	1376	§ 35. (1) <i>Changes in the Basic Characteristics of Assignments Already Recorded in the Master Register.</i>

MOD	4397 570BA	1377	(2) A notice of a change in the basic characteristics of an assignment notified under No. 1221 and already recorded, as specified in Appendix 1, Section A or B (except those entered in Columns 2c, 3 and 4a of the Master Register), or a notice under No. 1221 concerning an assignment already recorded under Nos. 1223 to 1227 (Appendix 1, Section C), shall be examined by the Board according to Nos. 1352 and 1353 and, where appropriate, No. 1354, and the provisions of Nos. 1356 to 1374 inclusive applied. Where the change should be recorded, the original assignment shall be amended according to the notice.
NOC	4398 570BB	1378	(3) However, in the case of a change in the basic characteristics of an assignment which is in conformity with No. 1352, should the Board reach a favourable finding with respect to No. 1353, and, where its provisions are applicable, with respect to No. 1354, or find that the change does not increase the probability of harmful interference to assignments already recorded, the amended assignment shall retain the original date in Column 2d. In addition, the date of receipt by the Board of the notice relating to the change shall be entered in the Remarks Column.
ADD	4398A	1379	(4) The projected date of bringing into use of a frequency assignment may be extended on request of the notifying administration by three months. In the case where the administration states that, due to exceptional circumstances, it needs a further extension of this period, such extension may be provided but it shall in no case exceed six months from the original projected date of bringing into use.
NOC	4399 570BC	1380	§ 36. In applying the provisions of this sub-section, any resubmitted notice which is received by the Board more than two years after the date of its return by the Board shall be considered as a new notice.
NOC	4400 570BD	1381	§ 37. (1) <i>Recording of Frequency Assignments Notified Before Being Brought into Use.</i>
NOC	4401 570BE	1382	(2) If a frequency assignment notified in advance of bringing into use has received a favourable finding by the Board with respect to Nos. 1352 and 1353 and, where appropriate, with respect to No. 1354, it shall be entered provisionally in the Master Register with a special symbol in the Remarks Column indicating the provisional nature of that entry.
MOD	4402 570BF	1383	(3) Within thirty days after the date of bringing into use, either as originally notified (see No. 1230) or as modified in application of No. 1379, the notifying administration shall confirm that the frequency assignment has been brought into use. When the Board is informed that the assignment has been brought into use, the special symbol shall be deleted from the Remarks Column.
ADD	4402A 570BG	1384	(4) If the Board does not receive this confirmation within the period referred to in No. 1383, the entry concerned shall be cancelled. The Board shall consult the administration concerned before taking such action.
MOD	4403 570BH	1385	(5) If, on the expiry of the period specified in No. 1374, the Board is informed that there has been no complaint of harmful interference, it shall delete the symbol entered in application of No. 1375.
SUP	4404		

NOC		Section III. Recording of Dates and Findings in the Master Register
MOD	4405 571	1386 § 38. In any case where a frequency assignment is recorded in the Master Register, the finding reached by the Board shall be indicated by a symbol in the appropriate column. In addition, the reasons for reaching an unfavourable finding shall be inserted in the Remarks Column.
MOD	4406 572	1387 § 39. The procedure for recording dates in the appropriate part of Column 2 of the Master Register which shall be applied according to the frequency bands and services concerned is described in the following Nos. 1388 to 1413 for frequency assignments referred to in Sub-Sections IIA to IIC.
NOC	4407 573	1388 § 40. NOC

Section IV. Categories of Frequency Assignments

MOD	4439 607	1416	§ 48. (1) Any frequency assignment which bears a date in Column 2a of the Master Register shall have the right to international protection from harmful interference; so shall class of operation A assignments to stations of the fixed service in the appropriate bands between 3 000 kHz and 27 500 kHz recorded with a date in Column 2d as a result of a favourable finding with respect to Nos. 1240 and 1242, in particular those resulting from the application of No. 1218.
-----	-------------	------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC	4440 608	1417	(2) Any frequency assignment which bears a date in Column 2b is recorded in the Master Register in order that administrations may take into account the fact that the frequency assignment concerned is in use. This recording shall not give the right to international protection to the frequency assignment concerned, except as provided for in No. 1241 , sub-paragraph 2).
NOC	4441 609	1418	(3) For frequency assignments having dates in two parts of Column 2, the date in Column 2c is given for information only.
SUP	4442 610		
MOD	4443 611	1419	(4) If harmful interference to the reception of any station whose assignment is in accordance with No. 1240 or 1352 is actually caused by the use of a frequency assignment which is not in conformity with No. 1240 or 1352 , the station using the latter frequency assignment shall, on receipt of advice thereof, immediately eliminate this harmful interference.
MOD	4444 611A	1420	(5) If harmful interference to the reception of any station whose assignment is in accordance with No. 1503 is actually caused by the use of a frequency assignment which is not in conformity with No. 1240 or 1352 , the station using the latter frequency assignment shall, on receipt of advice thereof, immediately eliminate this harmful interference.

NOC

Section V. Review of Findings

NOC	4445 612	1421	§ 49. (1) The review of a finding by the Board may be undertaken: <ul style="list-style-type: none"> a) at the request of the notifying administration; b) at the request of any other administration interested in the question, but only on the grounds of actual harmful interference; c) on the initiative of the Board itself when it considers this is justified.
(MOD)	4446 613	1422	(2) The Board, in the light of all the data at its disposal, shall review the matter, taking into account No. 1240 or 1352 and Nos. 1241 , 1242 , 1353 or 1354 , as appropriate, and shall render an appropriate finding, informing the notifying administration prior either to the publication of its finding or to any recording action.
NOC	4447 614	1423	§ 50. If a review of an unfavourable finding has been requested by the notifying administration on the grounds of special assistance to meet an urgent and essential need, in a case where harmful interference has been experienced, the Board shall consult immediately the administrations concerned and shall make such suggestions as will facilitate the operation of the assignment of the administration which asked for special assistance; such amendments as result from this consultation shall be made to the Master Register.

NOC	4448 615	1424	§ 51. (1) After actual use for a reasonable period of an assignment which has been entered in the Master Register on the insistence of the notifying administration, following an unfavourable finding with respect to Nos. 1241 , 1242 or 1354 , as appropriate, this administration may request the Board to review the finding. Thereupon the Board shall review the matter, first having consulted the administrations concerned.
NOC	4449 616	1425	(2) If the finding of the Board is then favourable, it shall enter in the Master Register the changes that are required so that the entry shall appear in the future as if the original finding had been favourable.
NOC	4450 617	1426	(3) If the finding with regard to the probability of harmful interference remains unfavourable, no change shall be made in the original entry.
SUP	4451 618		
ADD	4451A	1427	§ 52. (1) In the event of a deletion or modification of any recorded frequency assignment which had been the cause of an unfavourable finding and had led a later assignment to be recorded under No. 1255 , the Board shall review, and, where appropriate, modify that unfavourable finding with respect to No. 1241 or 1242 .
ADD	4451B	1428	(2) To provide a basis for the review of an entry in the Master Register made in accordance with No. 1255 , the Board shall, when examining the relevant notice, determine the date on which the review is to be made. If by that date no complaint of harmful interference has been received by the administration concerned, the Board shall automatically reverse the original unfavourable finding with respect to No. 1241 or 1242 .
MOD			Section VI. Maintenance of the Master Register
ADD	4451C	1429	§ 53. <i>Modification, Cancellation and Review of Entries in the Master Register.</i>
NOC	4452 619	1430	§ 54. In case of permanent discontinuance of the use of any recorded frequency assignment, the notifying administration shall inform the Board within three months of such discontinuance, whereupon the entry shall be removed from the Master Register.
NOC	4453 620	1431	§ 55. Whenever it appears to the Board from the information available that a recorded assignment has not been brought into regular operation in accordance with the notified basic characteristics, or is not being used in accordance with those basic characteristics, the Board shall consult the notifying administration and, subject to its agreement, shall either cancel or suitably modify the entry.
(MOD)	4454 621	1432	§ 56. If, in connection with an enquiry by the Board under No. 1264 or 1431 , the notifying administration has failed to supply the Board within three months with the necessary or pertinent information, the Board shall disregard the assignment concerned when acting on any later notice, until such time as it has been

informed that the assignment is being used as notified, or until it has received the information required. The Board shall make suitable entries in the Remarks Column of the Master Register to indicate the situation, and in particular the period when the assignment was not taken into account by the Board.

SUP 4455

ADD 4454A 1433 § 57. (1) *Periodic Examination of the Master Register.*

ADD 4454B 1434 (2) The Board shall institute a long-term programme of periodic reviews of each section of the Master Register with the aim of improving and maintaining its accuracy.

ADD 4454C 1435 (3) For the purpose of the reviews mentioned in No. 1434, the Board shall send to each administration, for revision and return, a national extract of the Master Register relating to the particular section under review. The Board shall at the same time draw the attention of administrations to any assignment to a station in the fixed service in frequency bands between 3 000 kHz and 27 500 kHz for which other means of telecommunication are believed to be available.

ADD 4454D 1436 (4) Administrations shall, having regard to the need to improve and maintain the accuracy of the Master Register, cooperate in these periodic reviews by notifying the deletion of any unused assignment and, where appropriate, the modification of other entries.

ADD 4454E 1437 (5) The Board shall include in its annual report to administrations a section relating to the work done under the provisions of the present paragraph 57, the results achieved, and the programme for the following year.

NOC

Section VII. Studies and Recommendations

(MOD) 4456 1438 § 58. (1) If it is requested by any administration, particularly by an administration of a country in need of special assistance, the Board, using such means at its disposal as are appropriate in the circumstances, shall conduct a study of the following problems of frequency utilization:

NOC 4457 1439 a) in cases arising under No. 1252 as to a possible alternative frequency assignment to avoid probable harmful interference;

NOC 4458 1440 b) in cases where a need arises for additional frequency assignments within a specified portion of the radio spectrum;

NOC 4459 1441 c) in cases where, due to harmful interference, two or more frequencies of the same order of magnitude are being used alternately to maintain communication on a circuit requiring only one frequency of that order;

NOC 4460 1442 d) in cases of alleged contravention or non-observance of these Regulations, or of harmful interference.

(MOD)	4461 628	1443	(2) The Board shall thereupon prepare and forward to the administrations concerned a report containing its finding and recommendations for the solution of the problem.
ADD	4461A	1444	(3) On receiving the Board's recommendations for the solution of the problem, an administration shall promptly acknowledge the receipt by telegram and shall subsequently indicate the action it intends to take. In cases when the Board's suggestions or recommendations are unacceptable to the administrations concerned, further efforts should be made by the Board to find an acceptable solution to the problem.
NOC	4462 629	1445	§ 59. If the Board finds, in particular following a request from an administration of a country in need of special assistance, that a change in the basic characteristics, including a change of frequency within a specific frequency range, of one or more assignments in conformity with the provisions of No. 1240 will:
NOC	4463 630	1446	a) accommodate a new assignment; <i>or</i>
NOC	4464 631	1447	b) facilitate the solution of a problem of harmful interference; <i>or</i>
NOC	4465 632	1448	c) otherwise facilitate the more effective use of a particular portion of the radio spectrum; <i>and</i>
NOC	4466 633	1449	if such change is acceptable to the administration or administrations concerned, the change in basic characteristics shall be recorded in the Master Register without change in the original date or dates.
NOC	4467 634	1450	§ 60. In a case where, as a result of a study, the Board submits to one or more administrations suggestions or recommendations for the solution of a problem, and where no answer has been received from one or more of these administrations within a period of thirty days, the Board shall consider that the suggestions or recommendations concerned are unacceptable to the administrations which did not answer. If it was the requesting administration which failed to answer within this period, the Board shall close the study.
NOC			Section VIII. Miscellaneous Provisions
NOC	4468 635	1451	§ 61. The provisions of Sections V, VI (excepting No. 1430) and VII of this Article shall not be applied to frequency assignments in conformity with the Allotment Plans contained in Appendices 25 Mar2, 26, 27 * and 27 Aer2 * to these Regulations.
MOD	4469 635A	1452	§ 62. (1) If it is requested by any administration, particularly by an administration of a country in need of special assistance, the Board using such means at its disposal as are appropriate in the circumstances, shall render the following assistance:
			a) verification of the diagram showing the coordination area referred to in No. 1113;
			b) computation of the interference, as referred to in Nos. 1164 to 1166;
			c) any other assistance of a technical nature for completion of the procedures in this Article.

* Note by the General Secretariat: See No. 5189 and Resolution 400.

NOC	4470 635B	1453	(2) In making a request to the Board under No. 1452 , the administration shall furnish the Board with the necessary information.
MOD	4471 636	1454	§ 63. The Technical Standards of the Board shall be based on the relevant provisions of these Regulations and the Appendices thereto, the decisions of administrative conferences of the Union, as appropriate, the Recommendations of the CCIR, the state of the radio art and the development of new transmission techniques, account being taken of exceptional propagation conditions which may prevail in certain regions (for example, particularly pronounced ducting).
MOD	4472 637	1455	§ 64. (1) The Board shall inform all administrations of its findings and reasons therefor, together with all changes made to the Master Register, through its weekly circular. Such information shall be published within forty-five days of the date of publication of the complete notice in the weekly circular referred to in No. 1235 . When the Board is not in a position to comply with the time-limit referred to above it shall, as soon as possible, so inform the administration concerned giving the reasons therefor.
ADD	4472A	1456	(2) The weekly circular of the IFRB shall be published in the working languages of the Union as defined in the Convention. In carrying out the various procedures stipulated in the Radio Regulations, the Board shall use the weekly circular as a means of communicating with administrations to the maximum extent practicable.
NOC	4473 638	1457	§ 65. The Board shall inform administrations, at appropriate intervals, of the cases of special assistance which were studied under Nos. 1423 and 1438 to 1450 inclusive of these Regulations.
MOD	4474 639	1458	§ 66. In case a Member avails itself of the provisions of Article 50 of the Convention, the Board shall, on request, make its records available for such proceedings as are prescribed in the Convention for the settlement of international disputes.
		1459 to 1487	NOT allocated.

MOD N13/9A

ARTICLE 13

Notification and Recording in the Master International Frequency Register of Frequency Assignments¹ to Radio Astronomy and Space Radiocommunication Stations Except Stations in the Broadcasting-Satellite Service²

NOC

Section I. Notification of Frequency Assignments

MOD 4575 1488 § 1. (1) Any frequency assignment to be used for transmission or reception by
639BA an earth or space station shall be notified to the Board:

1489 a) if the use of the frequency concerned is capable of causing harmful interference to any service of another administration; *or*

1490 b) if the frequency is to be used for international radiocommunications; *or*

1491 c) if it is desired to obtain international recognition of the use of the frequency.

SUP 4576
639BB

MOD 4577 1492 (2) Any frequency or frequency band to be used for reception by a
639BC particular radio astronomy station may be notified if it is desired that such data should be included in the Master Register.

ADD 4577A 1493 (3) When the Board receives from one administration a notice containing a
modification or deletion of a space station assignment already recorded in the Master Register on behalf of a group of administrations, it shall be assumed, in the absence of information to the contrary, that the notice of modification or deletion is submitted on behalf of all the administrations which were associated with the original notification.

MOD 4578 1494 (4) A notice submitted in accordance with Nos. 1488 to 1491 and relating to
639BD a frequency assignment to mobile earth stations in a satellite system shall include the technical characteristics either of each mobile earth station, or of a typical mobile earth station, and an indication of the service area within which these stations are to be operated.

NOC A.13.1 ¹ The expression *frequency assignment*, wherever it appears in this Article, shall be understood to refer either to a new frequency assignment or to a change in an assignment already recorded in the Master International Frequency Register (hereinafter called *Master Register*).

ADD A.13.2 ² For notification and recording of frequency assignments to stations in the broadcasting-satellite service and other services in the frequency bands 11.7 - 12.2 GHz (in Regions 2 and 3) and 11.7 - 12.5 GHz (in Region 1), see also Article 15.

MOD	4579 639BE	1495	§ 2. For any notification under Nos. 1488 to 1492 or 1494, a notice for each frequency assignment shall be drawn up as prescribed in Appendix 3, the various sections of which specify the basic characteristics to be furnished according to the case. It is recommended that the notifying administration should also supply the additional data called for in Section A of that Appendix, together with such further data as it may consider appropriate.
(MOD)	4580 639BF	1496	§ 3. (1) For a frequency assignment to an earth or space station, each notice shall be submitted in order to reach the Board not earlier than three years before the date on which the assignment is to be brought into use. The notice shall reach the Board in any case not later than three months ¹ before this date, except in the case of assignments in the space research service in bands allocated exclusively to this service or in shared bands in which this service is the sole primary service. In the case of such an assignment in the space research service, the notice should, whenever practicable, reach the Board before the date on which the assignment is brought into use, but it shall in any case reach the Board not later than thirty days after the date it is actually brought into use.
NOC	4581 639BG	1497	(2) Any frequency assignment to an earth or space station, the notice of which reaches the Board after the applicable period specified in No. 1496, shall, where it is to be recorded, bear a mark in the Master Register to indicate that it is not in conformity with No. 1496.
NOC			Section II. Procedure for the Examination of Notices and the Recording of Frequency Assignments in the Master Register
MOD	4582 639BH	1498	§ 4. Any notice which does not contain at least those basic characteristics specified in Appendix 3 shall be returned by the Board, by airmail, to the notifying administration with the reasons therefor, unless the information not provided is immediately forthcoming in response to an enquiry from the Board. The Board shall advise the administration by telegram when a notice is returned under this provision.
MOD	4583 639BI	1499	§ 5. On receipt of a complete notice, the Board shall include the particulars thereof, including diagrams, with the date of receipt, in the weekly circular referred to in No. 1235 to be published within a period of forty days after receipt of the notice. When the Board is not in a position to comply with this time-limit, it shall, as soon as possible, so inform the administrations concerned giving the reasons therefor.
MOD	4584 639BJ	1500	§ 6. The circular shall contain the full particulars of all such notices received by the Board since the publication of the previous circular and shall constitute the acknowledgement to each notifying administration of the receipt of the complete notice.
NOC	4580.1 639BF.1	1496.1	¹ The notifying administration shall take this limit into account when deciding, where appropriate, to initiate the coordination procedure(s).

MOD	4585 639BK	1501	§ 7. Complete notices shall be considered by the Board in the order of their receipt, taking into account the time-limit referred to in No. 1583 . The Board shall not postpone the formulation of a finding unless it lacks sufficient data to render a decision in connection therewith; moreover, the Board shall not act upon any notice which has a technical bearing on an earlier notice still under consideration by the Board, until it has reached a finding with respect to such earlier notice.
NOC	4586 639BL	1502	§ 8. The Board shall examine each notice:
MOD	4587 639BM	1503	a) with respect to its conformity with the Convention, the Table of Frequency Allocations and the other provisions of the Radio Regulations, with the exception of those relating to the coordination procedures and the probability of harmful interference which are the subject of the following sub-paragraphs;
MOD	4588 639BN	1504	b) with respect to its conformity with the provisions relating to the coordination of the use of the frequency assignment with the other administrations concerned, vis-à-vis space radiocommunication stations in cases where the provisions of Nos. 1060 or 1066 to 1071 are applicable;
MOD	4589 639BO	1505	c) with respect to its conformity with the provisions relating to the coordination of the use of the frequency assignment with the other administrations concerned, vis-à-vis terrestrial radiocommunication stations in cases where the provisions of No. 1107 are applicable;
MOD	4590 639BP	1506	d) with respect to the probability of harmful interference, when the coordination under No. 1060 has not been successfully effected; this examination ¹ shall take into account the frequency assignments for transmission or reception already recorded in the Master Register:
		1507	1) in application of Nos. 1526 , 1531 , 1534 or 1543 , <i>or</i>
		1508	2) in application of No. 1544 , if that frequency assignment has not in fact caused harmful interference to any other previously recorded frequency assignment which is in conformity with No. 1503 ;
MOD	4591 639BQ	1509	e) with respect to the probability of harmful interference, when the coordination under No. 1107 has not been successfully effected; this examination shall take into account the frequency assignments for transmission or reception already recorded in the Master Register:
		1510	1) in application of No. 1248 , <i>or</i>
		1511	2) in application of Nos. 1362 , 1367 , 1370 , or 1373 , <i>or</i>
ADD	4590.1	1506.1	¹ The examination of such a notice with respect to any other frequency assignment published under No. 1078 but not yet notified shall be deferred until both assignments have been notified; the Board shall then examine them in the order of their publication under No. 1078 .

- 1512 3) in application of No. 1374 if that assignment has not in fact caused harmful interference to any other previously recorded frequency assignment which is in conformity with No. 1503.

SUP 4592
639BR

NOC 4593 1513 § 9. When, following an examination of a notice with respect to Nos. 1506 to 1508, the Board reaches an unfavourable finding based upon the probability of harmful interference to a recorded assignment for a space station which the Board has reason to believe may not be in regular use, for example, as a consequence of No. 1569, the Board shall forthwith consult the administration responsible for the registered assignment. If it is established, after such consultation and on the basis of the information available, that the recorded assignment has not been in use for two years, it shall not be taken into account for the purposes of the examination in progress or any other further examination under Nos. 1506 to 1508 conducted before the date on which the assignment is brought back into use. Before the assignment is brought back into use, it shall be subject to further coordination in accordance with the provisions of No. 1060 or further examination by the Board with respect to Nos. 1506 to 1508, as appropriate. The date on which the assignment is brought back into use shall then be entered in the Master Register.

MOD 4594 1514 § 10. Depending upon the findings of the Board subsequent to the examination prescribed in Nos. 1503, 1504, 1505, 1506 to 1508 and 1509 to 1512, as appropriate, further action shall be as follows:

MOD 4595 1515 § 11. (1) *Finding Favourable with Respect to No. 1503 in Cases Where the Provisions of Nos. 1504 and 1505 Are Not Applicable (space station on board a non-geostationary satellite).*

NOC 4596 1516 (2) The assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

ADD 4596A 1517 § 12. (1) *Finding Unfavourable with Respect to No. 1503 in Cases Where the Provisions of Nos. 1504 and 1505 Are Not Applicable (space station on board a non-geostationary satellite).*

ADD 4596B 1518 (2) Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

ADD 4596C 1519 (3) Where the notice does not include a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342, it shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding together with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.

MOD 4597 1520 § 13. (1) *Finding Unfavourable with Respect to No. 1503 in Cases Where the Provisions of Nos. 1504 and 1505 Are Applicable.*

MOD	4598 639BX	1521	(2) Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342, and the finding is favourable with respect to Nos. 1504, 1505, 1506 to 1508 and 1509 to 1512, as appropriate, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.
MOD	4599 639BY	1522	(3) Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 and the finding is unfavourable with respect to Nos. 1504, 1505, 1506 to 1508 or 1509 to 1512, as appropriate, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding. Should the administration insist upon reconsideration of the notice, the assignment shall be recorded in the Master Register with the understanding that the provisions of No. 1560 shall be applied. The date of receipt by the Board of the original notice shall be entered in Column 2d.
SUP	4600 639BZ		
MOD	4601 639CA	1523	(4) Where the notice does not include a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342, it shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding together with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.
NOC	4602 639CB	1524	(5) If the notifying administration resubmits the notice unchanged, it shall be treated in accordance with the provisions of No. 1523. If it is resubmitted with a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342, it shall be treated in accordance with the provisions of No. 1521 or 1522, as appropriate. If it is resubmitted with modifications which, after re-examination, result in a favourable finding by the Board with respect to No. 1503, it shall be treated as a new notice.
NOC	4603 639CC	1525	§ 14. (1) <i>Finding Favourable with Respect to No. 1503 in Cases Where the Provisions of No. 1504 or 1505 Are Applicable.</i>
NOC	4604 639CD	1526	(2) Where the Board finds that the coordination procedures mentioned in No. 1504 or 1505 have been successfully completed with all administrations whose space or terrestrial radiocommunication stations may be affected, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.
MOD	4605 639CE	1527	(3) Where the Board finds that either of the coordination procedures mentioned in Nos. 1504 and 1505 has not been applied and:
ADD	4605A	1528	a) if the notifying administration requests the Board to effect the coordination, the Board shall take appropriate action; if the Board's efforts toward securing agreement are successful, it shall so inform the administrations concerned and shall treat the notice in accordance with No. 1526;
ADD	4605B	1529	b) if the Board's efforts toward securing agreement in application of Nos. 1528 or 1089 to 1094 or 1130 to 1135 are unsuccessful, or if, when notifying the assignment, the administration states that it has

been unsuccessful and does not request the Board to effect the required coordination, the Board shall examine the notice with respect to the provisions of Nos. 1506 to 1508 and 1509 to 1512, as appropriate. At the same time, the Board shall so inform the administrations concerned;

- | | | | |
|-------|---------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MOD | 4606
639CF | 1530 | c) if the notifying administration does not request the Board to effect the required coordination, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this action together with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem. |
| (MOD) | 4607
639CG | 1531 | (4) Where the notifying administration resubmits the notice and the Board finds that the coordination procedures mentioned in Nos. 1504 and 1505 have been successfully completed with all administrations whose space or terrestrial radiocommunication stations may be affected, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column. |
| MOD | 4608
639CH | 1532 | (5) Where the notifying administration resubmits the notice with a request that the Board effect the required coordination under No. 1060 or 1107, it shall be treated in accordance with the provisions of Nos. 1527 and either 1528 or 1529. However, in any subsequent recording of the assignment, the date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column. |
| SUP | 4609
639CI | | |
| MOD | 4610
639CJ | 1533 | § 15. (1) <i>Finding Favourable with Respect to Nos. 1503, 1506 to 1508, and 1509 to 1512 as Appropriate.</i> |
| NOC | 4611
639CK | 1534 | (2) The assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d. |
| MOD | 4612
639CL | 1535 | (3) However, should the examination show that the interference and the percentage of time during which it is likely to occur have values slightly greater than those used for assessing the probability of harmful interference (extreme propagation conditions, abnormal atmospheric humidity, etc.), a remark shall be included in the Master Register to show that there may be a slight risk of harmful interference and hence additional precautions must be taken in the use of the assignment to avoid harmful interference to assignments already recorded in the Master Register. |
| ADD | 4612A | 1536 | (4) In addition to the examination of a frequency assignment to an earth station under Nos. 1509 to 1512, if there is continuing disagreement, the Board shall examine that frequency assignment with respect to the probability of harmful interference caused to, or caused by, those terrestrial stations for which assignments have been communicated to the Board in application of No. 1126 and are to be brought into use in the next three years. |

ADD	4612B	1537	(5) Following the examination under No. 1536, the Board shall, where appropriate:
		1538	a) inform the administrations concerned of any unfavourable findings;
		1539	b) enter a remark indicating such an unfavourable finding against the assignment to the earth station recorded in the Master Register;
		1540	c) record the assignments to terrestrial stations in the Master Register with a remark indicating any unfavourable finding; the date of receipt of the information communicated under No. 1126 shall be entered in Column 2d.
MOD	4613 639CM	1541	§ 16. (1) <i>Finding Favourable with Respect to No. 1503 but Unfavourable with Respect to Nos. 1506 to 1508 or 1509 to 1512, as Appropriate.</i>
MOD	4614 639CN	1542	(2) The notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding together with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.
MOD	4615 639CO	1543	(3) Should the notifying administration resubmit the notice with modifications which result, after re-examination, in a favourable finding by the Board with respect to Nos. 1506 to 1508 or 1509 to 1512, as appropriate, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the resubmitted notice shall be indicated in the Remarks Column.
MOD	4616 639CP	1544	(4) Should the notifying administration resubmit the notice, either unchanged, or with modifications which decrease the probability of harmful interference, but not sufficiently to permit the provisions of No. 1543 to be applied, and should that administration insist upon reconsideration of the notice, but should the Board's finding remain unchanged, the assignment shall be recorded in the Master Register. However, this entry shall be made only if the Board is informed that the new assignment has been in use together with the frequency assignment to the station which was the basis for the unfavourable finding, for at least four months without any complaint of harmful interference having been received, provided that the earlier assignment has been brought into use within the additional period mentioned in No. 1550. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the advice that no complaint of harmful interference has been received shall be indicated in the Remarks Column.
NOC	4617 639CQ	1545	§ 17. (1) <i>Notices Relating to Radio Astronomy Stations.</i>
MOD	4618 639CR	1546	(2) A notice relating to a radio astronomy station shall be examined by the Board with respect to No. 1503 only. Whatever the finding, the assignment shall be recorded in the Master Register with a date in Column 2c. The date of receipt by the Board of the notice shall be recorded in the Remarks Column.

NOC	4619 639CS	1547	§ 18. (1) <i>Change in the Basic Characteristics of Assignments Already Recorded in the Master Register.</i>
MOD	4620 639CT	1548	(2) A notice of a change in the basic characteristics of an assignment already recorded, as specified in Appendix 3 (except the name of the station or the name of the locality in which it is situated or the date of bringing into use), shall be examined by the Board according to No. 1503, and, where appropriate, Nos. 1504, 1505, 1506 to 1508 and 1509 to 1512, and the provisions of Nos. 1515 to 1546 inclusive shall apply. Where the change should be recorded, the recorded assignment shall be amended according to the notice.
MOD	4621 639CU	1549	(3) However, in the case of a change in the characteristics of an assignment which is in conformity with No. 1503, should the Board reach a favourable finding with respect to Nos. 1504, 1505, 1506 to 1508 and 1509 to 1512, where appropriate, or find that the changes do not increase the probability of harmful interference to assignments already recorded, the amended assignment shall retain the original date in Column 2d. The date of receipt by the Board of the notice relating to the change shall be entered in the Remarks Column.
ADD	4621A	1550	(4) The projected date of bringing into use of a frequency assignment may be extended on request of the notifying administration by four months. In the case where the administration states that, due to exceptional circumstances, it needs a further extension of this period, such extension may be provided but it shall in no case exceed eighteen months from the original projected date of bringing into use.
NOC	4622 639CV	1551	§ 19. In applying the provisions of this section, any resubmitted notice which is received by the Board more than two years after the date of its return by the Board shall be considered as a new notice.
NOC	4623 639CW	1552	§ 20. (1) <i>Recording of Frequency Assignments Notified Before Being Brought into Use.</i>
MOD	4624 639CX	1553	(2) If a frequency assignment notified in advance of bringing into use has received a favourable finding by the Board with respect to No. 1503 and, where appropriate, Nos. 1504, 1505, 1506 to 1508 and 1509 to 1512, it shall be entered provisionally in the Master Register with a special symbol in the Remarks Column indicating the provisional nature of that entry.
MOD	4625 639CY	1554	(3) Within thirty days after the date of bringing into use, either as originally notified or as modified in application of No. 1550, the notifying administration shall confirm that the frequency assignment has been brought into use. When the Board is informed that the assignment has been brought into use, the special symbol shall be deleted from the Remarks Column.
ADD	4625A	1555	(4) If the Board does not receive this confirmation within the period referred to in No. 1554, the entry concerned shall be cancelled. The Board shall consult the administration concerned before taking such action.
MOD	4626 639CZ	1556	(5) In the circumstances described in Nos. 1522 and 1544, and as long as an assignment which received an unfavourable finding cannot be resubmitted with a statement relating to operation without interference, the notifying administration may ask the Board to enter the assignment provisionally in the Master Register, in

which event a special symbol to denote the provisional nature of the entry shall be entered in the Remarks Column. The Board shall delete this symbol when it receives from the notifying administration, at the end of the period specified in No. 1544, the information relating to the absence of complaint of harmful interference.

SUP 4627
639DA

NOC Section III. Recording of Findings in the Master Register

NOC 4628 1557 § 21. In any case where a frequency assignment is recorded in the Master Register, the finding reached by the Board shall be indicated by a symbol in the appropriate column. In addition, a remark indicating the reasons for any unfavourable finding shall be inserted in the Remarks Column.
639DB

NOC Section IV. Categories of Frequency Assignments

NOC 4629 1558 § 22. (1) The date in Column 2c shall be the date of putting into use notified by the administration concerned. It is given for information only.
639DC

MOD 4630 1559 (2) If harmful interference is actually caused to the reception of any space radiocommunication station whose frequency assignment has been recorded in the Master Register as a result of a favourable finding with respect to Nos. 1503, 1504, 1505, 1506 to 1508 and 1509 to 1512, as appropriate, by the use of a frequency assignment to a space radiocommunication station subsequently recorded in the Master Register in accordance with the provisions of No. 1544, the station using the latter frequency assignment must, upon receipt of advice thereof, immediately eliminate this harmful interference.
639DD

NOC 4631 1560 (3) If harmful interference to the reception of any station whose assignment is in accordance with Nos. 1240, 1352 or 1503, as appropriate, is actually caused by the use of a frequency assignment which is not in conformity with No. 1503, the station using the latter frequency assignment must, upon receipt of advice thereof, immediately eliminate this harmful interference.
639DE

NOC Section V. Review of Findings

NOC 4632 1561 § 23. (1) The review of a finding by the Board may be undertaken:
639DF 1562 a) at the request of the notifying administration;
1563 b) at the request of any other administration interested in the question, but only on the grounds of actual harmful interference;
1564 c) on the initiative of the Board itself when it considers this is justified.

MOD	4633 639DG	1565	(2) The Board, in the light of all the data at its disposal, shall review the matter, taking into account No. 1503 and, where appropriate, Nos. 1504, 1505, 1506 to 1508 and 1509 to 1512 , and shall render an appropriate finding, informing the notifying administration prior either to the publication of its finding or to any recording action.
MOD	4634 639DH	1566	§ 24. (1) After actual use for a reasonable period of an assignment which has been entered in the Master Register on the insistence of the notifying administration, following an unfavourable finding with respect to Nos. 1506 to 1508 or 1509 to 1512 , this administration may request the Board to review the finding. Thereupon, the Board shall review the matter, having first consulted the administrations concerned.
NOC	4635 639DI	1567	(2) If the finding of the Board is then favourable it shall enter in the Master Register the changes that are required so that the entry shall appear in the future as if the original finding had been favourable.
NOC	4636 639DJ	1568	(3) If the finding with regard to the probability of harmful interference remains unfavourable, no change shall be made in the original entry.
NOC			Section VI. Modification, Cancellation and Review of Entries in the Master Register
ADD	4636A	1569	§ 25. The Board shall, at intervals not exceeding two years, request confirmation from the notifying administration that its assignment has been and will continue to be in regular use in accordance with its recorded characteristics.
NOC	4637 639DK	1570	§ 26. (1) Where the use of a recorded assignment to a space station is suspended for a period of eighteen months, the notifying administration shall, within this eighteen-month period, inform the Board of the date on which such use was suspended and of the date on which the assignment is to be brought back into regular use.
NOC	4638 639DL	1571	(2) Whenever it appears to the Board, whether or not as a result of action under No. 1570 , that a recorded assignment to a space station has not been in regular use for more than eighteen months, the Board shall inquire of the notifying administration as to when the assignment is to be brought back into regular use.
NOC	4639 639DM	1572	(3) If no reply is received within six months of action by the Board under No. 1571 , or if the reply does not confirm that the assignment to a space station is to be brought back into regular use within this six-month limit, a mark shall be applied against the entry in the Master Register. Thereafter, the assignment shall be treated in accordance with No. 1513 as one which has been established as having been out of regular use for two years.
MOD	4640 639DN	1573	§ 27. In case of permanent discontinuance of the use of any recorded frequency assignment, the notifying administration shall inform the Board within three months of such discontinuance, whereupon the entry shall be removed from the Master Register.

MOD 4641 1574 § 28. Whenever it appears to the Board from the information available that a recorded assignment has not been brought into regular operation in accordance with the notified basic characteristics, or is not being used in accordance with those basic characteristics, the Board shall consult the notifying administration and, subject to its agreement, shall either cancel, or suitably modify, or retain the basic characteristics of the entry.
639DO

MOD 4642 1575 § 29. If, in connection with an inquiry by the Board under No. 1574, the notifying administration has failed to supply the Board within three months from the date of the enquiry with the necessary or pertinent information, the Board shall make suitable entries in the Remarks Column of the Master Register to indicate the situation.
639DP

NOC **Section VII. Studies and Recommendations**

NOC 4643 1576 § 30. (1) If it is requested by any administration, the Board, using such means at its disposal as are appropriate in the circumstances, shall conduct a study of cases of alleged contravention or non-observance of these Regulations, or of harmful interference.
639DQ

MOD 4644 1577 (2) The Board shall thereupon prepare and forward to the administrations concerned a report containing its findings and recommendations for the solution of the problem.
639DR

ADD 4644A 1578 (3) On receiving the Board's recommendations for the solution of the problem, an administration shall promptly acknowledge the receipt by telegram and shall subsequently indicate the action it intends to take. In cases when the Board's suggestions or recommendations are unacceptable to the administrations concerned, further efforts should be made by the Board to find an acceptable solution to the problem.

MOD 4645 1579 § 31. In a case where, as a result of a study, the Board submits to one or more administrations suggestions or recommendations for the solution of a problem, and where no answer has been received from one or more of these administrations within a period of four months, the Board shall consider that the suggestions or recommendations concerned are unacceptable to the administrations which did not answer. If it was the requesting administration which failed to answer within this period, the Board shall close the study.
639DS

NOC **Section VIII. Miscellaneous Provisions**

MOD 4646 1580 § 32. (1) If it is requested by any administration, particularly by an administration of a country in need of special assistance, the Board, using such means at its disposal as are appropriate in the circumstances, shall render any assistance of a technical nature in the application of the provisions of this Article.
639DT

NOC 4647 1581 (2) In making a request to the Board under No. 1580, the administration shall furnish the Board with the necessary information.

ADD N13A ARTICLE 14

**Supplementary Procedure to Be Applied in Cases Where a Footnote
in the Table of Frequency Allocations Requires an Agreement
with an Administration**

- ADD 4730 1610 § 1. (1) Before an administration notifies to the Board a frequency assignment in accordance with any footnote in the Table of Frequency Allocations which makes reference to this Article, it shall obtain the agreement of any other administration whose services may be affected. In the case of a footnote concerning a space radiocommunication service, this procedure may be initiated before or at the same time as the application of the provisions of Article 11.
- ADD 4731 1611 (2) The administration seeking such an agreement shall, sufficiently early before the planned date of putting the assignment into service, send to the Board:
- ADD 4732 1612 a) for terrestrial radiocommunication services, the basic characteristics of the planned assignment listed in the appropriate section of Appendix 1;
- ADD 4733 1613 b) for space radiocommunication services, the characteristics of the planned assignment listed in Appendix 4, or Appendix 3 when the latter are available¹.
- ADD 4734 1614 (3) The administration seeking agreement may, when sending its information to the Board, also identify those other administrations that are believed to have services which may be affected.
- ADD 4735 1615 § 2. (1) The Board shall publish the information sent under Nos. 1611 to 1614 in a special section of its weekly circular² and shall also, when the weekly circular contains such information, so advise administrations by circular telegram.
- ADD 4736 1616 (2) The Board shall endeavour to identify administrations whose services may be affected, and shall include the names of those administrations it is able to identify in the special section of its weekly circular and in the circular telegram mentioned under No. 1615.
- ADD 4737 1617 § 3. (1) Any administration, upon receipt of this information and believing that the planned assignment may affect its services operating in accordance with the Table of Frequency Allocations or planned to be so operated, shall, within four months of the date of the relevant weekly circular, so inform the administration requesting agreement and the Board.
-
- ADD 4733.1 1613.1 ¹ The information in Appendix 3 or 4 submitted to the Board under Article 11 may also be used for the purpose of this procedure.
- ADD 4735.1 1615.1 ² In the case of a space radiocommunication service, the administration submitting the information listed in Appendix 3 or 4 in accordance with the provisions of Article 11 may also ask the Board to apply this information in pursuance of this procedure and the Board shall indicate in the appropriate special section of its weekly circular that agreement under this Article is also sought.

- ADD 4738 1618 (2) Any administration not having commented within the period specified in No. 1617 shall be regarded as unaffected by the planned assignment.
- ADD 4739 1619 (3) Any administration responding under No. 1617 to a request for agreement shall, if possible at the same time, give at least the relevant basic characteristics of its stations whose services may be affected, and shall make such suggestions as it may be able to offer with a view to a satisfactory solution of the problem. A copy of all this information shall simultaneously be sent to the Board.
- ADD 4740 1620 § 4. The administration requesting agreement under Nos. 1611 to 1613 and the administration responding under No. 1617 shall together¹ make every possible effort to resolve the problem before the date of bringing into use of the planned assignment.
- ADD 4741 1621 § 5. Either administration may request from the other additional information which may be required to resolve the problem. A copy of such a request and of any information given in response shall be sent to the Board.
- ADD 4742 1622 § 6. Either administration may request the assistance of the Board in an attempt to resolve the problem.
- ADD 4743 1623 § 7. Following resolution of the problem, the administration which sought agreement shall inform the Board to that effect.
- ADD 4744 1624 § 8. An administration having sought agreement under Nos. 1611 to 1613 and having received no response under No. 1617 from any administration shall inform the Board thereof and shall then be regarded as having successfully completed the procedure of this Article.
- ADD 4745 1625 § 9. An administration having sought agreement under Nos. 1611 to 1613, having received one or more responses under No. 1617 and having informed the Board under No. 1623 of the resolution of the problem, shall be regarded as having obtained agreement in accordance with the relevant footnote in the Table of Frequency Allocations.
- ADD 4746 1626 § 10. The Board, following receipt of advice under No. 1624 or 1625 as to the completion of this procedure, shall publish this information in the appropriate special section of the weekly circular.

ADD 4740.1 1620.1 ¹ In the absence of appropriate CCIR Recommendations or IFRB Technical Standards, the technical criteria to be used in such a case shall be agreed between the administrations concerned.

ADD 4747 1627 § 11. An administration seeking agreement or an administration with which agreement is sought or any other administration whose services might be affected may request the assistance of the Board in applying any of the steps of this procedure, particularly in:

ADD 4748 1628 a) identifying administrations whose services might be affected;

ADD 4749 1629 b) evaluating the levels of interference;

ADD 4750 1630 c) defining, with the agreement of the administrations concerned, the technical criteria to be used¹.

1631
to NOT allocated.
1655

ADD 4750.1 1630.1 ¹ In the absence of appropriate CCIR Recommendations or IFRB Technical Standards, the technical criteria to be used in such a case shall be agreed between the administrations concerned.

ARTICLE 16

Procedure for Bringing Up to Date the Frequency Allotment¹ Plan for Coast Radiotelephone Stations Operating in the Exclusive Maritime Mobile Bands Between 4 000 kHz and 23 000 kHz

(Appendix 25 Mar2)

4751 1682 § 1. (1) Before notifying to the International Frequency Registration Board or
639DY bringing into use at any coast radiotelephone station a frequency assignment not covered by an allotment in the Frequency Allotment Plan contained in Appendix 25 Mar2, an administration which

1683 a) intends to establish a coast radiotelephone station and has no allotment in the Plan, or

1684 b) intends to expand its coast radiotelephone service and requires an additional allotment,

shall send the information listed in Appendix 5 to the Board not earlier than two years in the case of No. 1683, or not earlier than six months in the case of No. 1684, before the projected date of bringing into service of the planned coast radiotelephone service but in any case not later than three months before that date.

(MOD) 4752 1685 (2) The Board shall publish the information sent under Nos. 1682 to 1684 in
639DZ a special section of the IFRB weekly circular together with such apparent incompatibilities between the proposed allotment which is the subject of the publication and any other existing or proposed allotments which the Board can identify. The Board shall also indicate any information of a technical nature and make such suggestions as it may be able to offer with a view to avoiding these incompatibilities.

4753 1686 (3) If it is requested by any administration, particularly by an administra-
639EA tion of a country in need of special assistance, and if the circumstances appear to warrant, the Board, using such means at its disposal as are appropriate in the circumstances, shall render the following assistance:

1687 a) indication of a suitable channel or channels for the service projected by the administration before that administration submits the information for publication;

1688 b) carry out the procedure for which provision is made in No. 1690;

1689 c) any other assistance of a technical nature for completion of the procedure in the present Article.

4754 1690 § 2. (1) At the same time as sending the information listed in Appendix 5 to the
639EB Board for publication, an administration shall seek the agreement of the administrations having an allotment in the same channel as the proposed allotment. A copy of the relevant correspondence shall be sent to the Board.

- (MOD) 4755 1691 (2) Any administration which, upon examining the information published by the Board, considers that its existing services or services planned within the time-limits mentioned in Nos. 1682 to 1684 would be affected, shall have the right to be brought into the procedure undertaken pursuant to No. 1690.
639EC
- 4756 1692 § 3. (1) An administration which receives a request under No. 1690 shall acknowledge receipt thereof immediately by telegram. If no acknowledgement is received within thirty days after the date of the IFRB weekly circular containing the information published under No. 1685, the administration seeking agreement shall dispatch a telegram requesting acknowledgement, to which the receiving administration shall reply within a further period of fifteen days.
639ED
- (MOD) 4757 1693 (2) Upon receipt of the request under No. 1690, an administration shall, having regard to the proposed date of bringing into use of the assignment(s) corresponding to the allotment for which agreement was requested, promptly examine the matter with regard to harmful interference which would be caused to the services rendered by its coast station(s):
639EE
- 1694 a) using a frequency assignment corresponding to an allotment appearing in the Plan; *or*
- 1695 b) to be brought into service in conformity with an allotment appearing in the Plan within the time-limit prescribed in No. 1720; *or*
- 1696 c) to be brought into service within the time-limit prescribed in No. 1720, in conformity with a proposed allotment for which the information has been submitted to the Board under Nos. 1682 to 1684 for publication under No. 1685.
- (MOD) 4758 1697 (3) Any administration which receives a request under No. 1690 and which considers that the proposed use of a channel will not cause harmful interference to the services rendered by its coast stations as outlined in Nos. 1693 to 1696 shall, as soon as possible and not later than two months from the date of the relevant IFRB weekly circular, notify its agreement to the administration seeking agreement.
639EF
- (MOD) 4759 1698 (4) Any administration which receives a request under No. 1690 and which considers that the proposed use of a channel may cause harmful interference to the services rendered by its coast stations as outlined in Nos. 1693 to 1696 shall inform the administration concerned of the reasons for its disagreement as soon as possible and not later than two months from the date of the relevant IFRB weekly circular and shall furnish any information and suggestions with a view to reaching a satisfactory solution of the problem. The administration seeking agreement shall try, as far as possible, to adjust its requirements according to the comments received.
639EG
- 4760 1699 (5) In a case where the administration seeking agreement has no allotment in the band concerned, the administration(s) with which agreement is sought shall, in consultation with the requesting administration, explore all means of meeting the requirement of the requesting administration.
639EH

- (MOD) 4761 1700 § 4. (1) An administration seeking agreement may request the Board to endeavour to obtain such agreement in those cases where:
- 639EI
- 1701 a) an administration to which a request has been sent under No. 1690 fails to acknowledge receipt of the request within forty-five days from the date of the IFRB weekly circular containing the pertinent information;
- 1702 b) an administration has acknowledged receipt under No. 1692 but fails to give a decision within two months from the date of the IFRB weekly circular containing the pertinent information;
- 1703 c) there is disagreement between the administration seeking agreement and an administration with which agreement is sought as to the sharing possibilities;
- 1704 d) it is not possible to reach agreement for any other reason.
- 4762 1705 (2) Either the administration seeking agreement or an administration with which agreement is sought, or the Board, may request additional information which it may require in studying any problem relating to this agreement.
- 639EJ
- 4763 1706 (3) Where the Board receives a request under No. 1701, it shall forthwith send a telegram to the administration concerned requesting immediate acknowledgement.
- 639EK
- 4764 1707 (4) Where the Board receives an acknowledgement following its action under No. 1706, or where the Board receives a request under No. 1702, it shall forthwith send a telegram to the administration concerned requesting an early decision in the matter.
- 639EL
- 4765 1708 (5) Where the Board receives a request under No. 1704, it shall endeavour to obtain agreement to which reference is made in No. 1690. Where the Board receives from an administration no acknowledgement to the request it made under the terms of No. 1690 for agreement within the period specified in No. 1692, it shall act, in so far as this administration is concerned, in accordance with No. 1706.
- 639EM
- 4766 1709 (6) Where an administration fails to reply within fifteen days of the Board's telegram requesting an acknowledgement sent under No. 1706, or fails to give a decision in the matter within thirty days of dispatch of the Board's telegram of request under No. 1707, it shall be deemed that the administration with which agreement was sought has undertaken, once the projected allotment is included in the Plan:
- 639EN
- 1710 a) that no complaint will be made in respect of any harmful interference which may be caused to the services rendered by its coast radiotelephone stations by the use of assignments in accordance with the allotment for which agreement was requested; *and*
- 1711 b) that its existing or projected coast radiotelephone stations will not cause harmful interference to the use of assignments in conformity with the allotment for which agreement was requested.

- 1712 (7) The Board shall enter a remark in the Remarks Column of the Master Register for each assignment covered by the allotment in question, indicating that this assignment does not benefit from the provisions of No. 1416 of the present Regulations with respect to assignments of the administration seeking the agreement.
- (MOD) 4767 1713 (8) The Board shall examine the proposed allotment with respect to the probability of harmful interference which it may receive from an allotment in the Plan of the administration which failed to reply or which indicated disagreement without supplying the reasons; if the finding is favourable and where the application of the present procedure with respect to the other administrations concerned permits, the Board shall enter the proposed allotment in the Plan.
639EO
- (MOD) 4768 1714 (9) In the event of an unfavourable finding resulting, the Board shall inform the administration concerned of the result of the examination; if the administration insists, and where the application of the present procedure with respect to the other administrations concerned permits, the Board shall enter the proposed allotment in the Plan.
639EP
- 4769 1715 (10) Where the Board receives a request under No. 1703, it shall assess the sharing possibilities and it shall inform the administrations concerned of the results obtained.
639EQ
- (MOD) 4770 1716 (11) In the case of continuing disagreement, the Board shall examine the proposed allotment from the point of view of harmful interference which may be caused to the services rendered by the stations of the administration having declared its disagreement. In the case where the Board's finding is favourable and where the application of the present procedure with respect to the other administrations concerned permits, it shall enter the proposed allotment in the Plan.
639ER
- 4771 1717 (12) If, after the examination under No. 1716, the Board reaches an unfavourable finding, it shall then examine the proposed allotment from the point of view of harmful interference which may be caused to the services on all the various channels in the band. Should the Board reach an unfavourable finding in each case, it shall determine the channel which is the least affected and, if so requested by the administration seeking agreement, it shall enter the proposed allotment in this channel in the Plan.
639ES
- (MOD) 4772 1718 § 5. An administration seeking agreement for a proposed allotment shall inform the Board of the results of its consultations with the administrations concerned. When the Board finds that the procedure prescribed in this Article has been applied with respect to each administration concerned, the Board shall publish its finding in a special section of the IFRB weekly circular and, as the case may be, bring the Plan up to date.
639ET
- (MOD) 4773 1719 § 6. Notwithstanding the above provisions and if the circumstances justify, an administration may, in exceptional circumstances, notify to the Board for provisional entry in the Master Register an assignment which is not covered by an allotment in the Plan. That administration shall, however, begin forthwith the procedure prescribed in this Article.
639EU

4774
639EV

1720

§ 7. When, within twelve months from the date of the inclusion of the allotment in the Plan, the Board does not receive a notice of a first frequency assignment corresponding to this allotment, or where the first notified frequency assignment has not been brought into use within the time-limits prescribed in the present Regulations, before proceeding with the deletion of the allotment from the Plan, it shall consult with the administration concerned on the appropriateness of such a deletion and of publishing this information in connection with bringing the Plan up to date. However, in the case where the Board, in the light of a request from the administration concerned, finds that exceptional circumstances warrant an extension of this period, the extension shall in no case exceed six months, except in the case of an administration which has no coast station in service in which case the period may be extended to eighteen months.

(MOD)

4775
639EW

1721

§ 8. Any administration in whose name an allotment is shown in the Plan, and which has a need to replace this allotment by another allotment in the same frequency band with a view to improving its service, shall apply the procedure described in this Article. When that administration arrives at a positive result in applying this procedure, the Board, at its request, shall replace the existing allotment in the Plan by the proposed allotment.

4776
639EX

1722

§ 9. The Board shall maintain an up-to-date master copy of the Plan resulting from the application of this procedure. It shall prepare in a suitable form, for publication by the Secretary-General, the whole or part of the revised version of the Plan as and when the circumstances justify and in any case once annually.

N15/10

ARTICLE 17

**Procedure for the Bands Allocated Exclusively
to the Broadcasting Service Between 5 950 kHz and 26 100 kHz**

**Section I. Submission of Seasonal High Frequency
Broadcasting Schedules**

- (MOD) 4877 1748 § 1. Periodically, administrations shall submit to the International Frequency
640 Registration Board the projected seasonal schedules of their broadcasting stations in
the bands allocated exclusively to the broadcasting service between 5 950 kHz and
26 100 kHz. These schedules shall cover each of the following seasonal propagation
periods and shall be implemented at 0100 UTC on the first Sunday of the period
concerned:
- March Schedule – March and April
May Schedule – May, June, July and August
September Schedule – September and October
November Schedule – November, December, January and February.
- 4878 1749 § 2. The first schedules became effective on 4 September 1960 for the
641 September-October period 1960. The closure dates for the receipt of schedules are
set by the Board in order to permit the advance period to be reduced gradually to
the minimum found practicable by the Board. Those assignments in a schedule the
characteristics of which are not expected to change may be submitted up to a limit
of one year in advance. Each such assignment shall be confirmed by the closing
date for the submission of the schedules for the respective seasonal periods. The
Board shall take appropriate steps to send reminders to administrations in carrying
out this procedure.
- 4879 1750 § 3. Two or more administrations may submit coordinated schedules
642 containing their agreed projected frequency usage.
- 4880 1751 § 4. The frequencies shown in the schedules shall be frequencies that actually
643 will be used for that particular seasonal period and their number should be the
minimum necessary to provide satisfactory reception of the particular programme in
each of the areas for which it is intended. Each administration should prepare its
schedule from season to season by using to the maximum extent practicable the
same frequencies in each band as were used in previous schedules.
- 4881 1752 § 5. The schedules shall be submitted in the form prescribed in Appendix 2,
644 which specifies the data to be furnished for each assignment.
- 4882 1753 § 6. The frequencies included in the schedules shall be in conformity with
645 No. 1240 of these Regulations. To the extent practicable, the frequencies selected
should correspond to listings in the Master International Frequency Register. Those
administrations not having suitable listings in the Master Register may suggest any
frequency considered appropriate, or may, if they so desire, indicate only the
frequency band.

**Section II. Preliminary Examination and Preparation of
Tentative High Frequency Broadcasting Schedule**

- (MOD) 4883 1754 § 7. (1) On receipt of the seasonal schedules, including confirmation in appropriate cases of the continuing validity of assignments included in preceding schedules, the Board shall incorporate the proposed frequency usage of all administrations into a combined schedule and make the appropriate preliminary examination required to prepare the Tentative High Frequency Broadcasting Schedule (hereafter called the *Tentative Schedule*) for the particular seasonal period. This Tentative Schedule shall include:
- 646
- 1755 a) all specific frequency assignments in cases where no alternatives were given by the administration concerned;
- 1756 b) the selections made by the Board in cases where alternatives were given by the administration concerned;
- 1757 c) frequencies suggested by the Board in respect of all services for which no specific frequency was included in the submitted schedule, such suggestions to be made with due overall consideration for No. 1759, for compatibility within the Tentative Schedule, and for possible changes to the projected frequency usage which might be desirable to achieve more equitable satisfaction of administrations' requirements;
- 1758 d) such apparent incompatibilities between frequency assignments which the Board can indicate within the time available.
- (MOD) 4884 1759 (2) At the request of administrations, particularly those of countries in need of special assistance and which have no suitable listings in the Master Register, the Board shall give special consideration to the requirements of those administrations in preparing the Tentative Schedule.
- 647
- 4885 1760 (3) The Board shall begin the work outlined in Nos. 1754 to 1758 early enough for the Tentative Schedule to be issued to administrations not later than two months before the date when the particular seasonal period begins.
- 648

Section III. Technical Examination and Revision of the Tentative Schedule

- (MOD) 4886 1761 § 8. (1) The Board shall continue its technical examination of the Tentative Schedule with a view not only to identifying further incompatibilities between frequency assignments which become apparent in the technical examination and correcting them where possible, but also to improving the technical aspects of the Tentative Schedule by amendments to be agreed upon in consultation with the administrations concerned.
- 649
- 4887 1762 (2) In preparing its recommendations to administrations, the Board shall take into account monitoring observations and all other available data. However, when actual frequency usage is apparently not in conformity with the assignments in a submitted schedule, the Board shall seek from the administration concerned confirmation of this information.
- 650

- 4888** **1763** (3) Administrations, having considered the Tentative Schedule together with such recommendations as may have been furnished by the Board, should notify, as soon as possible, preferably before the date of commencement of the seasonal period concerned, any amendments to the Tentative Schedule which are intended for implementation.
- 651**
- 4889** **1764** (4) Changes in the assignments of broadcasting stations which are implemented after the date on which the seasonal period begins shall be notified to the Board as soon as they can be forecast.
- 652**
- (MOD) **4890** **1765** (5) For changes notified in accordance with Nos. **1763** and **1764**, the Board shall apply the same procedure as that specified in Nos. **1759**, **1761** and **1762**. Such revisions to the Tentative Schedule as result from the application of the procedure in this Section shall be published in the IFRB weekly circulars in order that administrations can keep up to date their copies of the Tentative Schedule.
- 653**

Section IV. Publication of the High Frequency Broadcasting Schedule

- 4891** **1766** § 9. After the end of each seasonal period, the Board shall publish the High Frequency Broadcasting Schedule, which shall reflect the Tentative Schedule as amended by all the changes notified to the Board since the publication of the Tentative Schedule. This High Frequency Broadcasting Schedule shall indicate by appropriate symbols:
- 654**
- 1767** a) those assignments which administrations found in practice to be unsatisfactory and so notified to the Board;
- 1768** b) those assignments not included in the Tentative Schedule which were taken into account by the Board in the examination under Section III of this Article.

Section V. Annual High Frequency Broadcasting Frequency List

- 4892** **1769** § 10. A High Frequency Broadcasting Frequency List shall be published at the end of the first year of implementation of the procedure prescribed in this Article, including all frequency assignments which appear in the High Frequency Broadcasting Schedules for the year concerned. This list shall be issued as a supplement to the International Frequency List, and in the same general format. It shall also include symbols to indicate those assignments which were notified to the Board as being unsatisfactory in practice, as well as symbols to indicate the seasonal periods during which each assignment was used. A recapitulative list shall be issued annually thereafter.
- 655**

Section VI. Miscellaneous Provisions

- 4893** **1770** § 11. The technical standards used by the Board when applying the provisions of this Article should be based, not only on the factors listed in No. **1454**, but also on past experience in broadcasting planning and on the experience gained by the Board in the application of the provisions of this Article.
656
- 4894** **1771** § 12. With a view to the ultimate evolution of compatible technical plans for the frequency bands concerned, the Board shall take all necessary steps to carry out engineering studies on a long-term basis. For this purpose, the Board shall use all information made available to it on frequency usage in the application of the procedure prescribed in this Article. The Board shall also keep administrations informed of the progress and results of such studies at regular intervals.
657
- 4895** **1772** § 13. In applying the provisions of Article **22** of these Regulations, problems of harmful interference which may arise in frequency usage in the bands concerned shall be resolved by administrations by exercising the utmost goodwill and mutual cooperation and by giving due consideration to all the relevant technical and operational factors involved.

§ 3. All stations shall radiate only as much power as is necessary to ensure a satisfactory service.

MOD

4999
695

1805

§ 4. In order to avoid interference:

1806

a) locations of transmitting stations and, where the nature of the service permits, locations of receiving stations shall be selected with particular care;

1807

b) radiation in and reception from unnecessary directions shall be minimized by taking the maximum practical advantage of the properties of directional antennae whenever the nature of the service permits;

1808

c) the choice and use of transmitters and receivers shall be in accordance with the provisions of Article 5;

1809

d) the conditions specified under No. 2612 shall be fulfilled.

ADD

4999A

1810

§ 5. Special consideration shall be given to avoiding interference on distress and safety frequencies and those related to distress and safety identified in Article 38.

SUP

4997.1
693.1

- MOD 5000 1811 § 6. The class of emission to be employed by a station should be such as to
696 achieve minimum interference and to assure efficient spectrum utilization. In general
this requires that in selecting the class of emission to meet these objectives every
effort shall be made to minimize the bandwidth occupied, taking into account the
operational and technical considerations of the service to be performed.

- ADD 5000A 1812 § 7. The out-of-band emissions of transmitting stations should not cause
harmful interference to services which operate in adjacent bands in accordance with
these Regulations and which use receivers in conformity with Nos. 301, 309, 310,
311 and relevant CCIR Recommendations.

- NOC 5001 1813 § 8. If, while complying with the provisions of Article 5, a station causes
697 harmful interference through its spurious emissions, special measures shall be taken
to eliminate such interference.

MOD **Section II. Interference from Electrical Apparatus
and Installations of any Kind Except Equipment Used
for Industrial, Scientific and Medical Applications**

- MOD 5002 1814 § 9. Administrations shall take all practicable and necessary steps to ensure
698 that the operation of electrical apparatus or installations of any kind, including
power and telecommunication distribution networks, but excluding equipment used
for industrial, scientific and medical applications, does not cause harmful interference
to a radiocommunication service and, in particular, to a radionavigation or
any other safety service operating in accordance with the provisions of these
Regulations¹.

ADD **Section III. Interference from Equipment Used for Industrial,
Scientific and Medical Applications**

- ADD 5002A 1815 § 10. Administrations shall take all practicable and necessary steps to ensure
that radiation from equipment used for industrial, scientific and medical applica-
tions is minimal and that, outside the bands designated for use by this equipment,
radiation from such equipment is at a level that does not cause harmful interference
to a radiocommunication service and, in particular, to a radionavigation or any
other safety service operating in accordance with the provisions of these Regula-
tions¹.

MOD **Section IV. Special Cases of Interference**

- MOD 5003 1816 § 11. Administrations authorizing the use of frequencies below 9 kHz shall
699 ensure that no harmful interference is caused thereby to the services to which the
bands above 9 kHz are allocated.

- 1817

International Monitoring

- | | | | |
|-----|-------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MOD | 5058
678 | 1872 | § 1. To assist to the extent practicable in the implementation of these Regulations, in particular to help ensure efficient and economical use of the radio frequency spectrum and to help in the prompt elimination of harmful interference, administrations agree to continue the development of monitoring facilities and, to the extent practicable, to cooperate in the continued development of the international monitoring system. |
| MOD | 5059
679 | 1873 | § 2. The international monitoring system comprises only those monitoring stations which have been so nominated by administrations in the information sent to the Secretary-General in accordance with No. 1879. These stations may be operated by an administration or, in accordance with an authorization granted by the appropriate administration, by a public or private enterprise, by a common monitoring service established by two or more countries, or by an international organization. |
| MOD | 5060
680 | 1874 | § 3. Administrations will, as far as they consider practicable, conduct such monitoring of both a general and a specific nature as may be required of them by the International Frequency Registration Board or by other administrations. In requesting monitoring observations, the Board and administrations should take into account the monitoring facilities set forth in the List of International Monitoring Stations (List VIII, see Article 26), and should clearly specify both the purpose for which the observations are requested and the parameters of the requested monitoring work (including appropriate schedules). The results of such monitoring forwarded to other administrations may also be sent to the Board, if appropriate. |
| NOC | 5061
681 | 1875 | § 4. Each administration or common monitoring service established by two or more countries, or international organizations participating in the international monitoring system, shall designate a centralizing office to which all requests for monitoring information shall be addressed and through which monitoring information will be forwarded to the Board or to centralizing offices of other administrations. |
| NOC | 5062
682 | 1876 | § 5. Administrations agree that monitoring requests from international organizations not participating in the international monitoring system should be coordinated by the Board and, if appropriate, forwarded by it to administrations. |
| NOC | 5063
683 | 1877 | § 6. However, these provisions shall not affect private monitoring arrangements made for special purposes by administrations, international organizations, or public or private enterprises. |
| NOC | 5064
684 | 1878 | § 7. The technical standards recommended by the CCIR to be observed by monitoring stations shall be recognized by the Board as the optimum practicable technical standards for monitoring stations participating in the international |

monitoring system. However, to meet some needs for monitoring data, stations observing lower technical standards may participate in the international monitoring system at the discretion of their administrations.

MOD 5065 1879 § 8. Administrations having determined whether the monitoring stations meet adequate technical standards, shall notify to the Secretary-General pertinent information on the centralizing office and on the stations they wish to have included in List VIII, clearly identifying those stations which may participate in the international monitoring system (see Article 26 and Appendix 9).
685

NOC 5066 1880 § 9. (1) Results of measurements forwarded to the Board or other administrations shall indicate the estimated accuracy obtained at the time the measurements were made.
686

NOC 5067 1881 (2) Where the results supplied by any monitoring station appear to be doubtful or insufficient for its purposes, the Board shall advise the administration or international organization concerned giving the appropriate details.
687

NOC 5068 1882 § 10. When rapid action is required, communications between the Board and centralizing offices should be transmitted by the most expeditious means available.
688

MOD 5069 1883 § 11. Administrations shall make every effort to arrange for monitoring observations (see Appendix 21) to be submitted to the Board as soon as possible.
689

NOC 5070 1884 § 12. Centralizing offices may request the help of other centralizing offices in order to implement the provisions of this Article and of Article 22.
690

MOD 5071 1885 § 13. The Board shall record the results supplied by the monitoring stations participating in the international monitoring system, and shall prepare periodically, for publication by the Secretary-General, summaries of the useful monitoring data received by it including a list of the stations contributing the data.
691

ADD 5071A 1886 § 14. When an administration, in supplying monitoring observations from one of its monitoring stations taking part in the international monitoring system, states to the Board that a clearly identified emission is not in conformity with these Regulations, the Board shall draw the attention of the administration concerned to those observations.

Procedure in a Case of Harmful Interference

- (MOD) 5126 1943 § 1. It is essential that Members exercise the utmost goodwill and mutual assistance in the application of the provisions of Article 35 of the Convention and of this Article to the settlement of problems of harmful interference.
704
- (MOD) 5127 1944 § 2. In the settlement of these problems, due consideration shall be given to all factors involved, including the relevant technical and operating factors, such as: adjustment of frequencies, characteristics of transmitting and receiving antennae, time sharing, change of channels within multichannel transmissions.
705
- (MOD) 5128 1945 § 3. When a case of such harmful interference is reported by a receiving station, it shall give to the transmitting station whose service is being interfered with all possible information which will assist in determining the source and characteristics of the interference.
706
- MOD 5129 1946 § 4. Where practicable, and subject to agreement by administrations concerned, the case of harmful interference may be dealt with directly by their specially designated monitoring stations or by direct coordination between their operating organizations.
707
- ADD 5129A 1947 § 5. For the purpose of this Article, the term “administration” may include the centralizing office designated by the administration, in accordance with No. 1875.
- MOD 5130 1948 § 6. If a case of harmful interference so justifies, the administration having jurisdiction over the receiving station experiencing the interference shall inform the administration having jurisdiction over the transmitting station whose service is being interfered with, giving all possible information.
708
- MOD 5131 1949 § 7. If further observations and measurements are necessary to determine the source and characteristics of and to establish the responsibility for the harmful interference, the administration having jurisdiction over the transmitting station whose service is being interfered with may seek the cooperation of other administrations, particularly of the administration having jurisdiction over the receiving station experiencing the interference, or of other organizations.
709
- MOD 5132 1950 § 8. Having determined the source and characteristics of the harmful interference, the administration having jurisdiction over the transmitting station whose service is being interfered with shall inform the administration having jurisdiction over the interfering station, giving all useful information in order that this administration may take such steps as may be necessary to eliminate the interference.
710
- MOD 5133 1951 § 9. When a safety service suffers harmful interference the administration having jurisdiction over the receiving station experiencing the interference may also approach directly the administration having jurisdiction over the interfering station. The same procedure may also be followed in other cases with the prior approval of the administration having jurisdiction over the transmitting station whose service is being interfered with.
711

ADD	5133A	1952	§ 10. An administration receiving a communication to the effect that one of its stations is causing harmful interference to a safety service shall promptly investigate the matter and take any necessary remedial action.
MOD	5134 711A	1953	§ 11. When the service rendered by an earth station suffers harmful interference, the administration having jurisdiction over the receiving station experiencing such interference may also approach directly the administration having jurisdiction over the interfering station.
ADD	5134A	1954	§ 12. On being informed that a station over which it has jurisdiction is believed to have been the cause of harmful interference, an administration shall, as soon as possible, acknowledge receipt of that information by telegram. Such acknowledgement shall not constitute an acceptance of responsibility.
MOD	5135 711B	1955	§ 13. When cases of harmful interference occur as a result of emissions from space stations, the administrations having jurisdiction over these interfering stations shall, upon request from the administration having jurisdiction over the station experiencing the interference, furnish current ephemeral data necessary to allow determination of the positions of the space stations when not otherwise known.
MOD	5136 712	1956	§ 14. In cases of harmful interference where rapid action is required, communications between administrations shall be transmitted by the quickest means available and, subject to prior authorisation by the administrations concerned in such cases, information may be exchanged directly between specially designated stations of the international monitoring system.
ADD	5136A	1957	§ 15. Recognizing that transmissions on the distress and safety frequencies (see Article 38) require absolute international protection and that the elimination of harmful interference to such transmissions is imperative, administrations undertake to act immediately when their attention is drawn to any such harmful interference.
MOD	5137 713	1958	§ 16. Full particulars relating to harmful interference shall, whenever possible, be given in the form indicated in Appendix 23.
MOD	5138 714	1959	§ 17. If the harmful interference persists in spite of the action taken in accordance with the procedures outlined above, the administration having jurisdiction over the transmitting station whose service is being interfered with may address to the administration having jurisdiction over the interfering station a report of irregularity or infraction in accordance with the provisions of Article 21.
MOD	5139 715	1960	§ 18. If there is a specialized international organization for a particular service, reports of irregularities and of infractions relating to harmful interference caused or suffered by stations in this service may be addressed to such organization at the same time as to the administration concerned.
NOC	5140 716	1961	§ 19. (1) If it is considered necessary, and particularly if the steps taken in accordance with the procedures described above have not produced satisfactory results, the administration concerned shall forward details of the case to the International Frequency Registration Board for its information.

(MOD)	5141 717	1962	(2) In such a case, the administration concerned may also request the Board to act in accordance with the provisions of Sections VII and VIII of Article 12 and Sections VII and VIII of Article 13; but it shall then supply the Board with the full facts of the case, including all the technical and operational details and copies of the correspondence.
SUP	5142 718		
ADD	5143	1963	§ 20. (1) In the case where an administration has difficulty in identifying a source of harmful interference and urgently wishes to seek the assistance of the Board, in a case affecting an assignment selected by the Board in response to a request under No. 1218, it shall promptly inform the Board.
ADD	5144	1964	(2) On receipt of this information, the Board shall immediately request the cooperation of appropriate administrations or specially designated stations of the international monitoring system that may be able to help in identifying the source of harmful interference.
ADD	5145	1965	(3) The Board shall consolidate all reports received in response to requests under No. 1964 and, using such other information as it has available, shall promptly attempt to identify the source of harmful interference.
ADD	5146	1966	(4) The Board shall thereafter forward its conclusions and recommendations by telegram to the administration reporting the case of harmful interference. These shall also be forwarded by telegram to the administration believed to be responsible for the source of harmful interference, together with a request for prompt action.

ARTICLE 24

NOC

Licences

- MOD 5221 2020 § 1. (1) No transmitting station may be established or operated by a private person or by any enterprise without a licence issued in an appropriate form and in conformity with the provisions of these Regulations by the government of the country to which the station in question is subject. (However, see Nos. 2021, 2027 and 2030).
725
- MOD 5222 2021 (2) However, the government of a country may conclude with the government of one or more neighbouring countries a special agreement concerning one or several stations of its broadcasting service or of its land mobile services, operating on frequencies above 41 MHz, situated in the territory of a neighbouring country and intended to improve national coverage. This agreement, which shall be compatible with the provisions of the present Regulations as well as of those regional agreements to which the countries concerned are signatories, may allow exceptions to the provisions of No. 2020 and shall be communicated to the Secretary-General in order that it may be brought to the notice of administrations for their information.
726
- NOC 5223 2022 (3) Mobile stations which are registered in a territory or group of territories which does not have full responsibility for its international relations may be considered, in so far as the issue of licences is concerned, as subject to the authority of that territory or group of territories.
727
- MOD 5224 2023 § 2. The holder of a licence is required to preserve the secrecy of telecommunications, as provided in the relevant provisions of the Convention. Moreover, the licence shall mention, specifically or by reference, that if the station includes a receiver, the interception of radiocommunication correspondence, other than that which the station is authorized to receive, is forbidden, and that in the case where such correspondence is involuntarily received, it shall not be reproduced, nor communicated to third parties, nor used for any purpose, and even its existence shall not be disclosed.
728
- MOD 5225 2024 § 3. To facilitate the verification of licences issued to mobile stations, there shall be added, when necessary, to the text written in the national language, a translation of the text in one of the working languages of the Union.
729
- MOD 5226 2025 § 4. (1) The government which issues a licence to a mobile station shall mention therein in clear form the particulars of the station, including its name, call sign and, where appropriate, the public correspondence category, as well as the general characteristics of the installation.
730
- MOD 5227 2026 (2) For land mobile stations, including stations consisting only of one or more receivers, a clause shall be included in the licence, specifically or by reference, under which the operation of these stations shall be forbidden in countries other than the country in which the licence is issued, except as may be provided by special agreement between the governments of the countries concerned.
731

NOC	5228 732	2027	§ 5. (1) In the case of a new registration of a ship or aircraft in circumstances where delay is likely to occur in the issue of a licence by the country in which it will be registered, the administration of the country from which the mobile station wishes to make its voyage or flight may, at the request of the operating company, issue a certificate to the effect that the station complies with these Regulations. This certificate, drawn up in a form determined by the issuing administration, shall give the particulars mentioned in No. 2025 and shall be valid only for the voyage or flight to the country in which the registration of the ship or aircraft will be effected, or for a period of three months, whichever is the lesser.
ADD	5228A (became 5230A)		
NOC	5229 733	2028	(2) The administration issuing the certificate shall inform the administration responsible for issuing the licence of the action taken.
NOC	5230 734	2029	(3) The holder of the certificate shall comply with the provisions of these Regulations applicable to licence holders.
ADD	5230A	2030	§ 6. In the case of hire, lease or interchange of aircraft, the administration having authority over the aircraft operator receiving an aircraft under such an arrangement may, by agreement with the administration of the country in which the aircraft is registered, issue a licence in conformity with that specified in No. 2025 as a temporary substitute for the original licence.
		2031 to 2054	NOT allocated.

ARTICLE 25

Identification of Stations**Section I. General Provisions**

ADD	5330	2055	§ 1. All transmissions shall be capable of being identified either by identification signals or by other means ¹ .
MOD	5331 735	2056	§ 2. (1) All transmissions with false or misleading identification are prohibited.
ADD	5331A	2057	(2) Where practicable and in appropriate services, identification signals should be automatically transmitted in accordance with relevant CCIR Recommendations.
ADD	5331B	2058	(3) All transmissions in the following services should, except as provided in Nos. 2066 to 2068, carry identification signals:
		2059	a) amateur service;
		2060	b) broadcasting service;
		2061	c) fixed service in the bands below 28 000 kHz;
		2062	d) mobile service;
		2063	e) standard frequency and time signal service.
ADD	5331C	2064	(4) All operational transmissions by radiobeacons shall carry identification signals. However, it is recognized that, for radiobeacons and for certain other radionavigation services that normally carry identification signals, during periods of malfunction or other non-operational service the deliberate removal of identification signals is an agreed means of warning users that the transmissions cannot safely be used for navigational purposes.
ADD	5331D	2065	(5) When identification signals are transmitted they shall comply with the provisions of this Article.
MOD	5332 736	2066	(6) However, the requirements for certain transmissions to carry identification signals need not apply to:
		2067	a) survival craft stations when transmitting distress signals automatically;
		2068	b) emergency position-indicating radiobeacons.
ADD	5330.1	2055.1	¹ In the present state of the technique, it is recognized nevertheless that the transmission of identifying signals for certain radio systems (e.g. radiodetermination, radio relay systems and space systems) is not always possible.
SUP	5331.1 735.1		

MOD	5333 737	2069	§ 3. In transmissions carrying identification signals a station shall be identified by a call sign, by a maritime mobile service identity in accordance with Appendix 43 ¹ or by other recognized means of identification which may be one or more of the following: name of station, location of station, operating agency, official registration mark, flight identification number, selective call number or signal, selective call identification number or signal, characteristic signal, characteristic of emission or other clearly distinguishing features readily recognized internationally.
SUP	5334		
MOD	5335 738	2070	§ 4. For transmissions carrying identification signals, in order that stations may be readily identified, each station shall transmit its identification as frequently as practicable during the course of transmissions, including those made for tests, adjustments or experiments. During such transmissions, however, identification signals shall be transmitted at least hourly, preferably within the period from five minutes before to five minutes after the hour (UTC) unless to do so would cause unreasonable interruption of traffic, in which case identification shall be given at the beginning and end of transmissions.
ADD	5335A	2071	§ 5. Identification signals shall wherever practicable be in one of the following forms:
		2072	a) speech, using simple amplitude or frequency modulation;
		2073	b) international Morse code transmitted at manual speed;
		2074	c) a telegraph code compatible with conventional printing equipment;
		2075	d) any other form recommended by the CCIR.
MOD	5336 739	2076	§ 6. To the extent possible the identification signal should be transmitted in accordance with relevant CCIR Recommendations.
ADD	5336A	2077	§ 7. Administrations should ensure that wherever practicable superimposed identification methods be employed in accordance with CCIR Recommendations.
SUP	5337		
NOC	5338 741	2078	§ 8. When a number of stations work simultaneously in a common circuit, either as relay stations, or in parallel on different frequencies, each station shall, as far as practicable, transmit its own identification or those of all the stations concerned.
ADD	5338A	2079	§ 9. Administrations shall ensure, except in the cases mentioned in Nos. 2066 to 2068, that all transmissions not carrying identification signals can be identified by other means when they are capable of causing harmful interference to the services of another administration operating in accordance with these Regulations.

ADD 5333.1 2069.1 ¹ For the application of Appendix 43, see Resolution 313.

- ADD **5338B** **2080** § 10. Administrations shall, having regard to the provisions of these Regulations relating to the notification of assignments for recording in the Master Register, adopt their own measures to ensure compliance with the provisions of No. **2079**.

- (MOD) **5339** **2081** § 11. Each Member reserves the right to establish its own measures for identifying its stations used for national defence. However, it shall use, as far as possible, call signs recognizable as such, and containing the distinctive characters of its nationality.
 742

NOC

**Section II. Allocation of International Series,
and Assignment of Call Signs**

- (MOD) **5340** **2082** § 12. (1) All stations open to the international public correspondence service, all amateur stations, and other stations which are capable of causing harmful interference beyond the boundaries of the country to which they belong, shall have call signs from the international series allocated to each country as given in the Table of Allocation of International Call Sign Series in Appendix **42**.
 743

- ADD **5340A** **2083** (2) All ship stations and ship earth stations with respect to which the provisions of Chapter **XI** apply and all coast stations or coast earth stations capable of communicating with such ships shall have assigned to them maritime mobile service identities in accordance with Appendix **43**¹.

- MOD **5341** **2084** (3) It is not compulsory to assign call signs from the international series to stations identified by maritime mobile service identities or which are easily identified by other means (see No. **2069**) and whose signals of identification or characteristics of emission are published in international documents.
 744

- NOC **5342** **2085** § 13. Should the available call sign series in Appendix **42** be exhausted, new call sign series may be allocated according to the principles set out in Resolution **13** relating to the formation of call signs and the allocation of new international series.
 748

- NOC **5343** **2086** § 14. Between administrative radio conferences, the Secretary-General is authorized to deal with questions relating to changes in the allocation of series of call signs, on a provisional basis, and subject to confirmation by the following conference (see also No. **2085**).
 749

- ADD **5343A** **2087** § 15. The Secretary-General shall, for the maritime mobile service identification system, be responsible for allocating nationality identification digits series to countries not included in the Table of Nationality Identification Digits (see Appendix **43**¹).

ADD **5340A.1** **2083.1** }
 5343A.1 **2087.1** } ¹ For the application of Appendix **43**, see Resolution **313**.

MOD	5344 749A	2088	§ 16. The Secretary-General shall be responsible for supplying series of selective call numbers or signals (see Nos. 2143 to 2146) at the request of the administrations concerned.
(MOD)	5345 750	2089	§ 17. (1) Each country shall choose the call signs and, if the selective calling system used is in accordance with Appendix 39, the ship station selective call number and the coast station identification numbers of its stations from the international series allocated or supplied to it; and shall, in accordance with Article 26, notify this information to the Secretary-General together with the information which is to appear in Lists I, II, IV, V, VI and VIIIA. These notifications do not include call signs assigned to amateur and experimental stations.
ADD	5345A	2090	(2) Each country shall choose the maritime mobile service identities of its stations from the nationality identification digits series allocated to it and notify this information to the Secretary-General for inclusion in the relevant lists, as provided for in Article 26.
MOD	5346 751	2091	(3) The Secretary-General shall ensure that the same call sign, the same maritime mobile service identity, the same selective call number or the same identification number is not assigned more than once and that call signs which might be confused with distress signals, or with other signals of the same nature, are not assigned.
NOC	5347 752	2092	§ 18. (1) When a fixed station uses more than one frequency in the international service, each frequency may be identified by a separate call sign used solely for this frequency.
NOC	5348 753	2093	(2) When a broadcasting station uses more than one frequency in the international service, each frequency may be identified by a separate call sign used solely for this frequency or by some other appropriate means, such as announcing the name of the place and frequency used.
NOC	5349 754	2094	(3) When a land station uses more than one frequency, each frequency may, if desired, be identified by a separate call sign.
NOC	5350 755	2095	(4) Where practicable, coast stations should use a common call sign for each frequency series ¹ .

NOC

Section III. Formation of Call Signs

NOC	5351 756	2096	§ 19. (1) The twenty-six letters of the alphabet, as well as digits in the cases specified below, may be used to form call signs. Accented letters are excluded.
-----	-------------	------	------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC 5350.1 2095.1 755.1 ¹ By “frequency series” is meant a group of frequencies each of which belongs to one of the different bands between 4 000 kHz and 27 500 kHz that are allocated exclusively to the maritime mobile service.

NOC	5352 757	2097	(2) However, the following combinations shall not be used as call signs:
NOC	5353 758	2098	a) combinations which might be confused with distress signals or with other signals of a similar nature;
NOC	5354 759	2099	b) combinations reserved for the abbreviations to be used in the radiocommunication services (see Appendices 13 and 14);
(MOD)	5355 761	2100	c) for amateur stations, combinations commencing with a digit when the second character is the letter O or the letter I.
MOD	5356 762	2101	§ 20. Call signs in the international series are formed as indicated in Nos. 2102 to 2122 . The first two characters shall be two letters or a letter followed by a digit or a digit followed by a letter. The first two characters or in certain cases the first character of a call sign constitute the nationality identification ¹ .
NOC	5357	2102	<i>Land and fixed stations</i>
SUP	5358 763		
MOD	5359 764	2103	§ 21. (1) – two characters and one letter, <i>or</i> – two characters and one letter followed by not more than three digits (other than the digits 0 and 1 in cases where they immediately follow a letter).
		2104	(2) However, it is recommended that, as far as possible, the call signs of fixed stations consist of: – two characters and one letter followed by two digits (other than the digits 0 and 1 in cases where they immediately follow a letter).
NOC	5360	2105	<i>Ship stations</i>
MOD	5361 765	2106	§ 22. (1) – two characters and two letters, <i>or</i> – two characters, two letters and one digit (other than the digits 0 or 1).
MOD	5362 766	2107	(2) However, ship stations employing only radiotelephony may also use a call sign consisting of: – two characters (provided that the second is a letter) followed by four digits (other than the digits 0 or 1 in cases where they immediately follow a letter), <i>or</i> – two characters and one letter followed by four digits (other than the digits 0 or 1 in cases where they immediately follow a letter).
ADD	5356.1	2101.1	¹ For call sign series beginning with B, F, G, I, K, M, N, R and W, only the first character is required for nationality identification. In the cases of half series, the first three characters are required for nationality identification.

NOC	5363	2108	<i>Aircraft stations</i>
MOD	5364 767	2109	§ 23. – two characters and three letters.
NOC	5365	2110	<i>Ship's survival craft stations</i>
NOC	5366 768	2111	§ 24. – the call sign of the parent ship followed by two digits (other than the digits 0 or 1 in cases where they immediately follow a letter).
NOC	5367	2112	<i>Emergency position-indicating radiobeacon stations</i>
NOC	5368 768A	2113	§ 25. – the Morse letter B and/or the call sign of the parent ship to which the radiobeacon belongs.
NOC	5369	2114	<i>Aircraft survival craft stations</i>
NOC	5370 769	2115	§ 26. – the complete call sign of the parent aircraft (see No. 2109), followed by a single digit other than 0 or 1.
NOC	5371	2116	<i>Land mobile stations</i>
SUP	5372 770		
MOD	5373 771	2117	§ 27. – two characters (provided that the second is a letter) followed by four digits (other than the digits 0 or 1 in cases where they immediately follow a letter), <i>or</i> – two characters and one or two letters followed by four digits (other than the digits 0 or 1 in cases where they immediately follow a letter).
NOC	5374	2118	<i>Amateur and experimental stations</i>
MOD	5375 772	2119	§ 28. (1) – one character (see No. 2101.1) and a single digit (other than 0 or 1), followed by a group of not more than three letters, <i>or</i> – two characters and a single digit (other than 0 or 1), followed by a group of not more than three letters.
NOC	5376 773	2120	(2) However, the prohibition of the use of the digits 0 and 1 does not apply to amateur stations.
NOC	5377	2121	<i>Stations in the space service</i>
MOD	5378 773A	2122	§ 29. When call signs for stations in the space service are employed, it is recommended that they consist of: – two characters followed by two or three digits (other than the digits 0 and 1 in cases where they immediately follow a letter).

NOC		Section IV. Identification of Stations Using Radiotelephony	
NOC	5379 774	2123	§ 30. Stations using radiotelephony shall be identified as indicated in Nos. 2124 to 2133.
(MOD)	5380 775	2124	§ 31. (1) <i>Coast stations</i> <ul style="list-style-type: none"> – a call sign (see No. 2103); <i>or</i> – the geographical name of the place as it appears in the List of Coast Stations, followed preferably by the word RADIO or by any other appropriate indication.
NOC	5381 776	2125	(2) <i>Ship stations</i> <ul style="list-style-type: none"> – a call sign (see Nos. 2106 and 2107); <i>or</i> – the official name of the ship preceded, if necessary, by the name of the owner on condition that there is no possible confusion with distress, urgency and safety signals; <i>or</i> – its selective call number or signal.
NOC	5382 777	2126	(3) <i>Ship's survival craft stations</i> <ul style="list-style-type: none"> – a call sign (see No. 2111); <i>or</i> – a signal of identification consisting of the name of the parent ship followed by two digits.
NOC	5383 777A	2127	(4) <i>Emergency position-indicating radiobeacon stations</i> <p>When speech transmission is used (see No. 3265):</p> <ul style="list-style-type: none"> – the name and/or the call sign of the parent ship to which the radiobeacon belongs.
NOC	5384 778	2128	§ 32. (1) <i>Aeronautical stations</i> <ul style="list-style-type: none"> – the name of the airport or geographical name of the place followed, if necessary, by a suitable word indicating the function of the station.
NOC	5385 779	2129	(2) <i>Aircraft stations</i> <ul style="list-style-type: none"> – a call sign (see No. 2109), which may be preceded by a word designating the owner or the type of aircraft; <i>or</i> – a combination of characters corresponding to the official registration mark assigned to the aircraft; <i>or</i> – a word designating the airline, followed by the flight identification number.

- NOC 5386 2130 (3) In the exclusive aeronautical mobile frequency bands, aircraft stations using radiotelephony may use other methods of identification, after special agreement between governments, and on condition that they are internationally known.
780
- NOC 5387 2131 (4) *Aircraft survival craft stations*
781
– a call sign (see No. 2115).
- (MOD) 5388 2132 § 33. (1) *Base stations*
782
– a call sign (see No. 2103); or
– the geographical name of the place followed, if necessary, by any other appropriate indication.
- (MOD) 5389 2133 (2) *Land mobile stations*
783
– a call sign (see No. 2117); or
– the identity of the vehicle or any other appropriate indication.

NOC

Section V. Selective Call Numbers in the Maritime Mobile Service

- NOC 5390 2134 §34. When stations of the maritime mobile service use selective calling devices in accordance with Appendices 38 and 39, their call numbers shall be assigned by the responsible administrations in accordance with the provisions below.
783A
- NOC 5391 2135 *Formation of ship station selective call numbers and coast station identification numbers*
- NOC 5392 2136 § 35. (1) The ten digits from 0 to 9 inclusive shall be used to form selective call numbers.
783B
- NOC 5393 2137 (2) However, combinations of numbers commencing with the digits 00 (zero, zero) shall not be used when forming the identification numbers for coast stations.
783C
- NOC 5394 2138 (3) Ship station selective call numbers and coast station identification numbers in the series are formed as indicated in Nos. 2139, 2140 and 2141.
783D
- NOC 5395 2139 (4) *Coast station identification numbers*
783E
– four digits (see No. 2137).

NOC	5396 783F	2140	(5) <i>Ship station selective call numbers</i> – five digits.
NOC	5397 783G	2141	(6) <i>Predetermined groups of ship stations</i> – five digits consisting of: – the same digit repeated five times; <i>or</i> – two different digits repeated alternately.
NOC	5398	2142	<i>Assignment of ship station selective call numbers and coast station identification numbers</i>
MOD	5399 783H	2143	§ 36. (1) In cases where selective call numbers for ship stations and identification numbers for coast stations are required for use in the maritime mobile service and the selective calling system is in accordance with Appendix 39, the selective call numbers and identification numbers shall be supplied by the Secretary-General on request. Upon notification by an administration of the introduction of selective calling for use in the maritime mobile service:
		2144	a) selective call numbers for ships will be supplied as required in blocks of 100 (one hundred);
		2145	b) coast station identification numbers will be supplied in blocks of 10 (ten) to meet actual requirements;
		2146	c) selective call numbers for selective calling of predetermined groups of ship stations in accordance with No. 2141 will be supplied as required as single numbers.
NOC	5400 783I	2147	(2) Each administration shall choose the selective call numbers to be assigned to its ship stations from the blocks of the series supplied to it.
NOC	5401 783J	2148	(3) Each administration shall choose the coast station identification numbers to be assigned to its coast stations from the blocks of the series supplied to it.
ADD			Section VI. Maritime Mobile Service Identities in the Maritime Mobile Service and the Maritime Mobile-Satellite Service
ADD	5401A	2149	§ 37. When a station in the maritime mobile service or the maritime mobile-satellite service is required to use maritime mobile service identities, the responsible administration shall assign the identity to the station in accordance with the provisions described in Appendix 43 and Resolution 313 and taking into consideration relevant CCIR and CCITT Recommendations.

MOD

Section VII. Special Provisions

NOC	5402 784	2150	§ 38. (1) In the aeronautical mobile service, after communication has been established by means of the complete call sign, the aircraft station may use, if confusion is unlikely to arise, an abbreviated call sign or identification consisting of:
MOD	5403 785	2151	a) in radiotelegraphy, the first character and last two letters of the complete call sign (see No. 2109);
MOD	5404 786	2152	b) in radiotelephony: <ul style="list-style-type: none"> – the first character of the complete call sign; <i>or</i> – the abbreviation of the name of the owner of the aircraft (company or individual); <i>or</i> – the type of aircraft; <p style="padding-left: 40px;">followed by the last two letters of the complete call sign (see No. 2109) or by the last two characters of the registration mark.</p>
NOC	5405 787	2153	(2) The provisions of Nos. 2150 , 2151 and 2152 may be amplified or modified by agreement between administrations concerned.
NOC	5406 788	2154	§ 39. The distinguishing signals allotted to ships for visual and aural signalling shall, in general, agree with the call signs of ship stations.
		2155 to 2179	NOT allocated.

Service Documents

ADD

Section 1. Titles, Contents and Publication of Service Documents

- | | | | |
|-----|-------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MOD | 5507
789 | 2180 | § 1. The following documents shall be published by the Secretary-General. As circumstances warrant and in response to individual requests by administrations, the published information shall also be available in computer printed form, machine readable form, film, microfiche or by other appropriate means. |
| MOD | 5508
790 | 2181 | § 2. <i>List I. The International Frequency List.</i> |
| | | 2182 | (1) This list shall be based on information prepared by the IFRB and shall contain: |
| MOD | 5509
791 | 2183 | a) particulars of frequency assignments recorded in the Master International Frequency Register; |
| MOD | 5510
792 | 2184 | b) the frequencies (e.g. 500 kHz or 2 182 kHz) prescribed by these Regulations for common use by certain services; |
| MOD | 5511
793 | 2185 | c) the allotments in the Allotment Plans included in Appendices 25 Mar2 (see No. 4212), 26, 27 * and 27 Aer2 *. |
| NOC | 5512
794 | 2186 | (2) An indication of the use of the frequencies and allotments in Nos. 2184 and 2185 shall be included in the entries concerned. |
| NOC | 5513
795 | 2187 | (3) Frequency assignments in the International Frequency List shall be arranged in numerical ascending order of the frequencies assigned. |
| NOC | 5514
796 | 2188 | (4) The International Frequency List above 28 MHz shall be in four separate parts as follows: |
| NOC | 5515
797 | 2189 | a) frequency assignments in bands between 28 MHz and 50 MHz, excluding broadcasting stations; |
| MOD | 5516
798 | 2190 | b) frequency assignments in Region 1 in the bands above 50 MHz, and frequency assignments ¹ to broadcasting stations in Region 1 in the bands between 28 MHz and 50 MHz; |

* Note by the General Secretariat: See No. 5189 and Resolution 400.

¹ In the case of television broadcasting stations in Region 1, separate entries shall be inserted in List I for the carrier frequencies of the vision and sound channels.

NOC 5516.1
798.1

2190.1

MOD	5517 799	2191	c)	frequency assignments in Region 2 in the bands above 50 MHz;
MOD	5518 800	2192	d)	frequency assignments in Region 3 in the bands above 50 MHz, and frequency assignments to broadcasting stations in Region 3 in the bands between 28 MHz and 50 MHz.
ADD	5518A	2193	(5)	New editions of the International Frequency List shall be published at intervals to be determined by the Secretary-General, but not exceeding two years. This list shall be kept up to date by quarterly recapitulative supplements published in the same form as the list itself. New or modified entries made in the Master International Frequency Register after the publication of the latest recapitulative supplement and which appear in a new recapitulative supplement or in a new edition of the list shall be indicated therein in an appropriate manner.
ADD	5518B	2194	(6)	The recapitulative supplements shall be divided into two sections as follows:
ADD	5518C	2195	a)	Section A shall contain new entries and modifications of entries already listed in the International Frequency List;
ADD	5518D	2196	b)	Section B shall contain entries in the International Frequency List which have been deleted in their entirety.
(MOD)	5519 801	2197	§ 3.	<i>List II. List of Fixed Stations Operating International Circuits.</i>
		2198	(1)	This list shall contain the particulars of the fixed stations operating international circuits, the frequencies of which appear in List I.
ADD	5519A	2199	(2)	List II shall be republished at intervals to be determined by the Secretary-General. The list shall be kept up to date by the publication of recapitulative supplements at intervals of three months.
MOD	5520 802	2200	§ 4.	<i>List III. (Spare)</i>
SUP	5521 803			
SUP	5522 804			
NOC	5523 805	2201	§ 5.	<i>List IV. List of Coast Stations.</i>
		2202	(1)	There are annexed to this list a table and a chart showing the zones and hours of service of ships of the second and third categories (see Appendix 12) and a table of inland telegraph rates, limitrophic rates, etc. This list shall also contain an annex giving any details of maritime mobile-satellite systems which may be forwarded to the Secretary-General by participating administrations.

- ADD 5223A 2203 (2) List IV shall be republished every two years and kept up to date by recapitulative supplements issued every six months.
- (MOD) 5524 2204 § 6. *List V. List of Ship Stations.*
806
- 2205 (1) This list shall contain particulars of:
- 2206 a) ship stations fitted with radiotelegraph installations;
- 2207 b) ship stations fitted with radiotelegraph and radiotelephone installations;
- 2208 c) ship stations which are fitted with radiotelephone installations only and which communicate with stations of the maritime mobile service other than those of their own nationality or stations on ships which make international voyages;
- 2209 d) ship stations fitted with mobile earth stations.
- 2210 (2) This list shall contain a table and a chart showing the zones and hours of service of ships of the second and third categories (see Appendix 12) and an annex giving details of maritime mobile-satellite systems which may be forwarded to the Secretary-General by participating administrations.
- ADD 5524A 2211 (3) List V shall be republished each year. It shall be kept up to date by means of a quarterly supplement in addition to a half-yearly recapitulative supplement.
- MOD 5525 2212 § 7. *List VI. List of Radiodetermination and Special Service Stations.*
807
- 2213 (1) This list shall contain particulars of radio direction-finding stations and radiobeacon stations of the maritime radionavigation service, including radiobeacon stations of the aeronautical radionavigation service reliable for maritime navigation, and the particulars of radiodetermination-satellite systems available for maritime use, ocean-station vessels, direction-finder calibration stations as well as stations transmitting standard frequency and time signals, regular meteorological bulletins, notices to navigators, medical advice, epidemiological bulletins and ursigrams. In this list, each class of station shall occupy a special section.
- ADD 5525A 2214 (2) List VI shall be republished at intervals to be determined by the Secretary-General. It shall be kept up to date by recapitulative supplements to be published every six months.
- MOD 5526 2215 § 8. *List VII. Alphabetical List of Call Signs Assigned from the International Series to Stations Included in Lists I, II, IV, V, VI and VIII A.*
808
- This list shall be published in two volumes:
- MOD 5527 2216 (1) *List VII A. Alphabetical List of Call Signs and/or Numerical Table of Identities of Stations Used by the Maritime Mobile Service and Maritime Mobile-Satellite Service (Coast, Coast Earth, Ship, Ship Earth, Radiodetermination and*

Special Service Stations), Ship and Ship Earth Stations Maritime Mobile Service Identities and Selective Call Numbers or Signals, and Coast and Coast Earth Stations Maritime Mobile Service Identities and Identification Numbers or Signals.

- 2217 a) This list shall be preceded by the Table of Allocation of International Call Sign Series and the Table of Nationality Identification Digits Series given in Appendices 42 and 43 and a table of signals characterizing the emissions of radiobeacons used in the maritime mobile service.
- ADD 5527A 2218 b) List VII A shall be republished every two years and kept up to date by recapitulative supplements every three months.
- (MOD) 5528 2219 (2) *List VII B. Alphabetical List of Call Signs of Stations Other than Amateur Stations, Experimental Stations and Stations of the Maritime Mobile Service.*
810
- 2220 a) This list shall be preceded by the Table of Allocation of International Call Sign Series given in Appendix 42 and by a table indicating the form of call signs assigned by each administration to its amateur and experimental stations.
- ADD 5528A 2221 b) List VII B shall be republished at intervals determined by the Secretary-General, and kept up to date by recapitulative supplements issued every three months.
- NOC 5529 2222 § 9. *List VIII. List of International Monitoring Stations.*
811
- 2223 (1) This list shall contain, in tabulated form, particulars of monitoring stations participating in international monitoring.
- ADD 5529A 2224 (2) List VIII shall be published at intervals to be determined by the Secretary-General. It shall be kept up to date by the publication of recapitulative supplements at intervals to be determined by the Secretary-General.
- (MOD) 5530 2225 § 10. *List VIII A. List of Stations in the Space Radiocommunication Services and in the Radio Astronomy Service.*
811A
- 2226 (1) This list shall contain particulars of earth and space stations and of radio astronomy stations. The Board shall prepare and keep up to date the contents of this list grouped in such a way as to permit administrations to more easily identify all stations pertaining to a given satellite network. Furthermore, the Board shall introduce the necessary improvements in the presentation of the list without in any way altering the basic data specified in the present Regulations. However, mobile earth stations of the maritime mobile-satellite service shall not be listed. Instead, a general reference to the List of Ship Stations shall be included in List VIII A.

ADD	5530A	2227	(2) List VIII A shall be republished at intervals to be determined by the Secretary-General. It shall be kept up to date by recapitulative supplements published every six months.
MOD	5531 812	2228	§ 11. <i>Map of Coast Stations Which Are Open to Public Correspondence or Which Participate in the Port Operations Service.</i> The Map shall be republished in a form and at intervals to be determined by the Secretary-General.
NOC	5532 813	2229	§ 12. <i>Chart in Colours Showing Frequency Allocations</i> as specified in Article 8.
SUP	5533 814		
ADD	5533A 814A	2230	§ 13. <i>Manual for Use by the Maritime Mobile and Maritime Mobile-Satellite Services.</i>
		2231	(1) This Manual shall contain the relevant extracts from:
		2232	a) the International Telecommunication Convention in force;
		2233	b) the Radio Regulations in force;
		2234	c) the Telegraph Regulations in force, the current “Instructions for the Operation of the International Public Telegram Service” and CCITT Resolutions and Recommendations;
		2235	d) the Telephone Regulations in force and the current “Instructions for the International Telephone Service” and CCITT Resolutions and Recommendations.
ADD	5533B 814B	2236	(2) The Manual should be revised as needed, especially after administrative conferences and Plenary Assemblies of the CCITT and/or the CCIR. New editions shall be published at intervals to be determined by the Secretary-General.
ADD			Section II. Preparation and Amendment of Service Documents
MOD	5534 815	2237	§ 14. (1) The Secretary-General shall publish the amendments to the documents listed in Section I of this Article. Administrations shall take all appropriate measures to notify the Secretary-General immediately as changes in operational information contained in Lists IV, V and VI are made, in view of the importance of this information particularly with regard to safety. At least once a month, administrations shall inform the Secretary-General, in the form shown for the lists themselves in Appendix 9, of the additions, modifications or deletions to be made in Lists IV, V and VI using for this purpose the appropriate symbols shown in Appendix 10. Furthermore, in order to make the necessary additions, modifications and deletions to Lists I, II and VIII A, he shall use the data provided by the International Frequency Registration Board obtained from the information received in application of the provisions of Articles 11, 12, 13 and 17. He shall make the requisite amendments to List VII by using the data he has received for Lists I, II, IV, V, VI and VIII A. Lists IV and VI shall be coordinated with the information appearing in List I. The Secretary-General shall refer any discrepancies to the administrations concerned.

NOC	5535 816	2238	(2) For permanent changes affecting the operation of radiodetermination stations (List VI), see No. 2833 .
	5536 817		(becomes 5518A)
	5537 818		(becomes 5518B)
	5538 819		(becomes 5518C)
	5539 820		(becomes 5518D)
	5540 821		(becomes 5519A)
SUP	5541 822

MOD	5551 831	2239	§ 15. (1) The forms in which Lists II, IV, V, VI, VIII and VIII A are to be prepared are given in Appendix 9. Information concerning the use of these documents and of List I shall be given in the Prefaces thereto. Each entry shall include the appropriate symbol, as shown in Appendix 10, to designate the category of station concerned. Additional symbols, where necessary, may be selected by the Secretary-General, any such new symbol being notified by the Secretary-General to administrations.
MOD	5552 832	2240	(2) In the service documents, the names of coast, aeronautical, radio direction-finding and radiobeacon stations are followed by the words:
NOC	5553 833	2241	a) RADIO for coast stations;
ADD	5553A	2242	b) AERADIO for aeronautical stations;

NOC	5554 834	2243	c) GONIO for maritime radio direction-finding stations;
NOC	5555 835	2244	d) PHARE for maritime radiobeacon stations;
NOC	5556 836	2245	e) AEROPHARE for aeronautical radiobeacon stations.
NOC	5557 837	2246	§ 16. For the purpose of the service documents, a country shall be understood to mean the territory within the limits of which the station is located; a territory which does not have full responsibility for its international relations shall also be considered as a country for this purpose.

**Terrestrial Radiocommunication Services Sharing
Frequency Bands with Space Radiocommunication
Services Above 1 GHz**

NOC

Section I. Choice of Sites and Frequencies

(MOD)

**6001
470A**

2501

§ 1. Sites and frequencies for terrestrial stations, operating in frequency bands shared with equal rights between terrestrial radiocommunication and space radiocommunication services, shall be selected having regard to the relevant CCIR Recommendations with respect to geographical separation from earth stations.

MOD

**6002
470AA**

2502

§ 2. (1) As far as practicable, sites for transmitting¹ stations, in the fixed or mobile service, employing maximum values of equivalent isotropically radiated power (e.i.r.p.) exceeding +35 dBW in the frequency bands between 1 GHz and 10 GHz, should be selected so that the direction of maximum radiation of any antenna will be at least 2° away from the geostationary-satellite orbit, taking into account the effect of atmospheric refraction².

* For provisions governing the mobile services and the special services related to safety, see:

Special Services Related to Safety:	Chapter IX
Aeronautical Mobile Service:	Chapter X
Maritime Mobile Service:	Chapter XI
Maritime Mobile-Satellite Service:	Chapter XI
Land Mobile Service:	Chapter XII

NOC

**6002.1
470AA.1**

2502.1

¹ For their own protection receiving stations in the fixed or mobile service operating in bands shared with space radiocommunication services (space-to-Earth) should also avoid directing their antennae towards the geostationary-satellite orbit if their sensitivity is sufficiently high that interference from space station transmissions may be significant.

NOC

**6002.2
470AA.2**

2502.2

² Information on this subject is given in the most recent version of CCIR Report No. 393.

MOD	6003 470AB	2503	(2) As far as practicable, sites for transmitting ¹ stations, in the fixed or mobile service, employing maximum values of equivalent isotropically radiated power (e.i.r.p.) exceeding +45 dBW in the frequency bands between 10 GHz and 15 GHz, should be selected so that the direction of maximum radiation of any antenna will be at least 1.5° away from the geostationary-satellite orbit, taking into account the effect of atmospheric refraction ² .
MOD	6004 470AC	2504	(3) In the frequency bands above 15 GHz there shall be no restriction ³ as to the direction of maximum radiation for stations in the fixed or mobile service.

Section II. Power Limits

MOD	6005 470B	2505	§ 3. (1) The maximum equivalent isotropically radiated power (e.i.r.p.) of a station in the fixed or mobile service shall not exceed +55 dBW.
MOD	6006 470BA	2506	(2) Where compliance with No. 2502 is impracticable the maximum equivalent isotropically radiated power (e.i.r.p.) of a station in the fixed or mobile service shall not exceed: +47 dBW in any direction within 0.5° of the geostationary-satellite orbit; <i>or</i> +47 dBW to +55 dBW, on a linear decibel scale (8 dB per degree), in any direction between 0.5° and 1.5° of the geostationary-satellite orbit, taking into account the effect of atmospheric refraction ⁴ .
NOC	6007 470C	2507	(3) The power delivered by a transmitter to the antenna of a station in the fixed or mobile service in frequency bands between 1 GHz and 10 GHz shall not exceed +13 dBW.
NOC	6008 470CA	2508	(4) The power delivered by a transmitter to the antenna of a station in the fixed or mobile service in frequency bands above 10 GHz shall not exceed +10 dBW.
NOC	6003.1 470AB.1	2503.1	¹ For their own protection receiving stations in the fixed or mobile service operating in bands shared with space radiocommunication services (space-to-Earth) should also avoid directing their antennae towards the geostationary-satellite orbit if their sensitivity is sufficiently high that interference from space station transmissions may be significant.
NOC	6003.2 470AB.2	2503.2	² Information on this subject is given in the most recent version of CCIR Report No. 393.
ADD	6004.1	2504.1	³ The provisions of No. 2504 shall apply until such time as the CCIR has made a Recommendation as to the need for restrictions in frequency bands specified in No. 2511, at which time all systems introduced after 1 January 1982 should as far as practicable meet any such restriction.
MOD	6006.1 470BA.1	2506.1	⁴ See No. 2503.2.

MOD 6009 2509 (5) The limits given in Nos. 2502, 2505, 2506 and 2507 apply in the
470D following frequency bands allocated to the fixed-satellite service, the meteorological-
satellite service and the mobile-satellite service for reception by space stations,
where these bands are shared with equal rights with the fixed or mobile service:

1 626.5 - 1 645.5 MHz	(for countries mentioned in No. 730)
1 646.5 - 1 660 MHz	(for countries mentioned in No. 730)
2 655 - 2 690 MHz ¹	(for Regions 2 and 3)
5 725 - 5 755 MHz ¹	(for countries of Region 1 mentioned in Nos. 803 and 805)
5 755 - 5 850 MHz ¹	(for countries of Region 1 mentioned in Nos. 803, 805 and 807)
5 850 - 7 075 MHz	
7 900 - 8 400 MHz	

MOD 6010 2510 (6) The limits given in Nos. 2503, 2505 and 2508 apply in the following
470DA frequency bands allocated to the fixed-satellite service for reception by space
stations, where these bands are shared with equal rights with the fixed or mobile
service:

10.7 - 11.7 GHz ^{1,2}	(for Region 1)
12.5 - 12.75 GHz ¹	(for countries mentioned in Nos. 848 and 850)
12.7 - 12.75 GHz ¹	(for Region 2)
12.75 - 13.25 GHz	
14.0 - 14.25 GHz	(for countries mentioned in No. 857)
14.25 - 14.3 GHz	(for countries mentioned in Nos. 857, 860 and 861)
14.3 - 14.4 GHz ¹	(for Regions 1 and 3)
14.4 - 14.5 GHz	
14.5 - 14.8 GHz ²	

MOD 6011 2511 (7) The limits given in Nos. 2505 and 2508 apply in the following frequency
470DB bands allocated to the fixed-satellite service for reception by space stations, where
these bands are shared with equal rights with the fixed or mobile service:

17.7 - 18.1 GHz ²	
27.0 - 27.5 GHz ³	(for Regions 2 and 3)
27.5 - 29.5 GHz	

2512
to NOT allocated.
2538

ADD 6009.1 2509.1 }
ADD 6010.1 2510.1 } ¹ The equality of right to operate when a band of frequencies is allocated in different
Regions to different services of the same category is established in No. 346. Therefore any
limits concerning inter-Regional interference which may appear in CCIR Recommendations
should, as far as practicable, be observed by administrations.

ADD 6010.2 2510.2 }
ADD 6011.1 2511.1 } ² The application of the limits in this frequency band is provisional (see Resolu-
tion 101).

ADD 6011.2 2511.2 ³ See No. 2509.1.

**Space Radiocommunication Services Sharing Frequency Bands
with Terrestrial Radiocommunication Services Above 1 GHz**

NOC

Section I. Choice of Sites and Frequencies

(MOD) 6037 2539 § 1. Sites and frequencies for earth stations, operating in frequency bands
470E shared with equal rights between terrestrial radiocommunication and space radio-
communication services, shall be selected having regard to the relevant CCIR
Recommendations with respect to geographical separation from terrestrial stations.

NOC

Section II. Power Limits

NOC 6038 2540 § 2. (1) Earth stations.
470F

(MOD) 6039 2541 (2) The equivalent isotropically radiated power (e.i.r.p.) transmitted in any
470G direction towards the horizon by an earth station operating in frequency bands
between 1 GHz and 15 GHz shall not exceed the following limits except as
provided in No. 2544 or 2546:

+ 40 dBW in any 4 kHz band for $\theta \leq 0^\circ$

+ 40 + 3 θ dBW in any 4 kHz band for $0^\circ < \theta \leq 5^\circ$

where θ is the angle of elevation of the horizon viewed from the centre of radiation
of the antenna of the earth station and measured in degrees as positive above the
horizontal plane and negative below it.

(MOD) 6040 2542 (3) The equivalent isotropically radiated power (e.i.r.p.) transmitted in any
470GA direction towards the horizon by an earth station operating in frequency bands
above 15 GHz shall not exceed the following limits except as provided in No. 2545
or 2546:

+ 64 dBW in any 1 MHz band for $\theta \leq 0^\circ$

+ 64 + 3 θ dBW in any 1 MHz band for $0^\circ < \theta \leq 5^\circ$

where θ is as defined in No. 2541.

(MOD) 6041 2543 (4) For angles of elevation of the horizon greater than 5° there shall be no
470GB restriction as to the equivalent isotropically radiated power (e.i.r.p.) transmitted by
an earth station towards the horizon.

(MOD) 6042 2544 (5) As an exception to the limits given in No. 2541, the equivalent isotropi-
470GC cally radiated power (e.i.r.p.) towards the horizon for an earth station in the space
research service (deep space) shall not exceed +55 dBW in any 4 kHz band.

(MOD) 6043 2545 (6) As an exception to the limits given in No. 2542, the equivalent isotropically radiated power (e.i.r.p.) towards the horizon for an earth station in the space research service (deep-space) shall not exceed +79 dBW in any 1 MHz band.
470GD

NOC 6044 2546 (7) The limits given in Nos. 2541, 2542, 2544 and 2545, as applicable, may be exceeded by not more than 10 dB. However, when the resulting coordination area extends into the territory of another country, such increase shall be subject to agreement by the administration of that country.
470H

MOD 6045 2547 (8) The limits given in No. 2541 apply in the following frequency bands allocated to the fixed-satellite service, the earth exploration-satellite service, and in particular the meteorological-satellite service, the mobile-satellite service and the space research service for transmission by earth stations where these bands are shared with equal rights with the fixed or mobile service:
470J

- 5 670 - 5 725 MHz (for the countries mentioned in No. 804 with respect to the countries mentioned in Nos. 803 and 805)
- 5 725 - 5 755 MHz¹ (for Region 1 with respect to the countries mentioned in Nos. 803 and 805)
- 5 755 - 5 850 MHz¹ (for Region 1 with respect to the countries mentioned in Nos. 803, 805 and 807)
- 5 850 - 7 075 MHz
- 7 900 - 8 400 MHz
- 10.7 - 11.7 GHz¹ (for Region 1)
- 12.5 - 12.75 GHz¹ (for Region 1 with respect to the countries mentioned in No. 848)
- 12.7 - 12.75 GHz¹ (for Region 2)
- 12.75 - 13.25 GHz
- 14.0 - 14.25 GHz (with respect to the countries mentioned in No. 857)
- 14.25 - 14.3 GHz (with respect to the countries mentioned in Nos. 857, 860 and 861)
- 14.3 - 14.4 GHz¹ (for Regions 1 and 3)
- 14.4 - 14.8 GHz

MOD 6046 2548 (9) The limits given in No. 2542 apply in the following frequency bands allocated to the fixed-satellite service, the earth exploration-satellite service, the mobile-satellite service and the space research service for transmission by earth stations where shared with equal rights with the fixed or mobile service:
470JA

- 17.7 - 18.1 GHz
- 27.0 - 27.5 GHz¹ (for Regions 2 and 3)
- 27.5 - 29.5 GHz
- 31.0 - 31.3 GHz (for the countries mentioned in No. 885)
- 34.2 - 35.2 GHz (for the countries mentioned in Nos. 895 and 896 with respect to the countries mentioned in No. 894)

ADD 6045.1 2547.1 }
ADD 6046.1 2548.1 }
¹ The equality of right to operate when a band of frequencies is allocated in different Regions to different services of the same category is established in No. 346. Therefore any limits concerning inter-Regional interference which may appear in CCIR Recommendations should, as far as practicable, be observed by administrations.

NOC

Section III. Minimum Angle of Elevation

NOC	6047 470K	2549	§ 3. (1) Earth stations.
MOD	6048 470L	2550	(2) Earth station antennae shall not be employed for transmission at elevation angles of less than 3° measured from the horizontal plane to the direction of maximum radiation, except when agreed to by administrations concerned and those whose services may be affected. In case of reception by an earth station, the above value shall be used for coordination purposes if the operating angle of elevation is less than that value.
NOC	6049 470LA	2551	(3) As an exception to No. 2550, earth station antennae in the space research service (near Earth) shall not be employed for transmission at elevation angles of less than 5°, and earth station antennae in the space research service (deep space) shall not be employed for transmission at elevation angles of less than 10°, both angles being those measured from the horizontal plane to the direction of maximum radiation. In the case of reception by an earth station, the above values shall be used for coordination purposes if the operating angle of elevation is less than those values.

NOC

Section IV. Limits of Power Flux-Density from Space Stations

MOD	6050 470N	2552	§ 4. (1) Power flux-density limits between 1 670 MHz and 1 700 MHz.
MOD	6051 470NA	2553	a) The power flux-density at the Earth's surface produced by emissions from a space station, including emissions from a reflecting satellite, for all conditions and for all methods of modulation, shall not exceed –133 dB(W/m ²) in any 1.5 MHz band. This limit relates to the power flux-density which would be obtained under assumed free-space propagation conditions.
(MOD)	6052 470NB	2554	b) The limit given in No. 2553 applies in the frequency band listed in No. 2555 which is allocated to the earth exploration-satellite service and in particular the meteorological-satellite service for transmission by space stations where this band is shared with equal rights with the meteorological aids service.
MOD	6053 470NC	2555	1 670 - 1 700 MHz
MOD	6054 470ND	2556	(2) Power flux-density limits between 1 525 MHz and 2 500 MHz.
MOD	6055 470NE	2557	a) The power flux-density at the Earth's surface produced by emissions from a space station, including emissions from a reflecting satellite, for all conditions and for all methods of modulation, shall not exceed the following values:

– 154 dB(W/m²) in any 4 kHz band for angles of arrival between 0 and 5 degrees above the horizontal plane;

–154 + 0.5(δ – 5) dB(W/m²) in any 4 kHz band for angles of arrival δ (in degrees) between 5 and 25 degrees above the horizontal plane;

–144 dB(W/m²) in any 4 kHz band for angles of arrival between 25 and 90 degrees above the horizontal plane.

These limits relate to the power flux-density which would be obtained under assumed free-space propagation conditions.

MOD	6056 470NF	2558	<p>b) The limits given in No. 2557 apply in the frequency bands listed in No. 2559 which are allocated to the following space radiocommunication services:</p> <ul style="list-style-type: none"> – meteorological-satellite service (space-to-Earth) – space research service (space-to-Earth) – space operation service (space-to-Earth)
-----	---------------	------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

for transmission by space stations where these bands are shared with equal rights with the fixed or mobile service.

MOD	6057 470NG	2559	<p>1 525 - 1 530 MHz¹ (for Regions 1 and 3) 1 530 - 1 535 MHz¹ (for Regions 1 and 3, up to 1 January 1990) 1 670 - 1 690 MHz 1 690 - 1 700 MHz (on the territory of the countries mentioned in Nos. 740 and 741) 1 700 - 1 710 MHz 2 290 - 2 300 MHz</p>
-----	---------------	------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC	6058 470NGA	2560	<p>c) The power flux-density values given in No. 2557 are derived on the basis of protecting the fixed service using line-of-sight techniques. Where a fixed service using tropospheric scatter operates in the bands listed in No. 2559 and where there is insufficient frequency separation, there must be sufficient angular separation between the direction to the space station and the direction of maximum radiation of the antenna of the receiving station of the fixed service using tropospheric scatter to ensure that the interference power at the receiver input of the station of the fixed service does not exceed –168 dBW in any 4 kHz band.</p>
-----	----------------	------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC	6059 470NH	2561	<p>(3) Power flux-density limits between 2 500 MHz and 2 690 MHz.</p>
-----	---------------	------	-----------------------------------------------------------------------

MOD	6060 470NI	2562	<p>a) The power flux-density at the Earth's surface produced by emissions from a space station in the broadcasting-satellite service or the fixed-satellite service for all conditions and for all methods of modulation shall not exceed the following values:</p>
-----	---------------	------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

–152 dB(W/m²) in any 4 kHz band for angles of arrival between 0 and 5 degrees above the horizontal plane;

ADD 6057.1 2559.1 ¹ The equality of right to operate when a band of frequencies is allocated in different Regions to different services of the same category is established in No. 346. Therefore any limits concerning inter-Regional interference which may appear in CCIR Recommendations should, as far as practicable, be observed by administrations.

– 152 + 0.75($\delta - 5$) dB(W/m²) in any 4 kHz band for angles of arrival δ (in degrees) between 5 and 25 degrees above the horizontal plane;

– 137 dB(W/m²) in any 4 kHz band for angles of arrival between 25 and 90 degrees above the horizontal plane.

These limits relate to the power flux-density which would be obtained under assumed free-space propagation conditions.

MOD	6061 470NJ	2563	<p><i>b)</i> The limits given in No. 2562 apply in the frequency band:</p> <p>2 500 - 2 690 MHz</p>
-----	----------------------	-------------	------------------------------------------------------------------------------------------------------------

which is shared by the broadcasting-satellite service or the fixed-satellite service with the fixed or mobile service.

NOC	6062 470NK	2564	<p><i>c)</i> The power flux-density values given in No. 2562 are derived on the basis of protecting the fixed service using line-of-sight techniques. Where a fixed service using tropospheric scatter operates in the band mentioned in No. 2563 and where there is insufficient frequency separation, there must be sufficient angular separation between the direction to the space station and the direction of maximum radiation of the antenna of the receiving station of the fixed service using tropospheric scatter to ensure that the interference power at the receiver input of the station of the fixed service does not exceed – 168 dBW in any 4 kHz band.</p>
-----	----------------------	-------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC	6063 470NL	2565	<p>(4) Power flux-density limits between 3 400 MHz and 7 750 MHz.</p>
-----	----------------------	-------------	-----------------------------------------------------------------------

MOD	6064 470NM	2566	<p><i>a)</i> The power flux-density at the Earth's surface produced by emissions from a space station, including emissions from a reflecting satellite, for all conditions and for all methods of modulation, shall not exceed the following values:</p>
-----	----------------------	-------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

– 152 dB(W/m²) in any 4 kHz band for angles of arrival between 0 and 5 degrees above the horizontal plane;

– 152 + 0.5($\delta - 5$) dB(W/m²) in any 4 kHz band for angles of arrival δ (in degrees) between 5 and 25 degrees above the horizontal plane;

– 142 dB(W/m²) in any 4 kHz band for angles of arrival between 25 and 90 degrees above the horizontal plane.

These limits relate to the power flux-density which would be obtained under assumed free-space propagation conditions.

MOD	6065 470NN	2567	<p><i>b)</i> The limits given in No. 2566 apply in the frequency bands listed in No. 2568 which are allocated to the following space radiocommunication services:</p>
-----	----------------------	-------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

- fixed-satellite service (space-to-Earth)
- meteorological-satellite service (space-to-Earth)
- mobile-satellite service
- space research service

for transmission by space stations where these bands are shared with equal rights with the fixed or mobile service.

NOC	6066 470NO	2568	3 400 - 4 200 MHz 4 500 - 4 800 MHz 5 670 - 5 725 MHz 7 250 - 7 750 MHz	(on the territory of countries mentioned in Nos. 803 and 805)
-----	----------------------	-------------	----------------------------------------------------------------------------------	------------------------------------------------------------------------------

NOC	6067 470NP	2569	(5) Power flux-density limits between 8 025 MHz and 11.7 GHz.
-----	----------------------	-------------	---------------------------------------------------------------

MOD	6068 470NQ	2570	a) The power flux-density at the Earth's surface produced by emissions from a space station, including emissions from a reflecting satellite, for all conditions and for all methods of modulation, shall not exceed the following values:
-----	----------------------	-------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

– 150 dB(W/m²) in any 4 kHz band for angles of arrival between 0 and 5 degrees above the horizontal plane;

– 150 + 0.5(δ – 5) dB(W/m²) in any 4 kHz band for angles of arrival δ (in degrees) between 5 and 25 degrees above the horizontal plane;

– 140 dB(W/m²) in any 4 kHz band for angles of arrival between 25 and 90 degrees above the horizontal plane.

These limits relate to the power flux-density which would be obtained under assumed free-space propagation conditions.

MOD	6069 470NR	2571	b) The limits given in No. 2570 apply in the frequency bands listed in No. 2572 which are allocated to the following space radiocommunication services:
-----	----------------------	-------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------

– earth exploration-satellite service (space-to-Earth)

– space research service (space-to-Earth)

– fixed-satellite service (space-to-Earth)

for transmission by space stations where these bands are shared with equal rights with the fixed or mobile service.

MOD	6070 470NS	2572	8 025 - 8 500 MHz 10.7 - 11.7 GHz
-----	----------------------	-------------	--------------------------------------

NOC	6071 470NT	2573	(6) Power flux-density limits between 12.2 GHz and 12.75 GHz.
-----	----------------------	-------------	---------------------------------------------------------------

MOD	6072 470NU	2574	a) The power flux-density at the Earth's surface produced by emissions from a space station, including emissions from a reflecting satellite, for all conditions and for all methods of modulation, shall not exceed the following values:
-----	----------------------	-------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

– 148 dB(W/m²) in any 4 kHz band for angles of arrival between 0 and 5 degrees above the horizontal plane;

– 148 + 0.5(δ – 5) dB(W/m²) in any 4 kHz band for angles of arrival δ (in degrees) between 5 and 25 degrees above the horizontal plane;

– 138 dB(W/m²) in any 4 kHz band for angles of arrival between 25 and 90 degrees above the horizontal plane.

These limits relate to the power flux-density which would be obtained under assumed free-space propagation conditions.

(MOD)	6073 470NV	2575	<i>b)</i> The limits given in No. 2574 apply in the frequency bands indicated in No. 2576 which are allocated to the fixed-satellite service for transmission by space stations where these bands are shared with equal rights with the fixed or mobile service.
MOD	6074 470NW	2576	12.2 - 12.5 GHz ¹ (for Region 3) 12.5 - 12.75 GHz ² (for Region 3 and for Region 1 on the territory of countries mentioned in Nos. 848 and 850).
MOD	6075 470NX	2577	(7) Power flux-density limits between 17.7 GHz and 19.7 GHz.
MOD	6076 470NY	2578	<i>a)</i> The power flux-density at the Earth's surface produced by emissions from a space station, including emissions from a reflecting satellite, for all conditions and for all methods of modulation, shall not exceed the following values: – 115 dB(W/m ²) in any 1 MHz band for angles of arrival between 0 and 5 degrees above the horizontal plane; – 115 + 0.5(δ – 5) dB(W/m ²) in any 1 MHz band for angles of arrival δ (in degrees) between 5 and 25 degrees above the horizontal plane; – 105 dB(W/m ²) in any 1 MHz band for angles of arrival between 25 and 90 degrees above the horizontal plane.

These limits relate to the power flux-density which would be obtained under assumed free-space propagation conditions.

MOD	6077 470NZ	2579	<i>b)</i> The limits given in No. 2578 apply in the frequency band listed in No. 2580 which is allocated to the following space radiocommunication services: – fixed-satellite service (space-to-Earth) – earth exploration-satellite including meteorological-satellite service (space-to-Earth)
-----	----------------------	-------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

ADD **6074.1** **2576.1** ¹ The equality of right to operate when a band of frequencies is allocated in different Regions to different services of the same category is established in No. 346. Therefore any limits concerning inter-Regional interference which may appear in CCIR Recommendations should, as far as practicable, be observed by administrations.

Section III. Station Keeping of Space Stations ¹

MOD	6107 470VB	2615	§ 4. (1) Space stations on board geostationary satellites which use any frequency band allocated to the fixed-satellite service or the broadcasting-satellite service ² :
MOD	6108 470VC	2616	a) shall have the capability of maintaining their positions within ± 0.1 degree of the longitude of their nominal positions;
MOD	6109 470VD	2617	b) shall maintain their positions within ± 0.1 degree of longitude of their nominal positions; <i>but</i>
ADD	6109A	2618	c) experimental stations on board geostationary satellites need not comply with No. 2616 nor No. 2617, but shall maintain their positions within ± 0.5 degree of longitude of their nominal positions;
MOD	6110 470VE	2619	d) however, space stations need not comply with No. 2617 nor No. 2618 as appropriate as long as the satellite network to which the space station belongs does not cause unacceptable interference ³ to any other satellite network whose space station complies with the limits given in Nos. 2617 and 2618.
ADD	6110A	2620	(2) Space stations on board geostationary satellites which do not use any frequency band allocated to the fixed-satellite service or the broadcasting-satellite service:
ADD	6110B	2621	a) shall have the capability of maintaining their positions within ± 0.5 degree of the longitude of their nominal positions;
ADD	6110C	2622	b) shall maintain their positions within ± 0.5 degree of longitude of their nominal positions; <i>but</i>
ADD	6110D	2623	c) need not comply with No. 2622 as long as the satellite network to which the space station belongs does not cause unacceptable interference ³ to any other satellite network whose space station complies with the limits given in No. 2622.
ADD	6110E	2624	(3) Space stations ⁴ on board geostationary satellites which are put into service prior to 1 January 1987, with the advance publication information for the network having been published before 1 January 1982, are exempted from the provisions of Nos. 2615 to 2623 inclusive; however they

(MOD) A.N27 S.III A.29 S.III.1 ¹ In the case of space stations on board geosynchronous satellites with orbits having an angle of inclination greater than 5 degrees the positional tolerance shall relate to the nodal point.

ADD 6107.1 2615.1 ² Space stations in the broadcasting-satellite service on geostationary satellites operating in the band 11.7 - 12.7 GHz are exempted from these provisions but shall maintain their positions in accordance with Appendix 30.

MOD 6110.1 470VE.1 2619.1 } ³ The level of accepted interference shall be fixed by agreement between the administrations concerned, using the relevant CCIR Recommendations as a guide.
 ADD 6110D.1 2623.1 }

ADD 6110E.1 2624.1 ⁴ See No. 2615.1.

- ADD 6110F 2625 a) shall have the capability of maintaining their positions within ± 1 degree of the longitude of their nominal positions, but efforts should be made to achieve a capability of maintaining their positions at least within ± 0.5 degree of the longitude of their nominal positions;
- ADD 6110G 2626 b) shall maintain their positions within ± 1 degree of longitude of their nominal positions; *but*
- ADD 6110H 2627 c) need not comply with No. 2626 as long as the satellite network to which the space station belongs does not cause unacceptable interference¹ to any other satellite network whose space station complies with the limits given in No. 2626.

NOC

**Section IV. Pointing Accuracy of Antennae
on Geostationary Satellites**

- MOD 6111 2628 § 5. (1) The pointing direction of maximum radiation of any earthward beam of antennae on geostationary satellites² shall be capable of being maintained within:
 - a) 10 % of the half power beamwidth relative to the nominal pointing direction, *or*
 - b) 0.3 degree relative to the nominal pointing direction,

whichever is greater. This provision applies only when such a beam is intended for less than global coverage.
- 2629 (2) In the event that the beam is not rotationally symmetrical about the axis of maximum radiation, the tolerance in any plane containing this axis shall be related to the half power beamwidth in that plane.
- 2630 (3) This accuracy shall be maintained only if it is required to avoid unacceptable interference³ to other systems.

NOC

Section V. Power Flux-Density at the Geostationary-Satellite Orbit

- NOC 6112 2631 § 6. In the frequency band 8 025 MHz - 8 400 MHz, which the earth exploration-satellite service using non-geostationary satellites shares with the fixed-satellite service (Earth-to-space) or the meteorological-satellite service (Earth-to-space), the maximum power flux-density produced at the geostationary-satellite orbit by any earth exploration-satellite service space station shall not exceed -174 dB(W/m²) in any 4 kHz band.

ADD 6110H.1 2627.1 ¹ The level of accepted interference shall be fixed by agreement between the administrations concerned, using the relevant CCIR Recommendations as a guide.

ADD 6111.1 2628.1 ² Transmitting antennae of space stations in the broadcasting-satellite service operating in the band 11.7 - 12.7 GHz are not subject to these provisions but shall maintain their pointing accuracy in accordance with paragraph 3.14.1 of Annex 8 to Appendix 30.

MOD 6111.2 2630.1 ³ See No. 2627.1.

ADD Section VI. Radio Astronomy in the Shielded Zone of the Moon

ADD 6113 2632 § 7. (1) In the shielded zone of the Moon¹ emissions causing harmful interference to radio astronomy observations² and to other users of passive services shall be prohibited in the entire frequency spectrum except in the following bands:

2633 a) the frequency bands allocated to the space research service using active sensors;

2634 b) the frequency bands allocated to the space operation service, the earth exploration-satellite service using active sensors, and the radiolocation service using stations on spaceborne platforms, which are required for the support of space research, as well as for radiocommunications and space research transmissions within the lunar shielded zone.

ADD 6114 2635 (2) In frequency bands in which emissions are not prohibited by Nos. 2632 to 2634, radio astronomy observations and passive space research in the shielded zone of the Moon may be protected from harmful interference by agreement between administrations concerned.

ADD Section VII. Earth Station Off-Axis Power Limitations

ADD 6115 2636 § 8. The level of equivalent isotropically radiated power (e.i.r.p.) emitted by an earth station at angles in the direction of the geostationary-satellite orbit off the main-beam axis has a significant impact on interference caused to other geostationary-satellite networks. Enhanced utilization of the geostationary-satellite orbit and easier coordination would be attained by minimizing such off-axis radiation and administrations are encouraged to achieve the lowest values practicable bearing in mind the latest CCIR Recommendations. Minimizing such levels is particularly important in intensively used up-link bands.

2637
to NOT allocated.
2663

ADD 6113.1 2632.1 ¹ The shielded zone of the Moon comprises the area of the Moon's surface and an adjacent volume of space which are shielded from emissions originating within a distance of 100 000 km from the centre of the Earth.

ADD 6113.2 2636.2 ² The level of harmful interference is determined by agreement between the administrations concerned, with the guidance of the relevant CCIR Recommendations.

**Broadcasting Service and
Broadcasting-Satellite Service**

Section I. Broadcasting Service

NOC	6213	2664	<i>A. General</i>
NOC	6214 422	2665	§ 1. (1) The establishment and use of broadcasting stations (sound broadcasting and television broadcasting stations) on board ships, aircraft or any other floating or airborne objects outside national territories is prohibited.
NOC	6215 423	2666	(2) In principle, except in the frequency band 3 900 - 4 000 kHz, broadcasting stations using frequencies below 5 060 kHz or above 41 MHz shall not employ power exceeding that necessary to maintain economically an effective national service of good quality within the frontiers of the country concerned.
NOC	6216	2667	<i>B. Broadcasting in the Tropical Zone</i>
NOC	6217 424	2668	§ 2. (1) In these Regulations, the expression “broadcasting in the Tropical Zone” indicates a type of broadcasting for internal national use in countries in the zone defined in Nos. 406 to 411, where it may be shown that because of the difficulty of high atmospheric noise level and propagation it is not possible to provide economically a more satisfactory service by using low, medium, or very high frequencies.
NOC	6218 425	2669	(2) The use by the broadcasting service of the bands listed below is restricted to the Tropical Zone: 2 300 - 2 498 kHz (Region 1) 2 300 - 2 495 kHz (Regions 2 and 3) 3 200 - 3 400 kHz (all Regions) 4 750 - 4 995 kHz (all Regions) 5 005 - 5 060 kHz (all Regions)
ADD	6218A	2670	(3) The carrier power of the transmitters operating in this service in the bands listed in No. 2669 shall not exceed 50 kW.
NOC	6219 426	2671	(4) Within the Tropical Zone, the broadcasting service has priority over the other services with which it shares the bands listed in No. 2669.
NOC	6220 427	2672	(5) However, in that part of Libya north of parallel 30° North the broadcasting service in the bands listed in No. 2669 has equal rights to operate with other services in the Tropical Zone with which it shares these bands.
NOC	6221 428	2673	(6) The broadcasting service operating inside the Tropical Zone, and other services operating outside this zone, are subject to the provisions of No. 346.

NOC

Section II. Broadcasting-Satellite Service

NOC **6222** **2674** § 3. In devising the characteristics of a space station in the broadcasting-satellite service, all technical means available shall be used to reduce, to the maximum extent practicable, the radiation over the territory of other countries unless an agreement has been previously reached with such countries.

**Section II. Provisions for the
Radiodetermination-Satellite Service**

SUP **6462**
 1584A

ADD **6462A** **2839** § 7. (1) The provisions of Nos. 2831 to 2838 excluding No. 2832 shall be applied to the maritime radionavigation-satellite service.

ADD **6462B** **2840** (2) The provisions of Nos. 2831 to 2838 excluding Nos. 2832 and 2833 shall be applied to the aeronautical radionavigation-satellite service.

NOC

Section III. Radio Direction-Finding Stations

NOC **6463** **2841** § 8. (1) In the maritime radionavigation service, the radiotelegraph frequency normally used for radio direction-finding is 410 kHz. All direction-finding stations of the maritime radionavigation service using radiotelegraphy shall be able to use this frequency. They shall, in addition, be able to take bearings on 500 kHz, especially for locating stations sending signals of distress, alarm and urgency.

NOC **6464** **2842** (2) Where a radio direction-finding service is provided in the authorized bands between 1 605 kHz and 2 850 kHz, the radio direction-finding stations should be able to take bearings on the radiotelephone distress and calling frequency 2 182 kHz.

NOC **6465** **2843** § 9. The procedure to be followed by radio direction-finding stations is given in Appendix 41.

NOC **6466** **2844** § 10. In the absence of prior arrangements, an aircraft station which calls a radio direction-finding station for a bearing shall use for this purpose a frequency on which the station called normally keeps watch.

NOC **6467** **2845** § 11. In the aeronautical radionavigation service, the procedure contemplated for radio direction-finding in this Section is applicable, except where special procedures are in force as a result of arrangements concluded between the administrations concerned.

NOC

Section IV. Radiobeacon Stations

NOC **6468** **2846** *A. General*

NOC **6469** **2847** § 12. When an administration thinks it desirable in the interests of navigation to organize a service of radiobeacon stations, it may use for this purpose:

NOC **6470** **2848** a) radiobeacons properly so-called, established on land or on ships permanently moored or, exceptionally, on ships navigating in a restricted area, the limits of which are known and published. The emissions of these radiobeacons may have either directional or non-directional patterns;

NOC	6471 1592	2849	b) fixed stations, coast stations or aeronautical stations designated to function as radiobeacons, at the request of mobile stations.
NOC	6472 1593	2850	§ 13. (1) Radiobeacons properly so-called shall use the frequency bands which are available to them under Chapter III.
NOC	6473 1594	2851	(2) Other stations notified as radiobeacons shall use for this purpose their normal working frequency and their normal class of emission.
NOC	6474 1595	2852	(3) The power radiated by each radiobeacon properly so-called shall be adjusted to the value necessary to produce the stipulated field strength at the limit of the range required (see Nos. 2855 and 2860).
NOC	6475	2853	<i>B. Aeronautical Radiobeacons</i>
MOD	6476 433	2854	§ 14. (1) The assignment of frequencies to aeronautical radiobeacons operating in the bands between 160 kHz and 435 kHz shall be based on a protection ratio against interference of at least 15 dB for each beacon throughout its service area.
MOD	6477 434	2855	(2) The radiated power should be kept to the minimum value necessary to give the desired field strength at the service range.
NOC	6478 435	2856	(3) The daylight service range of radiobeacons referred to in No. 2854 shall be based on the following field strengths:
NOC	6479 436	2857	(4) <i>Regions 1 and 2</i> – 70 microvolts per metre for radiobeacons north of 30° N; – 120 microvolts per metre for radiobeacons between 30° N and 30° S; – 70 microvolts per metre for radiobeacons south of 30° S.
NOC	6480 437	2858	(5) <i>Region 3</i> – 70 microvolts per metre for radiobeacons north of 40° N; – 120 microvolts per metre for radiobeacons between 40° N and 50° S; – 70 microvolts per metre for radiobeacons south of 50° S.
NOC	6481	2859	<i>C. Maritime Radiobeacons</i>
(MOD)	6482 458	2860	§ 15. (1) The protection ratio required for maritime radiobeacons operating in the bands between 283.5 kHz and 335 kHz is based on the radiated power being kept to the value necessary to give the desired field strength at the service range.

NOC	6483 459	2861	(2) The daylight service range of the radiobeacons referred to in No. 2860 shall be based on the following field strengths:
NOC	6484 460	2862	(3) <i>Region 1</i> – 50 microvolts per metre for radiobeacons north of 43° N; – 75 microvolts per metre for radiobeacons between 43° N and 30° N; – 100 microvolts per metre for radiobeacons between 30° N and 30° S; – 75 microvolts per metre for radiobeacons between 30° S and 43° S; – 50 microvolts per metre for radiobeacons south of 43° S.
NOC	6485 461	2863	(4) <i>Region 2</i> – 50 microvolts per metre for radiobeacons north of 40° N; – 75 microvolts per metre for radiobeacons between 40° N and 31° N; – 100 microvolts per metre for radiobeacons between 31° N and 30° S; – 75 microvolts per metre for radiobeacons between 30° S and 43° S; – 50 microvolts per metre for radiobeacons south of 43° S.
NOC	6486 462	2864	(5) <i>Region 3</i> – 75 microvolts per metre for radiobeacons north of 40° N; – 100 microvolts per metre for radiobeacons between 40° N and 50° S; – 75 microvolts per metre for radiobeacons south of 50° S.
NOC	6487 463	2865	(6) In Region 1, for maritime radiobeacons in these bands, the assignment of frequencies is based on a separation of 2.3 kHz between adjacent frequencies used for class A2A emissions.
NOC	6488 464	2866	(7) In Region 1, for maritime radiobeacons, the depth of modulation should be at least 70%.
		2867 to 2891	NOT allocated.

ARTICLE 36

Radio Astronomy Service

ADD

Section I. General Provisions

ADD 6579 2892 § 1. Administrations shall cooperate in protecting the radio astronomy service from interference, bearing in mind:

2893 a) the exceptionally high sensitivity of radio astronomy stations;

2894 b) the frequent need for long periods of observation without harmful interference; *and*

2895 c) that the small number of radio astronomy stations in each country and their known locations often make it practicable to give special consideration to the avoidance of interference.

ADD 6580 2896 § 2. The locations of the radio astronomy stations to be protected and their frequencies of observation shall be notified to the IFRB in accordance with No. 1492 and published by the Secretary-General in accordance with No. 2237 for communication to Members.

ADD

**Section II. Measures to Be Taken in the
Radio Astronomy Service**

ADD 6581 2897 § 3. The locations of radio astronomy stations shall be selected with due regard to the possibility of harmful interference to these stations.

ADD 6582 2898 § 4. All practicable technical means shall be adopted at radio astronomy stations to reduce their susceptibility to interference. The development of improved techniques for reducing susceptibility to interference shall be pursued, including participation in cooperative studies through the CCIR.

ADD

Section III. Protection of the Radio Astronomy Service

ADD 6583 2899 § 5. The status of the radio astronomy service in the various frequency bands is specified in the Table of Frequency Allocations, Article 8. Administrations shall provide protection from interference to stations in the radio astronomy service in accordance with the status of this service in those bands (see also Nos. 344, 2632 to 2634 and 2635).

ADD 6584 2900 § 6. In providing protection from interference to the radio astronomy service on a permanent or temporary basis, administrations shall use appropriate means such as geographical separation, site shielding, antenna directivity and the use of time-sharing and the minimum practicable transmitter power.

- ADD 6585 2901 § 7. In bands adjacent to those in which observations are carried out in the radio astronomy service, operating in accordance with these Regulations, administrations are urged, when assigning frequencies to stations of other services, to take all practicable steps to protect the radio astronomy service from harmful interference in accordance with No. 343. In addition to the measures referred to in No. 2900, technical means for minimizing the power radiated at frequencies within the band used for radio astronomy should be given special consideration (see also No. 344).
- ADD 6586 2902 § 8. When assigning frequencies to stations in other bands, administrations are urged, as far as practicable, to take into consideration the need to avoid spurious emissions which could cause harmful interference to the radio astronomy service operating in accordance with these Regulations (see also No. 344).
- ADD 6587 2903 § 9. In applying the measures outlined in this Section, administrations are urged to bear in mind that the radio astronomy service is extremely susceptible to interference from space and airborne transmitters.
- ADD 6588 2904 § 10. Administrations shall take note of the relevant CCIR Recommendations with the aim of limiting interference to the radio astronomy service from other services.
- 2905
to NOT allocated.

ARTICLE 37

NOC

General Provisions

MOD	6589 1380	2930	§ 1. The procedure specified in this Chapter is obligatory in the maritime mobile service and for communications between aircraft stations and stations of the maritime mobile service. The provisions of this Chapter are also applicable to the aeronautical mobile service except in the case of special arrangements between the governments concerned.
MOD	6590 1380A	2931	§ 2. The procedure specified in this Chapter is obligatory in the maritime mobile-satellite service and for communications between stations on board aircraft and stations of the maritime mobile-satellite service, where this service or stations of this service are specifically mentioned. Nos. 3086, 3090, 3095, 3096, 3097, 3098, 3200, 3203 and 3223 are also applicable.
NOC	6591 1381	2932	§ 3. (1) No provision of these Regulations prevents the use by a mobile station or ship earth station in distress of any means at its disposal to attract attention, make known its position, and obtain help.
NOC	6592 1381A	2933	(2) No provision of these Regulations prevents the use by stations on board aircraft or ships engaged in search and rescue operations, in exceptional circumstances, of any means at their disposal to assist a mobile station in distress.
(MOD)	6593 1382	2934	(3) No provision of these Regulations prevents the use by a land station, in exceptional circumstances, of any means at its disposal to assist a mobile station in distress (see also No. 959).
NOC	6594 1384	2935	§ 4. In cases of distress, urgency or safety, transmissions:
NOC	6595 1385	2936	a) by radiotelegraphy, shall not in general exceed a speed of sixteen words a minute;
NOC	6596 1386	2937	b) by radiotelephony, shall be made slowly and distinctly, each word being clearly pronounced to facilitate transcription.
NOC	6597 1386A	2938	§ 5. The abbreviations and signals of Appendix 14 and the Phonetic Alphabet and Figure Code in Appendix 24 should be used where applicable and, where language difficulties exist, the use of the International Code of Signals also is recommended.

NOC	6598 965	2939	§ 6. (1) The International Convention for the Safety of Life at Sea prescribes which ships and which of their survival craft shall be fitted with radio equipment and which ships shall carry portable radio equipment for use in survival craft. It also prescribes the requirements which shall be complied with by such installations.
NOC	6599 966	2940	(2) The Annexes to the Convention on International Civil Aviation state which aircraft should be fitted with radio equipment and which aircraft should carry portable radio equipment for use in survival craft. They state also the requirements which should be complied with by such installations.
NOC	6600 967	2941	§ 7. The applicable provisions of the present Regulations shall, however, be observed in the use of all such installations.
NOC	6601 968	2942	§ 8. Mobile stations of the maritime mobile service may communicate, for safety purposes, with stations of the aeronautical mobile service.
(MOD)	6602 992	2943	§ 9. Any aircraft required by national or international regulations to communicate for distress, urgency or safety purposes with stations of the maritime mobile service shall be capable of transmitting preferably class A2A or H2A and receiving preferably class A2A and H2A emissions on the carrier frequency 500 kHz or, on the carrier frequency 2 182 kHz, transmitting class A3E or H3E and receiving class A3E and H3E emissions, or on the frequency 156.8 MHz transmitting and receiving class G3E emissions.
		2944 to 2968	NOT allocated.

Frequencies for Distress and Safety

NOC

Section 1. Availability of Frequencies

NOC

6629

2969

A. 500 kHz

MOD

6630
1107

2970

§ 1. (1) The frequency 500 kHz is the international distress frequency for radiotelegraphy (see also No. 472); it shall be used for this purpose by ship, aircraft and survival craft stations using frequencies in the bands between 405 kHz and 535 kHz when requesting assistance from the maritime services. It shall be used for the distress call and distress traffic, for the urgency signal and urgency messages, for the safety signal and, outside regions of heavy traffic, for short safety messages. When practicable, safety messages shall be transmitted on the working frequency after a preliminary announcement on 500 kHz (see also No. 4236).

NOC

6631
1108

2971

(2) However, ship and aircraft stations which cannot transmit on 500 kHz should use any other available frequency on which attention might be attracted.

NOC

6632

2972

B. 2 182 kHz

MOD

6633
1323

2973

§ 2. (1) The frequency 2 182 kHz¹ is the international distress frequency for radiotelephony (see also Nos. 500 and 501); it shall be used for this purpose by ship, aircraft and survival craft stations and by emergency position-indicating radiobeacons using frequencies in the authorized bands between 1 605 kHz and 4 000 kHz when requesting assistance from the maritime services. It is used for the distress call and distress traffic, for signals of emergency position-indicating radiobeacons, for the urgency signal and urgency messages and for the safety signal. Safety messages shall be transmitted, where practicable, on a working frequency after a preliminary announcement on 2 182 kHz. The class of emission to be used for radiotelephony on the frequency 2 182 kHz shall be A3E or H3E (see No. 4127). The class of emission to be used by emergency position-indicating radiobeacons shall be as specified in Appendix 37 (see also No. 3265).

NOC

6633.1
1323.1

2973.1

¹ Where administrations provide at their coast stations a watch on 2 182 kHz for receiving class R3E and J3E emissions as well as class A3E and H3E emissions, ship stations beyond the A3E or H3E communication range of such coast stations may call them for safety purposes using class R3E or J3E emissions. This procedure shall only be used when calling by the use of class A3E and H3E emissions has not been successful.

MOD	6634 1323A	2974	(2) In the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, if a distress message on the carrier frequency 2 182 kHz has not been acknowledged, the radiotelephone alarm signal, whenever possible followed by the distress call and message, may be transmitted again on a carrier frequency of 4 125 kHz or 6 215.5 kHz, as appropriate (see Nos. 2982 , 2986 and 3054).
MOD	6635 1324	2975	(3) However, ship and aircraft stations which cannot transmit on the carrier frequency 2 182 kHz or, in accordance with No. 2974 , on the carrier frequencies 4 125 kHz or 6 215.5 kHz, should use any other available frequency on which attention might be attracted.
NOC	6636 1325A	2976	(4) Selective calling under the provisions of Article 62 may be used on the carrier frequency 2 182 kHz in the shore-to-ship, ship-to-shore and ship-to-ship directions and on this frequency shall be confined to distress and urgency and to vital navigational warnings. In no circumstances shall such selective calling be used in place of the procedures given in Nos. 3101 , 3102 , 3116 , 3117 and 3270 .
NOC	6637 1326	2977	(5) Any coast station using the carrier frequency 2 182 kHz for distress purposes shall be able to transmit the radiotelephone alarm signal described in No. 3270 (see also Nos. 3277 , 3278 and 3279).
NOC	6638 1326AA	2978	(6) Any coast station authorized to send navigational warnings should be able to transmit the navigational warning signal described in Nos. 3284 , 3285 and 3286 .
NOC	6639	2979	<i>C. 3 023 kHz</i>
MOD	6640 1326C	2980	§ 3. The aeronautical carrier (reference) frequency 3 023 kHz may be used for intercommunication between mobile stations when they are engaged in coordinated search and rescue operations, and for communication between these stations and participating land stations, in accordance with the provisions of Appendices 27 * and 27 Aer2 * (see also Nos. 501 and 505).
SUP	6641 969A		
MOD	6642	2981	<i>D. 4 125 kHz</i>
MOD	6643 1351E	2982	§ 4. In the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, the carrier frequency 4 125 kHz is designated to supplement the carrier frequency of 2 182 kHz for distress and safety purposes and for call and reply (see also No. 520). Stations using the frequency 4 125 kHz may continue to use class H3E emission until 1 January 1984.
SUP	6644 1351I		

* Note by the General Secretariat: See No. **5189** and Resolution **400**.

NOC	6645	2983	<i>E. 5 680 kHz</i>
MOD	6646 1353B	2984	§ 5. The aeronautical carrier (reference) frequency 5 680 kHz may be used for intercommunication between mobile stations when they are engaged in coordinated search and rescue operations, and for communication between these stations and participating land stations, in accordance with the provisions of Appendices 27 * and 27 Aer2 * (see also Nos. 501 and 505).
MOD	6647	2985	<i>F. 6 215.5 kHz</i>
MOD	6648 1351F	2986	§ 6. In the zone of Region 3 south of latitude 25° N, the carrier frequency 6 215.5 kHz is designated to supplement the carrier frequency 2 182 kHz for distress and safety purposes and for call and reply (see also No. 523). Stations using the frequency 6 215.5 kHz may continue to use class H3E emission until 1 January 1984.
NOC	6649	2987	<i>G. 8 364 kHz</i>
MOD	6650 1179	2988	§ 7. The frequency 8 364 kHz is designated for use by survival craft stations if they are equipped to transmit on frequencies in the bands between 4 000 kHz and 27 500 kHz and if they desire to establish communications relating to search and rescue operations with stations of the maritime and aeronautical mobile services (see also No. 501).
NOC	6651	2989	<i>H. 121.5 MHz and 123.1 MHz</i>
NOC	6651A 968	2990	§ 8. (1) Mobile stations of the maritime mobile service may communicate, for safety purposes, with stations of the aeronautical mobile service.
MOD	6652 969	2991	(2) For these purposes only, they may use the aeronautical emergency frequency 121.5 MHz and the aeronautical auxiliary frequency 123.1 MHz, using class A3E emissions for both frequencies (see also Nos. 501 and 593). They shall then comply with any special arrangements between the governments concerned by which the aeronautical mobile service is regulated.
MOD	6653	2992	<i>I. 156.3 MHz and 156.8 MHz</i>
MOD	6654 953	2993	§ 9. The frequencies 156.3 MHz and 156.8 MHz may be used by aircraft stations for safety purposes only (see also note <i>h</i> of Appendix 18).
SUP	6655		
MOD	6656 1359	2994	§ 10. (1) The frequency 156.8 MHz is the international distress, safety and calling frequency for radiotelephony for stations of the maritime mobile service when they use frequencies in the authorized bands between 156 MHz and 174 MHz (see also Nos. 501 and 613). It is used for the distress signal and call and distress traffic, for

* Note by the General Secretariat: See No. 5189 and Resolution 400.

the urgency signal, urgency traffic and for the safety signal (see also No. 2993). Safety messages shall be transmitted where practicable on a working frequency after a preliminary announcement on 156.8 MHz. The class of emission to be used for radiotelephony on the frequency 156.8 MHz shall be G3E (see Appendix 19).

NOC	6657 1359AA	2995	(2) However, ship stations which cannot transmit on 156.8 MHz should use any other available frequency on which attention might be attracted.
MOD	6658	2996	<i>J. 243 MHz</i>
			(See Nos. 501 and 642.)
MOD	6659	2997	<i>K. 406 - 406.1 MHz Band</i>
			(See No. 649.)
ADD	6659A	2998	<i>L. 1 544 - 1 545 MHz Band and 1 645.5 - 1 646.5 MHz Band</i>
			(See No. 728.)
NOC	6660	2999	<i>M. Aircraft in Distress</i>
SUP	6661 1208		
MOD	6662 1321	3000	§ 11. Any aircraft in distress shall transmit the distress call on the frequency on which watch is kept by the land or mobile stations capable of helping it. When the call is intended for stations in the maritime mobile service, the provisions of Nos. 2970 and 2971 or 2973 and 2975 or 2994 and 2995 shall be complied with.
NOC	6663	3001	<i>N. Survival Craft Stations</i>
NOC	6664 994	3002	§ 12. Equipment provided for use in survival craft stations shall, if capable of operating on any frequency:
NOC	6665 995	3003	a) <i>in the bands between 405 kHz and 535 kHz</i> , be able to transmit with a carrier frequency of 500 kHz using either class A2A and A2B * or H2A and H2B * emissions. If a receiver is provided for any of these bands, it shall be able to receive class A2A and H2A emissions on a carrier frequency of 500 kHz;

* This is to cater for the automatic reception of the radiotelegraph alarm signal.

NOC	6666 996	3004	<i>b) in the bands between 1 605 kHz and 2 850 kHz, be able to transmit with a carrier frequency of 2 182 kHz using class A3E or H3E emissions. If a receiver is provided for any of these bands, it shall be able to receive class A3E and H3E emissions on a carrier frequency of 2 182 kHz;</i>
NOC	6667 997	3005	<i>c) in the bands between 4 000 kHz and 27 500 kHz, be able to transmit with a carrier frequency of 8 364 kHz using class A2A or H2A emissions. If a receiver is provided for any of these bands, it shall be able to receive class A1A, A2A and H2A emissions throughout the band 8 341.75 - 8 728.5 kHz;</i>
MOD	6668 998	3006	<i>d) in the bands between 118 MHz and 136 MHz, be able to transmit on 121.5 MHz, preferably using amplitude modulated emission. If a receiver is provided for any of these bands, it shall be able to receive class A3E emissions on 121.5 MHz;</i>
NOC	6669 998A	3007	<i>e) in the bands between 156 MHz and 174 MHz, be able to transmit on 156.8 MHz using class G3E emission. If a receiver is provided for any of these bands it shall be able to receive class G3E emissions on 156.8 MHz;</i>
NOC	6670 999	3008	<i>f) in the bands between 235 MHz and 328.6 MHz, be able to transmit on the frequency 243 MHz.</i>

NOC

Section II. Protection of Distress Frequencies

NOC	6671	3009	<i>A. General</i>
NOC	6672 421	3010	§ 13. Any emission capable of causing harmful interference to distress, alarm, urgency or safety communications on the international distress frequencies 500 kHz or 2 182 kHz is prohibited (see Nos. 472 , 500 , 3018 and 3023). Any emission causing harmful interference to distress, safety and calling communications on the frequency 156.8 MHz is prohibited (see Nos. 613 , 3033 and 4414).
MOD	6673 1295	3011	§ 14. (1) Any signals sent for testing shall be kept to a minimum, particularly:
		3012	<i>a) on the carrier frequency 2 182 kHz;</i>
		3013	<i>b) on the frequency 156.8 MHz;</i>
		3014	<i>c) in the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, on the carrier frequency 4 125 kHz;</i>
		3015	<i>d) in the zone of Region 3 south of latitude 25° N also on the carrier frequency 6 215.5 kHz.</i>

NOC	6674 1295A	3016	(2) It is not permitted to send test transmissions of the radiotelephone alarm signal on the carrier frequency 2 182 kHz and the frequency 156.8 MHz, except where emergency equipment which can operate only on these frequencies is involved, in which case measures shall be taken to prevent radiation. Measures shall also be taken to prevent radiation from radiotelephone alarm tests carried out on frequencies other than 2 182 kHz and 156.8 MHz.
NOC	6675	3017	<i>B. 500 kHz</i>
NOC	6676 1112	3018	§ 15. (1) Apart from the transmissions authorized on 500 kHz, and taking account of No. 4226 , all transmissions on the frequencies included between 490 kHz and 510 kHz are forbidden (see No. 471 and Recommendation 200).
NOC	6677 1113	3019	(2) In order to facilitate the reception of distress calls, other transmissions on the frequency 500 kHz shall be reduced to a minimum, and in any case shall not exceed one minute.
NOC	6678 1113A	3020	(3) Before transmitting on 500 kHz, stations in the mobile service must listen on this frequency for a reasonable period to make sure that no distress traffic is being sent (see No. 3702 or 4713).
NOC	6679 1113B	3021	(4) The provisions of No. 3020 do not apply to stations in distress.
NOC	6680	3022	<i>C. 2 182 kHz</i>
NOC	6681 1325	3023	§ 16. (1) Except for transmissions authorized on the carrier frequency 2 182 kHz, all transmissions on the frequencies between 2 173.5 kHz and 2 190.5 kHz are forbidden.
NOC	6682 1326A	3024	(2) Before transmitting on the carrier frequency 2 182 kHz, a station in the mobile service should listen on this frequency for a reasonable period to make sure that no distress traffic is being sent (see No. 4915).
NOC	6683 1326B	3025	(3) The provisions of No. 3024 do not apply to stations in distress.
NOC	6684 1331	3026	(4) To facilitate the reception of distress calls, all transmissions on 2 182 kHz shall be kept to a minimum.
NOC	6685 1466B	3027	(5) To reduce unnecessary alarm signal emissions, tests of the radiotelephone alarm signal on the carrier frequency 2 182 kHz are prohibited (see No. 3016).
(MOD)	6686 1466C	3028	(6) As an exception such tests are permitted for radiotelephone emergency equipment which can operate only on the international distress frequency 2 182 kHz, in which case a suitable artificial antenna shall be employed.

MOD	6687	3029	<i>D. 4 125 kHz and 6 215.5 kHz</i>
MOD	6688 1351G	3030	§ 17. (1) In the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, before transmitting on the carrier frequency 4 125 kHz or 6 215.5 kHz, a station shall listen on the frequency for a reasonable period to make sure that no distress traffic is being sent (see No. 4915).
NOC	6689 1351H	3031	(2) The provisions of No. 3030 do not apply to stations in distress.
NOC	6690	3032	<i>E. 156.8 MHz</i>
NOC	6691 1363	3033	§ 18. (1) All emissions in the band 156.725 - 156.875 MHz ¹ capable of causing harmful interference to the authorized transmissions of stations of the maritime mobile service on 156.8 MHz are forbidden.
NOC	6692 1363A	3034	(2) Before transmitting on the frequency 156.8 MHz, a station in the mobile service should listen on this frequency for a reasonable period to make sure that no distress traffic is being sent (see No. 4915).
NOC	6693 1363B	3035	(3) The provisions of No. 3034 do not apply to stations in distress.
NOC	6694 1363C	3036	(4) To facilitate the reception of distress calls all transmissions on 156.8 MHz shall be kept to a minimum and shall not exceed one minute.

NOC **Section III. Watch on Distress Frequencies**

NOC	6695	3037	<i>A. 500 kHz</i>
(MOD)	6696 1130	3038	§ 19. (1) In order to increase the safety of life at sea and over the sea, all stations of the maritime mobile service normally keeping watch on frequencies in the authorized bands between 405 kHz and 535 kHz shall, during their hours of service, take the necessary measures to ensure watch on the international distress frequency 500 kHz for three minutes twice an hour beginning at x h 15 and x h 45 Coordinated Universal Time (UTC) by an operator using headphones or a loudspeaker.

NOC 6691.1
1363.1 3033.1 ¹ After 1 January 1983 this band is reduced to 156.7625 - 156.8375 MHz (see Resolution 308).

MOD	6697 1131	3039	(2) During the periods mentioned above, except for the emissions provided for in this Chapter:
NOC	6698 1132	3040	a) transmissions shall cease in the bands between 485 kHz and 515 kHz;
NOC	6699 1133	3041	b) outside these bands, transmissions of stations of the mobile service may continue; stations of the maritime mobile service may listen to these transmissions on the express condition that they first ensure watch on the distress frequency as required by No. 3038 .
NOC	6700 1134	3042	§ 20. (1) Stations of the maritime mobile service open to public correspondence and using frequencies in the authorized bands between 405 kHz and 535 kHz shall, during their hours of service, remain on watch on 500 kHz. This watch is obligatory only for class A2A and H2A emissions.
NOC	6701 1135	3043	(2) These stations, while observing the requirements of No. 3038 , are authorized to relinquish this watch only when they are engaged in communications on other frequencies.
NOC	6702 1136	3044	(3) When they are engaged in such communications:
		3045	a) ship stations may maintain this watch on 500 kHz by means of an operator using headphones or a loudspeaker or by some appropriate means such as an automatic alarm receiver;
		3046	b) coast stations may maintain this watch on 500 kHz by means of an operator using headphones or a loudspeaker; in the latter case an indication may be inserted in the List of Coast Stations.
NOC	6703	3047	<i>B. 2 182 kHz</i>
NOC	6704 1332	3048	§ 21. (1) All coast stations which are open to public correspondence and which form an essential part of the coverage of the area for distress purposes shall, during their hours of service, maintain a watch on 2 182 kHz.
NOC	6705 1333	3049	(2) These stations shall maintain this watch by means of an operator using some aural method, such as headphones, split headphones or loudspeaker.
NOC	6706 1334	3050	(3) In addition, ship stations should keep the maximum watch practicable on the carrier frequency 2 182 kHz for receiving by any appropriate means the radiotelephone alarm signal described in No. 3270 , and the navigational warning signal described in Nos. 3284 , 3285 and 3286 , as well as distress, urgency and safety signals.
NOC	6707 1335	3051	§ 22. Ship stations open to public correspondence should, as far as possible during their hours of service, keep watch on 2 182 kHz.

(MOD)	6708 1335A	3052	§ 23. In order to increase the safety of life at sea and over the sea, all stations of the maritime mobile service normally keeping watch on frequencies in the authorized bands between 1 605 kHz and 2 850 kHz shall, during their hours of service, and as far as possible, take steps to keep watch on the international distress carrier frequency 2 182 kHz for three minutes twice each hour beginning at <i>x</i> h 00 and <i>x</i> h 30 Coordinated Universal Time (UTC).
MOD	6709	3053	<i>C. 4 125 kHz and 6 215.5 kHz</i>
MOD	6710 1354A	3054	§ 24. (1) In the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, all coast stations which are open to public correspondence and which form an essential part of the coverage of the area for distress purposes may, during their hours of service, maintain a watch on the carrier frequencies 4 125 kHz and/or 6 215.5 kHz, as appropriate (see Nos. 2982 and 2986). Such watch should be indicated in the List of Coast Stations.
NOC	6711 1354B	3055	(2) These stations should maintain this watch by means of an operator using some aural method, such as headphones, split headphones or loudspeaker.
NOC	6712	3056	<i>D. 156.8 MHz</i>
NOC	6713 1364	3057	§ 25. (1) A coast station providing an international maritime mobile radiotelephone service in the band 156 - 174 MHz and which forms an essential part of the coverage of the area for distress purposes should, during its working hours in that band, maintain an efficient aural watch on 156.8 MHz (see Recommendation 306).
NOC	6714 1367	3058	(2) Ship stations should, where practicable, maintain watch on 156.8 MHz when within the service area of a coast station providing international maritime mobile radiotelephone service in the band 156 - 174 MHz. Ship stations fitted only with VHF radiotelephone equipment operating in the authorized bands between 156 MHz and 174 MHz, should maintain watch on 156.8 MHz, when at sea.
NOC	6715 1367A	3059	(3) Ship stations, when in communication with a port station may, on an exceptional basis and subject to the agreement of the administration concerned, continue to maintain watch, on the appropriate port operations frequency only, provided that watch on 156.8 MHz is being maintained by the port station.
NOC	6716 1367B	3060	(4) Ship stations, when in communication with a coast station in the ship movement service and subject to the agreement of the administrations concerned, may continue to maintain watch on the appropriate ship movement service frequency only, provided the watch on 156.8 MHz is being maintained by that coast station.
		3061 to 3085	NOT allocated.

NOC

Distress Communications

NOC

Section I. General

NOC 6767
1394

3086 § 1. The distress call shall have absolute priority over all other transmissions. All stations which hear it shall immediately cease any transmission capable of interfering with the distress traffic and shall continue to listen on the frequency used for the emission of the distress call. This call shall not be addressed to a particular station and acknowledgement of receipt shall not be given before the distress message which follows it is sent.

NOC 6768
1383

3087 § 2. The distress call and message shall be sent only on the authority of the master or person responsible for the ship, aircraft or other vehicle carrying the mobile station or ship earth station.

NOC

Section II. Distress Signal

NOC 6769
1389

3088 § 3. (1) The radiotelegraph distress signal consists of the group . . . – – – . . . , symbolized herein by SOS, transmitted as a single signal in which the dashes are emphasized so as to be distinguished clearly from the dots.

NOC 6770
1390

3089 (2) The radiotelephone distress signal consists of the word MAYDAY pronounced as the French expression “m’aider”.

NOC 6771
1391

3090 (3) These distress signals indicate that a ship, aircraft or other vehicle is threatened by grave and imminent danger and requests immediate assistance.

NOC

Section III. Distress Call

NOC 6772
1392

3091 § 4. (1) The distress call sent by radiotelegraphy consists of:

- the distress signal $\overline{\text{SOS}}$, sent three times;
- the word DE;
- the call sign of the mobile station in distress, sent three times.

NOC 6773
1393

3092 (2) The distress call sent by radiotelephony consists of:

- the distress signal MAYDAY, spoken three times;
- the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);
- the call sign or other identification of the mobile station in distress, spoken three times.

NOC

Section IV. Distress Messages

- | | | | |
|-----|--------------|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOC | 6774
1395 | 3093 | <p>§ 5. (1) The radiotelegraph distress message consists of:</p> <ul style="list-style-type: none"> – the distress signal <u>SOS</u>; – the name, or other identification, of the mobile station in distress; – particulars of its position; – the nature of the distress and the kind of assistance desired; – any other information which might facilitate the rescue. |
| NOC | 6775
1396 | 3094 | <p>(2) The radiotelephone distress message consists of:</p> <ul style="list-style-type: none"> – the distress signal MAYDAY; – the name, or other identification, of the mobile station in distress; – particulars of its position; – the nature of the distress and the kind of assistance desired; – any other information which might facilitate the rescue. |
| NOC | 6776
1397 | 3095 | <p>§ 6. (1) As a general rule, a ship shall signal its position in latitude and longitude (Greenwich), using figures for the degrees and minutes, together with one of the words NORTH or SOUTH and one of the words EAST or WEST. In radiotelegraphy, the signal · – · – · – shall be used to separate the degrees from the minutes; however this shall not necessarily apply to the maritime mobile-satellite service. When practicable, the true bearing and distance in nautical miles from a known geographical position may be given.</p> |
| NOC | 6777
1398 | 3096 | <p>(2) As a general rule, and if time permits, an aircraft shall transmit in its distress message the following information:</p> <ul style="list-style-type: none"> – estimated position and time of the estimate; – heading in degrees (state whether magnetic or true); – indicated air speed; – altitude; – type of aircraft; – nature of distress and type of assistance desired; – any other information which might facilitate the rescue (including the intention of the person in command, such as forced alighting on the sea or crash landing). |
| NOC | 6778
1399 | 3097 | <p>(3) As a general rule, an aircraft in flight shall signal its position either in radiotelephony or radiotelegraphy:</p> <ul style="list-style-type: none"> – by latitude and longitude (Greenwich) using figures for the degrees and minutes, together with one of the words NORTH or SOUTH and one of the words EAST or WEST; <i>or</i> |

- by the name of the nearest place, and its approximate distance in relation thereto, together with one of the words NORTH, SOUTH, EAST or WEST, as the case may be, or when practicable, by words indicating intermediate directions.

NOC 6779 3098 (4) However, in radiotelegraphy, the words NORTH or SOUTH and EAST
1400 or WEST, indicated in Nos. 3095 and 3097, may be replaced by the letters N or S and E or W.

NOC Section V. Procedures

NOC 6780 3099 A. Radiotelegraphy

NOC 6781 3100 § 7. (1) The radiotelegraph distress procedure shall consist of:
1401

6782 3101 – the alarm signal; followed in order by:
1402

6783 3102 – the distress call and an interval of two minutes;
1403

6784 3103 – the distress call;
1404

6785 3104 – the distress message;
1405

6786 3105 – two dashes of ten to fifteen seconds' duration each;
1406

6787 3106 – the call sign of the station in distress.
1407

NOC 6788 3107 (2) However, when time is vital, the second step of this procedure
1408 (No. 3102) or even the first and second steps (Nos. 3101 and 3102), may be omitted or shortened. These two steps of the distress procedure may also be omitted in circumstances where transmission of the alarm signal is considered unnecessary.

NOC 6789 3108 § 8. (1) The distress message, preceded by the distress call, shall be repeated at
1409 intervals, especially during the periods of silence prescribed in No. 3038 for radiotelegraphy, until an answer is received.

NOC 6790 3109 (2) The intervals shall, however, be sufficiently long to allow time for
1410 stations preparing to reply to start their sending apparatus.

NOC 6791 3110 (3) The alarm signal may also be repeated, if necessary.
1411

NOC 6792 3111 § 9. The transmissions under Nos. 3105 and 3106, which are to permit
1412 direction-finding stations to determine the position of the station in distress, may be repeated at frequent intervals if necessary.

NOC 6793 3112 § 10. When the mobile station in distress receives no answer to a distress
1413 message sent on the distress frequency, the message may be repeated on any other available frequency on which attention might be attracted.

- NOC **6794** **3113** § 11. Immediately before a crash landing or a forced landing (on land or sea) of an aircraft, as well as before total abandonment of a ship or an aircraft, the radio apparatus should be set for continuous emission, if considered necessary and circumstances permit.
1414

- NOC **6795** **3114** *B. Radiotelephony*

- NOC **6796** **3115** § 12. The radiotelephone distress procedure shall consist of:
1415
- NOC **6797** **3116** – the alarm signal (whenever possible) followed by:
1416
- NOC **6798** **3117** – the distress call;
1417
- NOC **6799** **3118** – the distress message.
1418

- NOC **6800** **3119** § 13. After the transmission by radiotelephony of its distress message, the mobile station may be requested to transmit suitable signals followed by its call sign or other identification, to permit direction-finding stations to determine its position. This request may be repeated at frequent intervals if necessary.
1419

- NOC **6801** **3120** § 14. (1) The distress message, preceded by the distress call, shall be repeated at intervals, especially during the periods of silence prescribed in No. 3052 for radiotelephony, until an answer is received.
1420

- NOC **6802** **3121** (2) The intervals shall, however, be sufficiently long to allow time for stations preparing to reply to start their sending apparatus.
1421

- NOC **6803** **3122** (3) This repetition shall be preceded by the alarm signal whenever possible.
1422

- NOC **6804** **3123** § 15. When the mobile station in distress receives no answer to a distress message sent on the distress frequency, the message may be repeated on any other available frequency on which attention might be attracted.
1423

- NOC **6805** **3124** § 16. Immediately before a crash landing or a forced landing (on land or sea) of an aircraft, as well as before total abandonment of a ship or an aircraft, the radio apparatus should be set for continuous emission, if considered necessary and circumstances permit.
1424

NOC **Section VI. Acknowledgement of Receipt of a Distress Message**

- NOC **6806** **3125** § 17. (1) Stations of the mobile service which receive a distress message from a mobile station which is, beyond any possible doubt, in their vicinity, shall immediately acknowledge receipt.
1425

- | | | | |
|-----|---------------|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOC | 6807
1426 | 3126 | (2) However, in areas where reliable communications with one or more coast stations are practicable, ship stations should defer this acknowledgement for a short interval so that a coast station may acknowledge receipt. |
| NOC | 6808
1427 | 3127 | (3) Stations of the mobile service which receive a distress message from a mobile station which, beyond any possible doubt, is not in their vicinity, shall allow a short interval of time to elapse before acknowledging receipt of the message, in order to permit stations nearer to the mobile station in distress to acknowledge receipt without interference. |
| NOC | 6809
1427A | 3128 | (4) However, stations in the maritime mobile service which receive a distress message from a mobile station which, beyond any possible doubt, is a long distance away, need not acknowledge receipt of messages except as specified in No. 3160. |
| NOC | 6810
1428 | 3129 | § 18. The acknowledgement of receipt of a distress message shall be given in the following form: |
| NOC | 6811
1429 | 3130 | <p>a) Radiotelegraphy:</p> <ul style="list-style-type: none"> – the distress signal <u>SOS</u>; – the call sign of the station sending the distress message, sent three times; – the word DE; – the call sign of the station acknowledging receipt, sent three times; – the group RRR; – the distress signal <u>SOS</u>. |
| NOC | 6812
1430 | 3131 | <p>b) Radiotelephony:</p> <ul style="list-style-type: none"> – the distress signal MAYDAY; – the call sign or other identification of the station sending the distress message, spoken three times; – the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties); – the call sign or other identification of the station acknowledging receipt, spoken three times; – the word RECEIVED (or RRR spoken as ROMEO ROMEO ROMEO in case of language difficulties); – the distress signal MAYDAY. |
| NOC | 6813
1431 | 3132 | <p>§ 19. (1) Every mobile station which acknowledges receipt of a distress message shall, on the order of the master or person responsible for the ship, aircraft or other vehicle, transmit, as soon as possible, the following information in the order shown:</p> <ul style="list-style-type: none"> – its name; – its position in the form prescribed in Nos. 3095, 3097 and 3098; |

- the speed at which it is proceeding towards, and the approximate time it will take to reach, the mobile station in distress;
- additionally, if the position of the ship in distress appears doubtful, ship stations should also transmit, when available, the true bearing of the ship in distress preceded by the abbreviation QTE (for classification of bearings, see Appendix 41).

NOC 6814 3133 (2) Before transmitting the message specified in No. 3132, the station shall
1432 ensure that it will not interfere with the emissions of other stations better situated to render immediate assistance to the station in distress.

NOC **Section VII. Distress Traffic**

NOC 6815 3134 § 20. Distress traffic consists of all messages relating to the immediate assis-
1433 tance required by the mobile station in distress.

NOC 6816 3135 § 21. In distress traffic, the distress signal shall be sent before the call and at
1434 the beginning of the preamble of any radiotelegram.

MOD 6817 3136 § 22. The control of distress traffic is the responsibility of the mobile station
1435 in distress or of the station which, by the application of the provisions of Section VIII of the present Article, has sent the distress message. These stations may, however, delegate the control of the distress traffic to another station.

NOC 6818 3137 § 23. The station in distress or the station in control of distress traffic may
1436 impose silence either on all stations of the mobile service in the area or on any station which interferes with the distress traffic. It shall address these instructions “to all stations” (CQ) or to one station only, according to circumstances. In either case, it shall use:

NOC 6819 3138 a) in radiotelegraphy, the abbreviation QRT, followed by the distress
1437 signal SOS;

NOC 6820 3139 b) in radiotelephony, the signal SEELONCE MAYDAY, pronounced
1438 as the French expression “silence, m’aider”.

NOC 6821 3140 § 24. If it is believed to be essential, any station of the mobile service near the
1439 ship, aircraft or other vehicle in distress may also impose silence. It shall use for this purpose:

NOC 6822 3141 a) in radiotelegraphy, the abbreviation QRT, followed by the word
1440 DISTRESS and its own call sign;

NOC 6823 3142 b) in radiotelephony, the word SEELONCE, pronounced as the French
1441 word “silence”, followed by the word DISTRESS and its own call sign.

NOC 6824 3143 § 25. (1) In radiotelegraphy, the use of the signal QRT SOS shall be reserved for
1442 the mobile station in distress and for the station controlling distress traffic.

NOC	6825 1443	3144	(2) In radiotelephony, the use of the signal SEELONCE MAYDAY shall be reserved for the mobile station in distress and for the station controlling distress traffic.
NOC	6826 1444	3145	§ 26. (1) Any station of the mobile service which has knowledge of distress traffic and which cannot itself assist the station in distress shall nevertheless follow such traffic until it is evident that assistance is being provided.
NOC	6827 1445	3146	(2) Until they receive the message indicating that normal working may be resumed (see No. 3150), all stations which are aware of the distress traffic, and which are not taking part in it, are forbidden to transmit on the frequencies on which the distress traffic is taking place.
NOC	6828 1446	3147	§ 27. A station of the mobile service which, while following distress traffic, is able to continue its normal service, may do so when the distress traffic is well established and on condition that it observes the provisions of No. 3146 and does not interfere with the distress traffic.
NOC	6829 1447	3148	§ 28. In cases of exceptional importance and provided that no interference or delay is caused to the handling of distress traffic, urgency and safety messages may be announced during a lull in the distress traffic, preferably by coast stations, on the distress frequencies. This announcement shall include an indication of the working frequency on which the urgency or safety message will be transmitted. In this case, the signals provided for in Nos. 3196, 3197, 3221 and 3222 should only be sent once (e.g. XXX DE ABC QSW...).
NOC	6830 1448	3149	§ 29. A land station or an earth station in the maritime mobile-satellite service at a specified fixed point receiving a distress message shall, without delay, take the necessary action to advise the appropriate authorities responsible for providing for the operation of rescue facilities.
NOC	6831 1449	3150	§ 30. (1) When distress traffic has ceased on a frequency which has been used for distress traffic, the station which has controlled this traffic shall transmit on that frequency a message addressed "to all stations" (CQ) indicating that normal working may be resumed.
NOC	6832 1449A	3151	(2) When complete silence is no longer necessary on a frequency which is being used for distress traffic, the station controlling the traffic shall transmit on that frequency a message addressed "to all stations" (CQ) indicating that restricted working may be resumed.
NOC	6833 1450	3152	(3) a) In radiotelegraphy, the message referred to in No. 3150 consists of: <ul style="list-style-type: none"> – the distress signal <u>SOS</u>; – the call "to all stations" (CQ) sent three times; – the word DE; – the call sign of the station sending the message; – the time of handing in of the message;

- the name and call sign of the mobile station which was in distress;
- the service abbreviation QUM.

3153 *b)* In radiotelegraphy, the message referred to in No. **3151** consists of:

- the distress signal SOS;
- the call “to all stations” (CQ) sent three times;
- the word DE;
- the call sign of the station sending the message;
- the time of handing in of the message;
- the name and call sign of the mobile station which is in distress;
- the service abbreviation QUZ.

NOC

6834
1451

3154

(4) *a)* In radiotelephony, the message referred to in No. **3150** consists of:

- the distress signal MAYDAY;
- the call “Hello all stations” or CQ (spoken as CHARLIE QUEBEC) spoken three times;
- the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);
- the call sign or other identification of the station sending the message;
- the time of handing in of the message;
- the name and call sign of the mobile station which was in distress;
- the words SEELONCE FEENEE pronounced as the French words “silence fini”.

3155

b) In radiotelephony, the message referred to in No. **3151** consists of:

- the distress signal MAYDAY;
- the call “Hello all stations” or CQ (spoken as CHARLIE QUEBEC) spoken three times;
- the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);
- the call sign or other identification of the station sending the message;
- the time of handing in of the message;

- the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);
- the call sign or other identification of the transmitting station, spoken three times.

NOC **6845** **3166** § 34. When the radiotelegraph alarm signal is used, an interval of two minutes shall be allowed, whenever this is considered necessary, before the transmission of the call mentioned in No. **3164**.
 1461

NOC **6846** **3167** § 35. When a station of the mobile service transmits a distress message under the conditions mentioned in No. **3160**, it shall take all necessary steps to notify the authorities who may be able to render assistance.
 1462

NOC **6847** **3168** § 36. A ship station should not acknowledge receipt of a distress message transmitted by a coast station under the conditions mentioned in Nos. **3157** to **3160** until the master or person responsible has confirmed that the ship station concerned is in a position to render assistance.

MOD

Urgency and Safety Transmissions, and Medical Transports

(MOD)

Section I. Urgency Signal and Messages

- NOC 6873 3196 § 1. (1) In radiotelegraphy, the urgency signal consists of three repetitions of the
1477 group XXX, sent with the letters of each group and the successive groups clearly separated from each other. It shall be transmitted before the call.
- NOC 6874 3197 (2) In radiotelephony, the urgency signal consists of three repetitions of the
1478 group of words PAN PAN, each word of the group pronounced as the French word “panne”. The urgency signal shall be transmitted before the call.
- NOC 6875 3198 § 2. (1) The urgency signal shall be sent only on the authority of the master or
1479 the person responsible for the ship, aircraft or other vehicle carrying the mobile station or mobile earth station in the maritime mobile-satellite service.
- NOC 6876 3199 (2) The urgency signal may be transmitted by a land station or an earth
1480 station in the maritime mobile-satellite service at specified fixed points only with the approval of the responsible authority.
- NOC 6877 3200 § 3. (1) The urgency signal indicates that the calling station has a very urgent
1481 message to transmit concerning the safety of a ship, aircraft or other vehicle, or the safety of a person.
- NOC 6878 3201 (2) The urgency signal and the message following it shall be sent on one or
1482 more of the international distress frequencies (500 kHz, 2 182 kHz, 156.8 MHz), or on any other frequency which may be used in case of distress.
- NOC 6879 3202 (3) However, in the maritime mobile service, the message shall be trans-
1482A mitted on a working frequency:
- a) in the case of a long message or a medical call; *or*
 - b) in areas of heavy traffic in the case of the repetition of a message transmitted in accordance with the provision as laid down in No. 3201.
- An indication to this effect shall be given at the end of the call.
- NOC 6880 3203 (4) The urgency signal shall have priority over all other communications,
1483 except distress. All stations which hear it shall take care not to interfere with the transmission of the message which follows the urgency signal.
- NOC 6881 3204 (5) In the maritime mobile service, urgency messages may be addressed
1483A either to all stations or to a particular station.
- NOC 6882 3205 § 4. Messages preceded by the urgency signal shall, as a general rule, be
1484 drawn up in plain language.

- NOC 6883 3206 § 5. (1) Mobile stations which hear the urgency signal shall continue to listen for
1485 at least three minutes. At the end of this period, if no urgency message has been heard, a land station should, if possible, be notified of the receipt of the urgency signal. Thereafter, normal working may be resumed.
- NOC 6884 3207 (2) However, land and mobile stations which are in communication on
1486 frequencies other than those used for the transmission of the urgency signal and of the call which follows it may continue their normal work without interruption provided the urgency message is not addressed “to all stations” (CQ).
- (MOD) 6885 3208 § 6. When the urgency signal has been sent before transmitting a message “to
1487 all stations” (CQ) which calls for action by the stations receiving the message, the station responsible for its transmission shall cancel it as soon as it knows that action is no longer necessary. This message of cancellation shall likewise be addressed “to all stations” (CQ).

ADD Section II. Medical Transports

- ADD 6885A 3209 § 7. The term “medical transports”, as defined in the 1949 Geneva Conventions and Additional Protocols, refers to any means of transportation by land, water or air, whether military or civilian, permanent or temporary, assigned exclusively to medical transportation and under the control of a competent authority of a Party to a conflict.
- ADD 6885B 3210 § 8. For the purpose of announcing and identifying medical transports which are protected under the above-mentioned Conventions, a complete transmission of the urgency signals described in Nos. 3196 and 3197 shall be followed by the addition of the single group “YYY” in radiotelegraphy and by the addition of the single word MAY-DEE-CAL, pronounced as in French “médical”, in radiotelephony.
- ADD 6885C 3211 § 9. The frequencies specified in No. 3201 may be used by medical transports for the purpose of self-identification and to establish communications. As soon as practicable, communications shall be transferred to an appropriate working frequency.
- ADD 6885D 3212 § 10. The use of the signals described in No. 3210 indicates that the message which follows concerns a protected medical transport. The message shall convey the following data:
- 3213 a) the call sign or other recognized means of identification of the medical transport;
- 3214 b) position of the medical transport;
- 3215 c) number and type of medical transports;
- 3216 d) intended route;
- 3217 e) estimated time en route and of departure and arrival, as appropriate;
- 3218 f) any other information, such as flight altitude, radio frequencies guarded, languages used and secondary surveillance radar modes and codes.

ADD 6885E 3219 § 11. The provisions of Section I of this Article shall apply as appropriate to the use of the urgency signal by medical transports.

ADD 6885F 3220 § 12. The use of radiocommunications for announcing and identifying medical transports is optional; however, if they are used, the provisions of these Regulations and particularly of this Section and of Articles 37 and 38 shall apply.

NOC **Section III. Safety Signal and Messages**

NOC 6886 3221 § 13. (1) In radiotelegraphy, the safety signal consists of three repetitions of the group TTT, the individual letters of each group and the successive groups being clearly separated from each other. It shall be sent before the call.
1488

NOC 6887 3222 (2) In radiotelephony, the safety signal consists of the word “SÉCURITÉ” pronounced clearly as in French, spoken three times and transmitted before the call.
1489

NOC 6888 3223 § 14. (1) The safety signal indicates that the station is about to transmit a message containing an important navigational or important meteorological warning.
1490

NOC 6889 3224 (2) The safety signal and call shall be sent on one or more of the international distress frequencies (500 kHz, 2 182 kHz, 156.8 MHz) or on any other frequency which may be used in case of distress.
1491

NOC 6890 3225 (3) The safety message which follows the call should be sent on a working frequency. A suitable announcement to this effect shall be made at the end of the call.
1492

NOC 6891 3226 (4) In the maritime mobile service, safety messages shall generally be addressed to all stations. In some cases, however, they may be addressed to a particular station.
1492A

NOC 6892 3227 § 15. (1) With the exception of messages transmitted at fixed times, the safety signal, when used in the maritime mobile service, shall be transmitted towards the end of the first available period of silence (see No. 3038 for radiotelegraphy and No. 3052 for radiotelephony); the message shall be transmitted immediately after the period of silence.
1493

NOC 6893 3228 (2) In the cases prescribed in Nos. 3328, 3331 and 3335, the safety signal and the message which follows it shall be transmitted as soon as possible, and shall be repeated at the end of the first period of silence which follows.
1494

NOC 6894 3229 § 16. All stations hearing the safety signal shall listen to the safety message until they are satisfied that the message is of no concern to them. They shall not make any transmission likely to interfere with the message.

NOC

Section I. Emergency Position-Indicating Radiobeacon Signals

SUP

6920
1388A

NOC

6921
1476A

3255

§ 1. The emergency position-indicating radiobeacon signal consists of:

NOC

6922
1476B

3256

a) for medium frequencies, i.e. 2 182 kHz¹:

3257

1) a keyed emission modulated by a tone of 1 300 Hz, and having a ratio of the period of the emission to the period of silence equal to or greater than one, and an emission duration between one and five seconds; *or*

NOC

6923
1476C

3258

2) the radiotelephone alarm signal (see No. 3270), followed by the Morse letter B and/or the call sign of the ship to which the radiobeacon belongs transmitted by keying a carrier modulated by a tone of either 1 300 Hz or 2 200 Hz;

(MOD)

6924
1476D

3259

b) for very high frequencies, i.e. 121.5 MHz and 243 MHz, a signal whose characteristics shall be in accordance with those recommended by the organizations mentioned in Resolution 601.

NOC

6925
1476H

3260

§ 2. (1) The essential purpose of the emergency position-indicating radiobeacon signals is to facilitate determining the position of survivors in search and rescue operations.

NOC

6926
1476I

3261

(2) These signals shall indicate that one or more persons are in distress, may no longer be on board a ship or an aircraft, and that receiving facilities may not be available.

NOC

6927
1476J

3262

(3) Any mobile service station receiving one of these signals, while no distress or urgent traffic is being passed, shall consider that the provisions of Nos. 3157 and 3158 are applicable.

NOC

6928
1476E

3263

§ 3. (1) Only the signal specified in No. 3257 shall be used by low power radiobeacons (Type L) and it shall be transmitted continuously.

NOC

6922.1
1476B.1

3256.1

¹ In Japan, there are emergency position-indicating radiobeacons which transmit the distress signal and identification on frequencies between 2 089.5 kHz and 2 092.5 kHz using class A1A emissions.

- | | | | |
|-------|----------------------|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOC | 6929
1476F | 3264 | (2) High power radiobeacons (Type H) may transmit either of the signals specified in No. 3257 or 3258 with a keying cycle which consists of the keying signal for between thirty and fifty seconds followed by a period of silence of between thirty and sixty seconds. |
| NOC | 6930
1476G | 3265 | (3) However, the keying cycles in Nos. 3263 and 3264 may be interrupted for speech transmission if administrations so desire. |
| NOC | 6931
1476K | 3266 | § 4. (1) Equipment designed to transmit emergency position-indicating radio-beacon signals on the carrier frequency 2 182 kHz shall meet the requirements specified in Appendix 37. |
| (MOD) | 6932
1476L | 3267 | (2) Equipment designed to transmit emergency position-indicating radio-beacon signals on the frequencies 121.5 MHz and 243 MHz shall comply with the recommendations and standards of the organizations mentioned in Resolution 601. |
| NOC | | | Section II. Radiotelegraph and Radiotelephone Alarm Signals |
| SUP | 6933
1387 | | |
| NOC | 6934
1463 | 3268 | § 5. (1) The radiotelegraph alarm signal consists of a series of twelve dashes sent in one minute, the duration of each dash being four seconds and the duration of the interval between consecutive dashes one second. It may be transmitted by hand but its transmission by means of an automatic instrument is recommended. |
| NOC | 6935
1464 | 3269 | (2) Any ship station working in the bands between 405 kHz and 535 kHz which is not provided with an automatic apparatus for the transmission of the radiotelegraph alarm signal shall be permanently equipped with a clock, clearly marking the seconds, preferably by means of a sweep hand completing one revolution per minute. This clock shall be placed at a point sufficiently visible from the operator's table so that the operator may, by keeping it in view, easily and correctly time the different elements of the alarm signal. |
| SUP | 6936
1388 | | |
| NOC | 6937
1465 | 3270 | § 6. (1) The radiotelephone alarm signal consists of two substantially sinusoidal audio frequency tones transmitted alternately. One tone shall have a frequency of 2 200 Hz and the other a frequency of 1 300 Hz, the duration of each tone being 250 milliseconds. |
| NOC | 6938
1466 | 3271 | (2) The radiotelephone alarm signal, when generated by automatic means, shall be sent continuously for a period of at least thirty seconds but not exceeding one minute; when generated by other means, the signal shall be sent as continuously as practicable over a period of approximately one minute. |

NOC	6939 1466AA	3272	(3) The radiotelephone alarm signal transmitted by coast stations shall be that described in Nos. 3270 and 3271 , which may be followed by a single tone of 1 300 Hz for 10 seconds.
SUP	6940 1466A		
SUP	6941 1473A		
NOC	6942 1467	3273	§ 7. The purpose of these special signals is:
NOC	6943 1468	3274	a) in radiotelegraphy, the actuation of automatic devices giving the alarm to attract the attention of the operator when there is no listening watch on the distress frequency;
NOC	6944 1469	3275	b) in radiotelephony, to attract the attention of the person on watch or to actuate automatic devices giving the alarm, or activating a silenced loudspeaker for the message which is to follow.
NOC	6945 1470	3276	§ 8. (1) These signals shall only be used to announce:
NOC	6946 1471	3277	a) that a distress call or message is about to follow; <i>or</i>
NOC	6947 1472	3278	b) the transmission of an urgent cyclone warning, which should be preceded by the safety signal (see Nos. 3221 and 3222). In this case they may only be used by coast stations duly authorized by their government; <i>or</i>
(MOD)	6948 1473	3279	c) the loss of a person or persons overboard. In this case they may only be used when the assistance of other ships is required and cannot be satisfactorily obtained by the use of the urgency signal alone, but the alarm signal shall not be repeated by other stations. The message shall be preceded by the urgency signal (see Nos. 3196 and 3197).
NOC	6949 1474	3280	(2) In the cases referred to in Nos. 3278 and 3279 , an interval of two minutes should, if possible, separate the end of the radiotelegraph alarm signal and the beginning of the warning or the message.
NOC	6950 1475	3281	§ 9. Automatic devices intended for the reception of the radiotelegraph and radiotelephone alarm signals shall meet the requirements specified in Appendix 36.
NOC	6951 1476	3282	§ 10. Before any such automatic device is approved for use on ships, the administration having jurisdiction over those ships shall be satisfied by practical tests made under operating conditions equivalent to those obtaining in practice (including interference, vibration, etc.), that the apparatus complies with the provisions of these Regulations.

NOC

Section III. All Ships Selective Call

NOC **6952** **3283** § 11. The characteristics of the “all ships call” in the selective calling system, which is reserved for alarm purposes only, are given in Appendix 39.
1388AA

NOC

Section IV. Navigational Warning Signal

NOC **6953** **3284** § 12. (1) The navigational warning signal consists of one substantially sinusoidal tone of the frequency 2 200 Hz, interrupted so that the durations of tone and space are 250 milliseconds each.
1476AA

NOC **6954** **3285** (2) The signal should be transmitted by coast stations continuously for a period of fifteen seconds before vital navigational warnings on radiotelephony in the medium frequency maritime bands.
1476AB

(MOD) **6955** **3286** (3) The purpose of the signal is to attract the attention of the person on watch using a loudspeaker or a filtered loudspeaker, or to actuate an automatic device to activate a silenced loudspeaker for the message which is to follow.

Special Services Relating to Safety

NOC

Section I. Meteorological Messages

- NOC 6981 3312 § 1. (1) Meteorological messages comprise:
1596
- NOC 6982 3313 a) messages addressed to meteorological services officially entrusted
1597 with weather forecasts, more specifically for the protection of mari-
time and air navigation;
- NOC 6983 3314 b) messages from these meteorological services intended specially for:
1598
- NOC 6984 3315 – ship stations;
1599
- NOC 6985 3316 – protection of aircraft;
1600
- NOC 6986 3317 – the public.
1601
- NOC 6987 3318 (2) The information contained in these messages may be:
1602
- NOC 6988 3319 a) observations taken at fixed times;
1603
- NOC 6989 3320 b) warnings of dangerous phenomena;
1604
- NOC 6990 3321 c) forecasts and warnings;
1605
- NOC 6991 3322 d) statements of the general meteorological situation.
1606
- NOC 6992 3323 § 2. (1) The various national meteorological services mutually agree to prepare
1607 common transmission programmes so as to use the transmitters best situated to
serve the regions concerned.
- MOD 6993 3324 (2) The meteorological observations contained in the classes mentioned in
1608 Nos. 3313 to 3316 should be drawn up in an international meteorological code,
whether they are transmitted by or intended for mobile stations.
- MOD 6994 3325 § 3. For observation messages intended for an official meteorological service,
1609 use shall be made of the frequencies made available for meteorological purposes, in
conformity with regional agreements made by the services concerned for the use of
these frequencies.
- NOC 6995 3326 § 4. (1) Meteorological messages specially intended for all ship stations shall in
1610 principle be sent in accordance with a definite timetable, and, as far as possible, at
times when they can be received by ship stations with only one operator. In
radiotelegraphy the transmission speed shall not exceed sixteen words a minute.
- NOC 6996 3327 (2) During the transmission “to all stations” of meteorological messages
1611 intended for stations of the maritime mobile service, all stations of this service
whose transmission might interfere with the reception of these messages shall keep
silent in order to permit all stations which desire to do so to receive these messages.

MOD	6997 1612	3328	(3) Meteorological warning messages for the maritime mobile service shall be transmitted without delay. They shall be repeated at the end of the first silence period which follows their receipt (see Nos. 3038 and 3052) as well as during the next appropriate broadcast as indicated in the List of Radiodetermination and Special Service Stations. They shall be preceded by the safety signal and sent on the appropriate frequencies (see No. 3224).
NOC	6998 1613	3329	(4) In addition to the regular information services contemplated in the preceding sub-paragraphs, administrations shall take the necessary steps to ensure that certain stations shall, upon request, communicate meteorological messages to stations in the maritime mobile service.
NOC	6999 1614	3330	(5) The provisions of Nos. 3326 to 3329 are applicable to the aeronautical mobile service, in so far as they are not contrary to more detailed special agreements which ensure at least equal protection to air navigation.
NOC	7000 1615	3331	§ 5. (1) Messages originating in mobile stations and containing information concerning the presence of cyclones shall be transmitted, with the least possible delay, to other mobile stations in the vicinity and to the appropriate authorities at the first point of the coast with which contact can be established. Their transmission shall be preceded by the safety signal.
NOC	7001 1616	3332	(2) Any mobile station may, for its own use, listen to messages containing meteorological observations sent out by other mobile stations, even those which are addressed to a national meteorological service.
NOC	7002 1617	3333	(3) Stations of the mobile services which transmit meteorological observations addressed to a national meteorological service are not required to repeat them to other stations. However, the exchange between mobile stations, on request, of information relating to the state of the weather is authorized.
NOC			Section II. Notices to Mariners
NOC	7003 1618	3334	§ 6. The provisions of Nos. 3326 to 3330 shall apply to notices to mariners.
NOC	7004 1619	3335	§ 7. Messages containing information concerning the presence of dangerous ice, dangerous wrecks, or any other imminent danger to marine navigation, shall be transmitted as soon as possible to other ship stations in the vicinity, and to the appropriate authorities at the first point of the coast with which contact can be established. These transmissions shall be preceded by the safety signal.
NOC	7005 1620	3336	§ 8. When thought desirable, and provided the sender agrees, administrations may authorize their land stations to communicate information concerning maritime damage or casualties or information of general interest to navigation to the marine information agencies approved by them and subject to the conditions fixed by them.

NOC

Section III. Medical Advice

NOC	7006 1621	3337	§ 9.	Mobile stations requiring medical advice may obtain it through any of the land stations shown as providing this service in the List of Radiodetermination and Special Service Stations.
-----	---------------------	-------------	------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC	7007 1622	3338	§ 10.	Radiotelegrams and radiotelephone calls concerning medical advice may be preceded by the appropriate urgency signal (see Nos. 3198 to 3208).

Operators' Certificates for Aircraft Stations

NOC

Section I. General Provisions

MOD 7136 3392 § 1. (1) The service of every aircraft radiotelegraph station shall be performed by
848 an operator holding a certificate issued or recognized by the government to which the station is subject.

MOD 7137 3393 (2) The service of every aircraft radiotelephone station shall be controlled by
849 an operator holding a certificate issued or recognized by the government to which the station is subject. Provided the station is so controlled, other persons besides the holder of the certificate may use the radiotelephone equipment.

MOD 7138 3394 (3) The service of automatic communication devices¹ installed in an aircraft
850 station shall be controlled by an operator holding a certificate issued or recognized by the government to which the station is subject. Provided the devices are so controlled, they may be used by other persons. If such devices require for their basic function the use of Morse code signals specified in the Instructions for the Operation of the International Public Telegram Service, the service shall be performed by an operator holding a radiotelegraph operator's certificate. However, this latter requirement does not apply to automatic devices which may use Morse code signals solely for identification purposes.

NOC 7139 3395 (4) Nevertheless, in the service of radiotelephone stations operating solely
851 on frequencies above 30 MHz, each government shall decide for itself whether a certificate is necessary and, if so, shall define the conditions for obtaining it.

MOD 7140 3396 (5) The provisions of No. 3395 shall not, however, apply to any aircraft
852 station working on frequencies assigned for international use.

MOD 7141 3397 § 2. (1) In the case of complete unavailability of the operator in the course of a
853 flight, and solely as a temporary measure, the person responsible for the station may authorize an operator holding a certificate issued by the government of another Member of the Union to perform the radiocommunication service.

MOD 7142 3398 (2) When it is necessary to employ a person without a certificate or an
854 operator not holding an adequate certificate as a temporary operator, his performance as such must be limited solely to signals of distress, urgency and safety, messages relating thereto, messages relating directly to the safety of life and essential messages relating to the navigation and safe movement of the aircraft. Persons employed in these cases are bound by the provisions of No. 3402 regarding the secrecy of correspondence.

NOC 7138.1 3394.1 ¹ The term "automatic communication devices" is intended to include such equipment
850.1 as teleprinters, data transfer systems, etc.

- NOC 7143 3399 (3) In all cases, such temporary operators must be replaced as soon as possible by operators holding the certificate prescribed in paragraph 1 of this Article.
855
- NOC 7144 3400 § 3. (1) Each administration shall take the necessary steps to prevent, to the maximum extent possible, the fraudulent use of certificates. For this purpose, such certificates shall bear the holder's signature and shall be authenticated by the issuing administration. Administrations may employ, if they wish, other means of identification such as photographs, fingerprints, etc.
856
- NOC 7145 3401 (2) To facilitate verification of certificates, these may carry, if necessary, in addition to the text in the national language, a translation of this text in a working language of the Union.
857
- NOC 7146 3402 § 4. Each administration shall take the necessary steps to place operators under the obligation to preserve the secrecy of correspondence as provided for in No. 2023.
858

NOC **Section II. Classes and Categories of Certificates**

- NOC 7147 3403 § 5. (1) There are two classes of certificates, as well as a special certificate, for radiotelegraph operators¹.
859
- (MOD) 7148 3404 (2) There are two categories of radiotelephone operator's certificates, general and restricted¹.
860
- NOC 7149 3405 § 6. (1) The holder of a first- or second-class radiotelegraph operator's certificate may carry out the radiotelegraph or radiotelephone service of any aircraft station.
861
- NOC 7150 3406 (2) The holder of a radiotelephone operator's general certificate may carry out the radiotelephone service of any aircraft station.
862
- NOC 7151 3407 (3) The holder of a radiotelephone operator's restricted certificate may carry out the radiotelephone service of any aircraft station, when working on frequencies of the maritime mobile service, provided that:
863
 - 3408 a) the peak envelope power of the transmitter does not exceed 200 watts; *or*
 - 3409 b) the operation of the transmitter requires only the use of simple external switching devices, excluding all manual adjustment of frequency determining elements, with the stability of the frequencies maintained by the transmitter itself within the limits of tolerance specified by Appendix 7, and the peak envelope power of the transmitter does not exceed 1 kilowatt.

NOC 7147.1 3403.1 }
859.1 }
(MOD) 7148.1 3404.1 }
860.1 }

¹ As regards the employment of operators holding the different certificates, see Article 45.

NOC	7152 864	3410	(4) The holder of a radiotelephone operator's restricted certificate may carry out the radiotelephone service of any aircraft station operating on frequencies allocated exclusively to the aeronautical mobile service, provided that the operation of the transmitter requires only the use of simple external switching devices, excluding all manual adjustment of frequency determining elements, and that the stability of the frequencies is maintained by the transmitter itself within the limits of tolerance specified by Appendix 7.
NOC	7153 865	3411	(5) The radiotelephone service of aircraft stations for which only a restricted radiotelephone operator's certificate is required may be carried out by an operator holding a radiotelegraph operator's special certificate.
NOC	7154 866	3412	§ 7. Exceptionally, the second-class radiotelegraph operator's certificate as well as the radiotelegraph operator's special certificate may be limited exclusively to the radiotelegraph service. In such cases the certificate shall be suitably endorsed.
NOC			Section III. Conditions for the Issue of Operators' Certificates
NOC	7155	3413	<i>A. General</i>
NOC	7156 867	3414	§ 8. (1) The conditions to be imposed for obtaining the various certificates are contained in the following paragraphs and represent the minimum requirements.
NOC	7157 868	3415	(2) Each administration is free to fix the number of examinations necessary to obtain each certificate.
MOD	7158 869	3416	§ 9. (1) The administration which issues a certificate may, before authorizing an operator to carry out the service on board aircraft, require the fulfilment of other conditions (for example: experience with automatic communication devices; further technical and professional knowledge relating particularly to navigation; physical fitness; the completion as an operator of a certain number of flying hours, etc.).
NOC	7159 870	3417	(2) Administrations should take whatever steps they consider necessary to ensure the continued proficiency of operators after prolonged absences from operational duties.
NOC	7160	3418	<i>B. First-Class Radiotelegraph Operator's Certificate</i>
NOC	7161 871	3419	§ 10. The first-class certificate is issued to candidates who have given proof of the technical and professional knowledge and qualifications enumerated below:
NOC	7162 872	3420	a) knowledge both of the general principles of electricity and of the theory of radio, knowledge of the adjustment and practical working of various types of radiotelegraph and radiotelephone apparatus used in the mobile service, including apparatus used for radio

direction-finding and the taking of direction-finding bearings, as well as a general knowledge of the principles of operation of other apparatus generally used for radionavigation;

NOC	7163 873	3421	b)	theoretical and practical knowledge of the operation and maintenance of apparatus, such as motor-generators, storage batteries, etc., used in the operation and adjustment of the radiotelegraph, radiotelephone and radio direction-finding apparatus mentioned in No. 3420;
MOD	7164 874	3422	c)	practical knowledge necessary to repair, with the means available on board, damage which may occur to the radiotelegraph, radiotelephone and radio direction-finding apparatus during a flight;
NOC	7165 875	3423	d)	ability to send correctly by hand and to receive correctly by ear, in the Morse code, code groups (mixed letters, figures and punctuation marks) at a speed of twenty groups a minute, and a plain language text at a speed of twenty-five words a minute. Each code group shall comprise five characters, each figure or punctuation mark counting as two characters. The average word of the text in plain language shall contain five characters. The duration of each test of sending and of receiving shall be, as a rule, five minutes;
NOC	7166 876	3424	e)	ability to send correctly and to receive correctly by radiotelephone;
NOC	7167 877	3425	f)	detailed knowledge of the Regulations applying to radiocommunications, knowledge of the documents relating to charges for radiocommunications, knowledge of the provisions of the Convention for the Safety of Life at Sea which relate to radio, and, in the case of air navigation, knowledge of the special provisions governing the aeronautical fixed, mobile, and radionavigation services. In the latter case, the certificate states that the holder has successfully passed the tests relating to these special provisions;
NOC	7168 878	3426	g)	a sufficient knowledge of world geography, especially the principal shipping and air routes and the most important telecommunication routes;
NOC	7169 879	3427	h)	sufficient knowledge of one of the working languages of the Union. Candidates should be able to express themselves satisfactorily in that language, both orally and in writing. Each administration shall decide for itself the language or languages required.
NOC	7170	3428	<i>C. Second-Class Radiotelegraph Operator's Certificate</i>	
NOC	7171 880	3429	§ 11.	The second-class certificate is issued to candidates who have given proof of the technical and professional knowledge and qualifications enumerated below:
NOC	7172 881	3430	a)	elementary theoretical and practical knowledge of electricity and of radio, knowledge of the adjustment and practical working of the various types of radiotelegraph and radiotelephone apparatus used in the mobile service, including apparatus used for radio direction-

finding and the taking of direction-finding bearings, as well as elementary knowledge of the principles of operation of other apparatus in general use for radionavigation;

NOC	7173 882	3431	b)	elementary theoretical and practical knowledge of the operation and maintenance of apparatus, such as motor-generators, storage batteries, etc., used in the operation and adjustment of the radiotelegraph, radiotelephone and radio direction-finding apparatus mentioned in No. 3430;
MOD	7174 883	3432	c)	practical knowledge sufficient for effecting repairs in the case of minor damage which may occur to the radiotelegraph, radiotelephone and radio direction-finding apparatus during a flight;
NOC	7175 884	3433	d)	ability to send correctly by hand and to receive correctly by ear, in the Morse code, code groups (mixed letters, figures and punctuation marks) at a speed of sixteen groups a minute, and a plain language text at a speed of twenty words a minute. Each code group shall comprise five characters, each figure or punctuation mark counting as two characters. The average word of the text in plain language shall contain five characters. The duration of each test of sending and of receiving shall, as a rule, be five minutes;
NOC	7176 885	3434	e)	ability to send correctly and to receive correctly by radiotelephone, except in the case provided for in No. 3412;
NOC	7177 886	3435	f)	knowledge of the Regulations applying to radiocommunications, knowledge of the documents relating to charges for radiocommunications, knowledge of the provisions of the Convention for the Safety of Life at Sea which relate to radio, and, in the case of air navigation, knowledge of the special provisions governing the aeronautical fixed, mobile, and radionavigation services. In the latter case, the certificate states that the holder has successfully passed the tests relating to these special provisions;
NOC	7178 887	3436	g)	a sufficient knowledge of world geography, especially the principal shipping and air routes and the most important telecommunication routes;
NOC	7179 888	3437	h)	if necessary, an elementary knowledge of one of the working languages of the Union. Candidates should be able to express themselves satisfactorily in that language, both orally and in writing. Each administration shall decide for itself the language or languages required.
.				
NOC	7180	3438	<i>D. Radiotelegraph Operator's Special Certificate</i>	
NOC	7181 889	3439	§ 12. (1) The radiotelegraph operator's special certificate is issued to candidates who have given proof of the knowledge and professional qualifications enumerated below:	
NOC	7182 890	3440	a)	ability to send correctly by hand and receive correctly by ear, in the Morse code, code groups (mixed letters, figures, and punctuation marks) at a speed of sixteen groups a minute, and a plain language text at a speed of twenty words a minute. Each code group shall

comprise five characters, each figure or punctuation mark counting as two characters. The average word of the text in plain language shall contain five characters;

NOC	7183 891	3441	b) knowledge of the practical operation and adjustment of radiotelegraph apparatus;
NOC	7184 892	3442	c) knowledge of the Regulations applying to radiotelegraph communications and specifically of that part of those Regulations relating to safety of life at sea.
NOC	7185 893	3443	(2) Each administration concerned shall fix the other conditions for obtaining this certificate. However, except as provided for in No. 3412, the conditions specified in Nos. 3450, 3451, 3452 and 3453 or 3454, as the case may be, shall be satisfied.
(MOD)	7186	3444	<i>E. Radiotelephone Operators' Certificates</i>
MOD	7187 894	3445	§ 13. The radiotelephone operator's general certificate is issued to candidates who have given proof of the knowledge and professional qualifications enumerated below (see also Nos. 3405 and 3406):
NOC	7188 895	3446	a) a knowledge of the elementary principles of radiotelephony;
NOC	7189 896	3447	b) detailed knowledge of the practical operation and adjustment of radiotelephone apparatus;
NOC	7190 897	3448	c) ability to send correctly and to receive correctly by telephone;
NOC	7191 898	3449	d) detailed knowledge of the Regulations applying to radiotelephone communications and specifically of that part of those Regulations relating to the safety of life.
NOC	7192 899	3450	§ 14. (1) The radiotelephone operator's restricted certificate is issued to candidates who have given proof of the knowledge and professional qualifications enumerated below:
NOC	7193 900	3451	a) practical knowledge of radiotelephone operation and procedure;
NOC	7194 901	3452	b) ability to send correctly and to receive correctly by telephone;
NOC	7195 902	3453	c) general knowledge of the Regulations applying to radiotelephone communications and specifically of that part of those Regulations relating to the safety of life.
MOD	7196 903	3454	(2) For aircraft radiotelephone stations operating on frequencies allocated exclusively to the aeronautical mobile service, each administration may itself fix these conditions for obtaining a radiotelephone operator's restricted certificate, provided that the operation of the transmitter requires only the use of simple external switching devices, excluding all manual adjustment of frequency determining elements, and that the stability of the frequencies is maintained by the transmitter itself within the limits of tolerance specified in Appendix 7. However, in

fixing the conditions, administrations shall ensure that the operator has an adequate knowledge of radiotelephone operation and procedure particularly as far as distress, urgency and safety are concerned. This in no way contravenes the provisions of No. 3457.

NOC	7197 904	3455	(3) Administrations in Region 1 do not issue certificates under No. 3454.
NOC	7198 905	3456	§ 15. A radiotelephone operator's certificate shall show whether it is a general certificate or a restricted certificate and, in the latter case, if it has been issued in conformity with the provisions of No. 3454.
NOC	7199 906	3457	§ 16. In order to meet special needs, special agreements between administrations may fix the conditions to be fulfilled in order to obtain a radiotelephone operator's certificate intended to be used in radiotelephone stations complying with certain technical conditions and certain operating conditions. These agreements, if made, shall be on the condition that harmful interference to international services shall not result therefrom. These conditions and agreements shall be mentioned in the certificates issued to such operators.

Inspection of Aircraft Stations

MOD	7255 838	3509	§ 1. (1) The governments or appropriate administrations of countries which an aircraft station visits may require the production of the licence for examination. The operator of the station, or the person responsible for the station, shall facilitate this examination. The licence shall be kept in such a way that it can be produced upon request. As far as possible, the licence, or a copy certified by the authority which has issued it, should be permanently exhibited in the station.
MOD	7256 839	3510	(2) The inspectors shall have in their possession an identity card or badge, issued by the competent authority, which they shall show on request of the person responsible for the aircraft.
NOC	7257 840	3511	(3) When the licence cannot be produced or when manifest irregularities are observed, governments or administrations may inspect the radio installations in order to satisfy themselves that these conform to the conditions imposed by these Regulations.
NOC	7258 841	3512	(4) In addition, inspectors have the right to require the production of the operators' certificates, but proof of professional knowledge may not be demanded.
MOD	7259 842	3513	§ 2. (1) When a government or an administration has found it necessary to adopt the course indicated in No. 3511, or when the operators' certificates cannot be produced, the government or administration to which the aircraft station is subject shall be so informed without delay. In addition, the procedure specified in Article 21 is followed when necessary.
MOD	7260 843	3514	(2) Before leaving, the inspector shall report the result of his inspection to the person responsible for the aircraft. If any breach of the conditions imposed by these Regulations is observed, the inspector shall make this report in writing.
MOD	7261 844	3515	§ 3. Members undertake not to impose upon foreign aircraft stations which are temporarily within their territorial limits, or which make a temporary stay in their territory, technical and operating conditions more severe than those contemplated in these Regulations. This undertaking in no way affects arrangements which are made under international agreements relating to air navigation, and which are therefore not covered by these Regulations.

ARTICLE 50

NOC

**Special Rules Relating to the Use of Frequencies
in the Aeronautical Mobile Service**

NOC	7376 429	3630	§ 1. Frequencies in any band allocated to the aeronautical mobile (R) service are reserved for communications between any aircraft and those aeronautical stations primarily concerned with the safety and regularity of flight along national or international civil air routes.
NOC	7377 430	3631	§ 2. Frequencies in any band allocated to the aeronautical mobile (OR) service are reserved for communications between any aircraft and aeronautical stations other than those primarily concerned with flight along national or international civil air routes.
MOD	7378 431	3632	§ 3. Frequencies in the bands allocated to the aeronautical mobile service between 2 850 kHz and 22 000 kHz (see Article 8) shall be assigned in conformity with the provisions of Appendices 26, 27 * and 27 Aer2 * and the other relevant provisions of these Regulations.
MOD	7379 432	3633	§ 4. Administrations shall not permit public correspondence in the frequency bands allocated exclusively to the aeronautical mobile service, unless permitted by special aeronautical regulations adopted by a conference of the Union to which all interested Members are invited. Such regulations shall recognize the absolute priority of safety and control messages.
MOD	7380 1162	3634	§ 5. In order to reduce interference, aircraft stations shall, within the means at their disposal, endeavour to select for calling the band with the most favourable propagational characteristics for effecting reliable communication. In the absence of more precise data, an aircraft station shall, before making a call, listen for the signals of the station with which it desires to communicate. The strength and intelligibility of such signals are useful as a guide to propagational conditions and indicate which is the preferable band for calling.
NOC	7381 1207	3635	§ 6. Governments may, by agreement, decide the frequencies to be used for call and reply in the aeronautical mobile service.

**Order of Priority of Communications
in the Aeronautical Mobile Service**

MOD

7408
1496

3651

The order of priority for communications¹ in the aeronautical mobile service shall be as follows, except where impracticable in a fully automated system in which, nevertheless, category 1 shall receive priority:

1. Distress calls, distress messages, and distress traffic.
2. Communications preceded by the urgency signal.
3. Communications preceded by the safety signal.
4. Communications relating to radio direction-finding.
5. Communications relating to the navigation and safe movement of aircraft engaged in search and rescue operations.
6. Communications relating to the navigation, movements, and needs of aircraft and ships, and weather observation messages destined for an official meteorological service.
7. ETATPRIORITENATIONS - Radiotelegrams relating to the application of the United Nations Charter.
8. ETATPRIORITE - Government radiotelegrams with priority and Government calls for which priority has been expressly requested.
9. Service communications relating to the working of the telecommunication service or to communications previously exchanged.
10. Government communications other than those shown in 8 above, ordinary private communications, RCT² radiotelegrams and press radiotelegrams.

**General Radiotelegraph Procedure
in the Aeronautical Mobile Service**

NOC

Section I. General Provisions

MOD 7434 3677 § 1. (1) The procedure detailed in this Article is obligatory, except in cases of
1000 distress, urgency or safety, to which the provisions of Chapter IX are applicable.

MOD 7435 3678 (2) The procedure specified in Sections IV, V and VI of the present Article
1001 is applicable only in the absence of special arrangements to the contrary concluded
between the governments concerned.

MOD 7436 3679 § 2. The use of the Morse code signals specified in the Instructions for the
1003 Operation of the International Public Telegram Service shall be obligatory in the
aeronautical mobile service. However, for radiocommunications of a special char-
acter, the use of other signals is not precluded.

MOD 7437 3680 § 3. In order to facilitate radiocommunications, stations shall use the service
1004 abbreviations given in Appendix 13.

NOC

Section II. Calls

NOC 7438 3681 *A. General*

NOC 7439 3682 § 4. The provisions of this Article are not applicable to the aeronautical
1063 mobile service when special agreements exist between the governments concerned.

MOD 7440 3683 § 5. (1) As a general rule, it rests with the aircraft station to establish communi-
1065 cation with the aeronautical station. For this purpose, the aircraft station may call
the aeronautical station only when it comes within the service area of the latter, that
is to say, that area within which, by using an appropriate frequency, the aircraft
station can be heard by the aeronautical station.

MOD 7441 3684 (2) However, an aeronautical station having traffic for an aircraft station
1066 may call this station if it has reason to believe that the aircraft station is keeping
watch and is within the service area of the aeronautical station.

MOD 7442 3685 § 6. When an aeronautical station receives calls from several aircraft stations
1076 at practically the same time, it decides the order in which these stations may
transmit their traffic. Its decision shall be based on the priority (see No. 3651) of the
radiotelegrams that aircraft stations have on hand and on the need for allowing
each calling station to clear the greatest possible number of communications.

NOC	7443 1077	3686	§ 7. (1) When a station called does not reply to a call sent three times at intervals of two minutes, the calling shall cease and shall not be renewed until after an interval of fifteen minutes.
NOC	7444 1079	3687	(2) Before renewing the call, the calling station shall ascertain that the station called is not in communication with another station.
MOD	7445 1080	3688	(3) If there is no reason to believe that harmful interference will be caused to other communications in progress, the provisions of No. 3686 are not applicable. In such cases the call, sent three times at intervals of two minutes, may be repeated after an interval of less than fifteen minutes but not less than three minutes.
MOD	7446 1081	3689	§ 8. Aircraft stations shall not radiate a carrier wave between calls.
MOD	7447 1082	3690	§ 9. When the name and address of the administration or private operating agency controlling an aircraft station are not given in the appropriate list of stations or are no longer in agreement with the particulars given therein, it is the duty of the aircraft station to furnish as a matter of regular procedure, to the aeronautical station to which it transmits traffic, all the necessary information in this respect.
MOD	7448 1083	3691	§ 10. (1) The aeronautical station may, by means of the abbreviation TR, ask the aircraft station to furnish it with the following information:
MOD	7449 1084	3692	a) position and, whenever possible, heading and speed;
MOD	7450 1085	3693	b) next destination.
MOD	7451 1086	3694	(2) The information referred to in Nos. 3691 to 3693, preceded by the abbreviation TR, should be furnished by aircraft stations, whenever this seems appropriate, without prior request from the aeronautical station. The provision of this information is authorized only by the person responsible for the aircraft.
NOC	7452	3695	<i>B. Calls to Several Stations</i>
NOC	7453 1088	3696	§ 11. Two types of calling signal “to all stations” are recognized:
MOD	7454 1089	3697	a) call CQ followed by the letter K (see No. 3699);
NOC	7455 1090	3698	b) call CQ not followed by the letter K (see No. 3700).
NOC	7456 1091	3699	§ 12. Stations desiring to enter into communication with stations of the mobile service without, however, knowing the names of any such stations within their service area may use the enquiry signal CQ in place of the call sign of the station called in the calling formula, the call being followed by the letter K (general call to all stations in the mobile service with request for reply).
NOC	7457 1093	3700	§ 13. The call CQ not followed by the letter K (general call to all stations without request for reply) is used before the transmission of information of any kind intended to be read or used by anyone who can intercept it.

NOC 7458 3701 § 14. The call CP followed by two or more call signs or by a code word (call
1094 to certain receiving stations without request for reply) is used only for the transmis-
sion of information of any nature intended to be read or used by the persons
authorized.

NOC **Section III. Preliminary Operations**

NOC 7459 3702 § 15. (1) Before transmitting, a station shall take precautions to ensure that its
1007 emissions will not interfere with transmissions already in progress; if such interfer-
ence is likely, the station shall await an appropriate break in the communications in
progress. This obligation does not apply to stations where unattended operation is
possible through automatic means (see No. 3394) on frequencies dedicated to
narrow-band direct-printing.

NOC 7460 3703 (2) If, these precautions having been taken, the emissions of the station
1008 should, nevertheless, interfere with a transmission already in progress, the following
rules shall be applied:

MOD 7461 3704 a) the aircraft station whose emission causes interference to the
1009 communication of a mobile station with a land station shall cease
sending at the first request of the land station;

MOD 7462 3705 b) the aircraft station whose emission causes interference to communi-
1010 cations already in progress between mobile stations shall cease
sending at the first request of one of the other stations;

NOC 7463 3706 c) the station which requests this cessation shall indicate the approxi-
1011 mate waiting time imposed on the station whose emission it
suspends.

NOC **Section IV. Method of Calling, Reply to Calls and Signals
Preparatory to Traffic**

NOC 7464 3707 *A. Method of Calling*

NOC 7465 3708 § 16. (1) The call consists of:
1012

- the call sign of the station called, not more than three times;
- the word DE;
- the call sign of the calling station, not more than three times.

NOC 7466 3709 (2) However, in the bands between 4 000 kHz and 27 500 kHz, when the
1013 conditions of establishing contact are difficult, the call signs may be transmitted
more than three times, but not more than ten times each. In this case, the call signs
of the called and the calling station shall be transmitted in alternate sequence up to
a total of twenty call signs altogether (e.g. ABC ABC de WXYZ WXYZ... or ABC
ABC ABC de WXYZ WXYZ WXYZ...). This call may be sent three times at
intervals of two minutes; thereafter it shall not be repeated until an interval of
fifteen minutes has elapsed.

NOC	7467 1014	3710	§ 17. For making the call and for transmitting preparatory signals, the calling station shall use a frequency on which the station called keeps watch.
NOC	7468	3711	<i>B. Indication of the Frequency to Be Used for Traffic</i>
MOD	7469 1016	3712	§ 18. (1) The call, as described in Nos. 3708 and 3709, shall be followed by the service abbreviation indicating the working frequency and, if useful, the class of emission which the calling station proposes to use for the transmission of its traffic.
MOD	7470 1017	3713	(2) When, as an exception to this rule, the call is not followed by an indication of the frequency to be used for the traffic, this indicates:
MOD	7471 1018	3714	a) where the calling station is an aeronautical station, that it proposes to use for traffic its normal working frequency shown in the appropriate document;
MOD	7472 1019	3715	b) where the calling station is an aircraft station, that the frequency to be used for traffic is to be chosen by the station called from the frequencies on which the calling station can transmit.
NOC	7473	3716	<i>C. Indication of Priority, of the Reason for the Call, and of Transmission of Radiotelegrams in Series</i>
MOD	7474 1020	3717	§ 19. (1) When the calling station has more than one radiotelegram to transmit to the station called, the above-mentioned preparatory signals shall be followed by the service abbreviation and the figure giving the number of such radiotelegrams.
NOC	7475 1021	3718	(2) Moreover, when the calling station wishes to send its radiotelegrams in series, it shall indicate this by adding the service abbreviation for requesting the consent of the station called.
NOC	7476	3719	<i>D. Form of Reply to Calls</i>
MOD	7477 1022	3720	§ 20. The reply to calls consists of: - the call sign of the calling station, not more than three times; - the word DE; - the call sign of the station called, once only.
NOC	7478	3721	<i>E. Frequency for Reply</i>
NOC	7479 1023	3722	§ 21. Except as otherwise provided in these Regulations, for transmitting the reply to calls and to preparatory signals, the station called shall use the frequency on which the calling station keeps watch, unless the calling station has specified a frequency for the reply.

NOC	7480	3723	<i>F. Agreement on the Frequency to Be Used for Traffic</i>
NOC	7481 1027	3724	§ 22. (1) If the station called is in agreement with the calling station, it shall transmit:
NOC	7482 1028	3725	a) the reply to the call;
NOC	7483 1029	3726	b) the service abbreviation indicating that from that moment onwards it will listen on the working frequency announced by the calling station;
NOC	7484 1030	3727	c) if necessary, the indications referred to in No. 3736;
MOD	7485 1031	3728	d) if useful, the service abbreviation and figure indicating the strength and/or intelligibility of the signals received (see Appendix 13);
NOC	7486 1032	3729	e) the letter K if the station called is ready to receive the traffic of the calling station.
NOC	7487 1033	3730	(2) If the station called is not in agreement with the calling station on the working frequency to be used, it shall transmit:
NOC	7488 1034	3731	a) the reply to the call;
NOC	7489 1035	3732	b) the service abbreviation indicating the working frequency to be used by the calling station and, if necessary, the class of emission;
NOC	7490 1036	3733	c) if necessary, the indications specified in No. 3736.
NOC	7491 1037	3734	(3) When agreement is reached regarding the working frequency which the calling station shall use for its traffic, the station called shall transmit the letter K after the indications contained in its reply.
NOC	7492	3735	<i>G. Reply to the Request for Transmission by Series</i>
NOC	7493 1038	3736	§ 23. The station called, in replying to a calling station which has proposed to transmit its radiotelegrams by series (see No. 3718), shall indicate, by means of the service abbreviation, its acceptance or refusal. In the former case it shall specify, if necessary, the number of radiotelegrams which it is ready to receive in one series.
NOC	7494	3737	<i>H. Difficulties in Reception</i>
NOC	7495 1039	3738	§ 24. (1) If the station called is unable to accept traffic immediately, it shall reply to the call as indicated in Nos. 3724 to 3729, but it shall replace the letter K by the signal · – · · · (wait), followed by a number indicating in minutes the probable duration of the waiting time. If the probable duration exceeds ten minutes (five minutes in the case of an aircraft station communicating with a station of the maritime mobile service), the reason for the delay shall be given.
NOC	7496 1040	3739	(2) When a station receives a call without being certain that such a call is intended for it, it shall not reply until the call has been repeated and understood. When, on the other hand, a station receives a call which is intended for it but is uncertain of the call sign of the calling station, it shall reply immediately using the service abbreviation in place of the call sign of this latter station.

NOC

Section V. Forwarding (Routing) of Traffic

NOC 7497 3740

A. Traffic Frequency

MOD 7498 3741
1041

§ 25. (1) As a general rule, a station of the aeronautical mobile service shall transmit its traffic on one of its working frequencies in that band in which the call has been made.

MOD 7499 3742
1043

(2) The use of frequencies reserved for calling shall be forbidden for traffic, except distress traffic (see Chapter IX).

NOC 7500 3743
1044

(3) If the transmission of a radiotelegram is to take place on a frequency and/or with a class of emission other than those used for the call, the transmission of the radiotelegram shall be preceded by:

- the call sign of the station called, not more than twice;
- the word DE;
- the call sign of the calling station, once only.

NOC 7501 3744
1045

(4) If the transmission is to be made on the same frequency and with the same class of emission as the call, the transmission of the radiotelegram shall be preceded, if necessary, by:

- the call sign of the station called;
- the word DE;
- the call sign of the calling station.

NOC 7502 3745

B. Numbering in Daily Series

MOD 7503 3746
1046

§ 26. (1) As a general rule, radiotelegrams in the public correspondence service transmitted by aircraft stations shall be numbered in a daily series; number 1 shall be given to the first radiotelegram sent each day to each separate station.

NOC 7504 3747
1047

(2) A series of numbers which has begun in radiotelegraphy should be continued in radiotelephony and vice versa.

NOC 7505 3748

C. Long Radiotelegrams

NOC 7506 3749
1048

§ 27. (1) In cases where both stations are able to change from sending to receiving without manual switching, the transmitting station may continue to send until completion of the message or until the receiving station breaks in on the transmission with the service abbreviation BK. Before commencing, both stations normally agree on such a method of working by means of the abbreviation QSK.

NOC 7507 3750
1049

(2) If this method of working cannot be employed, long radiotelegrams, whether in plain language or in secret language, shall, as a general rule, be transmitted in sections, each section containing fifty words in the case of plain language and twenty words or groups if secret language is used.

NOC 7508 3751 (3) At the end of each section the signal . . . — . . . (?) meaning “Have
1050 you received the radiotelegram correctly up to this point?” shall be transmitted. If
the section has been correctly received, the receiving station shall reply by sending
the letter K and the transmission of the radiotelegram shall be continued.

NOC 7509 3752 *D. Suspension of Traffic*

MOD 7510 3753 § 28. When an aircraft station transmits on a working frequency of an
1051 aeronautical station and causes interference to the transmission of such an aeronau-
tical station, it shall suspend working at the first request of the latter.

NOC **Section VI. End of Traffic and Work**

NOC 7511 3754 *A. Signal for the End of Transmission*

NOC 7512 3755 § 29. (1) The transmission of a radiotelegram shall be terminated by the signal
1052 . . . — . . . (end of transmission), followed by the letter K.

NOC 7513 3756 (2) In the case of transmission by series, the end of each radiotelegram shall
1053 be indicated by the signal . . . — . . . (end of transmission) and the end of the series
by the letter K.

NOC 7514 3757 *B. Acknowledgement of Receipt*

NOC 7515 3758 § 30. (1) The acknowledgement of receipt of a radiotelegram or a series of
1054 radiotelegrams shall be given by the receiving station in the following manner:

- the call sign of the sending station;
- the word DE;
- the call sign of the receiving station;
- the letter R followed by the number of the radiotelegram; *or*
- the letter R followed by the number of the last radiotelegram of a
series.

MOD 7516 3759 (2) The acknowledgement of receipt shall be transmitted by the receiving
1055 station on the traffic frequency (see No. 3741).

NOC 7517 3760 *C. End of Work*

NOC 7518 3761 § 31. (1) The end of work between two stations shall be indicated by each of them
1056 by means of the signal . . . — . . . (end of work).

NOC 7519 3762 (2) The signal . . . — . . . (end of work) shall also be used:
1057

- when the transmission of radiotelegrams of general information,
meteorological information and general safety notices is finished;
and
- when transmission is ended in long-distance radiocommunication
services with deferred acknowledgement of receipt or without
acknowledgement of receipt.

NOC

Section VII. Control of Working

NOC	7520 1058	3763	§ 32. The provisions of this Section are not applicable in cases of distress, urgency or safety (see No. 3677).
-----	--------------	------	-----------------------------------------------------------------------------------------------------------------

MOD	7521 1059	3764	§ 33. In communication between aeronautical stations and aircraft stations the aircraft station shall comply with the instructions given by the aeronautical station in all questions relating to the order and time of transmission, to the choice of frequency and class of emission, and to the duration and suspension of work.
-----	--------------	------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

MOD	7522 1060	3765	§ 34. In communication between aircraft stations the station called shall control the working in the manner indicated in No. 3764. However, if an aeronautical station finds it necessary to intervene, these stations shall comply with the instructions given by the aeronautical station.
-----	--------------	------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

NOC

Section VIII. Tests

MOD	7523 1061	3766	§ 35. When it is necessary for an aircraft station to send signals for testing or adjustment which are liable to interfere with the working of neighbouring coast or aeronautical stations, the consent of these stations shall be obtained before such signals are sent.
-----	--------------	------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

MOD	7524 1062	3767	§ 36. When it is necessary for a station in the aeronautical mobile service to send test signals, either for the adjustment of a transmitter before making a call or for the adjustment of a receiver, such signals shall not be continued for more than ten seconds and shall be composed of a series of VVV followed by the call sign of the station emitting the test signals.
-----	--------------	------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

3768 to 3792	NOT allocated.

**Radiotelephone Procedure in the
Aeronautical Mobile Service – Calls**

- | | | | |
|-----|--------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| NOC | 7550
1296 | 3793 | § 1. The provisions of this Article are not applicable to the aeronautical mobile service when special agreements exist between the governments concerned. |
| MOD | 7551
1298 | 3794 | § 2. (1) As a general rule, it rests with the aircraft station to establish communication with the aeronautical station. For this purpose the aircraft station may call the aeronautical station only when it comes within the service area of the latter, that is to say, that area within which, by using an appropriate frequency, the aircraft station can be heard by the aeronautical station. |
| MOD | 7552
1299 | 3795 | (2) However, an aeronautical station having traffic for an aircraft station may call this station if it has reason to believe that the aircraft station is keeping watch and is within the service area of the aeronautical station. |
| MOD | 7553
1307 | 3796 | § 3. When an aeronautical station receives calls from several aircraft stations at practically the same time, it decides the order in which these stations may transmit their traffic. Its decision shall be based on the priority (see No. 3651) of the radiotelegrams or radiotelephone calls that aircraft stations have on hand and on the need for allowing each calling station to clear the greatest possible number of communications. |
| NOC | 7554
1308 | 3797 | § 4. (1) When a station called does not reply to a call sent three times at intervals of two minutes, the calling shall cease and shall not be renewed until after an interval of fifteen minutes. |
| NOC | 7555
1310 | 3798 | (2) Before renewing the call, the calling station shall ascertain that the station called is not in communication with another station. |
| MOD | 7556
1311 | 3799 | (3) If there is no reason to believe that harmful interference will be caused to other communications in progress, the provisions of No. 3797 are not applicable. In such cases the call, sent three times at intervals of two minutes, may be repeated after an interval of less than fifteen minutes but not less than three minutes. |
| MOD | 7557
1312 | 3800 | § 5. Aircraft stations shall not radiate a carrier wave between calls. |
| MOD | 7558
1313 | 3801 | § 6. When the name and address of the administration or private operating agency controlling an aircraft station are not given in the appropriate list of stations or are no longer in agreement with the particulars given therein, it is the duty of the aircraft station to furnish as a matter of regular procedure, to the aeronautical station to which it transmits traffic, all the necessary information in this respect. |

MOD 7559 3802 § 7. (1) The aeronautical station may, by means of the abbreviation TR (spoken
1314 as TANGO ROMEO), ask the aircraft station to furnish it with the following
information:

MOD 7560 3803 a) position and, whenever possible, heading and speed;
1315

MOD 7561 3804 b) next destination.
1316

MOD 7562 3805 (2) The information referred to in Nos. 3802 to 3804, preceded by the
1317 abbreviation TR, should be furnished by aircraft stations, whenever this seems
appropriate, without prior request from the aeronautical station. The provision of
this information is authorized only by the person responsible for the aircraft.

Section I. General Provisions

- | | | | |
|-----|-----------------|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MOD | 7692
848 | 3860 | § 1. (1) The service of every ship radiotelegraph station shall be performed by an operator holding a certificate issued or recognized by the government to which the station is subject. |
| MOD | 7693
849 | 3861 | (2) The service of every ship radiotelephone station shall be controlled by an operator holding a certificate issued or recognized by the government to which the station is subject. Provided the station is so controlled, other persons besides the holder of the certificate may use the radiotelephone equipment. |
| MOD | 7694
849A | 3862 | (3) The service of every ship earth station shall be controlled by a person holding a certificate issued or recognized by the government to which the station is subject. Provided the station is so controlled, other persons besides the holder of the certificate may use the equipment. |
| MOD | 7695
850 | 3863 | (4) The service of automatic communication devices ¹ installed in a ship station shall be controlled by an operator holding a certificate issued or recognized by the government to which the station is subject. Provided the devices are so controlled, they may be used by other persons. If such devices require for their basic function the use of Morse code signals specified in the Instructions for the Operation of the International Public Telegram Service, the service shall be performed by an operator holding a radiotelegraph operator's certificate. However, this latter requirement does not apply to automatic devices which may use Morse code signals solely for identification purposes. |
| NOC | 7696
851 | 3864 | (5) Nevertheless, in the service of radiotelephone stations operating solely on frequencies above 30 MHz, each government shall decide for itself whether a certificate is necessary and, if so, shall define the conditions for obtaining it. |
| MOD | 7697
852 | 3865 | (6) The provisions of No. 3864 shall not, however, apply to any ship station working on frequencies assigned for international use. |
| MOD | 7698
853 | 3866 | § 2. (1) In the case of complete unavailability of the operator in the course of a sea passage and solely as a temporary measure, the master or the person responsible for the station may authorize an operator holding a certificate issued by the government of another Member to perform the radiocommunication service. |
| NOC | 7695.1
850.1 | 3863.1 | ¹ The term "automatic communication devices" is intended to include such equipment as teleprinters, data transfer systems, etc. |

MOD	7699 854	3867	(2) When it is necessary to employ a person without a certificate or an operator not holding an adequate certificate as a temporary operator, his performance as such must be limited solely to signals of distress, urgency and safety, messages relating thereto, messages relating directly to the safety of life and urgent messages relating to the movement of the ship. Persons employed in these cases are bound by the provisions of No. 3877 regarding the secrecy of correspondence.
NOC	7700 855	3868	(3) In all cases, such temporary operators must be replaced as soon as possible by operators holding the certificate prescribed in paragraph 1 of this Article.
NOC	7701 856	3869	§ 3. (1) Each administration shall take the necessary steps to prevent, to the maximum extent possible, the fraudulent use of certificates. For this purpose, such certificates shall bear the holder's signature and shall be authenticated by the issuing administration. Administrations may employ, if they wish, other means of identification such as photographs, fingerprints, etc.
MOD	7702 856A	3870	(2) In the maritime mobile service the certificates issued after 1 January 1978 shall bear the photograph of the holder and the holder's date of birth.
NOC	7703 857	3871	(3) To facilitate verification of certificates, these may carry, if necessary, in addition to the text in the national language, a translation of this text in a working language of the Union.
MOD	7704 857A	3872	(4) In the maritime mobile service all certificates not in one of the working languages of the Union and issued after 1 January 1978 shall carry at least the following information in one of these working languages:
		3873	a) the name and date of birth of the holder;
		3874	b) the title of the certificate and its date of issue;
		3875	c) if applicable, the number and period of validity of the certificate;
		3876	d) the issuing administration.
NOC	7705 858	3877	§ 4. Each administration shall take the necessary steps to place operators under the obligation to preserve the secrecy of correspondence as provided for in No. 2023.

NOC **Section II. Categories of Certificates
for Ship Station Operators**

NOC	7706 866A	3878	§ 5. (1) There are four categories of certificates for radiotelegraph operators ¹ , namely:
		3879	a) the radiocommunication operator's general certificate;
		3880	b) the first-class radiotelegraph operator's certificate;
		3881	c) the second-class radiotelegraph operator's certificate;
		3882	d) the radiotelegraph operator's special certificate.

NOC 7706.1
866A.1 3878.1 ¹ As regards the employment of operators holding the different certificates, see Article 56.

- NOC 7707 3883 (2) There are two categories of radiotelephone operators' ¹ certificates, 866B general and restricted.
- NOC 7708 3884 § 6. (1) The holder of a radiocommunication operator's general certificate, or of 866C a first-class or second-class radiotelegraph operator's certificate, may carry out the radiotelegraph or radiotelephone service of any ship station.
- NOC 7709 3885 (2) The holder of a radiotelephone operator's general certificate may carry 866D out the radiotelephone service of any ship station.
- NOC 7710 3886 (3) The holder of a radiotelephone operator's restricted certificate may carry 866E out the radiotelephone service of any ship station, provided that the operation of the transmitter requires only the use of simple external controls, and excludes all manual adjustment of frequency determining elements, with the stability of the frequencies maintained by the transmitter itself within the limits of tolerance specified by Appendix 7, and the peak envelope power of the transmitter does not exceed 1.5 kilowatt.
- NOC 7711 3887 (4) The radiotelephone operator's restricted certificate may be limited exclu- 866F sively to one or more of the maritime mobile frequency bands. In such cases the certificate shall be suitably endorsed.
- NOC 7712 3888 (5) The radiotelegraph service of ships for which a radiotelegraph installa- 866G tion is not made compulsory by international agreements, as well as the radiotelephone service of ship stations for which only a radiotelephone operator's restricted certificate is required, may be carried out by the holder of a radiotelegraph operator's special certificate.
- NOC 7713 3889 (6) However, where the conditions specified in No. 3934 are satisfied, the 866H radiotelegraph service of ships for which a radiotelegraph installation is not made compulsory by international agreements, as well as the radiotelephone service of any ship station, may be carried out by the holder of a radiotelegraph operator's special certificate.
- NOC 7714 3890 § 7. Exceptionally, the second-class radiotelegraph operator's certificate as 866I well as the radiotelegraph operator's special certificate may be limited exclusively to the radiotelegraph service. In such cases the certificate shall be suitably endorsed.

NOC Section III. Conditions for the Issue of Operators' Certificates

NOC 7715 3891 A. General

- NOC 7716 3892 § 8. (1) The conditions to be imposed for obtaining the various certificates are 867 contained in the following paragraphs and represent the minimum requirements.

NOC 7707.1 3883.1 ¹ As regards the employment of operators holding the different certificates, see 866B.1 Article 56.

NOC	7717 868	3893	(2) Each administration is free to fix the number of examinations necessary to obtain each certificate.
MOD	7718 869	3894	§ 9. (1) The administration which issues a certificate may, before authorizing an operator to carry out the service on board a ship, require the fulfilment of other conditions (for example: experience with automatic communication devices; further technical and professional knowledge relating particularly to navigation; physical fitness, etc.).
NOC	7719 870	3895	(2) Administrations should take whatever steps they consider necessary to ensure the continued proficiency of operators after prolonged absences from operational duties.
NOC	7720 870A	3896	(3) However, with respect to the maritime mobile service, administrations should also take whatever steps they consider necessary to ensure the continued proficiency of operators while in service.
NOC	7721	3897	<i>B. Radiocommunication Operator's General Certificate for the Maritime Mobile Service</i>
NOC	7722 870B	3898	§ 10. The radiocommunication operator's general certificate for the maritime mobile service is issued to candidates who have given proof of the technical and professional knowledge and qualifications enumerated below:
NOC	7723 870C	3899	a) knowledge of the principles of electricity and the theory of radio and of electronics sufficient to meet the requirements specified in Nos. 3900, 3901 and 3902;
NOC	7724 870D	3900	b) theoretical knowledge of modern radiocommunication equipment, including marine radiotelegraph and radiotelephone transmitters and receivers, marine antenna systems, automatic alarm devices, radio equipment for lifeboats and other survival craft, direction-finding equipment, together with all auxiliary items including power supply (such as motors, alternators, generators, inverters, rectifiers and accumulators), as well as a general knowledge of the principles of other apparatus generally used for radionavigation, with particular reference to maintaining the equipment in service;
NOC	7725 870E	3901	c) practical knowledge of the operation, adjustment and maintenance of the apparatus mentioned in No. 3900, including the taking of direction-finding bearings and knowledge of the principles of the calibration of radio direction-finding apparatus;
NOC	7726 870F	3902	d) practical knowledge necessary for the location and remedying (using appropriate testing equipment and tools) of faults in the apparatus mentioned in No. 3900 which may occur during a voyage;
NOC	7727 870G	3903	e) ability to send correctly by hand and to receive correctly by ear, in the Morse code, code groups (mixed letters, figures and punctuation marks) at a speed of sixteen groups a minute, and a plain language text at a speed of twenty words a minute. Each code group shall comprise five characters, each figure or punctuation mark counting

as two characters. The average word of the text in plain language shall contain five characters. The duration of each test of sending and receiving shall be, as a rule, five minutes;

NOC	7728 870H	3904	<i>f)</i> ability to send correctly and to receive correctly by radiotelephone;
NOC	7729 870I	3905	<i>g)</i> knowledge of the Regulations applying to radiocommunications, knowledge of the documents relating to charges for radiocommunications and knowledge of the provisions of the Convention for the Safety of Life at Sea which relate to radio;
NOC	7730 870J	3906	<i>h)</i> a sufficient knowledge of world geography, especially the principal shipping routes and the most important telecommunication routes;
NOC	7731 870K	3907	<i>i)</i> knowledge of one of the working languages of the Union. Candidates should be able to express themselves satisfactorily in that language, both orally and in writing. Each administration shall decide for itself the language or languages required.
NOC	7732	3908	<i>C. First-Class Radiotelegraph Operator's Certificate</i>
NOC	7733 871	3909	§ 11. The first-class certificate is issued to candidates who have given proof of the technical and professional knowledge and qualifications enumerated below:
NOC	7734 872	3910	<i>a)</i> knowledge both of the general principles of electricity and of the theory of radio, knowledge of the adjustment and practical working of various types of radiotelegraph and radiotelephone apparatus used in the mobile service, including apparatus used for radio direction-finding and the taking of direction-finding bearings, as well as a general knowledge of the principles of operation of other apparatus generally used for radionavigation;
NOC	7735 873	3911	<i>b)</i> theoretical and practical knowledge of the operation and maintenance of apparatus, such as motor-generators, storage batteries, etc., used in the operation and adjustment of the radiotelegraph, radiotelephone and radio direction-finding apparatus mentioned in No. 3910;
NOC	7736 874	3912	<i>c)</i> practical knowledge necessary to repair, with the means available on board, damage which may occur to the radiotelegraph, radiotelephone and radio direction-finding apparatus during a voyage;
NOC	7737 875	3913	<i>d)</i> ability to send correctly by hand and to receive correctly by ear, in the Morse code, code groups (mixed letters, figures and punctuation marks), at a speed of twenty groups a minute, and a plain language text at a speed of twenty-five words a minute. Each code group shall comprise five characters, each figure or punctuation mark counting as two characters. The average word of the text in plain language shall contain five characters. The duration of each test of sending and of receiving shall be, as a rule, five minutes;

NOC	7738 876	3914	e) ability to send correctly and to receive correctly by radiotelephone;
MOD	7739 877	3915	f) detailed knowledge of the Regulations applying to radiocommunications, knowledge of the documents relating to charges for radiocommunications and knowledge of the provisions of the Convention for the Safety of Life at Sea which relate to radio;
NOC	7740 878	3916	g) a sufficient knowledge of world geography, especially the principal shipping and air routes and the most important telecommunication routes;
NOC	7741 879	3917	h) sufficient knowledge of one of the working languages of the Union. Candidates should be able to express themselves satisfactorily in that language, both orally and in writing. Each administration shall decide for itself the language or languages required.
NOC	7742	3918	<i>D. Second-Class Radiotelegraph Operator's Certificate</i>
NOC	7743 880	3919	§ 12. The second-class certificate is issued to candidates who have given proof of the technical and professional knowledge and qualifications enumerated below:
NOC	7744 881	3920	a) elementary theoretical and practical knowledge of electricity and of radio, knowledge of the adjustment and practical working of the various types of radiotelegraph and radiotelephone apparatus used in the mobile service, including apparatus used for radio direction-finding and the taking of direction-finding bearings, as well as elementary knowledge of the principles of operation of other apparatus in general use for radionavigation;
NOC	7745 882	3921	b) elementary theoretical and practical knowledge of the operation and maintenance of apparatus, such as motor-generators, storage batteries, etc., used in the operation and adjustment of the radiotelegraph, radiotelephone and radio direction-finding apparatus mentioned in No. 3920;
NOC	7746 883	3922	c) practical knowledge sufficient for effecting repairs in the case of minor damage which may occur to the radiotelegraph, radiotelephone and radio direction-finding apparatus during a voyage;
NOC	7747 884	3923	d) ability to send correctly by hand and to receive correctly by ear, in the Morse code, code groups (mixed letters, figures and punctuation marks) at a speed of sixteen groups a minute, and a plain language text at a speed of twenty words a minute. Each code group shall comprise five characters, each figure or punctuation mark counting as two characters. The average word of the text in plain language shall contain five characters. The duration of each test of sending and of receiving shall, as a rule, be five minutes;
MOD	7748 885	3924	e) ability to send correctly and to receive correctly by radiotelephone, except in the case provided for in No. 3890;

MOD	7749 886	3925	f)	knowledge of the Regulations applying to radiocommunications, knowledge of the documents relating to charges for radiocommunications and knowledge of the provisions of the Convention for the Safety of Life at Sea which relate to radio;
NOC	7750 887	3926	g)	a sufficient knowledge of world geography, especially the principal shipping and air routes and the most important telecommunication routes;
NOC	7751 888	3927	h)	if necessary, an elementary knowledge of one of the working languages of the Union. Candidates should be able to express themselves satisfactorily in that language, both orally and in writing. Each administration shall decide for itself the language or languages required.
NOC	7752	3928	<i>E. Radiotelegraph Operator's Special Certificate</i>	
NOC	7753 889	3929	§ 13. (1) The radiotelegraph operator's special certificate is issued to candidates who have given proof of the knowledge and professional qualifications enumerated below:	
NOC	7754 890	3930	a)	ability to send correctly by hand and receive correctly by ear, in the Morse code, code groups (mixed letters, figures, and punctuation marks) at a speed of sixteen groups a minute, and a plain language text at a speed of twenty words a minute. Each code group shall comprise five characters, each figure or punctuation mark counting as two characters. The average word of the text in plain language shall contain five characters;
NOC	7755 891	3931	b)	knowledge of the practical operation and adjustment of radiotelegraph apparatus;
NOC	7756 892	3932	c)	knowledge of the Regulations applying to radiotelegraph communications and specifically of that part of those Regulations relating to safety of life at sea.
MOD	7757 893	3933	(2) Each administration concerned shall fix the other conditions for obtaining this certificate. However, the conditions specified in Nos. 3941, 3942, 3943 and 3944 or 3945, as the case may be, shall be satisfied.	
NOC	7758 893A	3934	(3) In the maritime mobile service each administration concerned shall fix the other conditions for obtaining this certificate. However, except as provided for in No. 3890, the conditions specified in Nos. 3936, 3937, 3938, 3939 and 3940 shall be satisfied for such a certificate issued to ship station operators after 1 January 1976.	
NOC	7759	3935	<i>F. Radiotelephone Operators' Certificates</i>	
MOD	7760 894	3936	§ 14. The radiotelephone operator's general certificate is issued to candidates who have given proof of the knowledge and professional qualifications enumerated below (see also Nos. 3884, 3885, 3888 and 3889):	
NOC	7761 895	3937	a)	a knowledge of the elementary principles of radiotelephony;

NOC	7762 896	3938	b) detailed knowledge of the practical operation and adjustment of radiotelephone apparatus;
NOC	7763 897	3939	c) ability to send correctly and to receive correctly by radiotelephone;
NOC	7764 898	3940	d) detailed knowledge of the Regulations applying to radiotelephone communications and specifically of that part of those Regulations relating to the safety of life.
NOC	7765 899	3941	§ 15. (1) The restricted radiotelephone operator's certificate is issued to candidates who have given proof of the knowledge and professional qualifications enumerated below:
NOC	7766 900	3942	a) practical knowledge of radiotelephone operation and procedure;
NOC	7767 901	3943	b) ability to send correctly and to receive correctly by telephone;
NOC	7768 902	3944	c) general knowledge of the Regulations applying to radiotelephone communications and specifically of that part of those Regulations relating to the safety of life.
MOD	7769 903	3945	(2) For ship radiotelephone stations where the peak envelope power of the transmitter does not exceed 400 watts, each administration may itself fix these conditions for obtaining a restricted radiotelephone operator's certificate, provided that the operation of the transmitter requires only the use of simple external switching devices, excluding all manual adjustment of frequency determining elements, and that the stability of the frequencies is maintained by the transmitter itself within the limits of tolerance specified in Appendix 7. However, in fixing the conditions, administrations shall ensure that the operator has an adequate knowledge of radiotelephone operation and procedure particularly as far as distress, urgency and safety are concerned. This in no way contravenes the provisions of No. 3949.
NOC	7770 904	3946	(3) Administrations in Region 1 do not issue certificates under No. 3945.
NOC	7771 905	3947	§ 16. A radiotelephone operator's certificate shall show whether it is a general certificate or a restricted certificate and, in the latter case, if it has been issued in conformity with the provisions of No. 3945.
MOD	7772 905A	3948	§ 17. In the maritime mobile service a radiotelephone operator's restricted certificate shall show whether it is also limited as provided for in No. 3887.
NOC	7773 906	3949	§ 18. In order to meet special needs, special agreements between administrations may fix the conditions to be fulfilled in order to obtain a radiotelephone operator's certificate, intended to be used in radiotelephone stations complying with certain technical conditions and certain operating conditions. These agreements, if made, shall be on the condition that harmful interference to international services shall not result therefrom. These conditions and agreements shall be mentioned in the certificates issued to such operators.

MOD

Inspection of Ship Stations and Ship Earth Stations

- MOD 7836 838 4012 § 1. (1) The governments or appropriate administrations of countries which a ship station or ship earth station visits may require the production of the licence for examination. The operator of the station, or the person responsible for the station, shall facilitate this examination. The licence shall be kept in such a way that it can be produced upon request. As far as possible, the licence, or a copy certified by the authority which has issued it, should be permanently exhibited in the station.
- MOD 7837 839 4013 (2) The inspectors shall have in their possession an identity card or badge, issued by the competent authority, which they shall show on request of the master or person responsible for the ship or other vessel carrying the ship station or the ship earth station.
- NOC 7838 840 4014 (3) When the licence cannot be produced or when manifest irregularities are observed, governments or administrations may inspect the radio installations in order to satisfy themselves that these conform to the conditions imposed by these Regulations.
- NOC 7839 841 4015 (4) In addition, inspectors have the right to require the production of the operators' certificates, but proof of professional knowledge may not be demanded.
- MOD 7840 842 4016 § 2. (1) When a government or an administration has found it necessary to adopt the course indicated in No. 4014, or when the operators' certificates cannot be produced, the government or administration to which the ship station or ship earth station is subject shall be so informed without delay. In addition, the procedure specified in Article 21 is followed when necessary.
- MOD 7841 843 4017 (2) Before leaving, the inspector shall report the result of his inspection to the master, or the person responsible for the ship or other vessel carrying the ship station or ship earth station. If any breach of the conditions imposed by these Regulations is observed, the inspector shall make this report in writing.
- MOD 7842 844 4018 § 3. Members of the Union undertake not to impose upon foreign ship stations or upon foreign ship earth stations which are temporarily within their territorial waters or which make a temporary stay in their territory technical and operating conditions more severe than those contemplated in these Regulations. This undertaking in no way affects arrangements which are made under international agreements relating to maritime navigation, and which are therefore not covered by these Regulations.

NOC

**Working Hours of Stations in the
Maritime Mobile Service**

NOC

Section I. General

(MOD) 7866 4044 § 1. In order to permit the application of the following rules on the subject
921 of hours of watch, every station of the maritime mobile service shall have an accurate clock correctly regulated to Coordinated Universal Time (UTC).

(MOD) 7867 4045 § 2. Coordinated Universal Time (UTC), reckoned from 0000 to 2359 hours
922 beginning at midnight, shall be used for all entries in the radiocommunication service log and in all similar documents of ships compulsorily equipped with radiocommunication apparatus in compliance with an international agreement; this same provision will apply, as far as possible, to other ships.

NOC

Section II. Coast Stations

NOC 7868 4046 § 3. (1) The service of coast stations is, as far as possible, continuous (day and
923 night). Certain coast stations, however, may have a service of limited duration. Each administration or recognized private operating agency duly authorized to that effect fixes the hours of service for coast stations under its jurisdiction.

NOC 7869 4047 (2) These hours of service shall be notified to the Secretary-General who
924 shall publish them in the List of Coast Stations.

NOC 7870 4048 § 4. Coast stations whose service is not continuous shall not close before:
925

NOC 7871 4049 a) finishing all operations resulting from a distress call or from an
926 urgency or safety signal;

MOD 7872 4050 b) exchanging all traffic originating in or destined for ship stations
927 which are situated within their service area and have indicated their presence before the actual cessation of work;

NOC 7873 4051 c) making a general call to all stations announcing the closing down of
927A the service and advising the time of reopening, if other than their normal hours of service.

NOC

Section III. Ship Stations

NOC 7874 4052 § 5. (1) For the international public correspondence service, ship stations are
929 divided into four categories:

NOC 7875 4053 a) stations of the first category: these stations maintain a continuous
930 service;

- NOC 7876 4054 b) stations of the second category: these stations maintain a service for 931 16 hours a day;
- NOC 7877 4055 c) stations of the third category: these stations maintain a service for 931A 8 hours a day;
- NOC 7878 4056 d) stations of the fourth category: these stations maintain a service the 932 duration of which is either shorter than that of stations of the third category, or is not fixed by these Regulations.

NOC 7879 4057 (2) Each administration shall itself determine the rules under which ship 933 stations subject to it are to be placed in one of the above four categories.

NOC 7880 4058 § 6. (1) Ship stations of the second category shall maintain the following hours 934 of service:

0000 - 0400	}	ship's time or zone time,
0800 - 1200		
1600 - 1800		
2000 - 2200		

and, additionally, four hours of service at times to be decided by the administration, master or responsible person, to meet the essential communication needs of the ship; having regard to propagation conditions and traffic requirements.

NOC 7881 4059 (2) Ship stations of the third category shall maintain the following hours of 934A service:

0800 - 1200 ship's time or zone time,

two continuous hours of service between 1800 and 2200 hours, ship's time or zone time, at times decided by the administration, master or responsible person and, additionally, two hours of service at times decided by the administration, master or responsible person, to meet the essential communication needs of the ship, having regard to propagation conditions and traffic requirements.

NOC 7882 4060 (3) Each administration will determine whether ship's time observed by its 934B ships is to be zone time as shown in Appendix 12 (see Nos. 4058 and 4059).

NOC 7883 4061 (4) In case of short voyages, these stations shall provide service during the 935 hours fixed by the administrations to which they are subject.

NOC 7884 4062 § 7. Ship stations of the fourth category are encouraged to provide service 935A from 0830 to 0930 hours, ship's time or zone time.

NOC	7885 939	4063	§ 8. (1) Ship stations whose service is not continuous shall not close before:
NOC	7886 940	4064	a) finishing all operations resulting from a distress call or from an urgency or safety signal;
MOD	7887 941	4065	b) exchanging, so far as practicable, all traffic originating in or destined for coast stations situated within their service area and for ship stations which, being within their service area, have indicated their presence before the actual cessation of work.
NOC	7888 942	4066	(2) Any ship station not having fixed working hours shall inform the coast stations with which it is in communication of the time of closing and the time of reopening its service.
MOD	7889 943	4067	§ 9. (1) Any ship station arriving in port, and whose service is therefore about to close, shall:
NOC	7890 944	4068	a) notify accordingly the nearest coast station and, if appropriate, the other coast stations with which it generally communicates;
NOC	7891 945	4069	b) not close until after the disposal of traffic on hand, unless this conflicts with the regulations in force in the country of the port of call.
NOC	7892 946	4070	(2) On departure from port the ship station shall notify the coast station or stations concerned that its service is reopening as soon as such reopening is permitted by the regulations in force in the country of the port of departure. However, a ship station not having hours of service fixed by these Regulations may defer such notification until the station first reopens its service after departure from port.

B. Ship Stations Using Radiotelegraphy

NOC

7929
970

4107

§ 9. Ship stations equipped with radiotelegraph apparatus intended to be used for normal traffic by Morse telegraphy shall be provided with devices permitting changeover from transmission to reception and vice versa without manual switching. In addition these stations should be able to listen on the reception frequency during the course of periods of transmission.

NOC	4108	B1. Bands Between 405 kHz and 535 kHz
NOC	7930 972	4109 § 10. Transmitters used in ship stations working in the authorized bands between 405 kHz and 535 kHz shall be provided with devices readily permitting a material reduction of power.
NOC	7931 973	4110 § 11. All ship stations equipped with radiotelegraph apparatus to work in the authorized bands between 405 kHz and 535 kHz shall be able to:
NOC	7932 974	4111 a) send either class A2A and A2B* or H2A and H2B* emissions and receive class A2A, A2B*, H2A and H2B* emissions with a carrier frequency of 500 kHz;
NOC	7933 975	4112 b) send, in addition, class A1A and either A2A or H2A emissions on at least two working frequencies;
NOC	7934 976	4113 c) receive, in addition, class A1A, A2A and H2A emissions on all the other frequencies necessary for their service.
NOC	7935 977	4114 § 12. The provisions of Nos. 4112 and 4113 do not apply to apparatus provided solely for distress, urgency and safety purposes.
NOC	4115	B2. Bands Between 1 605 kHz and 2 850 kHz
NOC	7936 978	4116 § 13. In Region 2, any radiotelegraph station installed on board a ship which uses frequencies in the band 2 089.5 - 2 092.5 kHz for call and reply shall be provided with at least one other frequency in the authorized bands between 1 605 kHz and 2 850 kHz.
NOC	4117	B3. Bands Between 4 000 kHz and 27 500 kHz
NOC	7937 979	4118 § 14. In ship stations, all apparatus using class A1A emissions on frequencies in the authorized bands between 4 000 kHz and 27 500 kHz shall satisfy the following conditions:
NOC	7938 980	4119 a) in each of the bands necessary to carry on the station's service, it shall have at least two working frequencies in addition to one in the calling band (see No. 4306);
NOC	7939 981	4120 b) changes of frequency in transmitting apparatus shall be effected as quickly as practicable, but within fifteen seconds in any event;
NOC	7940 982	4121 c) in the matter of frequency changing, receiving apparatus shall be capable of a performance equal to that of the transmitting apparatus.
NOC	7941	4122 <i>C. Ship Stations Using Narrow-Band Direct-Printing Telegraphy</i>
NOC	7942 999G	4123 § 15. The characteristics of the narrow-band direct-printing equipment shall be in accordance with Appendix 38.

* This is to cater for the automatic reception of the radiotelegraph alarm signal.

NOC	7943	4124	<i>D. Ship Stations Using Radiotelephony</i>
NOC		4125	D1. Bands Between 1 605 kHz and 4 000 kHz
NOC	7944 983	4126	§ 16. All ship stations equipped with radiotelephony apparatus to work in the authorized bands between 1 605 kHz and 2 850 kHz shall be able to:
NOC	7945 984	4127	a) send class A3E or H3E emissions on a carrier frequency of 2 182 kHz and receive class A3E and H3E emissions on a carrier frequency of 2 182 kHz. However, after 1 January 1982, it is no longer authorized to send class A3E emissions on a carrier frequency of 2 182 kHz, except for such apparatus as is referred to in No. 4130 ;
NOC	7946 985	4128	b) send, in addition: <ul style="list-style-type: none"> 1) class A3E, <i>or</i> 2) class H3E, R3E and J3E ¹ <p>emissions on at least two working frequencies ². However, after 1 January 1982, class A3E and H3E emissions are no longer authorized on working frequencies;</p>
	7947 986	4129	c) receive, in addition: <ul style="list-style-type: none"> 1) class A3E and H3E, <i>or</i> 2) class A3E, H3E, R3E and J3E <p>emissions on all other frequencies necessary for their service. However, after 1 January 1982, the ability to receive class A3E and H3E emissions is no longer required.</p>
NOC	7948 987	4130	§ 17. The provisions of Nos. 4128 and 4129 do not apply to apparatus provided solely for distress, urgency and safety purposes.
NOC		4131	D2. Bands Between 4 000 kHz and 23 000 kHz
MOD	7949 987A	4132	§ 18. In the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, all ship stations equipped with radiotelephony to work in the authorized bands between 4 000 kHz and 23 000 kHz should be able to send and receive on the carrier frequencies 4 125 kHz and 6 215.5 kHz (see Nos. 2982 and 2986).
NOC	7946.1 985.1	4128.1	¹ Up to 1 January 1982 administrations may, in certain areas, reduce this requirement to class H3E and J3E emissions on working frequencies.
NOC	7946.2 985.2	4128.2	² In certain areas, administrations may reduce this requirement to one working frequency.

NOC		4133	D3. Bands Between 156 MHz and 174 MHz
NOC	7950 988	4134	§ 19. All ship stations equipped with radiotelephony to work in the authorized bands between 156 MHz and 174 MHz (see No. 613 and Appendix 18) shall be able to send and receive class G3E emissions (see Resolution 308) on:
NOC	7951 989	4135	a) the distress, safety and calling frequency 156.8 MHz;
NOC	7952 990	4136	b) the primary intership frequency 156.3 MHz;
NOC	7953 991	4137	c) all the frequencies necessary for their service.

SUP	7971 1320		
NOC	7972	4147	<i>B. Provisions Relating to the Use of Frequencies Between 156 MHz and 174 MHz</i>
MOD	7973 952	4148	§ 26. (1) Having regard to interference which may be caused by aircraft stations at high altitudes, frequencies in the maritime mobile bands above 30 MHz shall not be used by aircraft stations, with the exception of those frequencies between 156 MHz and 174 MHz specified in Appendix 18 which may be used provided that the following conditions are observed:
NOC	7974 952A	4149	a) the altitude of aircraft stations shall not exceed 300 metres (1 000 feet), except for reconnaissance aircraft participating in ice-breaking operations, where an altitude of 450 metres (1 500 feet) is allowed;

NOC	7975 952B	4150	<i>b)</i> the mean power of aircraft station transmitters shall not exceed five watts; however, a power of one watt or less shall be used to the maximum extent possible;
NOC	7976 952C	4151	<i>c)</i> aircraft stations shall use the channels designated for this purpose in Appendix 18;
NOC	7977 952D	4152	<i>d)</i> except as provided in No. 4150, aircraft station transmitters shall comply with the technical characteristics given in Appendix 19;
NOC	7978 952E	4153	<i>e)</i> the communications of an aircraft station shall be brief and limited to operations in which stations of the maritime mobile service are primarily involved and where direct communication between the aircraft and the ship or coast station is required.
NOC	7979 953	4154	(2) The frequencies 156.3 MHz and 156.8 MHz may be used by aircraft stations for safety purposes only.
		4155 to 4179	NOT allocated.

**Special Rules Relating to the Use
of Frequencies in the Maritime Mobile Service**

NOC

Section I. General Provisions

NOC	8031	4180	<i>A. Single-Sideband Radiotelegraph Transmissions</i>
MOD	8032 437A	4181	§ 1. Stations employing single-sideband radiotelegraph transmissions shall use upper-sideband emissions. The frequencies specified in these Regulations for class H2A and H2B* emissions such as 410 kHz, 425 kHz, 454 kHz, 468 kHz, 480 kHz, 500 kHz, 512 kHz and 8 364 kHz shall be used as carrier frequencies.
NOC	8033	4182	<i>B. Bands Between 405 kHz and 535 kHz</i>
MOD	8034 438	4183	§ 2. Except as provided in No. 961, ship stations authorized to work in the bands between 415 kHz and 535 kHz shall transmit on the frequencies indicated in this Article (see No. 4237).
NOC	8035 438A	4184	§ 3. As a general rule, the minimum separation between adjacent frequencies used respectively by coast stations and by ship stations is 4 kHz.
NOC	8036 439	4185	§ 4. In the band 405 - 415 kHz in Region 1, no frequency is assigned to coast stations, in order to protect the frequency 410 kHz which is designated for the maritime radionavigation service (radio direction-finding).
NOC	8037 440	4186	§ 5. In the African Area of Region 1, in the bands 415 - 490 kHz and 510 - 525 kHz the separation between adjacent frequencies assigned to coast stations is, as a general rule, 3 kHz. However, in order that the frequencies may coincide with those used in the European Area in these bands, this spacing is reduced in certain cases.
NOC	8038	4187	<i>C. Bands Between 1 605 kHz and 4 000 kHz</i>
MOD	8039 442	4188	§ 6. (1) In Region 1, frequencies assigned to stations operating in the bands between 1 606.5 kHz and 3 800 kHz (see Article 8) should, whenever possible, be in accordance with the following subdivision: <ul style="list-style-type: none"> – 1 606.5 - 1 625 kHz: Radiotelegraphy exclusively. – 1 625 - 1 670 kHz: Low power radiotelephony. – 1 670 - 1 950 kHz: Coast stations. – 1 950 - 2 053 kHz: Ship stations working to coast stations.

* This is to cater for the automatic reception of the radiotelegraph alarm signal.

- 2 053 - 2 065 kHz: Intership working.
- 2 065 - 2 170 kHz: Ship stations working to coast stations.
- 2 170 - 2 173.5 kHz: Coast stations calling ship stations (including selective calling) and, exceptionally, coast stations transmitting safety messages.
- 2 173.5 - 2 190.5 kHz: *Guardband for the distress and calling frequency 2 182 kHz.*
- 2 190.5 - 2 194 kHz: Ship stations calling coast stations.
- 2 194 - 2 440 kHz: Intership working.
- 2 440 - 2 578 kHz: Ship stations working to coast stations.
- 2 578 - 2 850 kHz: Coast stations.
- 3 155 - 3 340 kHz: Ship stations working to coast stations.
- 3 340 - 3 400 kHz: Intership working.
- 3 500 - 3 600 kHz: Intership working.
- 3 600 - 3 800 kHz: Coast stations.

MOD	8040 443	4189	<p>(2) In these bands, in Region 1, the frequencies are spaced, as far as possible, by:</p> <ul style="list-style-type: none"> – 7 kHz when two adjacent frequencies are used for double-sideband radiotelephony; – 3 kHz when two adjacent frequencies are used for radiotelegraphy; – 5 kHz when one frequency is used for double-sideband radiotelephony and the adjacent frequency is used for radiotelegraphy.
NOC	8041 444	4190	<p>(3) However, in the case of the intership bands, in Region 1, the spacing is reduced to 5 kHz for adjacent frequencies used for double-sideband radiotelephony.</p>
NOC	8042 444A	4191	<p>(4) When these bands are used for single-sideband radiotelephony, a station operating in the lower half of a double-sideband channel shall use upper-sideband emission with the carrier frequency located 3 kHz below the centre frequency of that channel.</p>
NOC	8043 444B	4192	<p>(5) However, in the case of the intership bands, the carrier frequency of a station operating in the lower half of the double-sideband channel is located only 2.5 kHz below the centre frequency of that channel.</p>
NOC	8044 445	4193	<p>§ 7. In Regions 2 and 3, the carrier frequencies 2 635 kHz (assigned frequency 2 636.4 kHz) and 2 638 kHz (assigned frequency 2 639.4 kHz) are used as single-sideband intership radiotelephony working frequencies in addition to the frequencies prescribed for common use in certain services. The carrier frequency 2 635 kHz should be used with class R3E and J3E emissions only. The carrier frequency 2 638 kHz may be used with class A3E, H3E, R3E and J3E emissions. However, after 1 January 1982, class A3E and H3E emissions are no longer authorized. In Region 3 these frequencies are protected by a guardband between 2 634 kHz and 2 642 kHz.</p>

MOD	8045 445A	4194	§ 8. The assigned frequency of a single-sideband radiotelephone channel shall be 1 400 Hz higher than the carrier frequency.
NOC	8046	4195	<i>D. Bands Between 4 000 kHz and 27 500 kHz</i>
NOC	8047 446	4196	§ 9. (1) The bands exclusively allocated to the maritime mobile service between 4 000 kHz and 27 500 kHz (see Article 8) are subdivided into the following categories:
MOD	8048 447	4197	<p>a) <i>Ship stations</i>, telephony, duplex operation (two-frequency channels)</p> <p>4 063 - 4 143.6 kHz 6 200 - 6 218.6 kHz 8 195 - 8 291.1 kHz 12 330 - 12 429.2 kHz 16 460 - 16 587.1 kHz 22 000 - 22 124 kHz</p>
MOD	8049 448	4198	<p>b) <i>Coast stations</i>, telephony, duplex operation (two-frequency channels)</p> <p>4 357.4 - 4 438 kHz 6 506.4 - 6 525 kHz 8 718.9 - 8 815 kHz 13 100.8 - 13 200 kHz 17 232.9 - 17 360 kHz 22 596 - 22 720 kHz</p>
MOD	8050 449	4199	<p>c) <i>Ship stations and coast stations</i>, telephony, simplex operation (single-frequency channels) and intership cross-band operation (two frequencies)</p> <p>4 143.6 - 4 146.6 kHz 6 218.6 - 6 224.6 kHz 8 291.1 - 8 297.3 kHz 12 429.2 - 12 439.5 kHz 16 587.1 - 16 596.4 kHz 22 124 - 22 139.5 kHz</p>
NOC	8051 451	4200	<p>d) <i>Ship stations</i>, wide-band telegraphy, facsimile and special transmission systems</p> <p>4 146.6 - 4 162.5 kHz 4 166 - 4 170 kHz 6 224.6 - 6 244.5 kHz 6 248 - 6 256 kHz 8 300 - 8 328 kHz 8 331.5 - 8 343.5 kHz 12 439.5 - 12 479.5 kHz 12 483 - 12 491 kHz 16 596.4 - 16 636.5 kHz 16 640 - 16 660 kHz 22 139.5 - 22 160.5 kHz 22 164 - 22 192 kHz</p>

MOD	8052 451A	4201	<p>e) <i>Ship stations</i>, oceanographic data transmission (see note c) in Appendix 31)</p> <p>4 162.5 - 4 166 kHz 6 244.5 - 6 248 kHz 8 328 - 8 331.5 kHz 12 479.5 - 12 483 kHz 16 636.5 - 16 640 kHz 22 160.5 - 22 164 kHz</p>
NOC	8053 451B	4202	<p>f) <i>Ship stations</i>, narrow-band direct-printing telegraph and data transmission systems, at speeds not exceeding 100 bauds (frequencies paired with those in No. 4207)</p> <p>4 170 - 4 177.25 kHz 6 256 - 6 267.75 kHz 8 343.5 - 8 357.25 kHz 12 491 - 12 519.75 kHz 16 660 - 16 694.75 kHz 22 192 - 22 225.75 kHz</p>
NOC	8054 451C	4203	<p>g) <i>Ship stations</i>, narrow-band direct-printing telegraph and data transmission systems, at speeds not exceeding 100 bauds (non-paired frequencies)</p> <p>4 177.25 - 4 179.75 kHz 6 267.75 - 6 269.75 kHz 8 297.3 - 8 300 kHz 8 357.25 - 8 357.75 kHz 12 519.75 - 12 526.75 kHz 16 694.75 - 16 705.8 kHz 22 225.75 - 22 227 kHz 25 076 - 25 090.1 kHz</p>
NOC	8055 452	4204	<p>h) <i>Ship stations</i>, A1A Morse telegraphy, calling</p> <p>4 179.75 - 4 187.2 kHz 6 269.75 - 6 280.8 kHz 8 359.75 - 8 374.4 kHz 12 539.6 - 12 561.6 kHz 16 719.8 - 16 748.8 kHz 22 227 - 22 247 kHz 25 070 - 25 076 kHz</p>
NOC	8056 452A	4205	<p>i) <i>Ship stations</i>, digital selective calling</p> <p>4 187.2 - 4 188 kHz 6 280.8 - 6 282 kHz 8 374.4 - 8 376 kHz 12 561.6 - 12 564 kHz 16 748.8 - 16 752 kHz 22 247 - 22 250 kHz</p>

NOC	8058 452C	4207	<p><i>k) Coast stations, narrow-band direct-printing telegraph and data transmission systems, at speeds not exceeding 100 bauds (frequencies paired with those in No. 4202)</i></p> <p>4 349.4 - 4 356.75 kHz 6 493.9 - 6 505.75 kHz 8 704.4 - 8 718.25 kHz 13 070.8 - 13 099.75 kHz 17 196.9 - 17 231.75 kHz 22 561 - 22 594.75 kHz</p>
NOC	8059 452D	4208	<p><i>l) Coast stations, digital selective calling</i></p> <p>4 356.75 - 4 357.4 kHz 6 505.75 - 6 506.4 kHz 8 718.25 - 8 718.9 kHz 13 099.75 - 13 100.8 kHz 17 231.75 - 17 232.9 kHz 22 594.75 - 22 596 kHz</p>
NOC	8060 453	4209	<p><i>m) Coast stations, wide-band and A1A Morse telegraphy, facsimile, special and data transmission systems and direct-printing telegraph systems</i></p> <p>4 219.4 - 4 349.4 kHz 6 325.4 - 6 493.9 kHz 8 435.4 - 8 704.4 kHz 12 652.3 - 13 070.8 kHz 16 859.4 - 17 196.9 kHz 22 310.5 - 22 561 kHz</p>
NOC	8061 453A	4210	(2) Frequencies in the bands 25 010 - 25 070 kHz, 25 110 - 25 600 kHz and 26 100 - 27 500 kHz may be assigned to coast stations.
MOD	8062 456	4211	§ 10. (1) Appendix 16 shows the radiotelephone channels in the frequency bands listed in Nos. 4197, 4198 and 4199.
MOD	8063 457	4212	(2) The Frequency Allotment Plan for coast radiotelephone stations in the high frequency bands is contained in Appendix 25 Mar2.
NOC	8064	4213	<i>E. Bands Between 156 MHz and 174 MHz</i>
NOC	8065 457A	4214	§ 11. The ship movement service should be operated only on frequencies allocated to the maritime mobile service in the band 156 - 174 MHz.

NOC

Section II. Use of Frequencies for Radiotelegraphy

NOC **8066** **4215**

A. General

NOC **8067** **4216**
1094A

§ 12. Whenever the class of emission A2A, A2B*, H2A or H2B** is mentioned in the present Regulations for use in the maritime mobile service, the type of transmission shall, except for selective calling purposes, be telegraphy by on-off keying of the modulated emission, to the exclusion of on-off keying of the modulating audio frequencies only.

NOC **8068** **4217**

B. Bands Between 405 kHz and 535 kHz

NOC

B1. Call and Reply

MOD **8069** **4218**
1107

§ 13. (1) The frequency 500 kHz is the international distress frequency for radiotelegraphy (see No. 2970 for details of its use for distress, safety and urgency purposes).

NOC **8070** **4219**
1109

(2) In addition, 500 kHz may be used only:

NOC **8071** **4220**
1110

a) for call and reply (see Nos. 4225 and 4229);

NOC **8072** **4221**
1111

b) by coast stations to announce the transmission of their traffic lists under the conditions provided for in Nos. 4727, 4728 and 4729.

NOC **8073** **4222**
1113

(3) In order to facilitate the reception of distress calls, other transmissions on the frequency 500 kHz shall be reduced to a minimum, and in any case shall not exceed one minute.

MOD **8074** **4223**
1113A

(4) Before transmitting on 500 kHz, stations must listen on this frequency for a reasonable period to make sure that no distress traffic is being sent (see No. 4713).

NOC **8075** **4224**
1113B

(5) The provisions of No. 4223 do not apply to stations in distress.

NOC **8076** **4225**
1114

§ 14. (1) The general calling frequency which, except as provided under No. 4849, shall be used by any ship station or coast station engaged in radiotelegraphy in the authorized bands between 405 kHz and 535 kHz, and by aircraft desiring to enter into communication with a station of the maritime mobile service using frequencies in these bands, is the frequency 500 kHz.

* This is to cater for the automatic reception of the radiotelegraph alarm signal.

** This is to cater for the automatic reception of the radiotelegraph alarm signal and for selective calling.

NOC	8077 1115	4226	(2) However, in order to reduce interference in regions of heavy traffic, administrations may consider the requirements of No. 4225 as satisfied when the calling frequencies assigned to coast stations open to public correspondence are not separated by more than 3 kHz from the general calling frequency 500 kHz.
NOC	8078 1115A	4227	§ 15. (1) A ship station calling a coast station shall, wherever possible and particularly in regions of heavy traffic, indicate to the coast station that it is ready to receive on the working frequency of that station.
NOC	8079 1115B	4228	(2) The ship station should make sure beforehand that this frequency is not already being used by the coast station.
NOC	8080 1116	4229	§ 16. (1) The frequency for replying to a call sent on the general calling frequency (see No. 4225) shall be as follows: <ul style="list-style-type: none"> – either 500 kHz, – or the frequency specified by the calling station (see Nos. 4227 and 4769).
NOC	8081 1117	4230	(2) In regions of heavy traffic, coast stations may answer calls made by ship stations of their own nationality in accordance with special arrangements made by the administration concerned (see No. 4769).
NOC	8082 1117A	4231	§ 17. Selective calling under the provisions of Article 62 may be carried out on the frequency 500 kHz in the shore-to-ship, ship-to-shore and ship-to-ship directions.
NOC			B2. Traffic
NOC	8083 1118	4232	§ 18. (1) Coast stations working in the authorized bands between 405 kHz and 535 kHz shall be able to use at least one frequency in addition to 500 kHz. One of these additional frequencies, which is printed in heavy type in the List of Coast Stations, is the normal working frequency of the station.
MOD	8084 1119	4233	(2) In addition to their normal working frequency, coast stations may use, in the authorized bands, additional frequencies which are shown in ordinary type in the List of Coast Stations. The band 405 - 415 kHz, however, is assigned to radio direction-finding; it may not be used by the maritime mobile service except on the conditions fixed by Chapter III .
NOC	8085 1120	4234	(3) The working frequencies of coast stations shall be chosen so as to avoid interference with neighbouring stations.
NOC	8086 1121	4235	(4) In regions of heavy traffic, coast stations and ship stations should use class A1A emission on their working frequencies.
NOC	8087 1122	4236	§ 19. As an exception to the provisions of Nos. 2970 , 4219 , 4220 and 4221 and on condition that signals of distress, urgency and safety, and calls and replies are not interfered with, 500 kHz may be used outside regions of heavy traffic for direction-finding but with discretion.

NOC	8088 1123	4237	§ 20. (1) Ship stations operating in the authorized bands between 405 kHz and 535 kHz shall use working frequencies chosen from the following: 425 kHz, 454 kHz, 468 kHz, 480 kHz and 512 kHz, except as permitted by No. 961.
NOC	8089 1124	4238	(2) Coast stations are prohibited from transmitting on the working frequencies designated for the use of ship stations on a worldwide basis.
NOC	8090 1125	4239	(3) The frequency 512 kHz may be used by ship stations as a supplementary calling frequency when 500 kHz is being used for distress.
NOC	8091 1126	4240	(4) During these periods coast stations may:
NOC	8092 1127	4241	a) use 512 kHz as a supplementary frequency for call and reply; or
NOC	8093 1128	4242	b) make use of other arrangements for call and reply which shall have been specified in the List of Coast Stations.
NOC	8094 1129	4243	(5) When 500 kHz is in use for distress, ship stations shall not use 512 kHz as a working frequency in those areas where it is in use as a supplementary calling frequency.
NOC	8095	4244	<i>C. Bands Between 1 605 kHz and 4 000 kHz</i>
NOC			C1. Region 2
NOC	8096 1138	4245	§ 21. In Region 2, the frequencies in the band 2 068.5 - 2 078.5 kHz are assigned to ship stations using wide-band telegraphy, facsimile and special transmission systems. The provisions of No. 4254 are applicable.
NOC			C2. Additional Provisions Applicable in Region 3 Areas North of the Equator Only
MOD	8097 1139	4246	§ 22. (1) The band 2 089.5 - 2 092.5 kHz is the calling and safety band for radiotelegraphy in those parts of the bands between 1 605 kHz and 2 850 kHz in which radiotelegraphy is authorized.
NOC	8098 1140	4247	(2) Frequencies in the band 2 089.5 - 2 092.5 kHz may be used for calls, replies and safety. These frequencies may also be used for messages preceded by the urgency or safety signals.
NOC	8099 1141	4248	(3) Each coast station using the calling band 2 089.5 - 2 092.5 kHz shall, as far as possible, maintain watch on this band during its working hours.
MOD	8100 1142	4249	(4) Coast stations which use frequencies in the band 2 089.5 - 2 092.5 kHz for calling shall be able to use at least one other frequency in those parts of the bands between 1 605 kHz and 2 850 kHz in which radiotelegraphy is authorized.

NOC **8101** **4250** (5) One of these frequencies is printed in heavy type in the List of Coast Stations to indicate that it is the normal working frequency of the station. Supplementary frequencies, if any, are shown in ordinary type.
1143

NOC **8102** **4251** (6) Working frequencies of coast stations shall be chosen in such a manner as to avoid interference with other stations.
1144

NOC **8103** **4252** *D. Bands Between 4 000 kHz and 27 500 kHz*

NOC D1. General

MOD **8104** **4253** § 23. (1) Ship radiotelegraph stations equipped to operate in the bands specified in Nos. **4204** and **4206** shall employ only class A1A Morse telegraphy emissions at speeds not exceeding 40 bauds. Survival craft stations may use class A2A or H2A emissions in these bands (see Nos. **3002** and **3005**).
1145

MOD **8105** **4254** (2) Ship stations equipped for wide-band telegraphy, facsimile and special transmission systems may, in the frequency bands reserved for such use, employ any class of emission provided that such emissions can be contained within the wide-band channels indicated in Appendix 31. However, A1A Morse telegraphy and telephony are excluded, except for circuit alignment purposes.
1146

NOC **8106** **4255** (3) Except as provided for in No. **4376.1**, coast radiotelegraph stations operating in the maritime mobile exclusive bands between 4 000 kHz and 27 500 kHz shall not use Type 2 emissions (see No. **4216**).
1147

NOC **8107** **4256** (4) Coast radiotelegraph stations employing single-channel class A1A or F1B emissions and operating in the maritime mobile exclusive bands between 4 000 kHz and 27 500 kHz shall at no time use a mean power in excess of the following:
1148

<i>Band</i>	<i>Maximum mean power</i>
4 MHz	5 kW
6 MHz	5 kW
8 MHz	10 kW
12 MHz	15 kW
16 MHz	15 kW
22 MHz	15 kW

NOC **8108** **4257** (5) Coast radiotelegraph stations employing multichannel telegraph emissions and operating in the maritime mobile exclusive bands between 4 000 kHz and 27 500 kHz shall at no time use a mean power in excess of 2.5 kW per 500 Hz bandwidth.
1148A

MOD **8109** **4258** § 24. Nos. **4200** to **4209** and the corresponding columns of Appendix 31 show those parts of the bands between 4 000 kHz and 27 500 kHz exclusively allocated to the maritime mobile service which are to be used by coast stations and ship stations for radiotelegraphy.
1149

NOC

D2. Call and Reply

MOD	8110 1160	4259	§ 25. (1) In order to establish communication with a coast station, each ship station shall use an appropriate calling frequency in one of the bands listed in No. 4204 .
MOD	8111 1161	4260	(2) Frequencies in the A1A Morse telegraphy calling bands are assigned to each ship station in accordance with the provisions of Nos. 4277 to 4285 .
MOD	8112 1162	4261	§ 26. In order to reduce interference, ship stations shall, within the means at their disposal, endeavour to select for calling the band with the most favourable propagation characteristics for effecting reliable communication. In the absence of more precise data, a ship station shall, before making a call, listen for the signals of the station with which it desires to communicate. The strength and intelligibility of such signals are useful as a guide to propagation conditions and indicate which is the preferable band for calling.
NOC	8113 1162A	4262	§ 27. In order to reduce interference on the common calling channels, they shall be used only when a ship cannot use a calling frequency within the group indicated as a coast station receiving channel of the station with which it desires to communicate or when the coast station has indicated that it is keeping watch only on the common calling channels.
MOD	8114 1163	4263	§ 28. (1) The calling frequency to be used by a coast station, in each of the bands for which it is equipped, is its normal working frequency as shown in heavy type in the List of Coast Stations (see Nos. 4207 and 4209).
NOC	8115 1164	4264	(2) So far as is practicable, a coast station shall transmit its calls at specified times in the form of traffic lists on the frequency or frequencies indicated in the List of Coast Stations (see Nos. 4722 and 4726).
SUP	8116 1164A		
MOD	8117 1164B	4265	§ 29. The exclusive digital selective calling frequencies within the bands indicated in No. 4208 (see No. 4684) may be assigned to any coast station for use in accordance with No. 4681 .
MOD	8118 1165	4266	§ 30. Unless the calling station specifies otherwise, the frequency for reply to a call is as follows:
MOD	8119 1166	4267	a) for a ship station, one of its assigned calling frequencies in the same band, with due regard to No. 4262 ;
NOC	8120 1167	4268	b) for a coast station, its normal working frequency in the same band as that used by the calling station.

NOC	8121 1168	4269	§ 31. Administrations shall indicate, in respect of each coast station, in which of the ship calling bands and on which coast station receiving channels that coast station keeps watch and, as far as possible, the approximate hours of watchkeeping in Coordinated Universal Time (UTC). This information shall be published in the List of Coast Stations.
NOC	8122 1168A	4270	§ 32. Exceptionally, a coast station may indicate that it is keeping watch on calling frequencies other than those specified as its own receiving frequencies.
NOC	8123 1168B	4271	§ 33. In order to reduce interference on calling frequencies, a coast station shall take adequate steps to ensure, under normal conditions, the prompt receipt of calls (see No. 4755).
NOC			D3. Traffic
MOD	8124 1169	4272	§ 34. (1) A ship station after establishing communication on a calling frequency (see No. 4259) shall change to a working frequency for the transmission of traffic. The use of frequencies in the calling bands for any purpose other than calling shall be prohibited.
MOD	8125 1170	4273	(2) Working frequencies shall be assigned to ship stations in accordance with the provisions of Nos. 4288 to 4306 inclusive.
NOC	8126 1171	4274	§ 35. (1) A coast station shall transmit its traffic on its normal working frequency or on other working frequencies assigned to it.
NOC	8127 1172	4275	(2) Countries which share a channel in one of the exclusive maritime mobile bands between 4 000 kHz and 27 500 kHz should give special consideration to the countries among them which have no other channel in the same band and should endeavour to use their primary channel to the greatest extent possible, in order to permit the latter countries to satisfy their minimum communication requirements.
SUP	8128 1173		
SUP	8129 1173A		
SUP	8130 1173B		
MOD	8131	4276	<i>E. Assignment of Frequencies to Ship Stations</i>
NOC			E1. Calling Frequencies of Ship Stations
SUP	8132 1174		
MOD	8133 1176A	4277	§ 36. Each calling band between 4 000 kHz and 23 000 kHz indicated in No. 4204 is divided into four groups of channels and two common channels. The 25 MHz band is divided into three channels of which one is a common channel (see Appendix 34).

NOC	8134 1176B	4278	§ 37. (1) Coast stations shall, when providing international service as published in the List of Coast Stations, keep watch on the common calling channels in each band throughout their hours of service in the bands concerned, and on the appropriate group channel or channels during busy periods. The times during which watch will be kept on the group channel or channels shall be published for each country in the List of Coast Stations.
NOC	8135 1176C	4279	(2) If necessary, an indication of the channels on which watch is kept may be included in the coast station transmissions.
NOC	8136 1177	4280	§ 38. In the bands between 4 000 kHz and 23 000 kHz, the administration to which a ship station is subject shall assign to it at least two calling frequencies in each band in which the station is equipped to transmit ¹ . One of the calling frequencies in each band shall be within one of the common coast station receiving channels contained in Appendix 34; another in each band shall be selected from within the other channels in Appendix 34, taking account of the receiving channel or channels of the coast station with which the ship station most frequently communicates. In the 25 MHz band, administrations shall assign to ship stations under their control a frequency within the common channel. Another calling frequency in this band shall be selected from within Channel A or B of Appendix 34, taking account of the receiving channel of the coast station with which the ship station most frequently communicates.
NOC	8137 1177A	4281	§ 39. A ship station should, wherever possible, be assigned additional calling frequencies (see No. 4262).
NOC	8138 1177B	4282	§ 40. If it is not intended to maintain watch on all the receiving channels within a group, the administration concerned, in order to ensure an even distribution of calls, shall determine the channel or channels on which watch will be maintained, but only after coordination as far as possible with administrations sharing the same group (see Resolution 312).
NOC	8139 1177C	4283	§ 41. Administrations which assign to their ships frequencies in two or more calling channels within their group shall take the necessary steps to distribute such assignments uniformly throughout the channels taken into use.
NOC	8140 1177D	4284	§ 42. In order to ensure an even distribution of calls on the common calling channels, administrations should, as far as practicable, assign frequencies in each of the two channels to an equal number of their ships.
NOC	8141 1177E	4285	§ 43. Administrations shall ensure, as far as possible, that ship stations under their jurisdiction are capable of keeping their transmission within the limits of the assigned channels (see Appendix 7).
NOC	8136.1 1177.1	4280.1	¹ Up to 1 January 1980 ship stations whose transmitters are capable of using only three frequencies in each of the bands between 4 000 kHz and 23 000 kHz may, exceptionally, be assigned a single calling frequency in each of the frequency bands in which they can transmit. This exception may be made only if the administration concerned considers that the assignment of a minimum of two working frequencies in each band is necessary for the ship's service.

SUP	8142 1179A		
MOD	8143 1179B	4286	§ 44. The exclusive digital selective calling frequencies within the bands indicated in No. 4205 (see No. 4683) may be assigned to any ship station for use in accordance with No. 4681 .
MOD			E2. Working Frequencies of Ship Stations
NOC		4287	a) <i>Channel Spacing and Assignment of Frequencies</i>
MOD	8144 1180	4288	§ 45. In all bands, the working frequencies for ship stations equipped to use wide-band telegraphy, facsimile and special transmission systems are spaced 4 kHz apart. The frequencies assignable are shown in Appendix 31.
MOD	8145 1180A	4289	§ 46. In all bands, the frequencies assignable for oceanographic data transmissions are spaced 0.3 kHz apart. The frequencies assignable are shown in Appendix 31.
MOD	8146 1180B	4290	§ 47. In all bands, the working frequencies for ship stations using narrow-band direct-printing telegraph and data transmission systems, at speeds not exceeding 100 bauds, including those paired with the working frequencies assignable to coast stations (see No. 4207), are spaced 0.5 kHz apart. The frequencies assignable to ship stations which are paired with those used by coast stations are shown in Appendix 32 (see also No. 4202). The frequencies assignable to ship stations which are not paired with those used by coast stations are shown in Appendix 33 (see also No. 4203).
MOD	8147 1182	4291	§ 48. In all bands, except the 6 MHz band, the working frequencies for ship stations using A1A Morse telegraphy, at speeds not exceeding 40 bauds, are spaced 0.5 kHz apart; in the 6 MHz band they are spaced 0.75 kHz apart (see also Note e) to Appendix 31). The extreme frequencies assignable in each of these bands are shown in Appendix 31.
	8148 1183	4292	§ 49. In the 4, 6, 8, 12 and 16 MHz bands, certain frequencies are harmonically related as shown in Appendix 35.
NOC		4293	b) <i>Working Frequencies for Ship Stations Using Wide-Band Telegraphy, Facsimile and Special Transmission Systems</i>
SUP	8149 1188		
MOD	8150 1189	4294	§ 50. (1) Each administration shall assign to each ship station under its jurisdiction and employing wide-band telegraphy, facsimile and special transmission systems one or more series of the working frequencies reserved for this purpose and shown in Appendix 31. The total number of series assigned to each ship shall be determined by traffic requirements.

NOC	8151 1190	4295	(2) When ship stations employing wide-band telegraphy, facsimile and special transmission systems are assigned less than the total number of working frequencies in a band, the administration concerned shall assign working frequencies to such ships in accordance with an orderly system of rotation that will ensure approximately the same number of assignments on any one working frequency.
MOD	8152 1191	4296	(3) However, within the limits of the bands given in No. 4200 , administrations may, to meet the needs of specific systems, assign frequencies in a different manner from that shown in Appendix 31. Nevertheless administrations shall take into account, as far as possible, the provisions of Appendix 31 concerning channelling and 4 kHz spacing.
NOC		4297	<i>c) Working Frequencies for Oceanographic Data Stations</i>
SUP	8153 1191A		
MOD	8154 1191B	4298	§ 51. The frequency bands in No. 4201 may also be used by buoy stations for oceanographic data transmission and by stations interrogating these buoys.
MOD	8155 1191C	4299	§ 52. Each administration may assign to each station under its jurisdiction of a type specified in Nos. 4201 and 4298 one or more of the assignable frequencies designated in Appendix 31.
NOC		4300	<i>d) Working Frequencies (paired with those in No. 4207) for Ship Stations Using Narrow-Band Direct-Printing Telegraph and Data Transmission Systems, at Speeds Not Exceeding 100 Bauds</i>
SUP	8156 1191D		
NOC	8157 1191DA	4301	§ 53. The frequency pairs assignable to coast stations and ship stations using narrow-band direct-printing telegraph and data transmission systems are indicated in Appendix 32.
NOC	8158 1191E	4302	§ 54. When assigning frequencies listed in Appendix 32 for narrow-band direct-printing telegraph and data transmission systems, administrations shall apply the procedure described in Resolution 300.
NOC		4303	<i>e) Working Frequencies (non-paired) for Ship Stations Using Narrow-Band Direct-Printing Telegraph and Data Transmission Systems, at Speeds Not Exceeding 100 Bauds</i>
SUP	8159 1191F		
NOC	8160 1191G	4304	§ 55. When assigning frequencies listed in Appendix 33 for narrow-band direct-printing telegraph and data transmission systems, administrations shall take due account of the information entries in the Master Register resulting from the notification procedure contained in Resolution 301.

NOC		4305	<i>f) Working Frequencies for Ship Stations Using A1A Morse Telegraphy</i>
SUP	8161 1196		
NOC	8162 1200	4306	§ 56. Each administration shall assign to each ship station under its jurisdiction a sufficient number of working frequencies, in any of the 4, 6, 8, 12, 16, 22 and 25 MHz bands, to meet the traffic needs of the ship. In each band used, preferably not less than two working frequencies should be assigned to each ship. Administrations shall ensure a uniform distribution of assignments throughout the bands.
MOD	8163 1200A	4307	§ 57. For the exclusive purpose of communication with stations of the maritime mobile service, an aircraft station may be assigned one or more working frequencies in the bands shown in No. 4206. These frequencies shall be assigned in accordance with the same principles of uniform distribution as for ship stations.
NOC		4308	<i>g) Abbreviations for the Indication of Working Frequencies</i>
NOC	8164 1203	4309	§ 58. In the bands between 4 000 kHz and 27 500 kHz the following abbreviations may be used to designate a working frequency:
NOC	8165 1204	4310	a) if the frequency expressed in kHz has no decimal value, the last three figures shall be transmitted;
NOC	8166 1204A	4311	b) if the frequency expressed in kHz has a decimal value, the last three figures before the decimal point and the first decimal figure shall be transmitted.
NOC			Section III. Use of Frequencies for Narrow-Band Direct-Printing Telegraphy
NOC	8167	4312	<i>A. General</i>
NOC	8168 999H	4313	§ 59. Frequencies assigned to coast stations shall be indicated in the List of Coast Stations (List IV). This List shall also indicate any other useful information concerning the service performed by each coast station.
NOC	8169	4314	<i>B. Bands Between 405 kHz and 535 kHz</i>
NOC	8170 999I	4315	§ 60. (1) All ship stations equipped with narrow-band direct-printing telegraph apparatus to work in the authorized bands between 405 kHz and 535 kHz shall be able to send and receive class F1B emissions on at least two working frequencies (see No. 4237) ¹ .
NOC	8170.1 999I.1	4315.1	¹ In the European Maritime Area usage of these class F1B emissions is subject to special arrangements between interested and affected administrations.

NOC	8171 999J	4316	(2) Narrow-band direct-printing telegraphy is forbidden in the band 490 - 510 kHz.
NOC	8172	4317	<i>C. Bands Between 1 605 kHz and 4 000 kHz</i>
NOC	8173 999K	4318	§ 61. (1) All ship stations equipped with narrow-band direct-printing telegraph apparatus to work in the authorized bands between 1 605 kHz and 4 000 kHz shall be able to send and receive class F1B emissions on at least two working frequencies.
NOC	8174 999L	4319	(2) Narrow-band direct-printing telegraphy is forbidden in the band 2 170 - 2 194 kHz.
NOC	8175	4320	<i>D. Bands Between 4 000 kHz and 27 500 kHz</i>
NOC	8176 999M	4321	§ 62. All ship stations equipped with narrow-band direct-printing telegraph apparatus to work in the authorized bands between 4 000 kHz and 27 500 kHz shall be able to send and receive class F1B emissions on at least two frequencies in each band as required by their service. The assignable frequencies are indicated in Appendices 32 and 33.
NOC	8177	4322	<i>E. Bands Between 156 MHz and 174 MHz</i>
NOC	8178 999N	4323	§ 63. All ship stations equipped with narrow-band direct-printing telegraph apparatus may work in the authorized bands between 156 MHz and 174 MHz and shall conform to the provisions of Appendix 18.
NOC			Section IV. Use of Frequencies for Radiotelephony
NOC	8179	4324	<i>A. General</i>
SUP	8180 1319		
NOC	8181 1321A	4325	§ 64. Except with regard to the provisions of Article 12 concerning notification and recording of frequencies, when designating frequencies for single-sideband radiotelephony the carrier frequency is always to be designated. The assigned frequency is to be determined in accordance with No. 4194.
MOD	8182 1321B	4326	§ 65. Coast stations shall not occupy idle radiotelephone channels by emitting identification signals, such as those generated by call slips or tapes. Exceptionally, a coast station, when requested by a ship station for the purpose of establishing a radiotelephone call, may emit a receiver tuning signal of not more than 10 seconds' duration.

NOC	8183 1322	4327	§ 66. The frequencies of transmission (and reception when these frequencies are in pairs as in the case of duplex radiotelephony) assigned to each coast station shall be indicated in the List of Coast Stations. This List shall also indicate any other useful information concerning the service performed by each coast station.
NOC	8184 1322A	4328	§ 67. Single-sideband apparatus in radiotelephone stations of the maritime mobile service operating in the bands between 1 605 kHz and 4 000 kHz allocated to this service and in the bands allocated exclusively to this service between 4 000 kHz and 23 000 kHz shall satisfy the technical and operational conditions specified in Appendix 17 and Resolution 307.
NOC	8185 1322AA	4329	§ 68. When linked compressor and expander systems are used they shall conform to the characteristics specified in Appendix 40, paragraph a).
NOC	8186 1322AB	4330	§ 69. Single-sideband radio equipment used in conjunction with linked compressor and expander systems shall conform to the characteristics specified in Appendix 17 and should also conform to Appendix 40, paragraph b).
NOC	8187	4331	<i>B. Bands Between 1 605 kHz and 4 000 kHz</i>
NOC			<i>B1. Mode of Operation of Stations</i>
MOD	8188 1322B	4332	§ 70. (1) Except in the cases specified in Nos. 2973, 4127 and 4342, the classes of emission to be used in the bands between 1 605 kHz and 4 000 kHz shall be:
		4333	<i>a) A3E; or</i>
		4334	<i>b) H3E, R3E and J3E.</i>
		4335	However, unless otherwise specified in the present Regulations (see Nos. 2973, 3004, 4127, 4342 and 4354):
		4336	– class A3E emissions shall not be used by coast stations; <i>and</i>
		4337	– after 1 January 1982, class H3E emissions for coast stations and class A3E and H3E emissions for ship stations shall no longer be authorized.
NOC	8189 1322BA	4338	(2) The peak envelope power of coast radiotelephone stations operating in the authorized bands allocated between 1 605 kHz and 4 000 kHz shall not exceed:
		4339	– 5 kW for coast stations located north of latitude 32° N;
		4340	– 10 kW for coast stations located south of latitude 32° N.
NOC	8190 1322C	4341	(3) The normal mode of operation for each coast station shall be indicated in the List of Coast Stations.
NOC	8191 1322D	4342	(4) Transmissions in the bands 2 170 - 2 173.5 kHz and 2 190.5 - 2 194 kHz with the carrier frequency 2 170.5 kHz and the carrier frequency 2 191 kHz respectively are limited to class R3E and J3E emissions and are limited to a peak

envelope power of 400 watts. However, on the frequency 2 170.5 kHz and with the same power limit, coast stations may also use class H2B emissions when using the selective calling system defined in Appendix 39 and, exceptionally, in Regions 1 and 3 and in Greenland, may also use class H3E emissions for safety messages.

NOC

B2. Call and Reply

MOD **8192** **4343** § 71. (1) The frequency 2 182 kHz¹ is the international distress frequency for radiotelephony (see No. 2973 for details of use for distress, urgency, safety and emergency position-indicating radiobeacon (EPIRB) purposes). The class of emission to be used for radiotelephony on the frequency 2 182 kHz shall be A3E or H3E (see No. 4127).
1323

NOC **8193** **4344** (2) The frequency 2 182 kHz may also be used:
1327

NOC **8194** **4345** a) for call and reply in accordance with the provisions of Article 65;
1328

NOC **8195** **4346** b) by coast stations to announce the transmission, on another
1329 frequency, of traffic lists (see Nos. 4925 to 4929).

SUP **8196**
1329A

NOC **8197** **4347** (3) In addition, an administration may assign to its stations other frequen-
1330 cies for call and reply.

NOC **8198** **4348** § 72. To facilitate the reception of distress calls, all transmissions on
1331 2 182 kHz shall be kept to a minimum.

NOC **8199** **4349** § 73. Ship stations open to public correspondence should, as far as possible
1335 during their hours of service, keep watch on 2 182 kHz.

MOD **8200** **4350** § 74. (1) Before transmitting on the carrier frequency 2 182 kHz, a station shall
1326A listen on this frequency for a reasonable period to make sure that no distress traffic is being sent (see No. 4915).

NOC **8201** **4351** (2) The provisions of No. 4350 do not apply to stations in distress.
1326B

SUP **8191.1**
1322D.2

NOC **8192.1** **4343.1** ¹ Where administrations provide at their coast stations a watch on 2 182 kHz for
1323.1 receiving class R3E and J3E emissions as well as class A3E and H3E emissions, ship stations beyond the A3E or H3E communication range of such coast stations may call them for safety purposes using class R3E or J3E emissions. This procedure shall only be used when calling by the use of class A3E and H3E emissions has not been successful.

NOC

B3. Traffic

- NOC **8202** **4352** § 75. (1) Coast stations which use 2 182 kHz for calling shall be able to use at least one other frequency in the authorized bands between 1 605 kHz and 2 850 kHz.
1336
- MOD **8203** **4353** (2) Coast stations authorized to use radiotelephony on one or more frequencies other than 2 182 kHz in the authorized bands between 1 605 kHz and 2 850 kHz shall be capable of transmitting on those frequencies class A3E emissions or class H3E, R3E and J3E emissions. However, after 1 January 1982, class H3E emissions shall no longer be authorized, except on the frequency 2 182 kHz (see also No. 4342).
1336A
- NOC **8204** **4354** (3) Coast stations open to the public correspondence service on one or more frequencies between 1 605 kHz and 2 850 kHz shall also be capable of transmitting class H3E emissions with a carrier frequency of 2 182 kHz, and of receiving class A3E and H3E emissions with a carrier frequency of 2 182 kHz.
1337
- NOC **8205** **4355** (4) One of the frequencies which coast stations are required to be able to use (see No. 4352) is printed in heavy type in the List of Coast Stations to indicate that it is the normal working frequency of the stations. Supplementary frequencies, if assigned, are shown in ordinary type.
1338
- NOC **8206** **4356** (5) Working frequencies of coast stations shall be chosen in such a manner as to avoid interference with other stations.
1339

NOC

B4. Additional Provisions Applying to Region 1

- SUP **8207**
1340
- MOD **8208** **4357** § 76. The peak envelope power of ship radiotelephone stations operating in the authorized bands between 1 605 kHz and 2 850 kHz shall not exceed 400 watts.
1341
- NOC **8209** **4358** § 77. (1) All stations on ships making international voyages should be able to use:
1343
- NOC **8210** **4359** a) the following ship-to-shore working frequencies, if required by their service:
1344
- 4360** – carrier frequency 2 046 kHz (assigned frequency 2 047.4 kHz) and carrier frequency 2 049 kHz (assigned frequency 2 050.4 kHz) for class R3E and J3E emissions;
- 4361** – carrier frequency 2 049 kHz also for class A3E and H3E emissions until 1 January 1982;
- NOC **8211** **4362** b) the following intership frequencies, if required by their service:
1345
- 4363** – carrier frequency 2 053 kHz (assigned frequency 2 054.4 kHz) and carrier frequency 2 056 kHz (assigned frequency 2 057.4 kHz) for class R3E and J3E emissions;

4364 - carrier frequency 2 056 kHz also for class A3E and H3E emissions until 1 January 1982.

4365 These frequencies may be used as additional ship-to-shore frequencies.

NOC **8212** **4366** (2) These frequencies shall not be used for working between stations of the same nationality.
1346

NOC **8213** **4367** § 78. (1) Ships frequently exchanging correspondence with a coast station of a nationality other than their own may use the same frequencies as ships of the nationality of the coast station where mutually agreed by the administrations concerned.
1348

NOC **8214** **4368** (2) In exceptional circumstances, if frequency usage according to Nos. **4358** to **4365** or No. **4367** is not possible, a ship station may use one of its own assigned national ship-to-shore frequencies for communication with a coast station of another nationality, under the express condition that the coast station as well as the ship station take precautions (see No. **4915**) to ensure that the use of such a frequency will not cause harmful interference to the service for which the frequency in question is authorized.
1348A

NOC **B5. Additional Provisions Applying to Regions 2 and 3**

NOC **8215** **4369** § 79. All stations on ships making international voyages should, if required by their service, be able to use the intership carrier frequencies:
1351

- 2 635 kHz (assigned frequency 2 636.4 kHz)
- 2 638 kHz (assigned frequency 2 639.4 kHz).

The conditions of use of these frequencies are specified in No. **4193**.

NOC **8216** **4370** *C. Bands Between 4 000 kHz and 23 000 kHz*

NOC **C1. Mode of Operation of Stations**

MOD **8217** **4371** § 80. (1) The classes of emission to be used for radiotelephony in the bands between 4 000 kHz and 23 000 kHz are H3E¹, R3E and J3E.
1351A

NOC **8218** **4372** (2) The normal mode of operation of each coast station is indicated in the List of Coast Stations.
1351B

SUP **8217.1**
1351A.1

MOD **8217.2** **4371.1** ¹ For the use of class H3E emissions see Nos. **2982** and **2986**.
1351A.2

MOD 8219 4373 (3) Coast radiotelephone stations employing class H3E¹, R3E or J3E emissions in the bands between 4 000 kHz and 23 000 kHz shall use the minimum power necessary to cover their service area and shall at no time use a peak envelope power in excess of 10 kW per channel.
1351C

MOD 8220 4374 (4) Ship radiotelephone stations employing class H3E¹, R3E or J3E emissions in the bands between 4 000 kHz and 23 000 kHz shall at no time use a peak envelope power in excess of 1.5 kW per channel.
1351D

NOC

C2. Call and Reply

MOD 8221 4375 § 81. (1) Ship stations may use the following carrier frequencies for calling in radiotelephony:
1352

- 4 125 kHz^{2, 3}
- 6 215.5 kHz⁴
- 8 257 kHz
- 12 392 kHz
- 16 522 kHz
- 22 062 kHz

MOD 8219.1 4373.1
1351C.1

MOD 8220.1 4374.1
1351D.1

¹ For the use of class H3E emissions see Nos. 2982 and 2986.

MOD 8221.1 4375.1
1352.1

² In the United States and Canada, the carrier frequency 4 125 kHz is also authorized for common use by coast and ship stations for single-sideband radiotelephony on a simplex basis, provided the peak envelope power of such stations does not exceed 1 kW (see also No. 4376.2).

MOD 8221.2 4375.2
1352.2

³ In the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, the carrier frequency 4 125 kHz is also authorized for common use by coast and ship stations for single-sideband radiotelephony on a simplex basis for call, reply and safety purposes, provided the peak envelope power of such coast stations does not exceed 1 kW. In these zones the use of the carrier frequency 4 125 kHz for working purposes is not permitted (see also Nos. 2982, 3030 and 4375.1).

MOD 8221.3 4375.3
1352.3

⁴ In the zone of Region 3 south of latitude 25° N, the carrier frequency 6 215.5 kHz is also authorized for common use by coast and ship stations for single-sideband radiotelephony on a simplex basis for call, reply and safety purposes, provided the peak envelope power of such coast stations does not exceed 1 kW. In this zone the use of the carrier frequency 6 215.5 kHz for working purposes is not permitted (see also No. 2986).

MOD 8222 4376 (2) Coast stations may use the following carrier frequencies for calling in
1352A radiotelephony¹:

- 4 419.4 kHz²
- 6 521.9 kHz²
- 8 780.9 kHz
- 13 162.8 kHz
- 17 294.9 kHz
- 22 658 kHz

MOD 8223 4377 § 82. Ship and coast stations using digital selective calling in accordance with
1352AA No. 4681 may use the frequencies specified in Nos. 4683 and 4684 respectively.

NOC 8224 4378 § 83. The hours of service of coast stations open to public correspondence and
1354 the frequency or frequencies on which watch is maintained shall be indicated in the List of Coast Stations.

MOD 8225 4379 § 84. (1) In the zone of Regions 1 and 2 south of latitude 15° N, including
1351G Mexico, and in the zone of Region 3 south of latitude 25° N, before transmitting on the carrier frequency 4 125 kHz or 6 215.5 kHz a station shall listen on the frequency for a reasonable period to make sure that no distress traffic is being sent (see No. 4915).

NOC 8226 4380 (2) The provisions of No. 4379 do not apply to stations in distress.
1351H

NOC C3. Traffic

MOD 8227 4381 § 85. (1) For the conduct of duplex telephony, the transmitting frequencies of the
1355 coast stations and of the corresponding ship stations shall be associated in pairs, as indicated in Appendix 16, except temporarily in cases where working conditions prohibit the use of paired frequencies in order to meet operational needs.

MOD 8228 4382 (2) The frequencies to be used for the conduct of simplex radiotelephony are
1356 shown in Appendix 16, Section B. In these cases, the peak envelope power of the coast station transmitter shall not exceed 1 kW.

MOD 8229 4383 (3) The frequencies indicated in Appendix 16 for ship station transmissions
1357 may be used by ships of any category according to traffic requirements.

NOC 8222.1 4376.1 ¹ These frequencies may also be used by coast stations with class H2B emission, when
1352A.1 using the selective calling system defined in Appendix 39.

MOD 8222.2 4376.2 ² In Regions 2 and 3, the carrier frequencies 4 419.4 kHz and 6 521.9 kHz are also
1352A.2 authorized for common use by coast and ship stations for single-sideband radiotelephony on a simplex basis, provided the peak envelope power of such stations does not exceed 1 kW. The use of 6 521.9 kHz for this purpose should be limited to daytime use (see also No. 4375.1).

MOD	8230 1358	4384	(4) The technical characteristics of transmitters used for radiotelephony in the bands between 4 000 kHz and 23 000 kHz are specified in Appendix 17.
NOC	8231	4385	<i>D. Bands Between 156 MHz and 174 MHz</i>
NOC			D1. Call and Reply
MOD	8232 1359	4386	§ 86. (1) The frequency 156.8 MHz is the international distress, safety and calling frequency for radiotelephony when using frequencies in the authorized bands between 156 MHz and 174 MHz (see No. 2994 for details of use). The class of emission to be used for radiotelephony on the frequency 156.8 MHz shall be G3E (see Appendix 19).
MOD	8233 1359A	4387	(2) The frequency 156.8 MHz may also be used:
		4388	a) by coast and ship stations for call and reply in accordance with the provisions of Articles 62 and 65;
		4389	b) by coast stations to announce the transmission on another frequency of traffic lists and important maritime information (see Nos. 4925 to 4929).
NOC	8234 1359B	4390	(3) The frequency 156.8 MHz may be used by ship stations and coast stations for selective calling.
NOC	8235 1361	4391	(4) Any one of the channels designated in Appendix 18 for public correspondence may be used as a calling channel if an administration so desires. Such use shall be indicated in the List of Coast Stations.
MOD	8236 1362	4392	(5) Ship and coast stations in the public correspondence service may use a working frequency, for calling purposes, as provided in Articles 62 and 65.
NOC	8237 1363	4393	(6) All emissions in the band 156.725 - 156.875 MHz ¹ capable of causing harmful interference to the authorized transmissions of stations of the maritime mobile service on 156.8 MHz are forbidden.
NOC	8238 1363C	4394	(7) To facilitate the reception of distress calls all transmissions on 156.8 MHz shall be kept to a minimum and shall not exceed one minute.
MOD	8239 1363A	4395	(8) Before transmitting on the frequency 156.8 MHz, a station should listen on this frequency for a reasonable period to make sure that no distress traffic is being sent (see No. 4915).
NOC	8240 1363B	4396	(9) The provisions of No. 4395 do not apply to stations in distress.
NOC	8237.1 1363.1	4393.1	¹ After 1 January 1983 this band is reduced to 156.7625 - 156.8375 MHz (see Resolution 308).

NOC

D2. Watch

- MOD 8241 4397 § 87. (1) In addition to the watch referred to in No. 3057, a coast station open to the international public correspondence service should, during its hours of service, maintain watch on its receiving frequency or frequencies indicated in the List of Coast Stations.
1365
- NOC 8242 4398 (2) The method of watch on a working frequency shall be no less efficient than watch by an operator.
1366
- NOC 8243 4399 (3) Ship stations should, where practicable, maintain watch on 156.8 MHz when within the service area of a coast station providing international maritime mobile radiotelephone service in the band 156 - 174 MHz. Ship stations fitted only with VHF radiotelephone equipment operating in the authorized bands between 156 MHz and 174 MHz should maintain watch on 156.8 MHz when at sea.
1367
- NOC 8244 4400 (4) Ship stations, when in communication with a port station, may, on an exceptional basis and subject to the agreement of the administration concerned, continue to maintain watch on the appropriate port operations frequency only, provided that watch on 156.8 MHz is being maintained by the port station.
1367A
- NOC 8245 4401 (5) Ship stations, when in communication with a coast station in the ship movement service and subject to the agreement of the administration concerned, may continue to maintain watch on the appropriate ship movement service frequency only, provided the watch on 156.8 MHz is being maintained by that coast station.
1367B
- NOC 8246 4402 § 88. A coast station in the port operations service in an area where 156.8 MHz is being used for distress, urgency or safety shall, during its working hours, keep an additional watch on 156.6 MHz or other port operations frequency indicated in heavy type in the List of Coast Stations.
1368
- NOC 8247 4403 § 89. A coast station in the ship movement service in an area where 156.8 MHz is being used for distress, urgency and safety shall, during its working hours, keep an additional watch on the ship movement frequencies indicated in heavy type in the List of Coast Stations.
1368A

NOC

D3. Traffic

- NOC 8248 4404 § 90. (1) Where practicable, coast stations open to the international public correspondence service shall be capable of working with ship stations equipped for duplex or semi-duplex operation.
1369
- NOC 8249 4405 (2) The method of working (single-frequency or two-frequency) specified in Appendix 18 for each channel should be used in the international services (see Resolution 308).
1370

NOC	8250 1371	4406	§ 91. Communications in the port operations service shall be restricted to those relating to operational handling, the movement and the safety of ships and, in emergency, to the safety of persons. Messages of a public correspondence nature shall be excluded from this service.
NOC	8251 1371A	4407	§ 92. Communications in the ship movement service shall be restricted to those relating to the movement of ships. Messages of a public correspondence nature shall be excluded from this service.
NOC	8252 1372	4408	§ 93. (1) Coast stations which use 156.8 MHz for calling shall be able to use at least one other authorized channel in the international maritime mobile radiotelephone service in the band 156 - 174 MHz.
NOC	8253 1373	4409	(2) In the band 156 - 174 MHz administrations shall, where practicable, assign frequencies to coast and ship stations in accordance with the Table of Transmitting Frequencies given in Appendix 18 for such international services as administrations consider necessary (see Resolution 308).
MOD	8254 1373A	4410	(3) The normal sequence in which channels should be put into use in the band 156 - 174 MHz is indicated by the figures in the relevant columns of Appendix 18.
NOC	8255 1373B	4411	(4) Administrations should, as far as possible, arrange to ensure that ship stations fitted with the channels corresponding to the figures in a circle in Appendix 18 can obtain a reasonably adequate use of available services.
NOC	8256 1374	4412	(5) In assigning frequencies to their coast stations, administrations should collaborate in cases where harmful interference might occur.
NOC	8257 1375	4413	(6) Channels are designated by numbers in the Table of Transmitting Frequencies given in Appendix 18 (see Resolution 308).
NOC	8258 1376	4414	§ 94. (1) In assigning frequencies to stations of authorized services, other than maritime mobile, administrations shall avoid the possibility of interference to international maritime services in the bands between 156 MHz and 174 MHz.
NOC	8259 1377	4415	(2) The use of channels for maritime mobile purposes other than those indicated in the Table of Transmitting Frequencies given in Appendix 18 shall not cause harmful interference to services which operate in accordance with that table and shall not prejudice the future development of such services (see Resolution 308).
NOC	8260 1379	4416	§ 95. The carrier power of ship station transmitters shall not exceed 25 watts for equipment brought into service after 1 January 1970.
		4417 to 4440	NOT allocated.

**Order of Priority of Communications in the Maritime Mobile Service
and in the Maritime Mobile-Satellite Service**

MOD

8361 4441
1496A

The order of priority for communications¹ in the maritime mobile service and the maritime mobile-satellite service shall be as follows, except where impracticable in a fully automated system in which, nevertheless, category 1 shall receive priority:

1. Distress calls, distress messages, and distress traffic.
2. Communications preceded by the urgency signal.
3. Communications preceded by the safety signal.
4. Communications relating to radio direction-finding.
5. Communications relating to the navigation and safe movement of aircraft engaged in search and rescue operations.
6. Communications relating to the navigation, movements and needs of ships and aircraft, and weather observation messages destined for an official meteorological service.
7. ETATPRIORITENATIONS - Radiotelegrams relating to the application of the United Nations Charter.
8. ETATPRIORITE - Government radiotelegrams with priority and Government calls for which priority has been expressly requested.
9. Service communications relating to the working of the telecommunication service or to communications previously exchanged.
10. Government communications other than those shown in 8 above, ordinary private communications, RCT² radiotelegrams and press radiotelegrams.

4442
to NOT allocated.
4664

ADD 8361.1

4441.1

¹ The term *communications* as used in this Article includes radiotelegrams, radiotelephone calls and radiotelex calls.

ADD 8361.2

4441.2

8392

4669

B. Method of Calling

NOC

8393
999B

4670

§ 3. (1) The call shall consist of:

4671

a) the selective call number or identification number or signal of the
station called, followed by

b) the selective call number or identification number or signal of the
station calling.

4672

However, in the case of a coast station calling on VHF, the number of
the channel to be used for the reply and for traffic may replace the identification
number or signal of the coast station.

The call shall be transmitted twice.

NOC

8394
999C

4673

(2) When a station called does not reply, the call should not normally be
repeated until after an interval of at least five minutes and should not then normally
be renewed until after a further interval of fifteen minutes.

NOC 8395 4674 (3) The use of an “all ships call” shall be confined to distress and urgency
999CA in the MF and HF bands and the announcement of vital navigational warnings in those bands; additionally it may be used for safety purposes in the VHF band. This call may only be used to supplement, if required, the distress procedure specified in Nos. 3101, 3102, 3116 and 3117 and shall in no circumstances be used in place of such procedures, in particular the alarm signals mentioned in Nos. 3268 and 3270.

NOC 8396 4675 C. Reply to Calls

(MOD) 8397 4676 § 4. The reply to calls shall be made in accordance with the provisions of:
999D

4677 a) Nos. 4767 and 4769 when using radiotelegraphy;

4678 b) Nos. 4982 to 5002 when using radiotelephony.

NOC 8398 4679 D. Frequencies to Be Used

MOD 8399 4680 § 5. Selective calls should be sent on one or more of the following calling
999E carrier frequencies:

- 500 kHz
- 2 170.5 kHz¹
- 4 125 kHz
- 4 419.4 kHz
- 6 521.9 kHz
- 8 780.9 kHz
- 13 162.8 kHz
- 17 294.9 kHz
- 22 658 kHz
- 156.8 MHz²

NOC Section III. Digital Selective Calling System

NOC 8400 4681 § 6. A digital selective calling system may be used if it is in full conformity
999F with the relevant CCIR Recommendations in which all operational, technical and compatibility aspects which might be involved have been taken into account.

SUP 8401
1013AB

MOD 8399.1 4680.1 ¹ This frequency has replaced 2 182 kHz for selective calling except as provided in
999E.1 No. 2976.

NOC 8399.2 4680.2 ² Selective calling on this frequency should normally be only in the direction coast
999E.2 station to ship or intership. Selective calls from ship to coast stations should whenever possible be sent on other frequencies of Appendix 18, as appropriate.

MOD **8402** **4682** § 7. The frequencies assignable to ship and coast stations for digital selective
(ex **8739**) calling are as follows:
1238B

MOD **8403** **4683** a) *Ship stations*
(ex **8740**)
1238C

- 4 187.6 kHz
- 6 281.4 kHz
- 8 375.2 kHz
- 12 562.3 kHz
- 12 562.8 kHz
- 16 749.9 kHz
- 16 750.4 kHz
- 22 248 kHz
- 22 248.5 kHz

MOD **8404** **4684** b) *Coast stations*
(ex **8741**)

**General Radiotelegraph Procedure in the
Maritime Mobile Service**

NOC

Section I. General Provisions

MOD 8423 4710 § 1. The procedure detailed in this Article is obligatory, except in cases of
1000 distress, urgency or safety, to which the provisions of Chapter IX are applicable.

MOD 8424 4711 § 2. The use of the Morse code signals specified in the Instructions for the
1003 Operation of the International Public Telegram Service shall be obligatory.
However, for radiocommunications of a special character, the use of other signals is
not precluded.

MOD 8425 4712 § 3. The service abbreviations given in Appendix 14 are to be used.
1005

NOC

Section II. Preliminary Operations

NOC 8426 4713 § 4. (1) Before transmitting, a station shall take precautions to ensure that its
1007 emissions will not interfere with transmissions already in progress; if such inter-
ference is likely, the station shall await an appropriate break in the communications in
progress. This obligation does not apply to stations where unattended operation is
possible through automatic means (see No. 3863) on frequencies dedicated to
narrow-band direct-printing.

NOC 8427 4714 (2) If, these precautions having been taken, the emissions of the station
1008 should, nevertheless, interfere with a transmission already in progress, the following
rules shall be applied:

MOD 8428 4715 a) the ship station whose emission causes interference to the communi-
1009 cation of a mobile station with a coast station shall cease sending at
the first request of the coast station;

MOD 8429 4716 b) the ship station whose emission causes interference to communica-
1010 tions already in progress between mobile stations shall cease sending
at the first request of one of the other stations;

NOC 8430 4717 c) the station which requests this cessation shall indicate the approxi-
1011 mate waiting time imposed on the station whose emission it
suspends.

NOC

Section III. Calls by Radiotelegraphy

NOC 8431 4718 *A. General*

MOD 8432 4719 § 5. The provisions of this Section are not applicable to the maritime
1064A mobile-satellite service.

MOD	8433 1065	4720	§ 6. (1) As a general rule, it rests with the ship station to establish communication with the coast station. For this purpose, the ship station may call the coast station only when it comes within the service area of the latter, that is to say, that area within which, by using an appropriate frequency, the ship station can be heard by the coast station.
MOD	8434 1066	4721	(2) However, a coast station having traffic for a ship station may call this station if it has reason to believe that the ship station is keeping watch and is within the service area of the coast station.
MOD	8435 1067	4722	§ 7. (1) In addition, each coast station shall, so far as practicable, transmit its calls in the form of "traffic lists" consisting of the call signs in alphabetical order of all ship stations for which it has traffic on hand. These calls are made at specified times fixed by agreement between the administrations concerned and at intervals of at least two hours and not more than four hours during the working hours of the coast station.
NOC	8436 1067A	4723	(2) In the bands between 4 000 kHz and 27 500 kHz, however, traffic lists may be transmitted at intervals of not less than one hour.
NOC	8437 1068	4724	(3) Continuous or frequently repeated emissions of its call sign or of the enquiry signal CQ by a coast station should be avoided (see Nos. 1799 to 1803).
MOD	8438 1068A	4725	(4) However, in the bands between 4 000 kHz and 27 500 kHz, a coast station may transmit its call sign at intervals, using type A1A transmission, to enable ship stations to select the calling band with the most favourable propagation characteristics for reliable communication (see No. 4261).
NOC	8439 1069	4726	(5) Coast stations shall transmit their traffic lists on their normal working frequencies in the appropriate bands. This transmission shall be preceded by a general call to all stations (CQ).
NOC	8440 1070	4727	(6) The call to all stations announcing the traffic list may be sent on a calling frequency in the following form: <ul style="list-style-type: none"> – CQ, not more than three times; – the word DE; – the call sign of the calling station, not more than three times; – QSW followed by the indication of the working frequency or frequencies on which the traffic list is about to be sent. <p style="text-align: center;">In no case may this preamble be repeated.</p>
NOC	8441 1071	4728	(7) The provisions of No. 4727:
NOC	8442 1071A	4729	a) are obligatory when 500 kHz is used;
NOC	8443 1072	4730	b) do not apply when frequencies in the bands between 4 000 kHz and 27 500 kHz are used.

NOC	8444 1073	4731	(8) The hours at which coast stations transmit their traffic lists and the frequencies and classes of emission which they use for this purpose shall be stated in the List of Coast Stations.
MOD	8445 1074	4732	(9) Ship stations should, as far as possible, listen to the traffic lists transmitted by coast stations. On hearing their call sign in such a list they shall reply as soon as they can do so.
MOD	8446 1075	4733	(10) When the traffic cannot be sent immediately, the coast station shall inform each ship station concerned of the probable time at which working can begin, and also, if necessary, the frequency and class of emission which will be used.
MOD	8447 1076	4734	§ 8. When a coast station receives calls from several ship stations at practically the same time, it decides the order in which these stations may transmit their traffic. Its decision shall be based on the priority (see No. 4441) of the radiotelegrams that ship stations have on hand and on the need for allowing each calling station to clear the greatest possible number of communications.
NOC	8448 1077	4735	§ 9. (1) When a station called does not reply to a call sent three times at intervals of two minutes, the calling shall cease and shall not be renewed until after an interval of fifteen minutes.
ADD	8448A 1078	4736	(2) In the case of a communication between a station of the maritime mobile service and an aircraft station, calling may be renewed after an interval of five minutes, notwithstanding No. 4735 .
NOC	8449 1079	4737	(3) Before renewing the call, the calling station shall ascertain that the station called is not in communication with another station.
NOC	8450 1080	4738	(4) If there is no reason to believe that harmful interference will be caused to other communications in progress, the provisions of Nos. 4146 and 4735 are not applicable. In such cases the call, sent three times at intervals of two minutes, may be repeated after an interval of less than fifteen minutes but not less than three minutes.
MOD	8451 1081	4739	§ 10. Ship stations shall not radiate a carrier wave between calls.
MOD	8452 1082	4740	§ 11. When the name and address of the administration or private operating agency controlling a ship station are not given in the appropriate list of stations or are no longer in agreement with the particulars given therein, it is the duty of the ship station to furnish as a matter of regular procedure, to the coast station to which it transmits traffic, all the necessary information in this respect.
MOD	8453 1083	4741	§ 12. (1) The coast station may, by means of the abbreviation TR, ask the ship station to furnish it with the following information:
NOC	8454 1084	4742	a) position and, whenever possible, course and speed;
NOC	8455 1085	4743	b) next port of call.

MOD	8456 1086	4744	(2) The information referred to in Nos. 4741 to 4743, preceded by the abbreviation TR, should be furnished by ship stations whenever this seems appropriate, without prior request from the coast station. The provision of this information is authorized only by the master or person responsible for the ship or other vessel carrying the ship station.
NOC	8457	4745	<i>B. Calls to Several Stations</i>
MOD	8458 1087A	4746	§ 13. The provisions of this Section are not applicable to the maritime mobile-satellite service.
NOC	8459 1088	4747	§ 14. Two types of calling signal “to all stations” are recognized:
NOC	8460 1089	4748	a) call CQ followed by the letter K (see Nos. 4750 and 4751);
NOC	8461 1090	4749	b) call CQ not followed by the letter K (see No. 4752).
MOD	8462 1091	4750	§ 15. Stations desiring to enter into communication with stations of the maritime mobile service without, however, knowing the names of any such stations within their service area may use the enquiry signal CQ in place of the call sign of the station called in the calling formula, the call being followed by the letter K (general call to all stations in the maritime mobile service with request for reply).
MOD	8463 1092	4751	§ 16. In regions where traffic is congested, the use of the call CQ followed by the letter K is forbidden. As an exception it may be used with signals denoting urgency.
NOC	8464 1093	4752	§ 17. The call CQ not followed by the letter K (general call to all stations without request for reply) is used before the transmission of information of any kind intended to be read or used by anyone who can intercept it.
NOC	8465 1094	4753	§ 18. The call CP followed by two or more call signs or by a code word (call to certain receiving stations without request for reply) is used only for the transmission of information of any nature intended to be read or used by the persons authorized.
NOC			Section IV. Method of Calling, Reply to Calls and Signals Preparatory to Traffic
NOC	8466	4754	<i>A. Method of Calling – Morse Telegraphy</i>
SUP	8467 1013A		
NOC	8468 1013B	4755	§ 19. (1) The call consists of: <ul style="list-style-type: none"> – the call sign of the station called, not more than twice; – the word DE;

- the call sign of the calling station, not more than twice;
- the information required by No. 4761 and, as appropriate, by Nos. 4764 and 4765;
- the letter K.

NOC	8469 1013C	4756	(2) For normal calling, when the requirements of No. 4261 have been met, the call specified in No. 4755 may be transmitted twice at an interval of not less than one minute; thereafter it shall not be repeated until after an interval of three minutes.
NOC	8470	4757	<i>B. Frequency to Be Used for Calling and for Preparatory Signals</i>
NOC	8471 1014	4758	§ 20. (1) For making the call and for transmitting preparatory signals, the calling station shall use a frequency on which the station called keeps watch.
MOD	8472 1015	4759	(2) A ship station calling a coast station in any of the frequency bands between 4 000 kHz and 27 500 kHz shall use a frequency in the calling band specially reserved for this purpose.
NOC	8473	4760	<i>C. Indication of the Frequency to Be Used for Traffic</i>
MOD	8474 1016A	4761	§ 21. (1) The call, as described in No. 4755, shall contain the service abbreviation indicating the working frequency and, if useful, the class of emission which the calling station proposes to use for the transmission of its traffic.
MOD	8475 1019A	4762	(2) When the call by a coast station does not contain an indication of the frequency to be used for the traffic, this indicates that the coast station proposes to use for traffic its normal working frequency shown in the List of Coast Stations.
NOC	8476	4763	<i>D. Indication of Priority, of the Reason for the Call, and of Transmission of Radiotelegrams in Series</i>
MOD	8477 1020A	4764	§ 22. (1) The calling station shall transmit the service abbreviation after the above-mentioned preparatory signals to indicate a priority message other than a distress, urgency or safety message (see No. 4441) and to indicate the reason for the call.
NOC	8478 1021	4765	(2) Moreover, when the calling station wishes to send its radiotelegrams in series, it shall indicate this by adding the service abbreviation for requesting the consent of the station called.

NOC	8479	4766		<i>E. Form of Reply to Calls</i>
MOD	8480 1022A	4767	§ 23.	The reply to calls consists of: <ul style="list-style-type: none"> – the call sign of the calling station, not more than twice; – the word DE; – the call sign of the station called, once only.
NOC	8481	4768		<i>F. Frequency for Reply</i>
NOC	8482 1023	4769	§ 24.	Except as otherwise provided in these Regulations, for transmitting the reply to calls and to preparatory signals, the station called shall use the frequency on which the calling station keeps watch, unless the calling station has specified a frequency for the reply.
NOC	8483	4770		<i>G. Agreement on the Frequency to Be Used for Traffic</i>
NOC	8484 1027	4771	§ 25. (1)	If the station called is in agreement with the calling station, it shall transmit: <ul style="list-style-type: none"> a) the reply to the call; b) the service abbreviation indicating that from that moment onwards it will listen on the working frequency announced by the calling station; c) if necessary, the indications referred to in No. 4783; d) if useful, the service abbreviation and figure indicating the strength and/or intelligibility of the signals received (see Appendix 14); e) the letter K if the station called is ready to receive the traffic of the calling station.
NOC	8485 1028	4772		
NOC	8486 1029	4773		
NOC	8487 1030	4774		
MOD	8488 1031	4775		
NOC	8489 1032	4776		
NOC	8490 1033	4777	(2)	If the station called is not in agreement with the calling station on the working frequency to be used, it shall transmit: <ul style="list-style-type: none"> a) the reply to the call; b) the service abbreviation indicating the working frequency to be used by the calling station and, if necessary, the class of emission; c) if necessary, the indications specified in No. 4783.
NOC	8491 1034	4778		
NOC	8492 1035	4779		
NOC	8493 1036	4780		
NOC	8494 1037	4781	(3)	When agreement is reached regarding the working frequency which the calling station shall use for its traffic, the station called shall transmit the letter K after the indications contained in its reply.

NOC 8495 4782

*H. Reply to the Request
for Transmission by Series*

NOC 8496 4783
1038

§ 26. The station called, in replying to a calling station which has proposed to transmit its radiotelegrams by series (see No. 4765), shall indicate, by means of the service abbreviation, its acceptance or refusal. In the former case it shall specify, if necessary, the number of radiotelegrams which it is ready to receive in one series.

NOC 8497 4784

I. Difficulties in Reception

NOC 8498 4785
1039

§ 27. (1) If the station called is unable to accept traffic immediately, it shall reply to the call as indicated in Nos. 4771 to 4776, but it shall replace the letter K by the signal · – · · · (wait), followed by a number indicating in minutes the probable duration of the waiting time. If the probable duration exceeds ten minutes (five minutes in the case of an aircraft station communicating with a station of the maritime mobile service), the reason for the delay shall be given.

NOC 8499 4786
1040

(2) When a station receives a call without being certain that such a call is intended for it, it shall not reply until the call has been repeated and understood. When, on the other hand, a station receives a call which is intended for it but is uncertain of the call sign of the calling station, it shall reply immediately using the service abbreviation in place of the call sign of this latter station.

NOC

Section V. Forwarding (Routing) of Traffic

NOC 8500 4787

A. Traffic Frequency

MOD 8501 4788
1041

§ 28. (1) As a general rule, a station of the maritime mobile service shall transmit its traffic on one of its working frequencies in that band in which the call has been made.

NOC 8502 4789
1042

(2) In addition to its normal working frequency, printed in heavy type in the List of Coast Stations, a coast station may use one or more supplementary frequencies in the same band, in accordance with the provisions of Article 60.

MOD 8503 4790
1043

(3) The use of frequencies reserved for calling shall be forbidden for traffic, except distress traffic (see Chapter IX).

NOC 8504 4791
1044

(4) If the transmission of a radiotelegram is to take place on a frequency and/or with a class of emission other than those used for the call, the transmission of the radiotelegram shall be preceded by:

- the call sign of the station called, not more than twice;
- the word DE;
- the call sign of the calling station, once only.

NOC	8505 1045	4792	(5) If the transmission is to be made on the same frequency and with the same class of emission as the call, the transmission of the radiotelegram shall be preceded, if necessary, by: <ul style="list-style-type: none"> – the call sign of the station called; – the word DE; – the call sign of the calling station.
NOC	8506	4793	<i>B. Numbering in Daily Series</i>
MOD	8507 1046	4794	§ 29. (1) As a general rule, radiotelegrams of all kinds transmitted by ship stations shall be numbered in a daily series; number 1 shall be given to the first radiotelegram sent each day to each separate station.
NOC	8508 1047	4795	(2) A series of numbers which has begun in radiotelegraphy should be continued in radiotelephony and vice versa.
NOC	8509	4796	<i>C. Long Radiotelegrams</i>
NOC	8510 1048	4797	§ 30. (1) In cases where both stations are able to change from sending to receiving without manual switching, the transmitting station may continue to send until completion of the message or until the receiving station breaks in on the transmission with the service abbreviation BK. Before commencing, both stations normally agree on such a method of working by means of the abbreviation QSK.
NOC	8511 1049	4798	(2) If this method of working cannot be employed, long radiotelegrams, whether in plain language or in secret language, shall, as a general rule, be transmitted in sections, each section containing fifty words in the case of plain language and twenty words or groups if secret language is used.
NOC	8512 1050	4799	(3) At the end of each section the signal · · – – · · (?) meaning “Have you received the radiotelegram correctly up to this point?” shall be transmitted. If the section has been correctly received, the receiving station shall reply by sending the letter K and the transmission of the radiotelegram shall be continued.
NOC	8513	4800	<i>D. Suspension of Traffic</i>
MOD	8514 1051	4801	§ 31. When a ship station transmits on a working frequency of a coast station and causes interference with the transmission of such a coast station, it shall suspend working at the first request of the latter.
NOC			Section VI. End of Traffic and Work
NOC	8515	4802	<i>A. Signal for the End of Transmission</i>
NOC	8516 1052	4803	§ 32. (1) The transmission of a radiotelegram shall be terminated by the signal · – · – · (end of transmission), followed by the letter K.

NOC	8517 1053	4804	(2) In the case of transmission by series, the end of each radiotelegram shall be indicated by the signal · – · – · (end of transmission) and the end of the series by the letter K.
NOC	8518	4805	<i>B. Acknowledgement of Receipt</i>
NOC	8519 1054	4806	<p>§ 33. (1) The acknowledgement of receipt of a radiotelegram or a series of radiotelegrams shall be given by the receiving station in the following manner:</p> <ul style="list-style-type: none"> – the call sign of the sending station; – the word DE; – the call sign of the receiving station; – the letter R followed by the number of the radiotelegram; <i>or</i> – the letter R followed by the number of the last radiotelegram of a series.
NOC	8520 1055	4807	(2) The acknowledgement of receipt shall be transmitted by the receiving station on the traffic frequency (see Nos. 4788 and 4789).
NOC	8521	4808	<i>C. End of Work</i>
NOC	8522 1056	4809	§ 34. (1) The end of work between two stations shall be indicated by each of them by means of the signal · · · – · – (end of work).
NOC	8523 1057	4810	<p>(2) The signal · · · – · – (end of work) shall also be used:</p> <ul style="list-style-type: none"> – when the transmission of radiotelegrams of general information, meteorological information and general safety notices is finished; – when transmission is ended in long-distance radiocommunication services with deferred acknowledgement of receipt or without acknowledgement of receipt.
NOC			Section VII. Control of Working
NOC	8524 1058	4811	§ 35. The provisions of this Section are not applicable in cases of distress, urgency or safety (see No. 4710).
MOD	8525 1059	4812	§ 36. In communications between coast stations and ship stations, the ship station shall comply with the instructions given by the coast station, in all questions relating to the order and time of transmission, to the choice of frequency and class of emission, and to the duration and suspension of work.
MOD	8526 1060	4813	§ 37. In communications between ship stations, the station called shall control the working in the manner indicated in No. 4812. However, if a coast station finds it necessary to intervene, these stations shall comply with the instructions given by the coast station.

NOC

Section VIII. Tests

MOD 8527 4814 § 38. When it is necessary for a ship station to send signals for testing or
1061 adjustment which are liable to interfere with the working of neighbouring coast
stations, the consent of these stations shall be obtained before such signals are sent.

MOD 8528 4815 § 39. When it is necessary for a station in the maritime mobile service to make
1062 test signals, either for the adjustment of a transmitter before making a call or for the
adjustment of a receiver, such signals shall not be continued for more than ten
seconds and shall be composed of a series of VVV followed by the call sign of the
station emitting the test signals.

ARTICLE 64

NOC **General Procedures for Narrow-Band Direct-Printing Telegraphy
in the Maritime Mobile Service¹**

NOC **Section I. General**

MOD **8580** **4841** § 1. Stations using narrow-band direct-printing telegraphy shall comply with
1062AA the provisions of Articles 59 and 60.

NOC **8581** **4842** § 2. The procedures specified in the present Article should be employed
1062AB except in cases of distress, urgency or safety.

NOC **8582** **4843** § 3. (1) The traffic may be exchanged with or without the use of error-correcting
1062AC equipment.

NOC **8583** **4844** (2) For communication between two stations the ARQ mode should be used
1062AD when available.

NOC **8584** **4845** (3) For transmissions from one coast or ship station to two or more other
1062AE stations the forward-error-correcting mode should be used when available.

NOC **8585** **4846** § 4. The services provided by each station open to public correspondence
1062AF shall be indicated in the List of Coast Stations and in the List of Ship Stations,
together with information on charging.

MOD **8586** **4847** § 5. Where transmission over the telecommunication channels open to public
1062AG correspondence (excluding the telecommunication channels of the mobile service
and of the mobile-satellite service and its feeder links) is involved, the provisions of
the Telegraph Regulations and the relevant CCITT Recommendations should be
taken into account.

NOC **Section II. Procedures for Manual Operation**

NOC **8587** **4848** *A. General*

MOD **8588** **4849** § 6. When using direct-printing telegraphy or similar systems in any of the
1015A frequency bands allocated to the maritime mobile service, the call may, by prior
arrangement, be made on a working frequency available for such systems.

NOC **A.N61** **A.64** ¹ Reference may also be made to the relevant CCIR Recommendations.

NOC	8589	4850	<i>B. Ship to Coast Station</i>
NOC	8590 1062AH	4851	§ 7. (1) The operator of the ship station establishes communication with the coast station by A1A Morse telegraphy, telephony or by other means using normal calling procedures. The operator then requests direct-printing communication, exchanges information regarding the frequencies to be used and, when applicable, gives the ship station the direct-printing selective call number assigned in accordance with Appendix 38.
NOC	8591 1062AI	4852	(2) The operator of the coast station then establishes direct-printing communication on the frequency agreed, using the appropriate identification of the ship.
NOC	8592 1062AJ	4853	§ 8. (1) Alternatively the operator of the ship station, using the direct-printing equipment, calls the coast station on a predetermined coast station receive frequency using the identification of the coast station assigned in accordance with Appendix 38.
NOC	8593 1062AK	4854	(2) The operator of the coast station then establishes direct-printing communication on the corresponding coast station transmit frequency.
NOC	8594	4855	<i>C. Coast Station to Ship</i>
NOC	8595 1062AL	4856	§ 9. (1) The operator of the coast station calls the ship station by A1A Morse telegraphy, telephony or other means, using normal calling procedures.
NOC	8596 1062AM	4857	(2) The operator of the ship station then applies the procedures of No. 4851 or 4853 .
NOC	8597	4858	<i>D. Intership</i>
NOC	8598 1062AN	4859	§ 10. (1) The operator of the calling ship station establishes communication with the called ship station by A1A Morse telegraphy, telephony or by other means, using normal calling procedures. The operator then requests direct-printing communication, exchanges information regarding the frequencies to be used and, when applicable, gives the direct-printing selective call number of the calling ship station assigned in accordance with Appendix 38.
NOC	8599 1062AO	4860	(2) The operator of the called ship station then establishes direct-printing communication on the frequency agreed, using the appropriate identification of the calling ship.

NOC **Section III. Procedures for Automatic Operation**

NOC **8600 4861** *A. Ship to Coast Station*

NOC **8601 4862** § 11. (1) The ship station calls the coast station on a predetermined coast station receive frequency, using the direct-printing equipment and the identification signal of the coast station assigned in accordance with Appendix 38.
1062AP

NOC **8602 4863** (2) The coast station's direct-printing equipment detects the call and the coast station responds directly on the corresponding coast station transmit frequency, either automatically or under manual control.
1062AQ

NOC **8603 4864** *B. Coast Station to Ship*

NOC **8604 4865** § 12. (1) The coast station calls the ship on a predetermined coast station transmit frequency, using the direct-printing equipment and the ship station direct-printing selective call number assigned in accordance with Appendix 38.
1062AR

NOC **8605 4866** (2) The ship station's direct-printing equipment tuned to receive the predetermined coast station transmit frequency detects the call, whereupon the reply is given in one of the following ways:
1062AS

NOC **8606 4867** a) the ship station replies either immediately on the corresponding coast station receive frequency or at a later stage, using the procedure of No. 4853; *or*
1062AT

NOC **8607 4868** b) the ship station's transmitter is automatically started on the corresponding coast station receive frequency and the direct-printing equipment responds by sending appropriate signals to indicate readiness to receive traffic automatically.
1062AU

NOC **Section IV. Message Format**

NOC **8608 4869** § 13. Where the appropriate facilities are provided by the coast station, traffic may be exchanged with the telex network:
1062AV

NOC **8609 4870** a) in a conversational mode where the stations concerned are connected directly, either automatically or under manual control; *or*
1062AW

NOC **8610 4871** b) in a store-and-forward mode where traffic is stored at the coast station until the circuit to the called station can be set up, either automatically or under manual control.
1062AX

NOC **8611 4872** § 14. In the shore-to-ship direction, the message format should conform to normal telex network practice.
1062AY

NOC	8612 1062AZ	4873	§ 15. In the ship-to-shore direction, the message format should conform to normal telex network practice with the addition of a preamble as follows:
NOC	8613 1062BA	4874	a) in the conversational mode the preamble shall consist of the characters DIRTLXyz+ transmitted in sequence and preceded by at least one carriage return and a line feed, where “y” is the telex destination code in accordance with relevant CCITT Recommendations, “z” is the land subscriber’s telex number and “+” indicates end of sequence;
NOC	8614 1062BB	4875	b) in the store-and-forward mode the preamble shall consist of the characters TLXyz+ transmitted in sequence and preceded by at least one carriage return and a line feed, where “y” is the telex destination code in accordance with relevant CCITT Recommendations, “z” is the land subscriber’s telex number and “+” indicates end of sequence.

NOC

**Section V. Procedures for Operation
in the Forward-Error-Correcting Mode**

NOC	8615 1062BC	4876	§ 16. Messages in the forward-error-correcting mode may be sent, by prior arrangement, from a coast station or a ship station to one or more ship stations in the following cases:
NOC	8616 1062BD	4877	a) where a receiving ship station is not able to use its transmitter or is not permitted to do so;
NOC	8617 1062BE	4878	b) where the message is intended for more than one ship;
NOC	8618 1062BF	4879	c) where unattended reception of a message in the forward-error-correcting mode is necessary and automatic acknowledgement is not required.
NOC	8619 1062BG	4880	§ 17. All messages in the forward-error-correcting mode should be preceded by at least one carriage return and a line feed signal.
NOC	8620 1062BH	4881	§ 18. Ship stations may acknowledge the reception of messages in the forward-error-correcting mode by A1A Morse telegraphy, telephony or by other means.
		4882 to 4902	NOT allocated.

ARTICLE 65

NOC **General Radiotelephone Procedure in the Maritime Mobile Service**

NOC **Section I. General Provisions**

- MOD **8671** **4903** § 1. The procedure detailed in this Article is applicable to radiotelephone stations, except in cases of distress, urgency or safety, to which the provisions of Chapter IX are applicable.
1209
- NOC **8672** **4904** § 2. (1) The service of ship radiotelephone stations shall be performed by an operator satisfying the conditions specified in Article 55.
1211
- NOC **8673** **4905** (2) For the call signs or other means of identification for coast or ship radiotelephone stations see Article 25.
1212
- NOC **8674** **4906** § 3. The radiotelephone public correspondence service provided on ships should, if possible, be operated on a duplex basis.
1213
- NOC **8675** **4907** § 4. (1) Devices providing for the emission of a signal to indicate that a call is in progress on a channel may be used in this service on a non-interference basis to the service provided by coast stations.
1214
- NOC **8676** **4908** (2) The use of devices for continuous or repetitive calling or identification is not permitted.
1214A
- NOC **8677** **4909** (3) A station may not transmit identical information simultaneously on two or more frequencies when communicating with only one other station.
1214B
- NOC **8678** **4910** (4) A station shall not emit any carrier wave between calls.
1214C
- MOD **8679** **4911** (5) Radiotelephone stations should, as far as possible, be equipped with devices for instantaneous switching from transmission to reception and vice versa. This equipment is necessary for all stations participating in communication between ships and subscribers of the land telephone system.
1215
- MOD **8680** **4912** § 5. (1) Stations equipped for radiotelephony may transmit and receive radiotelegrams by means of radiotelephony. Coast stations providing such service and open for public correspondence shall be indicated in the List of Coast Stations.
1216
- NOC **8681** **4913** (2) To facilitate radiocommunications the service abbreviations given in Appendix 14 may be used.
1216A
- NOC **8682** **4914** (3) When it is necessary to spell out certain expressions, difficult words, service abbreviations, figures, etc., the phonetic spelling tables in Appendix 24 shall be used.
1216B

NOC

Section II. Preliminary Operations

- NOC **8683** **4915** § 6. (1) Before transmitting, a station shall take precautions to ensure that its emissions will not interfere with transmissions already in progress; if such interference is likely, the station shall await an appropriate break in the working.
1217
- NOC **8684** **4916** (2) If, these precautions having been taken, the emissions of the station should nevertheless interfere with a transmission already in progress, the following rules shall be applied:
- MOD **8685** **4917** a) the ship station whose emission causes interference to the communication of a mobile station with a coast station shall cease sending at the first request of the coast station;
1219
- MOD **8686** **4918** b) the ship station whose emission causes interference to communications already in progress between mobile stations shall cease sending at the first request of one of the other stations;
1220
- NOC **8687** **4919** c) the station which requests this cessation shall indicate the approximate waiting time imposed on the station whose emission it suspends.
1221

NOC

Section III. Calls by Radiotelephony

- MOD **8688** **4920** § 7. (1) The provisions of this Section relating to the intervals between calls are not applicable to a station operating under conditions involving distress, urgency or safety.
1297A
- MOD **8689** **4921** (2) The provisions of this Section are not applicable to the maritime mobile-satellite service.
1297B
- MOD **8690** **4922** § 8. (1) As a general rule, it rests with the ship station to establish communication with the coast station. For this purpose the ship station may call the coast station only when it comes within the service area of the latter, that is to say, that area within which, by using an appropriate frequency, the ship station can be heard by the coast station.
1298
- MOD **8691** **4923** (2) However, a coast station having traffic for a ship station may call this station if it has reason to believe that the ship station is keeping watch and is within the service area of the coast station.
1299
- MOD **8692** **4924** § 9. (1) In addition, each coast station shall, so far as practicable, transmit its calls in the form of "traffic lists" consisting of the call signs or other identification in alphabetical order of all ship stations for which it has traffic on hand. These calls shall be made at specified times fixed by agreement between the administrations concerned and at intervals of not less than two hours and not more than four hours during the working hours of the coast station.
1300
- NOC **8693** **4925** (2) Coast stations shall transmit their traffic lists on their normal working frequencies in the appropriate bands. The transmission shall be preceded by a general call to all stations.
1301

NOC	8694 1302	4926	(3) The general call to all stations announcing the traffic lists may be sent on a calling frequency in the following form: <ul style="list-style-type: none">- "Hello all ships" or CQ (spoken as CHARLIE QUEBEC) not more than three times;- the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);- "... Radio" not more than three times;- "Listen for my traffic list on ... kHz". <p>In no case may this preamble be repeated.</p>
NOC	8695 1302A	4927	(4) However, in the bands between 156 MHz and 174 MHz when the conditions for establishing contact are good, the call described in No. 4926 may be replaced by: <ul style="list-style-type: none">- "Hello all ships" or CQ (spoken as CHARLIE QUEBEC), once;- the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);- "... Radio", twice;- "Listen for my traffic list on channel ...". <p>In no case may this preamble be repeated.</p>
NOC	8696 1303	4928	(5) The provisions of No. 4926 are obligatory when 2 182 kHz or 156.8 MHz is used.
NOC	8697 1304	4929	(6) The hours at which coast stations transmit their traffic lists and the frequencies and classes of emission which they use for this purpose shall be stated in the List of Coast Stations.
MOD	8698 1305	4930	(7) Ship stations should as far as possible listen to the traffic lists transmitted by coast stations. On hearing their call sign or other identification in such a list they must reply as soon as they can do so.
MOD	8699 1306	4931	(8) When the traffic cannot be sent immediately, the coast station shall inform each ship station concerned of the probable time at which working can begin, and also, if necessary, the frequency and class of emission which will be used.
MOD	8700 1307	4932	§ 10. When a coast station receives calls from several ship stations at practically the same time, it decides the order in which these stations may transmit their traffic. Its decision shall be based on the priority (see No. 4441) of the radiotelegrams or radiotelephone calls that the ship stations have on hand and on the need for allowing each calling station to clear the greatest possible number of communications.
MOD	8701 1308	4933	§ 11. (1) When a station called does not reply to a call sent three times at intervals of two minutes, the calling shall cease.
MOD	8702 1308A	4934	(2) However, when a station called does not reply, the call may be repeated at three-minute intervals.

MOD	8703 1308B	4935	(3) In areas where reliable VHF communication with a called coast station is practicable, the calling ship station may repeat the call as soon as it is ascertained that traffic has been terminated at the coast station.
NOC	8704 1309	4936	(4) In the case of a communication between a station of the maritime mobile service and an aircraft station, calling may be renewed after an interval of five minutes.
NOC	8705 1310	4937	(5) Before renewing the call, the calling station shall ascertain that the station called is not in communication with another station.
MOD	8706 1311	4938	(6) If there is no reason to believe that harmful interference will be caused to other communications in progress, the provisions of No. 4936 are not applicable. In such cases the call, sent three times at intervals of two minutes, may be repeated after an interval of not less than three minutes.
MOD	8707 1311A	4939	(7) However, before renewing the call, the calling station shall ascertain that further calling is unlikely to cause interference to other communications in progress and that the station called is not in communication with another station.
MOD	8708 1312	4940	(8) Ship stations shall not radiate a carrier wave between calls.
MOD	8709 1313	4941	§ 12. When the name and address of the administration or private operating agency controlling a ship station are not given in the appropriate list of stations or are no longer in agreement with the particulars given therein, it is the duty of the ship station to furnish as a matter of regular procedure, to the coast station to which it transmits traffic, all the necessary information in this respect.
MOD	8710 1314	4942	§ 13. (1) The coast station may, by means of the abbreviation TR (spoken as TANGO ROMEO), ask the ship station to furnish it with the following information:
NOC	8711 1315	4943	a) position and, whenever possible, course and speed;
NOC	8712 1316	4944	b) next port of call.
MOD	8713 1317	4945	(2) The information referred to in Nos. 4942 to 4944 , preceded by the abbreviation TR, should be furnished by ship stations, whenever this seems appropriate, without prior request from the coast station. The provision of this information is authorized only by the master or the person responsible for the ship.

NOC

**Section IV. Method of Calling, Reply to Calls
and Signals Preparatory to Traffic**

NOC **8714** **4946** *A. Method of Calling*

NOC **8715** **4947** § 14. (1) The call consists of:

- the call sign or other identification of the station called, not more than three times;
- the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);

- the call sign or other identification of the calling station, not more than three times.
- NOC 8716 4948
1222A (2) However, in the bands between 156 MHz and 174 MHz when the conditions for establishing contact are good, the call described in No. 4947 may be replaced by:
- the call sign of the station called, once;
 - the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);
 - the call sign or other identification of the calling station, twice.
- NOC 8717 4949
1222B (3) When calling a VHF coast station operating on more than one channel, a ship station calling on a working channel should include the number of that channel in the call.
- NOC 8718 4950
1223 (4) When contact is established, the call sign or other identification may thereafter be transmitted once only.
- NOC 8719 4951
1224 (5) When the coast station is fitted with equipment for selective calling and the ship station is fitted with equipment for receiving selective calls, the coast station shall call the ship by transmitting the appropriate code signals. The ship station shall call the coast station by speech in the manner given in No. 4947 (see also Article 62).
- NOC 8720 4952
1224A § 15. Calls for internal communications on board ship when in territorial waters shall consist of:
- NOC 8721 4953
1224B a) From the master station:
- the name of the ship followed by a single letter (ALFA, BRAVO, CHARLIE, etc.) indicating the sub-station not more than three times;
 - the words THIS IS;
 - the name of the ship followed by the word CONTROL;
- NOC 8722 4954
1224C b) From the sub-station:
- the name of the ship followed by the word CONTROL not more than three times;
 - the words THIS IS;
 - the name of the ship followed by a single letter (ALFA, BRAVO, CHARLIE, etc.) indicating the sub-station.
- NOC 8723 4955
B. Frequency to Be Used for Calling and for Preparatory Signals
- NOC 4956
B1. Bands Between 1 605 kHz and 4 000 kHz
- NOC 8724 4957
1225 § 16. (1) A radiotelephone ship station calling a coast station should use for the call, in order of preference:
- NOC 8725 4958
1226 a) a working frequency on which the coast station is keeping watch;

NOC	8726 1227	4959	<i>b)</i> the carrier frequency 2 182 kHz;
NOC	8727 1227A	4960	<i>c)</i> in Regions 1 and 3 and in Greenland, the carrier frequency 2 191 kHz (assigned frequency 2 192.4 kHz) when a carrier frequency of 2 182 kHz is being used for distress.
NOC	8728 1229	4961	(2) A radiotelephone ship station calling another ship station should use for the call:
NOC	8729 1230	4962	<i>a)</i> the carrier frequency 2 182 kHz;
NOC	8730 1231	4963	<i>b)</i> an intership frequency, whenever and wherever traffic density is high and prior arrangements can be made.
NOC	8731 1233	4964	(3) Subject to the provisions of No. 4967 , coast stations shall, in accordance with the requirements of their own country, call ship stations of their own nationality either on a working frequency or, when calls to individual ships are made, on the carrier frequency 2 182 kHz.
NOC	8732 1234	4965	(4) However, a ship station which keeps watch simultaneously on the carrier frequency 2 182 kHz and a working frequency should be called on the working frequency.
NOC	8733 1235	4966	(5) As a general rule, coast stations should call radiotelephone ship stations of another nationality on the carrier frequency 2 182 kHz.
NOC	8734 1235A	4967	(6) Coast stations may call ship stations equipped to receive selective calls in accordance with the provisions of Article 62.
NOC		4968	B2. Bands Between 4 000 kHz and 23 000 kHz
MOD	8735 1236	4969	§ 17. (1) A ship station calling a coast station by radiotelephony shall use either one of the calling frequencies mentioned in No. 4375 or the working frequency associated with that of the coast station, in accordance with Appendix 16, Section A.
MOD	8736 1237	4970	(2) A coast station calling a ship station by radiotelephony shall use one of the calling frequencies mentioned in No. 4376 , one of its working frequencies shown in the List of Coast Stations, or the carrier frequency 4 125 kHz or 6 215.5 kHz, in accordance with the provisions of Nos. 4375.2 and 4375.3 .
NOC	8737 1238	4971	(3) The preliminary operations for the establishment of radiotelephone communications may also be carried out by radiotelegraphy using the procedure appropriate to radiotelegraphy (see Nos. 4758 and 4759).

MOD	8738 1238A	4972	(4) The provisions of Nos. 4969 and 4970 do not apply to communications between ship stations and coast stations using the simplex frequencies specified in Appendix 16, Section B.
SUP	8739 to 8741 (become 8402 to 8404)		
NOC		4973	B3. Bands Between 156 MHz and 174 MHz
MOD	8742 1239	4974	§ 18. (1) In the bands between 156 MHz and 174 MHz, intership and coast station to ship calling should, as a general rule, be made on 156.8 MHz. However, coast station to ship calling may be conducted on a working channel or on a two-frequency calling channel which has been implemented in accordance with No. 4391. Except for distress, urgency or safety communications, when 156.8 MHz should be used, ship to coast station calling should, whenever possible, be made on a working channel or on a two-frequency calling channel which has been implemented in accordance with No. 4391. Ships wishing to participate in a port operations service or ship movement service should call on a port operations or ship movement working frequency, indicated in heavy type in the List of Coast Stations.
NOC	8743 1240	4975	(2) When 156.8 MHz is being used for distress, urgency or safety communications, a ship station desiring to participate in the port operations service may establish contact on 156.6 MHz, or another port operations frequency indicated in heavy type in the List of Coast Stations.
NOC		4976	B4. Procedure for Calling a Station Providing Pilot Service
NOC	8744 1240A	4977	§ 19. A radiotelephone ship station calling a station providing pilot service should use for the call, in order of preference:
NOC	8745 1240B	4978	a) an appropriate channel in the bands between 156 MHz and 174 MHz;
NOC	8746 1240C	4979	b) a working frequency in the bands between 1 605 kHz and 4 000 kHz;
NOC	8747 1240D	4980	c) the carrier frequency 2 182 kHz, and then only to determine the working frequency to be used.

NOC	8748	4981		<i>C. Form of Reply to Calls</i>
NOC	8749 1241	4982	§ 20.	The reply to calls consists of: <ul style="list-style-type: none"> – the call sign or other identification of the calling station, not more than three times; – the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties); – the call sign or other identification of the station called, not more than three times.
NOC	8750	4983		<i>D. Frequency for Reply</i>
NOC		4984	D1.	Bands Between 1 605 kHz and 4 000 kHz
NOC	8751 1242	4985	§ 21. (1)	When a ship station is called on the carrier frequency 2 182 kHz, it should reply on the same carrier frequency unless another frequency is indicated by the calling station.
NOC	8752 1242A	4986	(2)	When a ship station is called by selective calling, it shall reply on a frequency on which the coast station keeps watch.
NOC	8753 1243	4987	(3)	When a ship station is called on a working frequency by a coast station of the same nationality, it shall reply on the working frequency normally associated with the frequency used by the coast station for the call.
NOC	8754 1244	4988	(4)	When calling a coast station or another ship station, a ship station shall indicate the frequency on which a reply is required if this frequency is not the normal one associated with the frequency used for the call.
NOC	8755 1245	4989	(5)	A ship station which frequently exchanges traffic with a coast station of another nationality may use the same procedure for reply as ships of the nationality of the coast station, where this has been agreed by the administrations concerned.
NOC	8756 1246	4990	(6)	As a general rule a coast station shall reply:
NOC	8757 1247	4991	a)	on the carrier frequency 2 182 kHz to calls made on the carrier frequency 2 182 kHz, unless another frequency is indicated by the calling station;
NOC	8758 1248	4992	b)	on a working frequency to calls made on a working frequency;
NOC	8759 1248A	4993	c)	on a working frequency to calls made in Regions 1 and 3 and in Greenland on the carrier frequency 2 191 kHz (assigned frequency 2 192.4 kHz).
NOC		4994	D2.	Bands Between 4 000 kHz and 23 000 kHz
MOD	8760 1249	4995	§ 22. (1)	A ship station called by a coast station shall reply either on one of the calling frequencies mentioned in No. 4375 or on the working frequency associated with that of the coast station, in accordance with Appendix 16, Section A.

NOC	8761 1250	4996	(2) A coast station called by a ship station shall reply on one of the calling frequencies mentioned in No. 4376, or on one of its working frequencies shown in the List of Coast Stations.
MOD	8762 1250A	4997	(3) In the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, when a station is called on the carrier frequency 4 125 kHz it should reply on the same frequency unless another frequency is indicated by the calling station.
MOD	8763 1251	4998	(4) In the zone of Region 3 south of latitude 25° N, when a station is called on the carrier frequency 6 215.5 kHz it should reply on the same frequency unless another frequency is indicated by the calling station.
MOD	8764 1251A	4999	(5) The provisions of Nos. 4995 and 4996 do not apply to communication between ship stations and coast stations using the simplex frequencies specified in Appendix 16, Section B.
NOC		5000	D3. Bands Between 156 MHz and 174 MHz
NOC	8765 1252	5001	§ 23. (1) When a station is called on 156.8 MHz it should reply on the same frequency unless another frequency is indicated by the calling station.
NOC	8766 1253	5002	(2) When a coast station open to public correspondence calls a ship station either by speech or by selective calling, using a two-frequency channel, the ship station shall reply by speech on the frequency associated with that of the coast station; conversely, a coast station shall reply to a call from a ship station on the frequency associated with that of the ship station.
NOC	8767	5003	<i>E. Indication of the Frequency to Be Used for Traffic</i>
NOC		5004	E1. Bands Between 1 605 kHz and 4 000 kHz
NOC	8768 1254	5005	§ 24. If contact is established on the carrier frequency 2 182 kHz, coast and ship stations shall transfer to working frequencies for the exchange of traffic.
NOC		5006	E2. Bands Between 4 000 kHz and 23 000 kHz
NOC	8769 1255	5007	§ 25. After a ship station has established contact with a coast station, or another ship station, on the calling frequency of the band chosen, traffic shall be exchanged on their respective working frequencies.

NOC	5008	E3. Bands Between 156 MHz and 174 MHz
NOC	8770 1256	5009 § 26. (1) Whenever contact has been established between a coast station in the public correspondence service and a ship station either on 156.8 MHz or on a two-frequency calling channel (see No. 4392), the stations shall transfer to one of their normal pairs of working frequencies for the exchange of traffic. The calling station should indicate the channel to which it is proposed to transfer by reference to the frequency in MHz or, preferably, to its channel designator.
NOC	8771 1257	5010 (2) When contact on 156.8 MHz has been established between a coast station in the port operations service and a ship station, the ship station should indicate the particular service required (such as navigational information, docking instructions, etc.) and the coast station shall then indicate the channel to be used for the exchange of traffic by reference to the frequency in MHz, or, preferably, to its channel designator.
NOC	8772 1257A	5011 (3) When contact on 156.8 MHz has been established between a coast station in the ship movement service and a ship station, the coast station shall then indicate the channel to be used for the exchange of traffic by reference to the frequency in MHz or, preferably, to its channel designator.
NOC	8773 1258	5012 (4) A ship station, when it has established contact with another ship station on 156.8 MHz, should indicate the intership channel to which it is proposed to transfer for the exchange of traffic by reference to the frequency in MHz or, preferably, to its channel designator.
NOC	8774 1258A	5013 (5) However, a brief exchange of traffic not to exceed one minute concerning the safety of navigation need not be transmitted on a working frequency when it is important that all ships within range receive the transmission.
NOC	8775 1258B	5014 (6) Stations hearing a transmission concerning the safety of navigation shall listen to the message until they are satisfied that the message is of no concern to them. They shall not make any transmission likely to interfere with the message.
NOC	8776	5015 <i>F. Agreement on the Frequency to Be Used for Traffic</i>
NOC	8777 1259	5016 § 27. (1) If the station called is in agreement with the calling station, it shall transmit:
NOC	8778 1260	5017 a) an indication that from that moment onwards it will listen on the working frequency or channel announced by the calling station;
NOC	8779 1261	5018 b) an indication that it is ready to receive the traffic of the calling station.
NOC	8780 1262	5019 (2) If the station called is not in agreement with the calling station on the working frequency or channel to be used, it shall transmit an indication of the working frequency or channel proposed.

NOC	8781 1263	5020	(3) For communications between a coast station and a ship station, the coast station shall finally decide the frequency or channel to be used.
NOC	8782 1264	5021	(4) When agreement is reached regarding the working frequency or channel which the calling station shall use for its traffic, the station called shall indicate that it is ready to receive the traffic.
NOC	8783	5022	<i>G. Indication of Traffic</i>
NOC	8784 1265	5023	§ 28. When the calling station wishes to exchange more than one radiotelephone call, or to transmit one or more radiotelegrams, it should indicate this when contact is established with the station called.
NOC	8785	5024	<i>H. Difficulties in Reception</i>
NOC	8786 1266	5025	§ 29. (1) If the station called is unable to accept traffic immediately, it should reply to the call as indicated in No. 4982 followed by "Wait . . . minutes" (or AS spoken as ALFA SIERRA . . . (minutes) in case of language difficulties), indicating the probable duration of waiting time in minutes. If the probable duration exceeds ten minutes the reason for the delay shall be given. Alternatively the station called may indicate, by any appropriate means, that it is not ready to receive traffic immediately.
NOC	8787 1267	5026	(2) When a station receives a call without being certain that such a call is intended for it, it shall not reply until the call has been repeated and understood.
NOC	8788 1268	5027	(3) When a station receives a call which is intended for it, but is uncertain of the identification of the calling station, it shall reply immediately asking for a repetition of the call sign or other identification of the calling station.
NOC			Section V. Forwarding (Routing) of Traffic
NOC	8789	5028	<i>A. Traffic Frequency</i>
MOD	8790 1269	5029	§ 30. (1) Every station should transmit its traffic (radiotelephone calls or radiotelegrams) on one of its working frequencies in the band in which the call has been made.
NOC	8791 1270	5030	(2) In addition to its normal working frequency, printed in heavy type in the List of Coast Stations, a coast station may use one or more supplementary frequencies in the same band, in accordance with the provisions of Article 60 .
MOD	8792 1271	5031	(3) The use of frequencies reserved for calling shall be forbidden for traffic, except distress traffic (see Chapter IX).

NOC	8793 1272	5032	(4) After contact has been established on the frequency to be used for traffic, the transmission of a radiotelegram or radiotelephone call shall be preceded by:
NOC	8794 1273	5033	– the call sign or other identification of the station called;
		5034	– the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties);
		5035	– the call sign or other identification of the calling station.
NOC	8795 1274	5036	(5) The call sign or other identification need not be sent more than once.
NOC	8796	5037	<i>B. Establishment of Radiotelephone Calls and Transmission of Radiotelegrams</i>
NOC		5038	B1. Establishment of Radiotelephone Calls
MOD	8797 1275	5039	§ 31. (1) In setting up a radiotelephone call, the coast station should establish connection with the telephone network as quickly as possible. In the meantime, the ship station shall maintain watch on the appropriate working frequency as indicated by the coast station.
MOD	8798 1276	5040	(2) However, if the connection cannot be quickly established, the coast station shall inform the ship station accordingly. The latter station shall then either:
NOC	8799 1277	5041	a) maintain watch on the appropriate frequency until an effective circuit can be established; <i>or</i>
NOC	8800 1278	5042	b) contact the coast station later at a mutually agreed time.
NOC	8801 1279	5043	(3) When a radiotelephone call has been completed, the procedure indicated in No. 5054 shall be applied unless further calls are on hand at either station.
NOC		5044	B2. Transmission of Radiotelegrams
NOC	8802 1280	5045	§ 32. (1) The transmission of a radiotelegram should be made as follows:
			– radiotelegram begins: from ... (name of ship or aircraft);
			– number ... (serial number of radiotelegram);
			– number of words ... ;
			– date ... ;
			– time ... (time radiotelegram was handed in aboard ship or aircraft);
			– service indicators (if any);
			– address ... ;

- text . . . ;
- signature . . . (if any);
- radiotelegram ends, over.

MOD	8803 1281	5046	(2) As a general rule, radiotelegrams of all kinds transmitted by ship stations shall be numbered in a daily series; number 1 shall be given to the first radiotelegram sent each day to each separate station.
NOC	8804 1282	5047	(3) A series of numbers which has begun in radiotelegraphy should be continued in radiotelephony and vice versa.
NOC	8805 1283	5048	(4) Each radiotelegram should be transmitted once only by the sending station. However, it may, when necessary, be repeated in full or in part by the receiving or the sending station.
NOC	8806 1285	5049	(5) In transmitting groups of figures, each figure shall be spoken separately and the transmission of each group or series of groups shall be preceded by the words "in figures".
NOC	8807 1286	5050	(6) Numbers written in letters shall be spoken as they are written, their transmission being preceded by the words "in letters".
NOC		5051	B3. Acknowledgement of Receipt
NOC	8808 1287	5052	<p>§ 33. (1) The acknowledgement of receipt of a radiotelegram or a series of radiotelegrams shall be given by the receiving station in the following manner:</p> <ul style="list-style-type: none"> – the call sign or other identification of the sending station; – the words THIS IS (or DE spoken as DELTA ECHO in case of language difficulties); – the call sign or other identification of the receiving station; – "Your No. . . . received, over" (or R spoken as ROMEO . . . (number), K spoken as KILO in case of language difficulties); <i>or</i> – "Your No. . . . to No. . . . received, over" (or R spoken as ROMEO . . . (numbers), K spoken as KILO in case of language difficulties).
NOC	8809 1288	5053	(2) The radiotelegram, or series of radiotelegrams, shall not be considered as cleared until this acknowledgement has been received.
NOC	8810 1289	5054	(3) The end of work between two stations shall be indicated by each of them by means of the word "Out" (or VA spoken as VICTOR ALFA in case of language difficulties).

NOC

Section VI. Duration and Control of Working

- MOD **8811** **5055** § 34. (1) Calling, and signals preparatory to traffic, shall not exceed one minute
1290 when made on the carrier frequency 2 182 kHz or on 156.8 MHz, except in cases of
distress, urgency or safety to which the provisions of Chapter IX apply.
- MOD **8812** **5056** (2) In communications between coast stations and ship stations, the ship
1291 station shall comply with the instructions given by the coast station in all questions
relating to the order and time of transmission, to the choice of frequency, and to the
duration and suspension of work.
- MOD **8813** **5057** (3) In communications between ship stations, the station called controls the
1292 working in the manner indicated in No. 5056. However, if a coast station finds it
necessary to intervene, the ship stations shall comply with the instructions given by
the coast station.

NOC

Section VII. Tests

- MOD **8814** **5058** § 35. When it is necessary for a ship station to send signals for testing or
1293 adjustments which are liable to interfere with the working of neighbouring coast
stations, the consent of these stations shall be obtained before such signals are sent.
- NOC **8815** **5059** § 36. (1) When it is necessary for a station to make test signals, either for the
1294 adjustment of a transmitter before making a call or for the adjustment of a receiver,
such signals shall not be continued for more than ten seconds, and shall include the
call sign or other identification of the station emitting the test signals. This call sign
or other identification shall be spoken slowly and distinctly.
- MOD **8816** **5060** (2) Any signals sent for testing shall be kept to a minimum, particularly:
1295
- on the carrier frequency 2 182 kHz;
 - on the frequency 156.8 MHz;
 - in the zone of Regions 1 and 2 south of latitude 15° N, including Mexico, and in the zone of Region 3 south of latitude 25° N, on the carrier frequency 4 125 kHz;
 - in the zone of Region 3 south of latitude 25° N also on the carrier frequency 6 215.5 kHz.
- NOC **8817** **5061** (3) It is not permitted to send test transmissions of the radiotelephone alarm
1295A signal on the carrier frequency 2 182 kHz and the frequency 156.8 MHz, except
where emergency equipment which can operate only on these frequencies is
involved, in which case measures shall be taken to prevent radiation. Measures shall
also be taken to prevent radiation from radiotelephone alarm tests carried out on
frequencies other than 2 182 kHz and 156.8 MHz.
- 5062**
to NOT allocated.

ADD N62A

ARTICLE 66

**Public Correspondence in the Maritime Mobile Service
and the Maritime Mobile-Satellite Service¹**

Section I. General

8900 5085 § 1. The provisions of the Telegraph Regulations and the Telephone Regulations, taking into account CCITT Recommendations, shall apply to radiocommunications in so far as the relevant provisions of these Regulations do not provide otherwise.

Section II. Accounting Authority

8901 5086 § 2. Charges for radiocommunications from ship to shore shall in principle, and subject to national law and practice, be collected from the maritime mobile station licensee:

8902 5087 a) by the administration that has issued the licence; *or*

8903 5088 b) by a recognized private operating agency; *or*

8904 5089 c) by any other entity or entities designated for this purpose by the administration referred to in No. 5087.

8905 5090 § 3. The administration or the recognized private operating agency or the designated entity (or entities) is referred to in this Article as the “accounting authority”.

8906 5091 § 4. The name(s) and address(es) of the accounting authority(ies) shall be notified to the Secretary-General of the ITU for inclusion in the List of Ship Stations; the number of such names and addresses shall be limited as far as possible, taking into account CCITT Recommendations.

Section III. Accounting

8907 5092 § 5. The exchange and verification of accounts shall be carried out in accordance with the Telegraph Regulations and the Telephone Regulations, taking into account CCITT Recommendations.

8908 5093 § 6. The accounts shall be sent as promptly as possible but in any case before the end of the third month following that to which they relate.

8909 5094 § 7. In principle, an account shall be considered as accepted without the need for specific notification of acceptance to the administration (or recognized private operating agency) that sent it.

8910 5095 § 8. However, any accounting authority shall have the right to question the contents of an account for a period of six months after dispatch of the account.

¹ See Resolution 201.

- 8911** **5096** § 9. All radiomaritime accounts shall be paid by the accounting authority without delay and in any case within six months after dispatch of the account.
- 8912** **5097** § 10. If international radiomaritime accounts remain unpaid after six months, the administration that has licensed the mobile station shall, on request, take all possible steps, within the limits of applicable national law, to ensure settlement of the accounts from the licensee.
- 8913** **5098** § 11. In the case referred to in No. **5095**, if the account is seriously delayed in transit, the receiving accounting authority should at once notify the originating administration (or recognized private operating agency) that queries and payment may be delayed. The delay shall, however, not exceed three months from the date of receipt of the account.
- 8914** **5099** § 12. The debtor accounting authority may refuse the settlement and adjustment of accounts presented more than eighteen months after the date of handing in of the radiotelegrams, or the date of establishment of the radiotelephone calls or radiotelex calls to which the accounts relate.

Section IV. Payment of Balances

- 8915** **5100** § 13. Payment of balances shall be carried out in accordance with the Telegraph Regulations and the Telephone Regulations, taking into account any relevant CCITT Recommendations.

Section V. Archives

- 8916** **5101** § 14. The originals of radiotelegrams and documents relating to radiotelegrams, radiotelephone calls and radiotelex calls shall be held by the administrations (or recognized private operating agencies) with all necessary precautions from the point of view of secrecy, until the settlement of the relative account and, in any case, for at least six months counting from the month in which the accounts were sent. Administrations (or recognized private operating agencies) may preserve the information by any other means, e.g. magnetic or electronic records.
- 8917** **5102** § 15. However, should an administration (or recognized private operating agency) deem it desirable to destroy the originals of radiotelegrams or any other documents or records mentioned in No. **5101** before the above-mentioned period, and hence not be in a position to carry out an inquiry in respect of the services for which it is responsible, such administration (or recognized private operating agency) shall bear all the consequences both as regards refund of charges and any difference in the accounts in question that might otherwise have been observed.

Entry into Force of the Radio Regulations

- | | | | |
|-----|--------------|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MOD | 9357
1629 | 5187 | § 1. These Regulations, which are annexed to the International Telecommunication Convention, shall enter into force on 1 January 1982, except as specified in Nos. 5188 and 5189. |
| ADD | 9357A | 5188 | § 2. Article 25 and Appendix 43 - but not Appendices 42 and 44 related to this Article - and Article 66 of these Regulations shall enter into force on 1 January 1981. |
| ADD | 9357B | 5189 | § 3. The Frequency Allotment Plan for the Aeronautical Mobile (R) Service and the directly related provisions contained in Appendix 27 Aer2* of these Regulations shall enter into force at 0001 hours UTC on 1 February 1983. |
| ADD | 9357C | 5190 | § 4. On the date of entry into force of Article 25 and Article 66 of these Regulations, as specified in No. 5188 (1 January 1981), the provisions of the following Articles of the Radio Regulations, Geneva, 1959, as amended: <ul style="list-style-type: none"> a) Article 19 - with the exception of provisions 745 to 747 thereof and the Appendices related thereto - and b) Articles 38, 39, 40 and 40A - including the related Appendices 21, 21A and 22 - as well as the Additional Radio Regulations <p>shall be abrogated and replaced respectively by the provisions of Articles 25 and 66 of these Regulations.</p> |
| MOD | 9358
1630 | 5191 | § 5. On the date specified in No. 5187 (1 January 1982) all the other provisions of the Radio Regulations, Geneva, 1959, as partially revised by the: <ul style="list-style-type: none"> a) Extraordinary Administrative Radio Conference to Allocate Frequency Bands for Space Radiocommunication Purposes, Geneva, 1963, b) Extraordinary Administrative Radio Conference for the Preparation of a Revised Allotment Plan for the Aeronautical Mobile (R) Service, Geneva, 1966, c) World Administrative Radio Conference to Deal with Matters Relating to the Maritime Mobile Service, Geneva, 1967, d) World Administrative Radio Conference for Space Telecommunications, Geneva, 1971, |

* Note by the General Secretariat: See No. 1314 and Resolution 400.

- e) World Maritime Administrative Radio Conference, Geneva, 1974, and the

- f) World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978,

shall be abrogated and replaced by the provisions of these Regulations.

ADD 9358A 5192 § 6. In accordance with the request by the World Administrative Radio Conference for the Planning of the Broadcasting-Satellite Service in Frequency Bands 11.7 - 12.2 GHz (in Regions 2 and 3) and 11.7 - 12.5 GHz (in Region 1), Geneva, 1977, the provisions and associated Plan adopted by that Conference are, in the appropriate form and without affecting their content and integrity, included in these Regulations as Appendix 30 and form an integral part of these Regulations.

MOD AP1 APPENDIX 1
(See Article 12)

(MOD) Section A. Basic Characteristics to Be Furnished
for Notification under Nos. 1214 to 1217
of the Radio Regulations

Introduction

This Appendix contains six sections and one annex:

Section A – Basic Characteristics to Be Furnished for Notification under Nos. 1214 to 1217 of the Radio Regulations

Section B – Basic Characteristics to Be Furnished for Notification under No. 1219 of the Radio Regulations

Section C – Basic Characteristics to Be Furnished for Notification under Nos. 1223 to 1227 of the Radio Regulations

Section D – Information to Be Furnished for Notification under No. 1218 of the Radio Regulations

Section E – Form of Notice

Section F – General Instructions

I. General Notes

II. Notes Concerning Information to Be Entered in the Notice Pertaining to Specific Columns of the Master Register

Annex: Map of Geographical Zones for Broadcasting

Column 1 Assigned frequency.

Column 2c Date of bringing into use.

Column 3 Call sign (identification).

This is not a basic characteristic for stations referred to in No. 2055.1.

Column 4a Name of the transmitting station.

Column 4b Country or geographical area in which the transmitting station is located.

Column 4c Longitude and latitude of the transmitter site.

Column 5a Name of the receiving station.

This is not a basic characteristic for broadcasting, land, radionavigation land, radiolocation land or standard frequency and time signal stations, or for ground-based stations in the meteorological aids service.

Column 5b Country or geographical area in which the receiving station is located.

This is not a basic characteristic for broadcasting, land, radionavigation land, radiolocation land or standard frequency and time signal stations, or for ground-based stations in the meteorological aids service.

Column 5c Longitude and latitude of the site of the receiving station.

This is not a basic characteristic for broadcasting, land, radionavigation land, radiolocation land or standard frequency and time signal stations, or for ground-based stations in the meteorological aids service.

Column 5d Locality or area(s) of the receiving stations.

This is a basic characteristic only for broadcasting, land, radionavigation land, radiolocation land and standard frequency and time signal stations.

Columns 5e and 5f to be used only if the area is not adequately defined in Column 5d.

Column 5e Longitude and latitude of the centre of the circular receiving area.

This is a basic characteristic only for land, radionavigation land, radiolocation land and standard frequency and time signal stations.

To be used only if the area is not adequately defined in Column 5d.

Column 5f Nominal radius (km) of the circular receiving area.

This is a basic characteristic only for land, radionavigation land, radiolocation land and standard frequency and time signal stations.

To be used only if the area is not adequately defined in Column 5d.

Column 6 Class of station and nature of service.

Column 7a Class of emission, necessary bandwidth and description of transmission.

Column 7b Class of operation of the assignment.

This is a basic characteristic only for the assignments to stations of the fixed service in the frequency bands allocated to this service between 3 000 kHz and 27 500 kHz.

Column 8 Power (dBW).

Column 9a Azimuth of maximum radiation.

Column 9b Elevation angle of maximum directivity.

This is a basic characteristic only for stations in the bands above 1 GHz allocated on a shared basis to the space radiocommunication and terrestrial radiocommunication services and shall be provided to an accuracy of one tenth of a degree¹.

Column 9c Angular width of radiation main lobe.

This is not a basic characteristic if the Column 9j data are supplied.

¹ These data shall be provided to an accuracy of one tenth of a degree only if the station is within the coordination area of an earth station or if the direction of the maximum radiation is within three degrees of the geostationary-satellite orbit.

Column 9d Polarization.

This is a basic characteristic only for stations in the bands above 1 GHz allocated on a shared basis to the space radiocommunication and terrestrial radiocommunication services and for broadcasting stations in the VHF/UHF bands in the African and European Broadcasting Areas.

Column 9e Height of antenna (metres) for a simple vertical antenna.

This is a basic characteristic for broadcasting stations in the LF/MF bands in Region 1 and MF bands in Region 3.

Column 9f Maximum effective height of the antenna.

This is a basic characteristic for broadcasting stations in the VHF/UHF bands in the African and European Broadcasting Areas and is defined in the Final Acts of the relevant conferences.

This is a basic characteristic for terrestrial stations operating in the bands above 1 GHz that are shared between space and terrestrial services and shall be indicated in metres above mean sea level.

Column 9g Maximum antenna gain (isotropic, relative to a short vertical antenna or relative to a half-wave dipole, as appropriate).

This is not a basic characteristic if the effective radiated power or the e.i.r.p. is notified in Column 8 or if the Column 9j data are supplied.

Column 9h Azimuths defining the sectors of limited radiation in degrees (clockwise) from True North.

This is a basic characteristic for broadcasting stations in the LF/MF bands in Region 1 and MF bands in Region 3.

Column 9i Maximum agreed radiation in the sectors.

This is a basic characteristic for broadcasting stations in the LF/MF bands in Region 1 and MF bands in Region 3.

Column 9j Type of antenna (see CCIR Book "Antenna Diagrams").

This is not a basic characteristic if the Columns 9c and 9g data are supplied.

Column 10b Regular hours (UTC) of operation of the frequency assignment.

Column 11 Coordination with other administrations.

This is a basic characteristic for the bands and services concerned.

Supplementary information:

- a) in any case where there are one or more *reference frequencies* in a particular transmission (e.g. in the case of the frequency of the reduced carrier in an independent or single-sideband emission, or the frequencies of the sound and vision carriers in a television emission), such reference frequencies shall be supplied;

- b) any coordination required by Nos. 1148 to 1154;
- c) the name of any administration with which an agreement has been effected to exceed the limits prescribed in these Regulations and the contents of such agreement.

Section B. Basic Characteristics to Be Furnished for Notification under No. 1219 of the Radio Regulations

Column 1	Assigned frequency.
Column 2c	Date of bringing into use.
Column 4a	Name of the transmitting station: indicate the letter "M" (for Mobile).
Column 4b	Country or geographical area in which the transmitting mobile stations are located.
Column 4c	The geographical coordinates (longitude and latitude in degrees and minutes) of the centre of the circular transmitting area.
Column 4d	The nominal radius (km) of the circular transmitting area.
Column 4e	Indicate a standard defined area using the symbols contained in standard references, e.g. MWARA, RDARA, geographical zones, etc. (see also the Preface to the International Frequency List).

Column 5a	Name of the receiving land station.
Column 5b	Country or geographical area in which the receiving station is located.
Column 5c	The geographical coordinates (longitude and latitude in degrees and minutes) of the site of the receiving station.
Column 6	Class of mobile stations and nature of service.
Column 7a	Class of emission of mobile stations and necessary bandwidth and description of transmission.
Column 8	Power (dBW).
Column 10b	Regular hours (UTC) of operation of the frequency assignment.

Supplementary information:

- a) any coordination required by Nos. 1148 to 1154;
- b) the name of any administration with which an agreement has been effected to exceed the limits prescribed in these Regulations and the contents of such agreement.

Section C. Basic Characteristics to Be Furnished for Notification under Nos. 1223 to 1227 of the Radio Regulations

Column 1	Assigned frequency.
Column 2c	Date of bringing into use.

Column 4b Country or geographical area in which the transmitting station is located.

For the remainder of Column 4 complete either 4e alone, or 4c and 4d.

Column 4c The geographical coordinates (longitude and latitude in degrees and minutes) of the centre of the circular transmitting area.

Column 4d The nominal radius (km) of the circular transmitting area.

Column 4e Indicate a standard defined area using the symbols appearing in the Preface to the International Frequency List.

Column 6 Class of station and nature of service.

Column 7a Class of emission, necessary bandwidth and description of transmission.

Column 8 Power (dBW).

Column 10b Regular hours (UTC) of operation of the frequency assignment.

Supplementary information:

the name of any administration with which an agreement has been effected to exceed the limits prescribed in these Regulations and the contents of such agreement.

Section D. Information to Be Furnished for Notification under No. 1218 of the Radio Regulations

1. *General instructions*

a) The assistance of the IFRB concerns the selection of a frequency or frequencies for assignment to a station in the fixed service in frequency bands between 3 000 kHz and 27 500 kHz allocated to that service.

b) The administration shall give:

- a general description of the problems experienced;
- the necessary technical information and any other information that could guide the subsequent search by the IFRB.

c) The instructions appearing in Section F may also be relevant.

2. *Information to be furnished by the administration*

Column 1 Frequency.

1. If the request concerns the selection of a frequency or a set of frequencies for a radio circuit, leave this column blank or indicate the preferred band.
2. If the request concerns a predetermined frequency, indicate that frequency.

Column 2c Date of bringing into use.

Indicate the proposed date of bringing the frequency assignments into use.

Column 3 Call sign (identification).

<i>Column 4</i>	Particulars of the transmitting station.
<i>Column 4a</i>	Indicate the name of the locality by which the transmitting station is known or in which it is situated.
<i>Column 4b</i>	Indicate the country or geographical area in which the station is located. Symbols from the Preface to the International Frequency List should be used.
<i>Column 4c</i>	Indicate the geographical coordinates (longitude and latitude in degrees and minutes) of the transmitter site.
<i>Column 5</i>	Particulars of the receiving station.
<i>Column 5a</i>	Name of the receiving station. Indicate the name of the locality by which the receiving station is known or in which it is situated. Provided that, for a given area, the reception area is well defined and sufficiently small to make it easy to forecast the conditions of use of the frequency from the propagation point of view, it is necessary to notify only sufficient stations to define the reception area.
<i>Column 5b</i>	Country or geographical area in which the receiving station is located.
<i>Column 5c</i>	Indicate the geographical coordinates (longitude and latitude in degrees and minutes) of the site of the receiving station.
<i>Column 6</i>	Class of station and nature of service. Indicate the class of station and nature of service performed using the symbols shown in Appendix 10.

<i>Column 7a</i>	Class of emission, necessary bandwidth and description of transmission. Indicate, for each locality or area of reception shown in Column 5a, the class of emission, necessary bandwidth and description of transmission, in accordance with Article 4 and Appendix 6.
<i>Column 8</i>	Power (dBW). 1. The power supplied to the antenna transmission line shall be notified as follows, according to the class of emission and shall be provided in dBW: a) mean power (PY) for the amplitude modulated emissions using unkeyed full carrier and for all frequency modulated emissions (see No. 152); b) peak envelope power (PX) for all classes of emission other than those referred to in a) (see No. 151); c) leave blank when the power is to be calculated by the IFRB. 2. The power normally used to each locality or area of reception shown in Column 5a shall be indicated.
<i>Column 9</i>	Transmitting antenna characteristics (give as much information as is available).
<i>Column 9a</i>	Azimuth of maximum radiation. 1. If a directive transmitting antenna is used, indicate the azimuth of maximum radiation of the transmitting antenna in degrees (clockwise) from True North. 2. If a transmitting antenna with non-directional characteristics is used, insert "ND".

Columns 9c and 9g If the radiation characteristics of the antenna concerned differ from those recommended by the CCIR, Columns 9c and 9g should be completed. Where the radiation characteristics are to be found in the CCIR Book "Antenna Diagrams", indicate an appropriate reference in Column 9j.

Column 9c Angular width of radiation main lobe.

The total angle measured horizontally in a plane containing the direction of maximum radiation, in degrees, within which the power radiated in any direction does not fall more than 3 dB below the power radiated in the direction of maximum radiation, should be indicated.

Column 9g Antenna gain.

The relative gain of the antenna in the direction of maximum radiation for the assigned frequency should be indicated (see No. 154).

Column 9j Type of antenna (see CCIR Book "Antenna Diagrams").

Indicate the appropriate reference from the CCIR Book "Antenna Diagrams". See Columns 9c and 9g above.

Column 10 Hours of operation.

Column 10a Maximum hours (UTC) of operation of the circuit to each locality or area.

As complementary information, indicate by the letter "I" any part of the period during which the operation of the circuit is intermittent.

Column 10b Regular hours (UTC) of operation of the frequency assignment.

Indicate the time as Coordinated Universal Time (UTC) by a group of four figures (0000 to 2359). Otherwise indicate the hours of operation as day service (HJ), night service (HN), or transition period service (HT).

Column 11 Coordination with other administrations.

If applicable indicate the country or geographical area with which the relevant coordination has been successfully completed.

Column 12a Operating administration or company.

Column 12b Postal and telegraphic addresses of the administration responsible for the station.

Supplementary information:

if available, provide any receiving antenna data.

MOD

Section E. Form of Notice

The Board shall develop and keep up to date a form of notice to meet fully the statutory provisions of this Appendix and related decisions of future conferences.

Section F. General Instructions

1. A separate notice shall be sent to the International Frequency Registration Board for notifying:

- each new frequency assignment;
- any change in the characteristics of a frequency assignment recorded in the Master International Frequency Register (hereinafter called the *Master Register*);
- any total deletion of a frequency assignment recorded in the Master Register.

2. When a frequency assignment is used by a station to perform different services, a separate notice shall be submitted for each type of service (e.g. FA, FB, FC, FX, etc.).

3. Frequencies prescribed by these Regulations for common use, as specified in the Preface to the International Frequency List, should not be notified (see No. 1220).

4. Separate entries, in Columns 5a to 10, should be made for the various characteristics when they do not apply to the assignment as a whole, for instance when the class of emission or the power differ according to the localities or areas of reception.

5. For television broadcasting stations in Region 1, separate notices shall be submitted for the sound and vision channels. In such cases, the notice shall relate to the sound and vision carrier frequencies.

NOC

I. General Notes

(a) The name of the notifying administration should be indicated.

(b) Indicate in this box by the letter "X" when the notice reflects:

- the first use of a frequency by a station; *or*
- the first use of an additional frequency by a station.

(c) Indicate in this box by the letter "X" when the notice reflects a change in the characteristics of a frequency assignment recorded in the Master Register.

- (1) In the case where existing particulars (including the frequency) are changed, the new characteristics in the appropriate place should be underlined; the original characteristics which have been changed should be shown in brackets underneath or at the side.
- (2) In the case where the change is an addition to existing particulars, the additional characteristics should be shown in the appropriate place and should be underlined.
- (3) In the case where the change is a cancellation of a particular characteristic or characteristics, this should be shown in the appropriate place by a dash and, underneath or at the side, the characteristics which have been cancelled should be shown in brackets.

(d) Indicate in this box by the letter "X" when the notice reflects a deletion of an assignment, in all of its notified characteristics.

(e) The serial number of the notice and the date on which the notice is sent to the Board shall be shown here.

II. Notes Concerning Information to Be Entered in the Notice Pertaining to Specific Columns of the Master Register

Column 1 Assigned frequency.

1. Indicate the assigned frequencies^{1, 2, 3} as defined in Article 1: in kHz up to 28 000 kHz inclusive, in MHz above 28 000 kHz to 10 500 MHz inclusive, and in GHz above 10 500 MHz.
2. *This information is a basic characteristic.*

Column 2c Date of bringing into use.

1. In the case of a new assignment, insert the date (actual or foreseen, as appropriate) of bringing the frequency assignment into use.
2. Whenever the assignment is changed in any of its basic characteristics as defined in this Appendix, except in the case of a change in Columns 3, 4a, 10a or 11, the date to be indicated shall be that of the latest change (actual or foreseen, as appropriate).
3. *This information is a basic characteristic.*

¹ For television broadcasting stations in Region 1, the frequencies to be notified are those of the sound and vision carriers.

² For radiotelephone stations in the maritime mobile service, see No. 4194.

³ For stations in the aeronautical mobile (R) service, see Appendix 27 Aer2 revised paragraph 27/72.

Column 3 Call sign (identification).

1. Indicate the call sign or other identification used in accordance with Article 25.
2. *This information is a basic characteristic, except for stations referred to in Nos. 1224 to 1227 and 2055.1 or when the frequency assignment is used for reception in the circumstances described in No. 1219.*

Column 4 Particulars of the transmitting station.

When the frequency assignment is used in the circumstances described in Nos. 1214 to 1217, the basic characteristics to be provided in Column 4 are as follows:

Column 4a Indicate the name of the locality by which the transmitting station is known or in which it is situated.

Column 4b Indicate the country or geographical area in which the station is located. Symbols from the Preface to the International Frequency List shall be used.

Column 4c Indicate the geographical coordinates (longitude and latitude in degrees and minutes) of the transmitter site. For frequency assignments above 1 GHz in the bands shared between terrestrial radiocommunication and space radiocommunication services, indicate the geographical coordinates (longitude and latitude in degrees, minutes and seconds with an accuracy of one tenth of a minute¹ or, as an alternative, indicate the longitude and latitude in degrees and minutes and, in Column 9a, the azimuth of maximum radiation of the antenna to an accuracy of one tenth of a degree).

¹ The seconds with an accuracy of one tenth of a minute need only be notified if the station is within the coordination area of an earth station.

When the frequency assignment is used for reception in the circumstances described in No. 1219, the basic characteristics to be provided in Column 4 are as follows:

Column 4a Name of the transmitting station: indicate the letter "M" (for Mobile).

Column 4b Indicate the country or geographical area in which the transmitting mobile stations are located. If the stations are not located within a country, indicate the country responsible. Symbols from the Preface to the International Frequency List shall be used.

Column 4c Indicate the geographical coordinates (longitude and latitude in degrees and minutes) of the centre of the circular transmitting area.

Column 4d Indicate the nominal radius (km) of the circular transmitting area.

Column 4e Indicate a standard defined area using the symbols contained in standard references, e.g. MWARA, RDARA, geographical zones, etc. (see also the Preface to the International Frequency List).

When the frequency assignment is used in the circumstances described in Nos. 1223 to 1227, the basic characteristics to be provided in Column 4 are as follows:

Column 4b Indicate the country or geographical area in which the station is located. Symbols from the Preface to the International Frequency List shall be used.

For the remainder of Column 4 complete either 4e alone, or 4c and 4d.

Column 4c Indicate the geographical coordinates (longitude and latitude in degrees and minutes) of the centre of the circular transmitting area.

Column 4d Indicate the nominal radius (km) of the circular transmitting area.

Column 4e Indicate a standard defined area using the symbols appearing in the Preface to the International Frequency List.

Column 5 Particulars of the receiving station.

When the frequency assignment is used in the circumstances described in Nos. 1214 to 1217, the basic characteristics to be provided in Column 5 are as follows:

Column 5a Name of the receiving station. Indicate the name of the locality by which the receiving station is known or in which it is situated.

1. Provided that, in the fixed service, the reception area is well defined and sufficiently small to make it easy to forecast the conditions of use of the frequency from the propagation point of view, it is necessary to notify only sufficient stations to define the reception area.
2. However, for broadcasting, land, radionavigation land, radiolocation land and standard frequency and time signal stations, and for ground-based stations in the meteorological aids service, it is not necessary to indicate any information in this column.
3. In the case of a network composed of stations intercommunicating on the same frequency, the symbol ZN shall be entered in Column 5a. When the same frequency is used for two or more networks of the same administration, each network should be identified by a separate letter following the network symbol ZN, e.g. ZN-A, ZN-B, etc.

4. In the case of a network, as well as in the case where a frequency is used in a specific area by numerous stations under the jurisdiction of the same administration, it is necessary to notify only sufficient stations to define the area of operation, provided that that area is well defined and sufficiently small to make it easy to forecast the conditions of the use of the frequency from the propagation point of view.

Column 5b Country or geographical area in which the receiving station is located. Symbols from the Preface to the International Frequency List shall be used.

However, for broadcasting, land, radionavigation land and standard frequency and time signal stations, and for ground-based stations in the meteorological aids service, it is not necessary to indicate any information in this column.

Column 5c Indicate the geographical coordinates (longitude and latitude in degrees and minutes) of the site of the receiving station.

However, for broadcasting, land, radiolocation land or standard frequency and time signal stations, or for ground-based stations in the meteorological aids service, it is not necessary to indicate any information in this column.

Column 5d Locality or area(s) of the receiving station(s).

1. For broadcasting stations, the area of reception shall be indicated. Each area should be expressed either:
 - as interior (INTR);

- or the symbol designating a country or countries or geographical area(s) (Preface to the International Frequency List);
- or one of the geographical zones appearing on the map annexed to this Appendix. If the area of reception cannot be defined in the above manner, Columns 5e and 5f shall be completed.

This is not a basic characteristic for broadcasting stations in the LF/MF or VHF/UHF bands unless specified in a relevant regional agreement.

2. For land, radionavigation land, radiolocation land, standard frequency and time signal stations, and for ground-based stations in the meteorological aids service, indicate an area only if it is standardly described. If the area of reception is not standardly defined, describe the area in Columns 5e and 5f.

Column 5e Longitude and latitude of the centre of the circular receiving area.

1. Indicate the geographical coordinates (in degrees and minutes).
2. This column is not to be used if the area of reception is adequately defined in Column 5d. If Column 5e is used, a corresponding entry must be made in Column 5f.

Column 5f Nominal radius of the circular receiving area.

1. Indicate the radius (km) of the circular receiving area.
2. This column is not to be used if the area of reception is adequately defined in Column 5d. If Column 5f is used, a corresponding entry is required in Column 5e.

When the frequency assignment is used in the circumstances described in No. 1219, the basic characteristics to be provided in Column 5 are as follows:

Column 5a Name of the receiving station. Indicate the name of the locality by which the receiving station is known or in which it is situated.

Column 5b Country or geographical area in which the receiving station is located. Symbols from the Preface to the International Frequency List shall be used.

Column 5c Indicate the geographical coordinates (longitude and latitude in degrees and minutes) of the site of the receiving station.

When the frequency assignment is used in the circumstances described in Nos. 1223 to 1227, no entry is required in Column 5.

Column 6 Class of station and nature of service.

1. Indicate the class of station and nature of service performed, using the symbols shown in Appendix 10.
2. When the frequency assignment is used for reception in the circumstances described in No. 1219, the class of station and nature of service applicable to the mobile stations should be indicated.
3. *This information is a basic characteristic.*

Column 7 Class of emission and class of operation.

Column 7a Class of emission, necessary bandwidth and description of transmission.

1. Indicate, for each locality or area of reception shown in Column 5a, the class of emission, necessary bandwidth and description of transmission, in accordance with Article 4 and Appendix 6.

2. When the frequency assignment is used for reception in the circumstances described in No. 1219, the particulars to be indicated are those applicable to the mobile stations.

3. *This information is a basic characteristic.*

Column 7b Class of operation of the assignment.

This is a basic characteristic. For assignments to stations of the fixed service in the frequency bands allocated to this service between 3 000 kHz and 27 500 kHz, indicate the class of operation of the assignment by the symbols A, B or C, as follows:

Symbol A – Assignment for regular operational use which is not provided by another satisfactory means of telecommunication.

Symbol B – Assignment for use as a standby to some other means of telecommunication.

Symbol C – Assignment for occasional use on a reserve basis and not requiring internationally recognized protection from harmful interference.

Column 8 Power (dBW).

1. The power supplied to the antenna transmission line shall be notified as follows, according to the class of emission and shall be provided in dBW:
 - a) carrier power (PZ) for A3E sound broadcasting (see No. 153);

- b) mean power (PY) for other amplitude modulated emissions using unkeyed full carrier, and for all frequency modulated emissions (see No. 152);
- c) peak envelope power (PX) for all classes of emission other than those referred to in a) or b), including C3F television (vision) (see No. 151).
2. In the bands above 28 000 kHz which are not allocated on a shared basis to the space radiocommunication and terrestrial radiocommunication services, except for notices referred to in Nos. 1223 to 1227, the effective radiated power shall be notified (see No. 156).
 3. In the bands above 1 GHz allocated on a shared basis to the space radiocommunication and terrestrial radiocommunication services, the equivalent isotropically radiated power (e.i.r.p.) shall be notified (see No. 155).
 4. The appropriate symbol PZ, PY or PX shall follow the indication of the value of the power. In cases where the effective radiated power is notified, this symbol shall be followed by the letter "e". In cases where the e.i.r.p. is notified, this symbol shall be followed by the letter "i".
 5. The power normally used to each locality or area of reception shall be indicated.
 6. When the frequency assignment is used for reception in the circumstances described in No. 1219, the power of the mobile stations should be indicated. If not all of the stations use the same power, the highest power should be indicated.
 7. *This information is a basic characteristic.*

Column 9 Transmitting antenna characteristics.

Column 9a Azimuth of maximum radiation.

1. If a directive transmitting antenna is used, indicate the azimuth of maximum radiation of the transmitting antenna in degrees (clockwise) from True North.
2. If a transmitting antenna with non-directional characteristics is used, insert "ND" in this column.
3. For frequency assignments above 1 GHz in the bands shared between terrestrial radiocommunication and space radiocommunication services, the azimuth shall be provided to an accuracy of one tenth of a degree¹ in those cases where the required accuracy in the geographical coordinates (to a tenth of a minute²) has not been specified in Column 4c.
4. *This information is a basic characteristic, except for stations referred to in Nos. 1223 to 1227, or when the frequency assignment is used for reception in the circumstances described in No. 1219.*

Column 9b Elevation angle of maximum directivity.

This is a basic characteristic only for stations in the bands above 1 GHz allocated on a shared basis to the space radiocommunication and terrestrial radiocommunication services and shall be provided to an accuracy of one tenth of a degree¹.

¹ These data shall be provided to an accuracy of one tenth of a degree only if the station is within the coordination area of an earth station or if the direction of the maximum radiation is within three degrees of the geostationary-satellite orbit.

² The seconds with an accuracy of one tenth of a minute need only be notified if the station is within the coordination area of an earth station.

Columns 9c and 9g If the radiation characteristics of the antenna concerned differ from those recommended by the CCIR, Columns 9c and 9g should be completed. Where the radiation characteristics are to be found in the CCIR Book "Antenna Diagrams", indicate an appropriate reference in Column 9j.

Column 9c Angular width of radiation main lobe.

The total angle measured horizontally in a plane containing the direction of maximum radiation, in degrees, within which the power radiated in any direction does not fall more than 3 dB below the power radiated in the direction of maximum radiation, should be indicated.

Column 9d Polarization.

This is a basic characteristic for stations in the bands above 1 GHz allocated on a shared basis to the space radiocommunication and terrestrial radiocommunication services and for broadcasting stations in the VHF/UHF bands in the African and European Broadcasting Areas.

Column 9e Height of antenna (metres) for a simple vertical antenna.

This is a basic characteristic for broadcasting stations in the LF/MF bands in Region 1 and MF bands in Region 3.

Column 9f Maximum effective height of the antenna.

This is a basic characteristic for broadcasting stations in the VHF/UHF bands in the African and European

Broadcasting Areas and is defined in the Final Acts of the relevant conferences.

This is a basic characteristic for terrestrial stations operating in the bands above 1 GHz that are shared between space radiocommunication and terrestrial radiocommunication services and shall be indicated in metres above mean sea level.

Column 9g Maximum antenna gain (isotropic, relative to a short vertical antenna or relative to a half-wave dipole, as appropriate).

1. The relative gain of the antenna in the direction of maximum radiation for the assigned frequency should be indicated (see No. 154).
2. *This is not a basic characteristic if the effective radiated power or the e.i.r.p. is notified in Column 8.*

Column 9h Azimuths defining the sectors of limited radiation in degrees (clockwise) from True North.

1. Indicate the azimuths defining the sectors of limited radiation in degrees (clockwise) from True North.
2. *This is a basic characteristic for broadcasting stations in the LF/MF bands in Region 1 and MF bands in Region 3.*

Column 9i Maximum agreed radiation in the sectors.

1. Indicate the maximum agreed radiation in the sector, in dB relative to a cymomotive force (c.m.f.) of 300 V or an effective monopole radiated power (e.m.r.p.) of 1 kW,

determined from the nominal power of the transmitter and the theoretical gain of the antenna without allowing for miscellaneous losses.

2. *This is a basic characteristic for broadcasting stations in the LF/MF bands in Region 1 and MF bands in Region 3.*

Column 9j Type of antenna (see CCIR Book "Antenna Diagrams").

Indicate the appropriate reference from the CCIR Book "Antenna Diagrams". See Columns 9c and 9g above.

Column 10 Hours of operation.

Column 10a Maximum hours (UTC) of operation of the circuit to each locality or area.

1. When the frequency assignment is used for reception in the circumstances described in No. 1219, the maximum hours of operation are those relating to the mobile stations.
2. As complementary information, indicate by the letter "I" any part of the period during which the operation of the circuit is intermittent.
3. *This information is not a basic characteristic.*

Column 10b Regular hours (UTC) of operation of the frequency assignment.

1. If known, indicate the regular hours of operation of the frequency assignment in UTC. Otherwise indicate the hours of operation as day service (HJ), night service (HN), or transition period service (HT).
2. *This is a basic characteristic.*

Column 11 Coordination with other administrations.

1. Identify the country or geographical area with which coordination has been successfully completed and indicate the provision (No. of the Radio Regulations, regional agreement, or other arrangement) requiring such coordination.
2. *This is a basic characteristic for the bands and services concerned.*

Column 12a Operating administration or company *.

This information is not a basic characteristic, but it is recommended it be supplied in cases where the same agency operates in more than one country.

Column 12b Postal and telegraphic addresses of the administration responsible for the station *.

1. The addresses required are those to which communication should be sent on urgent matters regarding interference, quality of emissions and questions referring to the technical operation of the circuit (see Article 22).
2. *This information is not a basic characteristic.*

Supplementary Information

Any supplementary information supplied by the administration should be indicated within the frame provided on the notice.

1. If the assignment is made in application of a regional or service agreement, the relevant agreement shall be indicated in the appropriate place; otherwise, insert the indication "Nil".

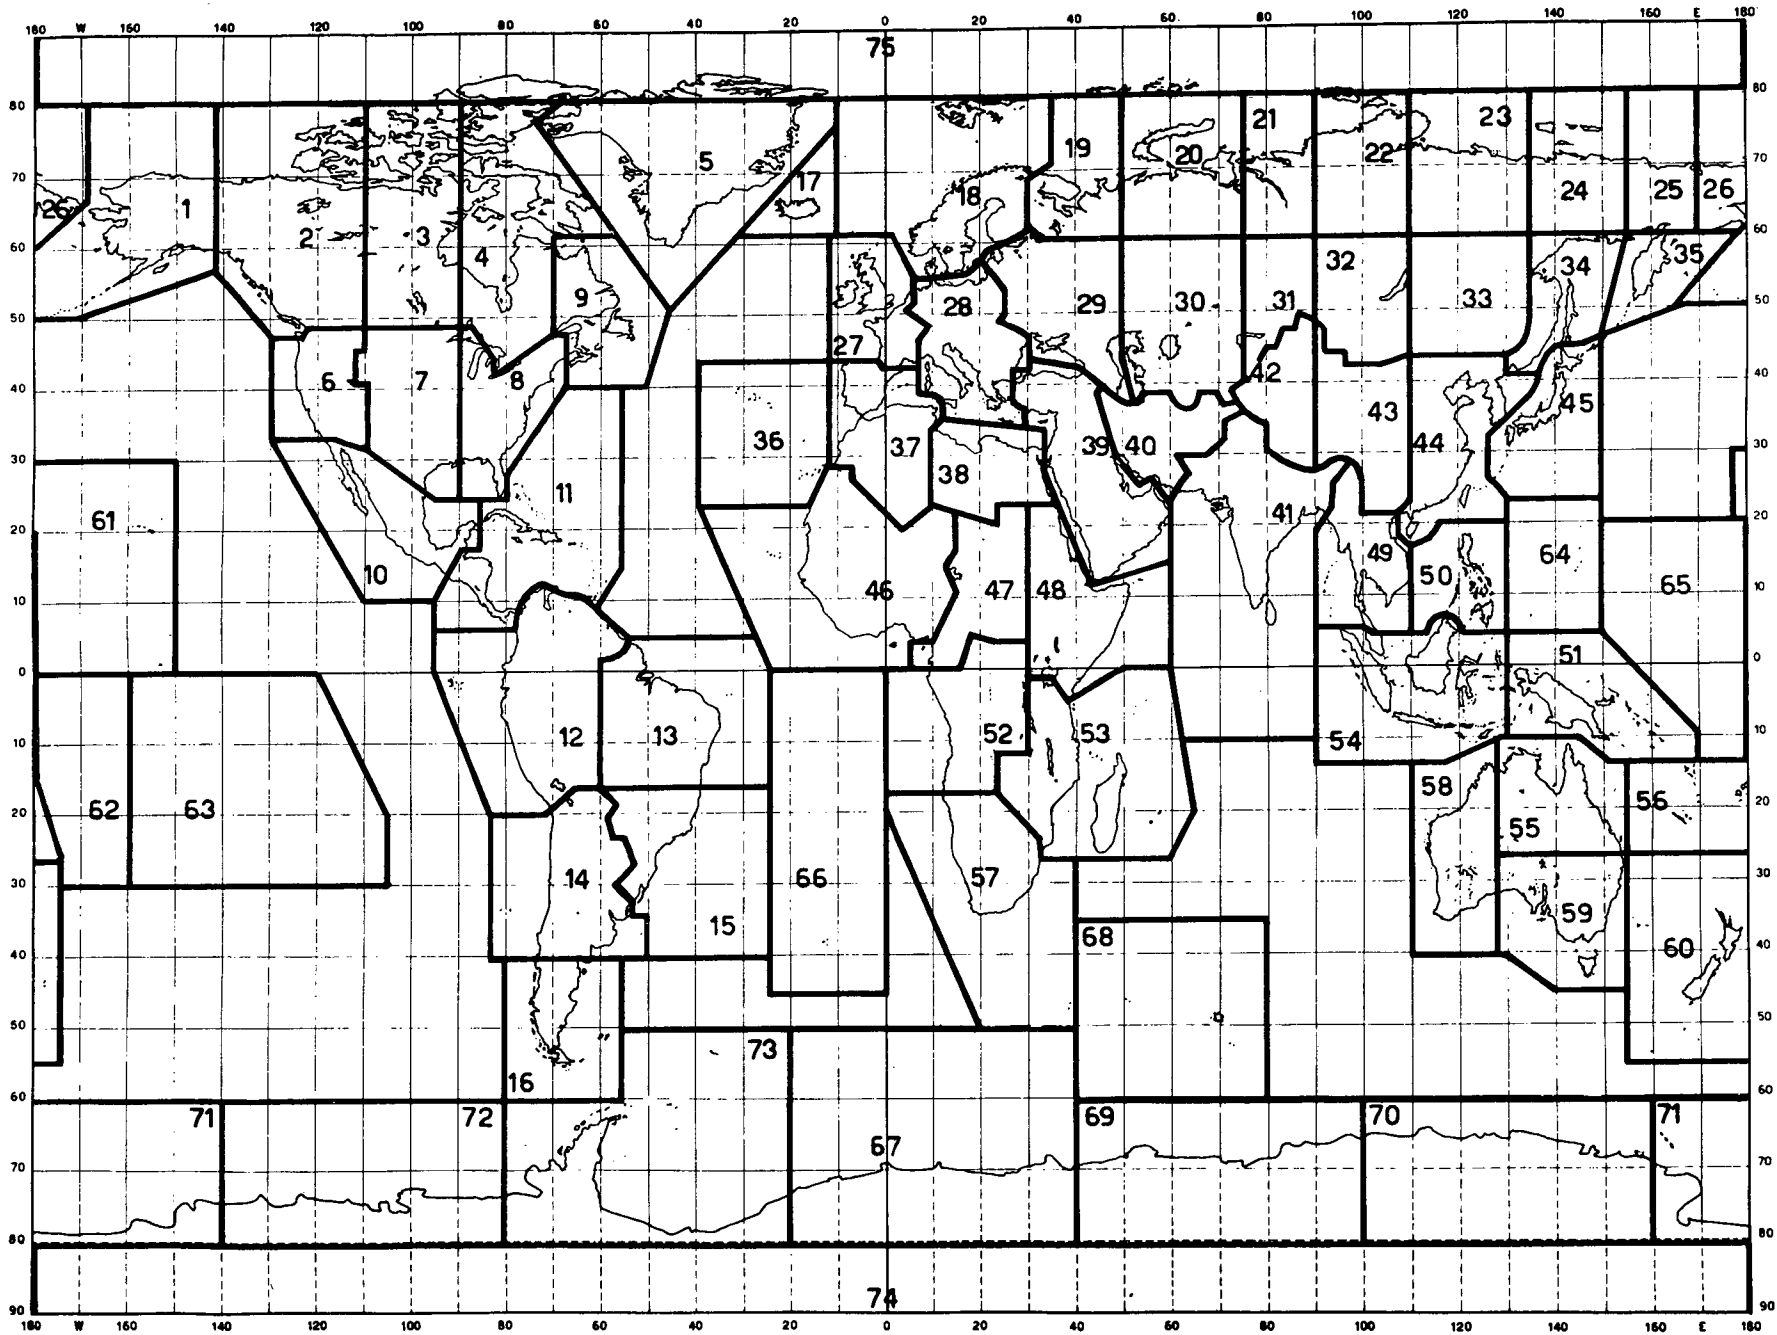

* Where this information already appears in the Preface to the International Frequency List, the appropriate reference number or letter may be used.

2. Indicate after the symbol COORD/---- the name of any administration with which coordination has been effected for the use of the frequency; if no coordination has been effected, the indication "Nil" should be inserted. In the case of a notification under Nos. 1223 to 1227 in a frequency band above 28 000 kHz, the area or areas of the actual use to which the coordination refers should be indicated.

3. In any case where there are one or more reference frequencies in a particular transmission (e.g. in the case of the frequency of the reduced carrier in an independent or single-sideband emission, or the frequencies of the sound and vision carriers in a television emission), such reference frequencies shall be supplied. In the case of television broadcasting stations in Region 1, each notice shall include, as supplementary information, both the frequency of the other carrier and the assigned frequency.

4. Any other information which the administration considers to be relevant should be indicated, such as, for example, an indication that the assignment concerned would be operating in accordance with No. 342 of these Regulations, or information concerning the use of the notified frequency if such use is restricted or if the frequency is not used during all the time which is possible according to propagation conditions.

5. *Only the information specified in paragraph 3 above is a basic characteristic; it is recommended, however, that the information under paragraphs 1 and 2 above be supplied. However, in the case of stations in the terrestrial radiocommunication services referred to in Nos. 1148 to 1154, the name of any administration with which coordination of the use of the frequency has been sought and the name of any administration with which such coordination has been effected are basic characteristics.*

APPENDIX 2
(See Article 17)
Section A. Form of Notice

Section B. General Instructions

BC

6 Class of station

Form of Notice*
For Use when Submitting to the International Frequency Registration Board
a Seasonal High Frequency Broadcasting Schedule
or a Change thereto
(see Article 17)

(a) Notifying administration _____
(b) Assignment for the particular season _____
(c) Change of characteristics of an assignment for the season _____
(d) Deletion of an assignment for the season _____
(e) Notice No.: _____ Date: _____

1a Assigned frequency _____ kHz
1b Alternative frequency _____ kHz
1c Frequency band _____ MHz
Season: MARCH _____ MAY _____ SEPT. _____ NOV. _____
2c Date of putting into use in the particular season _____
2c Other date: _____
3 Call sign (Identification) _____
4a Name of transmitting station _____
4b Country _____
4c Longitude and latitude of the transmitter site _____

Zone(s) or area(s) of reception 5a	Class of emission and necessary bandwidth 7	Power (kW) 8	Transmitting antenna characteristics			Hours of operation (UTC) 10	Other frequencies simultaneously utilized for same programme to the same area(s) 11	Supplementary information
			Azimuth of max. radiation 9a	Angular width of radiation main lobe 9b	Antenna gain in dB elevation 9c			

12b Name and postal address of administration (Article 22) _____
Telegraphic address _____
COORD/ _____
Other information: _____

* The actual size of the notice is a matter for individual administrations.

- A separate notice shall be sent to the IFRB for notifying:
 - each frequency assignment to be put into use for a particular season;
 - any change in the characteristics of a frequency assignment in the High Frequency Broadcasting Schedule, for the season;
 - any deletion of a frequency assignment in the High Frequency Broadcasting Schedule, for the season.
- Separate entries, in Columns 5a and 8 to 11, should be made for the various characteristics when they do not apply to the assignment as a whole, for instance when the power, antenna characteristics or hours of operation differ according to the zones or areas of reception.

I. General Notes

- The name of the notifying administration should be indicated.
- Indicate in this box by the letter "X" when the notice reflects the first frequency usage by a station in a particular season.
- Indicate in this box by the letter "X" when the notice reflects a change in the characteristics of a frequency assignment in the High Frequency Broadcasting Schedule, for the season.
 - In the case where existing particulars are changed, the new characteristics in the appropriate place should be underlined; the original characteristics which have been changed should be shown in brackets underneath or at the side.
 - In the case where the change is an addition to existing particulars, the additional characteristics should be shown in the appropriate place and should be underlined.
 - In the case where the change is a cancellation of a particular characteristic or characteristics, this should be shown in the appropriate place by a dash and, underneath or at the side, the characteristics which have been cancelled should be shown in brackets.

- (d) Indicate in this box by the letter "X" when the notice reflects a deletion of an assignment, in all of its notified characteristics, for the season.
- (e) The serial number of the notice and the date on which the notice is sent to the Board shall be shown here.

- 4b Indicate the country in which the station is located. Symbols from the Preface to the International Frequency List should be used.
- 4c Indicate the geographical co-ordinates (in degrees and minutes) of the transmitter site.

**II. Notes Concerning Information to Be Entered
in the Specific Columns of the Notice**

Column 1 Frequency

- 1a Indicate the assigned frequency as defined in Article 1, in kHz;
- 1b indicate any suggested alternative frequency or frequencies in kHz, or
- 1c the desired band in MHz, if a specific frequency is not given under 1a and 1b above.

Column 2c Date of putting into use, in the particular season

1. If the assignment is to be brought into use on the implementation date of the seasonal schedule, indicate the last two digits of the year in the box(es) of the season(s) for which the assignment is to be used.
2. If the assignment is to be brought into use or changed by any date other than the implementation date of the particular seasonal schedule, this date shall be entered in the space provided.

Column 3 Call sign (Identification)

Indicate the call sign or other station identification used in accordance with Article 25.

Column 4 Name and location of transmitting station

- 4a Indicate the name of the locality by which the transmitting station is known or in which it is situated.

Column 5a Zone(s) or area(s) of reception

1. Indicate in this column the zone(s) of reception as shown in the map annexed to Appendix 1.
2. If the reception area is smaller than an entire zone, it should be indicated as a country or part of a country using symbols from the Preface to the International Frequency List, as far as possible.
3. Indicate, as supplementary information, the maximum service range (in km) when this is considered necessary.

Column 7 Class of emission and necessary bandwidth

Indicate the class of emission and necessary bandwidth in accordance with Article 4 and Appendix 6.

Column 8 Power (in kW)

Indicate the carrier power supplied to the transmission line.

Transmitting Antenna Characteristics

Column 9a Azimuth of maximum radiation

1. If a directive transmitting antenna is used, indicate the azimuth of maximum radiation of the transmitting antenna in degrees (clockwise) from True North.

2. If a transmitting antenna with non-directional characteristics is used, insert "ND" in this column.

Column 9b Angular width of radiation main lobe

The total angle in the horizontal plane, in degrees, within which the power radiated in any direction does not fall more than 6 dB below the power radiated in the direction of maximum radiation, should be indicated.

Column 9c Antenna gain (dB)

The relative gain of the antenna in the direction of maximum radiation for the assigned frequency should be indicated.

Column 9d Angle of elevation

The angle of the direction of maximum radiation in the vertical plane in degrees should be indicated.

Column 9e Type of antenna

The nomenclature of the CCIR book of "Antenna Diagrams" should be used wherever it is applicable as shown in a list at the end of this instruction (see III of this Section).

Column 10 Hours of operation (UTC)

Column 11 Other frequencies simultaneously used for the same programme to the same area(s)

1. If the notified frequency is the only frequency used for the particular schedule, the indication "Nil" shall be inserted in this column.
2. In other cases, the other frequencies simultaneously used for the same programme to the same area shall be indicated.

Column 12b Postal and telegraphic address of administration responsible for the station *

The addresses required are those to which communication should be sent on urgent matters regarding interference, quality of emissions, and questions referring to the technical operation (see Article 22).

Supplementary Information

Any other information supplied by the administration should be indicated in the space provided.

1. Indicate after the symbol COORD/--- the name of any administration with which coordination has been effected for the use of the frequency; if no coordination has been effected, the indication "Nil" should be inserted.
2. Any other information which the administration considers to be relevant should be indicated, such as, for example, the maximum service range when this is less than 2 000 kms; or information concerning the use of the notified frequency if such use is restricted; or if the frequency is not used during all the hours indicated in Column 10, or on certain days of the week only; or if synchronizing techniques are used.

III. Symbols for Type of Antenna

HOR	Horizontal non-directive antenna
VER	Vertical non-directive antenna

* Where this information already appears in the Preface to the International Frequency List, the appropriate reference number or letter may be used.

AP2-7

DP Dipole
H Horizontal
V Vertical
R With reflector
(Example : DPHR means : Horizontal dipole with reflector)

H Horizontal dipole curtain antenna
R With reflector curtain
S Slew antenna
/.. Number of half wave elements in each row
/.. Number of half wave elements in each stack (one above the other)
/.. Height above ground in full wavelengths of the bottom row of elements
S.. Angle of slew, if any
(Example : HRS/4/3/2S15 means : Horizontal array with reflector curtain, 4 half wave elements in each row, 3 stacks of dipoles, bottom element 2 wavelengths above the ground, slewed with an angle of 15 degrees)

RHO Rhombic antenna
/.. Length of one side of the rhombus, in wavelengths
/.. Height of rhombus above ground, in wavelengths
/.. One half of the interior side angle of rhombus
(Example : RHO/2.5/0.4/65 means : Rhombic antenna, length of one side 2.5 wavelengths, height above ground 0.4 wavelengths, one half of the interior side angle 65 degrees)

TRO Tropical broadcasting antenna
/.. Number of rows
/.. Height above the ground in wavelengths
(Example : TRO/4/0.2 means : Tropical BC antenna with 4 rows (and 4 dipoles in each row) in a height of 0.2 wavelengths above the ground)

MOD APIA

APPENDIX 3

**Notices Relating to Space Radiocommunications
and Radio Astronomy Stations**

(See Articles 11 and 13)

Section A. General Instructions

1. A separate notice shall be sent to the International Frequency Registration Board for notifying:

- each new frequency assignment to an earth station for transmitting or to be received or a space station for transmitting or to be received;
- any change in the characteristics of a frequency assignment recorded in the Master International Frequency Register (hereinafter called the *Master Register*);
- any total deletion of a frequency assignment recorded in the Master Register.

2. When submitting notices under Nos. 1488 to 1491 for frequency assignments to an earth or space station for transmitting or for frequency assignments to be used for reception by an earth or space station, separate notices shall be submitted to the Board for each assignment. In each of these cases where the basic characteristics are identical, with the exception of the frequency, a single notice may be submitted covering all basic characteristics and listing the assigned frequencies. In the case of a reflecting satellite system, only earth transmitting and receiving assignments shall be notified.

3. In the case of a satellite system employing multiple space stations with the same general characteristics, a separate notice shall be submitted to the Board for each space station for transmitting or receiving assignments:

- when it is aboard a geostationary satellite;
- when it is aboard a non-geostationary satellite except when a number of satellites have the same radio frequency characteristics and orbital characteristics (excluding the ascending node position); in the latter case, one notice covering all such space stations may be submitted to the Board.

4. The following basic information shall be shown on the notice:

- a) the serial number of the notice and the date on which the notice is sent to the Board;
- b) the name of the notifying administration;
- c) sufficient data to identify the particular satellite network in which the earth or space station will operate, including in the case of a geostationary satellite its orbital position;
- d) whether the notice reflects:
 - 1) the first use of a frequency by a station;
 - 2) a change in the characteristics of a frequency assignment recorded in the Master Register (indicate whether the change is a replacement, addition or deletion of existing characteristics);
 - 3) a deletion of an assignment in all of its notified characteristics;
- e) reference to the IFRB weekly circular providing the advance publication information required in accordance with No. 1042;

- f) basic characteristics as outlined in Section B, C, D, E, or F as appropriate;
- g) any other information which the administration considers to be relevant, e.g., any factors taken into account when applying Appendix 28 for determination of the coordination area and also any indication that the assignment concerned would be operating in accordance with No. 342, information concerning the use of the notified frequency if such use is restricted, or, in the case of notices pertaining to space stations, if the transmissions of the station are to be permanently switched off after a certain period.

**Section B. Basic Characteristics to Be Furnished
in Notices Relating to Frequencies Used
by Earth Stations for Transmitting**

Item 1 Assigned frequency (frequencies)

Indicate the assigned frequency (frequencies), as defined in Article 1 (see No. 142), in kHz up to 28 000 kHz inclusive, in MHz above 28 000 kHz to 10 500 MHz inclusive and in GHz above 10 500 MHz.

Item 2 Assigned frequency band

Indicate the bandwidth of the assigned frequency band in kHz (see No. 141).

Item 3 Date of bringing into use

a) In the case of a new assignment, indicate the date (actual or foreseen, as appropriate) of bringing the frequency assignment into use.

b) Whenever the assignment is changed in any of its basic characteristics, as shown in this Section (except in the case of a change in *Item 4 a)*), the date to be given shall be that of the latest change (actual or foreseen, as appropriate).

Item 4 Identity and location of the transmitting earth station

a) Indicate the name by which the station is known or the name of the locality in which it is situated.

b) Indicate the country or geographical area in which the station is located. Symbols from the Preface to the International Frequency List should be used.

c) Indicate the geographical coordinates of the transmitter site (longitude and latitude in degrees and minutes). Indicate also the seconds¹ with an accuracy of one-tenth of a minute.

Item 5 Station(s) with which communication is to be established

Identify the associated receiving space station(s) by reference to the notification thereof or in any other appropriate manner, or, in the case of a reflecting satellite, the identity of the satellite and the location of the associated receiving earth station(s). In the case of a geostationary satellite, indicate also its orbital position.

Item 6 Class of station and nature of service

Indicate the class of station and nature of service performed, using the symbols shown in Appendix 10.

¹ This information need only be furnished if the coordination area of the earth station overlaps the territory of another administration.

Item 7 Class of emission, necessary bandwidth and description of transmission

In accordance with Article 4 and Appendix 6:

- a)* indicate the class of emission;
- b)*¹ indicate the carrier frequency or frequencies of the emission(s);
- c)*¹ indicate, for each carrier, the class of emission, necessary bandwidth and description of transmission;
- d)*¹ indicate for the carrier having the smallest bandwidth of assignments in the system the class of emission, necessary bandwidth and a description of the transmission.

Item 8 Power characteristics of the transmission

- a)*¹ Indicate for each carrier the peak envelope power (dBW) supplied to the input of the antenna.
- b)* Indicate the total peak envelope power (dBW) and the maximum power density per Hz (dB(W/Hz))² supplied to the input of the antenna averaged over the worst 4 kHz band for carriers below 15 GHz, or averaged over the worst 1 MHz band for carriers above 15 GHz.
- c)*¹ Indicate for each carrier the minimum value of the peak envelope power supplied to the input of the antenna.

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

² The most recent version of CCIR Report 792 should be used to the extent applicable in calculating the maximum power density per Hz.

Item 9 Transmitting antenna characteristics

- a)* Indicate the isotropic or absolute gain (dB) of the antenna in the direction of maximum radiation (see No. 154).
- b)* Indicate the beamwidth in degrees between the half power points (describe in detail if not symmetrical).
- c)* Either attach the measured radiation diagram of the antenna (taking as a reference the direction of maximum radiation) or indicate the reference radiation diagram to be used for coordination.
- d)* Indicate graphically the horizon elevation angle for each azimuth around the earth station.
- e)* Indicate in degrees from the horizontal plane the planned minimum operating angle of elevation of the antenna in the direction of maximum radiation.
- f)* Indicate in degrees, clockwise from True North, the planned range of operating azimuthal angles for the direction of maximum radiation.
- g)*¹ Indicate the type of polarization of the transmitted wave in the direction of maximum radiation; also indicate the direction in the case of circular polarization and the plane in the case of linear polarization. (See Nos. 148 and 149.)
- h)* Indicate the altitude (metres) of the antenna above mean sea level.

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

*Item 10*¹ Modulation characteristics

For each carrier, according to the nature of the signal modulating the carrier and the type of modulation, indicate the following characteristics:

- a) carrier frequency modulated by a frequency-division multi-channel telephony baseband (FDM/FM) or by a signal that can be represented by a multi-channel telephony baseband: indicate the lowest and highest frequencies of the baseband and the r.m.s. frequency deviation of the test tone as a function of baseband frequency;
- b) carrier frequency modulated by a television signal: indicate the standard of the television signal (including, where appropriate, the standard used for colour), the frequency deviation for the reference frequency of the pre-emphasis characteristic and the pre-emphasis characteristic itself. Also indicate, where applicable, the characteristics of the multiplexing of the video signal with the sound signal(s) or other signals;
- c) carrier phase-shift modulated by a pulse code modulation signal (PCM/PSK): indicate the bit rate and the number of phases;
- d) amplitude modulated carrier (including single-side-band): indicate as precisely as possible the nature of the modulating signal and the kind of amplitude modulation used;

- e) for all other types of modulation, provide such particulars as may be useful for an interference study;
- f) for any type of modulation as applicable, indicate the characteristics of energy dispersal, such as the peak-to-peak frequency deviation (MHz) and the sweep frequency (kHz) of the energy dispersal wave form.

Item 11 Regular hours of operation

Indicate, in UTC, the regular hours of operation on the frequency of each carrier.

Item 12 Coordination

Give the name of any administration with which the use of this frequency has been successfully coordinated in accordance with Nos. 1060 and 1107 and, if appropriate, the name of any administration with which coordination has been sought but not effected.

Item 13 Agreements

Give, if appropriate, the name of any administration with which agreement has been effected to exceed the limits prescribed in these Regulations, and the contents of such agreement.

Item 14 Operating administration or company

Give the name of the operating administration or company and the postal and telegraphic addresses of the administration to which communications should be sent on urgent matters regarding interference, quality of emissions and questions referring to the technical operation of stations (see Article 22).

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

**Section C. Basic Characteristics to Be Furnished in Notices
Relating to Frequencies to Be Received by Earth Stations**

Item 1 Assigned frequency (or frequencies)

Indicate the assigned frequency (frequencies), as defined in Article 1 (see No. 142), of the emission to be received, in kHz up to 28 000 kHz inclusive, in MHz above 28 000 kHz to 10 500 MHz inclusive and in GHz above 10 500 MHz.

Item 2 Assigned frequency band

Indicate the bandwidth of the assigned frequency band in kHz (see No. 141).

Item 3 Date of bringing into use

a) In the case of a new assignment, indicate the date (actual or foreseen, as appropriate) when reception of the assigned frequency begins.

b) Whenever the assignment is changed in any of its basic characteristics, as shown in this Section (except in the case of a change in *Item 4 a)*), the date to be given shall be that of the latest change (actual or foreseen, as appropriate).

Item 4 Identity and location of the receiving earth station

a) Indicate the name by which the receiving earth station is known or the name of the locality in which it is situated.

b) Indicate the country or geographical area in which the station is located. Symbols from the Preface to the International Frequency List should be used.

c) Indicate the geographical coordinates of the receiver site (longitude and latitude in degrees and minutes). Indicate also the seconds¹ with an accuracy of one-tenth of a minute.

Item 5 Station(s) with which communication is to be established

Identify the associated transmitting space station(s) by reference to the notification thereof or in any other appropriate manner, or, in the case of a reflecting satellite, the identity of the satellite and the associated transmitting earth station(s). In the case of a geostationary satellite, indicate also its orbital position.

Item 6 Class of station and nature of service

Indicate the class of station and nature of service performed, using the symbols shown in Appendix 10.

Item 7 Class of emission, necessary bandwidth and description of the transmission to be received

In accordance with Article 4 and Appendix 6:

a) indicate the class of emission of the transmission to be received;

¹ This information need only be furnished if the coordination area of the earth station overlaps the territory of another administration.

- b)¹ indicate the carrier frequency or frequencies of the transmission to be received;
- c)¹ indicate, for each carrier to be received, the class of emission, necessary bandwidth and description of the transmission.

Item 8 Earth station receiving antenna characteristics

- a) Indicate the isotropic or absolute gain (dB) of the antenna in the direction of maximum radiation (see No. 154).
- b) Indicate the beamwidth in degrees between the half power points (describe in detail if not symmetrical).
- c) Either attach the measured radiation diagram of the antenna (taking as a reference the direction of maximum radiation) or indicate the reference radiation diagram to be used for coordination.
- d) Indicate graphically the horizon elevation angle for each azimuth around the earth station.
- e) Indicate in degrees from the horizontal plane the planned minimum operating angle of elevation of the antenna in the direction of maximum radiation.
- f) Indicate in degrees, clockwise, from True North, the planned range of operating azimuthal angles for the direction of maximum radiation.
- g) Indicate the altitude (metres) of the antenna above mean sea level.

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

- h)¹ Indicate the type of polarization of the antenna. In the case of circular polarization, indicate the direction of polarization (see Nos. 148 and 149). In the case of linear polarization, indicate the plane of polarization. Indicate also if consent is given to the general use of this information in the determination of the need for coordination with other satellite networks according to Appendix 29.

Item 9 Noise temperature, link noise temperature and transmission gain

- a) Indicate, in kelvins, the lowest total receiving system noise temperature referred to the output of the receiving antenna of the earth station under "quiet sky conditions". This value shall be indicated for the nominal value of the angle of elevation when the associated transmitting station is aboard a geostationary satellite and, in other cases, for the minimum value of angle of elevation.
- b) When simple frequency-changing transponders are used on the associated space station, indicate the lowest equivalent satellite link noise temperatures under the conditions of *Item 9 a)* for each assignment (see No. 168).
- c) Indicate the value of transmission gain associated with each equivalent satellite link noise temperature given in *Item 9 b)*. The transmission gain is evaluated from the output of the receiving antenna of the space station to the output of the receiving antenna of the earth station.

Item 10 Regular hours of reception

Indicate, in UTC, the regular hours of reception on the frequency of each carrier.

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

Item 11 Coordination

Give the name of any administration with which the use of this frequency has been successfully coordinated in accordance with Nos. 1060 and 1107 and, if appropriate, the name of any administration with which coordination has been sought but not effected.

Item 12 Agreements

Give also, if appropriate, the name of any administration with which agreement has been effected to exceed the limits prescribed in these Regulations, and the contents of such agreement.

Item 13 Operating administration or company

Give the name of the operating administration or company and the postal and telegraphic addresses of the administration to which communications should be sent on urgent matters regarding interference and questions referring to the technical operation of stations (see Article 22).

Section D. Basic Characteristics to Be Furnished in Notices Relating to Frequencies Used by Space Stations for Transmitting

Item 1 Assigned frequency (frequencies)

Indicate the assigned frequency (frequencies), as defined in Article 1 (see No. 142), in kHz up to 28 000 kHz inclusive, in MHz above 28 000 kHz to 10 500 MHz inclusive and in GHz above 10 500 MHz. At least one separate assignment notice should be made out for each antenna radiation beam.

Item 2 Assigned frequency band

Indicate the bandwidth of the assigned frequency band in kHz (see No. 141).

Item 3 Date of bringing into use¹

a) In the case of a new assignment, indicate the date (actual or foreseen, as appropriate) of bringing the frequency assignment into use.

b) Whenever the assignment is changed in any of its basic characteristics as shown in this Section (except in the case of a change in *Item 4*), the date to be given shall be that of the latest change (actual or foreseen, as appropriate).

Item 4 Identity of the space station(s)

Indicate the identity of the space station(s).

Item 5 Orbital information

a) In the case of a space station aboard a geostationary satellite indicate the nominal geographical longitude on the geostationary-satellite orbit and the planned longitudinal tolerance and inclination excursion. Indicate also in the case where a geostationary satellite is intended to communicate with an earth station:

- 1) the arc of the geostationary-satellite orbit over which the space station is visible, at a minimum angle of elevation of 10° at the Earth's surface, from its associated earth stations or service areas; *and*

¹ See also Resolution 4.

- 2) the arc of the geostationary-satellite orbit within which the space station could provide the required service to its associated earth stations or service areas; *and*
- 3) in the event that the arc defined in paragraph 2) above is less than the arc defined in paragraph 1) above, provide the reasons therefor.

Note: The arcs specified in 1) and 2) will be indicated by the geographical longitude of the extremes of these arcs on the geostationary-satellite orbit.

b) In the case of space station(s) aboard non-geostationary satellite(s), indicate the angle of inclination of the orbit, the period, the altitudes in kilometres of the apogee and perigee of the space station(s) and the number of satellites used.

Item 6 Service area or receiving station(s)

a) In the case where the associated receiving stations are earth stations, indicate the service area or areas on the Earth or the name of the locality and country or geographical area in which each receiving station is located.

b) In the case where the associated receiving stations are space stations, identify each station by reference to the notification thereof or in any other appropriate manner.

Item 7 Class of station and nature of service

Indicate the class of station and nature of service performed, using the symbols shown in Appendix 10.

Item 8 Class of emission, necessary bandwidth and description of transmission

In accordance with Article 4 and Appendix 6:

- a)* indicate the class of emission of the transmission;

- b)*¹ indicate the carrier frequency or frequencies of the transmission;
- c)*¹ indicate, for each carrier, the class of emission, necessary bandwidth and description of transmission;
- d)*¹ indicate, for the carrier having the smallest bandwidth of assignments in the system, the class of emission, necessary bandwidth and a description of the transmission.

Item 9 Power characteristics of the transmission

*a)*¹ Indicate for each carrier the peak envelope power (dBW) supplied to the input of the antenna.

b) Indicate the total peak envelope power (dBW) and the maximum power density per Hz (dB(W/Hz))² at the input of the antenna, averaged over the worst 4 kHz band for carriers below 15 GHz or averaged over the worst 1 MHz band for carriers above 15 GHz.

*c)*¹ Indicate for each carrier the minimum value of the peak envelope power supplied to the input of the antenna.

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

² The most recent version of CCIR Report 792 should be used to the extent applicable in calculating the maximum power density per Hz.

Item 10 Space station transmitting antenna characteristics

For each service area or antenna radiation beam:

- a) in the case of a space station aboard a geostationary satellite that is intended to communicate with an earth station, indicate the maximum gain of the space station transmitting antenna and the gain contours plotted on a map of the Earth's surface, preferably in a radial projection from the satellite on to a plane perpendicular to the axis from the centre of the Earth to the satellite. The isotropic or absolute gain at each contour which corresponds to a gain of 2, 4, 6, 10 and 20 dB and at 10 dB intervals thereafter, as necessary, below the maximum gain, shall be indicated. Whenever possible the gain contours of the space station transmitting antenna should also be provided in the form of a numerical equation or in tabular form;
- b) in the case of a space station aboard a geostationary satellite in which the antenna radiation beam is directed towards another satellite, or in the case of a space station aboard a non-geostationary satellite, indicate the isotropic or absolute gain of the space station transmitting antenna in the direction of maximum radiation and the antenna radiation pattern, taking the gain in the direction of maximum radiation as a reference;
- c)¹ indicate the type of polarization of the radiation emitted by the antenna. In the case of circular polarization, indicate the direction of polarization

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

(see Nos. 148 and 149). In the case of linear polarization, indicate the angle (in degrees) measured anticlockwise in a plane normal to the beam axis from the equatorial plane to the electric vector of the wave as seen from the satellite;

- d) for a geostationary satellite, indicate the pointing accuracy of the antenna;
- e) in the case of a space station aboard a geostationary satellite operating in a band allocated in the Earth-to-space direction and in the space-to-Earth direction, also indicate the gain of the space station transmitting antenna in the direction of those parts of the geostationary-satellite orbit which are not obstructed by the Earth, by means of a diagram showing estimated antenna gain versus orbit longitude.

*Item 11*¹ Modulation characteristics

For each carrier, according to the nature of the signal modulating the carrier and the type of modulation, indicate the following characteristics:

- a) carrier frequency modulated by a frequency-division multi-channel telephony baseband (FDM/FM) or by a signal that can be represented by a multi-channel telephony baseband: indicate the lowest and highest frequencies of the baseband and the r.m.s. frequency deviation of the test tone as a function of baseband frequency;

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

- b) carrier frequency modulated by a television signal: indicate the standard of the television signal (including, where appropriate, the standard used for colour), the frequency deviation for the reference frequency of the pre-emphasis characteristic and the pre-emphasis characteristic itself. Also indicate, where applicable, the characteristics of the multiplexing of the video signal with the sound signal(s) or other signal(s);
- c) carrier phase-shift modulated by a pulse code modulation signal (PCM/PSK): indicate the bit rate and the number of phases;
- d) amplitude modulated carrier (including single-side-band): indicate as precisely as possible the nature of the modulating signal and the kind of amplitude modulation used;
- e) for all other types of modulation, provide such particulars as may be useful for an interference study;
- f) for any type of modulation as applicable, indicate the characteristics of energy dispersal.

Item 12 Regular hours of operation

Indicate in UTC the regular hours of operation on the frequency of each carrier.

Item 13 Coordination

Give the name of any administration or group of administrations with which the use of the satellite network to which the space station belongs has been successfully coordinated in accordance with No. 1060.

Item 14 Agreements

Give also, if appropriate, the name of any administration with which agreement has been effected to exceed the limits prescribed in these Regulations and the contents of such agreement.

Item 15 Operating administration or company

Give the name of the operating administration or company and the postal and telegraphic addresses of the administration to which communications should be sent on urgent matters regarding interference, quality of emissions and questions referring to the technical operation of stations (see Article 22).

**Section E. Basic Characteristics to Be Furnished in
Notices Relating to Frequencies to Be Received
by Space Stations**

Item 1 Assigned frequency (or frequencies)

Indicate the assigned frequency (frequencies), as defined in Article 1 (see No. 142), in kHz up to 28 000 kHz inclusive, in MHz above 28 000 kHz to 10 500 MHz inclusive and in GHz above 10 500 MHz. At least one separate assignment notice should be made out for each antenna radiation beam.

Item 2 Assigned frequency band

Indicate the bandwidth of the assigned frequency band in kHz (see No. 141).

Item 3 Date of bringing into use ¹

a) In the case of a new assignment, indicate the date (actual or foreseen, as appropriate) when reception of the assigned frequency begins.

b) Whenever the assignment is changed in any of its basic characteristics, as shown in this Section (except in the case of a change in *Item 4*), the date to be given shall be that of the latest change (actual or foreseen, as appropriate).

Item 4 Identity of the receiving space station(s)

Indicate the identity of the receiving space station(s).

Item 5 Orbital information

a) In the case of a space station aboard a geostationary satellite, indicate the planned nominal geographical longitude on the geostationary-satellite orbit and the planned longitudinal tolerance and inclination excursion. Indicate also in the case where a geostationary satellite is intended to communicate with an earth station:

- 1) the arc of the geostationary-satellite orbit over which the space station is visible, at a minimum angle of elevation of 10° at the Earth's surface, from its associated earth stations or service areas; *and*
- 2) the arc of the geostationary-satellite orbit within which the space station could provide the required service to its associated earth stations or service areas; *and*

- 3) in the event that the arc defined in paragraph 2) above is less than the arc defined in paragraph 1) above, provide the reasons therefor.

Note: The arcs specified in 1) and 2) will be indicated by the geographical longitude of the extremes of these arcs on the geostationary-satellite orbit.

b) In the case of space station(s) aboard non-geostationary satellite(s), indicate the angle of inclination of the orbit, the period, the altitudes in kilometres of the apogee and perigee of the space station(s) and the number of satellites used.

Item 6 Associated transmitting earth station(s) or space station(s)

Identify the associated transmitting earth station(s) or space station(s) by reference to the notifications thereof or in any other appropriate manner.

Item 7 Class of station and nature of service

Indicate the class of station and nature of service performed, using the symbols shown in Appendix 10.

Item 8 Class of emission, necessary bandwidth and description of the transmission(s) to be received

In accordance with Article 4 and Appendix 6:

- a)* indicate the class of emission of the transmission(s) to be received;
- b)*¹ indicate the carrier frequency or frequencies of the transmission(s) to be received;

¹ See also Resolution 4.

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

- c)¹ indicate, for each carrier to be received, the class of emission, necessary bandwidth and description of the transmission(s) to be received.

Item 9 Space station receiving antenna characteristics

For each receiving beam:

- a) in the case of a space station aboard a geostationary satellite that is intended to communicate with an earth station, indicate the maximum gain of the space station receiving antenna and the gain contours plotted on a map of the Earth's surface, preferably in a radial projection from the satellite on to a plane perpendicular to the axis from the centre of the Earth to the satellite. The isotropic or absolute gain at each contour which corresponds to a gain of 2, 4, 6, 10 and 20 dB and at 10 dB intervals thereafter, as necessary, below the maximum gain, shall be indicated. Whenever possible the gain contours of the space station receiving antenna should also be provided in the form of a numerical equation or in tabular form;
- b) in the case of a space station aboard a geostationary satellite in which the antenna radiation beam is directed towards another satellite, or in the case of a space station aboard a non-geostationary satellite, indicate the isotropic or absolute gain of the space station receiving antenna in the direction of maximum radiation and indicate the antenna radiation pattern, taking the gain in the direction of maximum radiation as a reference;

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

- c)¹ indicate the type of polarization of the antenna. In the case of circular polarization, indicate the direction of polarization (see Nos. 148 and 149). In the case of linear polarization, indicate the angle (in degrees) measured anticlockwise in a plane normal to the beam axis from the equatorial plane to the electric vector of the wave as seen from the satellite. Indicate also if consent is given to the general use of this information in the determination of the need for coordination with other satellite networks according to Appendix 29;

- d) indicate, for a geostationary satellite, the pointing accuracy of the antenna;

- e) in the case of a space station aboard a geostationary satellite operating in a band allocated in the Earth-to-space direction and in the space-to-Earth direction, also indicate the gain of the space station receiving antenna in the direction of those parts of the geostationary-satellite orbit which are not obstructed by the Earth by means of a diagram showing estimated antenna gain versus orbit longitude.

Item 10 Noise temperature

Indicate, in kelvins, the total receiving system noise temperature referred to the output of the receiving antenna of the space station.

¹ This information need only be furnished when such information has been used as a basis to effect coordination with another administration.

Item 11 Regular hours of reception

Indicate, in UTC, the regular hours of reception on the frequency of each carrier.

Item 12 Coordination

Give the name of any administration or group of administrations with which the use of the satellite network to which the space station belongs has been successfully coordinated in accordance with No. 1060.

Item 13 Agreements

Give also, if appropriate, the name of any administration with which agreement has been effected to exceed the limits prescribed in these Regulations and the contents of such agreement.

Item 14 Operating administration or company

Give the name of the operating administration or company and the postal and telegraphic addresses of the administration to which communications should be sent on urgent matters regarding interference and questions referring to the technical operation of stations (see Article 22).

**Section F. Basic Characteristics to Be Furnished
in Notices Relating to Frequencies to Be Received
by Radio Astronomy Stations**

Item 1 Observed frequency

Indicate the centre of the frequency band observed, in kHz up to 28 000 kHz inclusive, in MHz above 28 000 kHz to 10 500 MHz inclusive and in GHz above 10 500 MHz.

Item 2 Date of bringing into use

a) Indicate the date (actual or foreseen, as appropriate) when reception of the frequency band begins.

b) Whenever there is a change in any of the basic characteristics, as shown in this Section (except in the case of a change in *Item 3 b*)), the date to be given shall be that of the latest change (actual or foreseen, as appropriate).

Item 3 Name and location of the station

a) Indicate the letters "RA".

b) Indicate the name by which the station is known or the name of the locality in which it is situated or both.

c) Indicate the country or geographical area in which the station is located. Symbols from the Preface to the International Frequency List should be used.

d) Indicate the geographical coordinates of the station site (longitude and latitude in degrees and minutes).

Item 4 Bandwidth

Indicate the width of the frequency band (in kHz) observed by the station.

Item 5 Antenna characteristics

Indicate the antenna type and dimensions, effective area and angular coverage in azimuth and elevation.

Item 6 Regular hours of reception

Indicate in UTC the regular hours of reception on the observed frequency.

Item 7 Noise temperature

Indicate, in kelvins, the over-all receiving system noise temperature referred to the output of the receiving antenna.

Item 8 Class of observations

Indicate the class of observations to be taken on the frequency band shown in *Item 4*. Class A observations are those in which the sensitivity of the equipment is not a primary factor. Class B observations are those of such a nature that they can be made only with advanced low-noise receivers using the best techniques.

Item 9 Operating administration or company

Indicate the identity of the operating administration or company and the postal and telegraphic addresses of the administration to which communications should be sent on urgent matters regarding interference and questions referring to the technical operation of stations (see Article 22).

Section G. Forms of Notice (earth station)

The Board shall develop and keep up to date forms of notice to meet fully the statutory provisions of this Appendix and related decisions of future conferences.

Section H. Forms of Notice (space station)

The Board shall develop and keep up to date forms of notice to meet fully the statutory provisions of this Appendix and related decisions of future conferences.

ANNEX TO APPENDIX 3

**Minimum Information Required for Coordination
in Accordance with Nos. 1060 and 1107**

General Information

- a) For coordination in accordance with No. 1060:
 - for the coordination of (an) assignment(s) to a space station, the information to be provided in Section B or C of Appendix 3 shall be either the characteristics of the actual cooperating earth station of the network, if known, or the characteristics of a typical earth station;
 - for the coordination of (an) assignment(s) to an earth station, supply *Items 4 c*) and *4 e*), Section A of Appendix 3 if there is no change in the basic characteristics of the assignment(s) to the space station to accommodate the earth station(s). Otherwise, coordination of the frequency assignment(s) to the space station will be required.
- b) For coordination in accordance with No. 1107, only the items indicated in Columns 9 and 10 of the table are required.
- c) An "X" in a column of the table indicates that the information is required.

Appendix 3 information — Type of coordination required

Titles of the columns

1. Assignments to transmitting earth station with simple frequency-changing transponder on board the satellite in accordance with No. 1060.
2. Same as 1 in cases requiring independent treatment of the up-link and down-link (e.g. telemetry and telecommand).
3. Assignments to receiving earth station with simple frequency-changing transponder on board the satellite in accordance with No. 1060.
4. Same as 3 in cases requiring independent treatment of the up-link and down-link (e.g. telemetry and telecommand).
5. Assignments to transmitting space station with simple frequency-changing transponder on board the satellite in accordance with No. 1060.
6. Same as 5 in cases requiring independent treatment of the up-link and down-link (e.g. telemetry and telecommand).
7. Assignments to receiving space station with simple frequency-changing transponder on board the satellite in accordance with No. 1060.
8. Same as 7 in cases requiring independent treatment of the up-link and down-link (e.g. telemetry and telecommand).
9. Assignments to transmitting earth station in accordance with No. 1107.
10. Assignments to receiving earth station in accordance with No. 1107.

APPENDIX 4

**Advance Publication Information to Be Furnished
for a Satellite Network**

(See Article 11)

Section A. General Instructions

Item 1 Information shall be provided separately for each satellite network.

Item 2 Information to be furnished for each satellite network shall include general characteristics (Section B), and, as applicable, characteristics in the Earth-to-space direction (Section C), characteristics in the space-to-Earth direction (Section D), and characteristics for space-to-space relay (Section E). In addition, the administration, or one acting on behalf of a group of named administrations submitting the advance information, may provide, as supplementary information, data for interference calculations for the purpose of inter-network coordination (Section F).

**Section B. General Characteristics to Be Furnished for
a Satellite Network**

Item 1 Identity of the satellite network

Clearly identify the satellite network and, if applicable, identify the satellite system of which it will form a part.

Item 2 Date of bringing into use¹

Indicate the date by which the satellite network is expected to be brought initially into use.

Item 3 Administration or group of administrations submitting the advance information

Give the name of the administration or the names of the administrations in the group submitting the advance information on the satellite network and the postal and telegraphic addresses of the administration(s) to which any communication should be sent.

Item 4 Orbital information relating to the space station(s)

a) In the case of a space station aboard a geostationary satellite, give the planned nominal geographical longitude on the geostationary-satellite orbit and the planned longitudinal tolerance and inclination excursion. Indicate also:

- 1) the arc of the geostationary-satellite orbit over which the space station is visible, at a minimum angle of elevation of 10° at the Earth's surface, from its associated earth stations or service areas;
- 2) the arc of the geostationary-satellite orbit within which the space station could provide the required service to its associated earth stations or service areas; *and*

¹ See also Resolution 4.

- 3) in the event that the arc defined in paragraph 2) above is less than the arc defined in paragraph 1) above, provide the reasons therefor.

Note: The arcs specified in 1) and 2) will be indicated by the geographical longitude of the extremes of these arcs on the geostationary-satellite orbit.

- b) In the case of space station(s) aboard non-geostationary satellite(s), indicate the angle of inclination of the orbit, the period, the altitudes in kilometres of the apogee and perigee of the space station(s) and the number of satellites used having the same characteristics.

Section C. Characteristics of the Satellite Network in the Earth-to-Space Direction

Item 1 Earth-to-space service area(s)

Indicate the service area(s) on the Earth associated with each receiving antenna of the space station.

Item 2 Class of stations and nature of service

For each Earth-to-space service area, indicate the class of the stations in the satellite network and the nature of the service to be performed, using the symbols shown in Appendix 10.

Item 3 Frequency range

For each Earth-to-space service area, indicate the frequency range within which the carriers will be located.

Item 4 Power characteristics of the transmitted wave

a) For each Earth-to-space service area indicate the maximum spectral power density (dB(W/Hz))¹ to be delivered to the antenna of the transmitting earth stations (the bandwidth over which this is averaged depends on the nature of the service concerned) for each size of transmitting earth station antenna and, if available, the total peak envelope power (dBW) and the necessary bandwidth of this emission.

b) If available, indicate, for each Earth-to-space service area, the actual radiation pattern (relative to isotropic) of the transmitting earth station antenna having the highest off-beam equivalent isotropically radiated spectral power density for each size of transmitting earth station antenna.

c) If available, for television carriers and for each Earth-to-space service area, indicate the peak envelope power to be delivered to the input of the earth station transmitting antenna.

d) If available, indicate the minimum carrier power delivered to the antenna of the earth station for narrow-band carriers.

Item 5 Characteristics of space station receiving antennae

For each Earth-to-space service area:

- a) in the case of a space station aboard a geostationary satellite, indicate the maximum gain of the space station receiving antenna and the gain contours plotted on a map of the Earth's surface

¹ The most recent version of CCIR Report 792 should be used to the extent applicable in calculating the maximum power density per Hz.

preferably using a radial projection from the satellite in a plane perpendicular to the axis from the centre of the Earth to the satellite. The isotropic or absolute gain at each contour which corresponds to a gain of 2, 4, 6, 10 and 20 dB and at 10 dB intervals thereafter, as necessary, below the maximum gain, shall be indicated. Whenever possible the estimated gain contours of the space station receiving antenna should also be provided in the form of a numerical equation or in a tabular form;

- b) in the case of a space station aboard a non-geostationary satellite, indicate the isotropic or absolute gain of the space station receiving antenna in the direction of maximum radiation and indicate the antenna radiation pattern, taking the gain in the direction of maximum radiation as a reference;
- c) if available, for each space station receiving antenna, indicate the type of polarization of the antenna. In the case of circular polarization, indicate the direction of polarization (see Nos. 148 and 149);
- d) in the case of a space station aboard a geostationary satellite operating in a band allocated in the Earth-to-space direction and in the space-to-Earth direction, also indicate the estimated gain of the space station receiving antenna in the direction of those parts of the geostationary-satellite orbit which are not obstructed by the Earth by means of a diagram showing estimated antenna gain versus orbit longitude.

Item 6 Noise temperature of the receiving space station

For each Earth-to-space service area, when other than a simple frequency-changing transponder is used aboard the

space station, indicate the lowest total receiving system noise temperature referred to the output of the receiving antenna.

Item 7 Necessary bandwidth

If available, in the case of narrow-band carriers, indicate the necessary bandwidth.

Item 8 Modulation characteristics

If available, in the case of television carriers, indicate the characteristics of energy dispersal such as the peak-to-peak frequency deviation (MHz) and the sweep frequency (kHz) of the energy dispersal waveform.

**Section D. Characteristics of the Satellite Network
in the Space-to-Earth Direction**

Item 1 Space-to-Earth service area(s)

Indicate the service area(s) on the Earth associated with each transmitting antenna of the space station.

Item 2 Class of stations and nature of service

For each space-to-Earth service area, indicate the class of the stations in the satellite network and the nature of the service to be performed, using the symbols shown in Appendix 10.

Item 3 Frequency range

For each space-to-Earth service area, indicate the frequency range within which the carriers will be located.

Item 4 Power characteristics of the transmission

- a) For each space-to-Earth service area, indicate the maximum spectral power density (dB(W/Hz))¹ to be delivered to the transmitting antenna of the space station (the bandwidth over which this is averaged depends on the nature of the service concerned) and, if available, the total peak envelope power (dBW) and the necessary bandwidth of this emission.
- b) If available, for narrow-band carriers and for television carriers, indicate the peak envelope power to be delivered to the input of the space station transmitting antenna.
- c) If available, indicate the minimum carrier power delivered to the antenna of the space station for narrow-band carriers.

Item 5 Characteristics of space station transmitting antennae

For each space-to-Earth service area:

- a) in the case of a space station aboard a geostationary satellite, indicate the maximum gain of the space station transmitting antenna and the gain contours plotted on a map of the Earth's surface, preferably in a radial projection from the satellite in a plane perpendicular to the axis from the centre of the Earth to the satellite. The isotropic or absolute gain at each contour which corresponds to a gain of 2, 4, 6, 10 and 20 dB and at 10 dB intervals thereafter as necessary, below the maximum gain,

shall be indicated. Whenever possible, the estimated gain contours of the space station transmitting antenna should also be provided in the form of a numerical equation or in tabular form;

- b) in the case of a space station aboard a non-geostationary satellite, indicate the isotropic or absolute gain of the space station transmitting antenna in the direction of maximum radiation and indicate the antenna radiation pattern, taking the gain in the direction of maximum radiation as a reference;
- c) if available, for each space station transmitting antenna, indicate the type of polarization of the antenna. In the case of circular polarization, indicate the direction of polarization (see Nos. 148 and 149);
- d) in the case of a space station aboard a geostationary satellite operating in a band allocated in the Earth-to-space direction and in the space-to-Earth direction, also indicate the estimated gain of the space station transmitting antenna in the direction of those parts of the geostationary-satellite orbit which are not obstructed by the Earth by means of a diagram showing estimated antenna gain versus orbit longitude.

Item 6 Characteristics of receiving earth stations

- a) For each space-to-Earth service area, when other than a simple frequency-changing transponder is used aboard the space station, indicate the lowest total receiving system noise temperature on the earth stations referred to the output of the receiving antenna.

¹ The most recent version of CCIR Report 792 should be used to the extent applicable in calculating the maximum power density per Hz.

For each space-to-Earth service area and for each projected usage¹ when simple frequency-changing transponders are used on the space station, indicate:

- 1) the lowest equivalent satellite link noise temperature and the associated value of transmission gain; *and*
- 2) the values of transmission gain and associated equivalent link noise temperature that correspond to the highest ratio of transmission gain to equivalent satellite link noise temperature. The transmission gain is evaluated from the output of the receiving antenna of the space station to the output of the receiving antenna of the earth station. For each projected usage, indicate also the receiving antenna(e) of the space station to which each simple frequency-changing transponder will be connected.

b) If available, indicate for each space-to-Earth service area the actual radiation pattern (relative to isotropic) of the receiving earth station for each size of receiving earth station antenna having the highest off beam level. When simple frequency-changing transponders are used on the space station, indicate also, if available, the pattern associated with each equivalent satellite link noise temperature indicated above.

Item 7 Necessary bandwidth

If available, in the case of narrow-band carriers, indicate the necessary bandwidth.

¹ A different usage will be considered to take place when different types of carriers are employed (different by virtue of maximum power spectral density), or when different types of receiving earth stations are employed (different by virtue of receiving antenna gain).

Item 8 Modulation characteristics

If available, in the case of television carriers, indicate the characteristics of energy dispersal such as the peak-to-peak frequency deviation (MHz) and the sweep frequency (kHz) of the energy dispersal waveform.

**Section E. Characteristics to Be Furnished
for Space-to-Space Relays**

Where the satellite network is connected to one or more satellite networks by means of space-to-space relay, indicate the following:

- a)* identity or identities of the other satellite network(s) to which the satellite network is connected;
- b)* transmit and receive frequency bands;
- c)* classes of emission;
- d)* nominal equivalent isotropically radiated power(s) (e.i.r.p.) on the beam axis.

Section F. Supplementary Information (if available)

Item 1 General

Supplementary information may be provided by an administration or one acting on behalf of a group of named administrations who so desire. This information may be used for interference calculations associated with the advance publication process. The information may consist of part or all of the data contained in the following items which are not exhaustive but provide an indication of the type of information which may be supplied.

Item 2 Earth-to-space direction

For each Earth-to-space service area, the following information may be provided:

- a) class of emission, necessary bandwidth and modulation characteristics (including energy dispersal if employed) for each type of carrier transmitted;
- b) earth station e.i.r.p. for each type of carrier associated with each type and diameter of earth station antenna;
- c) technical description and system parameters of telecommand (except for coding data).

Item 3 Space-to-Earth direction

For each space-to-Earth service area, the following information may be provided:

- a) class of emission, necessary bandwidth and modulation characteristics (including energy dispersal if employed) for each type of carrier;
- b) satellite transmitter power to be delivered to the satellite transmitting antenna for each type of carrier;
- c) technical description and system parameters of beacon and space telemetry emissions (except for coding data).

Item 4 Any other information which may be useful

with Nos. 1682 to 1684**

(See Article 16)

Initial
allotment

Additional
allotment

Replacement
allotment
(No. 1721)

1. Country or area of allotment
2. 2.1 Proposed frequency { Carrier kHz
Assigned kHz
- 2.2 Alternative proposed frequency { Carrier kHz
Assigned kHz
- 2.3 Frequency to be replaced (No. 1721) { Carrier kHz
Assigned kHz
3. 3.1 Main service area
- 3.2 Maximum length of circuit in kilometres
4. Nature of service (e.g. CP, CO, CV or OT)
5. Class of emission
6. Peak envelope power in kW

7. Transmitting antenna characteristics (for details see Appendix 1):
 - 7.1 In the case of a non-directional antenna, insert the symbol "ND"
 - 7.2 In the case of a directional antenna, indicate:
 - a) the azimuth of maximum radiation
 - b) the angular width of main lobe
 - c) relative gain of the antenna in dB
8. Planned scheduled hours of operation of the proposed frequency to hrs (UTC)
9. Indicate, if possible:
 - a) the estimated peak hours of traffic to hrs (UTC)
 - b) the estimated daily volume of traffic in minutes
10. Planned date of first use of channel (month) (year)

APPENDIX 6

**Additional Characteristics for the Classification of Emissions ;
Determination of Necessary Bandwidths Including
Examples for their Calculation and Associated
Examples for the Designation of Emissions**

(See Article 4)

PART A

Additional Characteristics for the Classification of Emissions

Article 4 of these Regulations describes the basic characteristics, with three symbols, for the classification of emissions. For a more complete description of an emission, two optional additional characteristics should be added.

The optional additional characteristics (see also Recommendation 62) are:

Fourth symbol – Details of signal(s)

Fifth symbol – Nature of multiplexing

Where the fourth or the fifth symbol is not used this should be indicated by a dash where each symbol would otherwise appear.

1. *Fourth symbol* – Details of signal(s)
 - 1.1 Two-condition code with elements of differing numbers and/or durations A
 - 1.2 Two-condition code with elements of the same number and duration without error-correction B
 - 1.3 Two-condition code with elements of the same number and duration with error-correction C

- 1.4 Four-condition code in which each condition represents a signal element (of one or more bits) D
 - 1.5 Multi-condition code in which each condition represents a signal element (of one or more bits) E
 - 1.6 Multi-condition code in which each condition or combination of conditions represents a character F
 - 1.7 Sound of broadcasting quality (monophonic) G
 - 1.8 Sound of broadcasting quality (stereophonic or quadraphonic) H
 - 1.9 Sound of commercial quality (excluding categories given in sub-paragraphs 1.10 and 1.11) J
 - 1.10 Sound of commercial quality with the use of frequency inversion or band-splitting K
 - 1.11 Sound of commercial quality with separate frequency-modulated signals to control the level of demodulated signal L
 - 1.12 Monochrome M
 - 1.13 Colour N
 - 1.14 Combination of the above W
 - 1.15 Cases not otherwise covered X
2. *Fifth symbol* – Nature of multiplexing
 - 2.1 None N
 - 2.2 Code-division multiplex * C
 - 2.3 Frequency-division multiplex F

* This includes bandwidth expansion techniques.

2.4 Time-division multiplex	T
2.5 Combination of frequency-division multiplex and time-division multiplex	W
2.6 Other types of multiplexing	X

PART B

Determination of Necessary Bandwidths Including Examples for their Calculation and Associated Examples for the Designation of Emissions

For the full designation of an emission, the necessary bandwidth, indicated in four characters, shall be added just before the classification symbols. When used, the necessary bandwidth shall be determined by one of the following methods:

- 1) use of the formulae included in the following table which also gives examples of necessary bandwidths and designation of corresponding emissions;
- 2) computation in accordance with CCIR Recommendations ¹;
- 3) measurement, in cases not covered by 1) or 2) above.

However, the necessary bandwidth so determined is not the only characteristic of an emission to be considered in evaluating the interference that may be caused by that emission.

¹ See also Recommendation 63.

In the formulation of the table, the following terms have been employed:

- B_n = Necessary bandwidth in hertz
- B = Modulation rate in bauds
- N = Maximum possible number of black plus white elements to be transmitted per second, in facsimile
- M = Maximum modulation frequency in hertz
- C = Sub-carrier frequency in hertz
- D = Peak deviation, i.e., half the difference between the maximum and minimum values of the instantaneous frequency. The instantaneous frequency in hertz is the time rate of change in phase in radians divided by 2π
- t = Pulse duration in seconds at half-amplitude
- t_r = Pulse rise time in seconds between 10% and 90% amplitude
- K = An overall numerical factor which varies according to the emission and which depends upon the allowable signal distortion
- N_c = Number of baseband channels in radio systems employing multi-channel multiplexing
- f_p = Continuity pilot sub-carrier frequency (Hz) (continuous signal utilized to verify performance of frequency-division multiplex systems).

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
I. NO MODULATING SIGNAL			
Continuous wave emission	—	—	NONE
II. AMPLITUDE MODULATION			
1. Signal with Quantized or Digital Information			
Continuous wave telegraphy, Morse code	$B_n = BK$ $K = 5$ for fading circuits $K = 3$ for non-fading circuits	25 words per minute ; $B = 20, K = 5$ Bandwidth : 100 Hz	100HA1AAN
Telegraphy by on-off keying of a tone modulated carrier, Morse code	$B_n = BK + 2M$ $K = 5$ for fading circuits $K = 3$ for non-fading circuits	25 words per minute ; $B = 20, M = 1\ 000$ $K = 5$ Bandwidth : 2 100 Hz = 2.1 kHz	2K10A2AAN
Selective calling signal using sequential single frequency code, single-sideband full carrier	$B_n = M$	Maximum code frequency is : 2 110 Hz $M = 2\ 110$ Bandwidth : 2 110 Hz = 2.11 kHz	2K11H2BFN
Direct-printing telegraphy using a frequency shifted modulating sub-carrier, with error-correction, single-sideband, suppressed carrier (single channel)	$B_n = 2M + 2DK$ $M = \frac{B}{2}$	$B = 50$ $D = 35$ Hz (70 Hz shift) $K = 1.2$ Bandwidth : 134 Hz	134HJ2BCN

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
Telegraphy, multi-channel with voice frequency, error-correction, some channels are time-division multiplexed, single-sideband, reduced carrier	$B_n = \text{highest central frequency} + M + DK$ $M = \frac{B}{2}$	15 channels ; highest central frequency is : 2 805 Hz $B = 100$ $D = 42.5$ Hz (85 Hz shift) $K = 0.7$ Bandwidth : 2 885 Hz = 2.885 kHz	2K89R7BCW
2. Telephony (Commercial Quality)			
Telephony, double-sideband (single channel)	$B_n = 2M$	$M = 3\ 000$ Bandwidth : 6 000 Hz = 6 kHz	6K00A3EJN
Telephony, single-sideband, full carrier (single channel)	$B_n = M$	$M = 3\ 000$ Bandwidth : 3 000 Hz = 3 kHz	3K00H3EJN
Telephony, single-sideband, suppressed carrier (single channel)	$B_n = M - \text{lowest modulation frequency}$	$M = 3\ 000$ lowest modulation frequency is 300 Hz Bandwidth : 2 700 Hz = 2.7 kHz	2K70J3EJN
Telephony with separate frequency modulated signal to control the level of de-modulated speech signal, single-sideband, reduced carrier, (Lincompex) (single channel)	$B_n = M$	Maximum control frequency is 2 990 Hz $M = 2\ 990$ Bandwidth : 2 990 Hz = 2.99 kHz	2K99R3ELN

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
Telephony with privacy, single-sideband, suppressed carrier (two or more channels)	$B_n = N_c M$ - lowest modulation frequency in the lowest channel	$N_c = 2$ $M = 3\ 000$ lowest modulation frequency is 250 Hz Bandwidth : 5 750 Hz = 5.75 kHz	5K75J8EKF
Telephony, independent sideband (two or more channels)	$B_n =$ sum of M for each sideband	two channels $M = 3\ 000$ Bandwidth : 6 000 Hz = 6 kHz	6K00B8EJN
3. Sound Broadcasting			
Sound broadcasting double-sideband	$B_n = 2M$ M may vary between 4 000 and 10 000 depending on the quality desired	Speech and music, $M = 4\ 000$ Bandwidth: 8 000 Hz = 8 kHz	8K00A3EGN
Sound broadcasting, single-sideband, reduced carrier (single channel)	$B_n = M$ M may vary between 4 000 and 10 000 depending on the quality desired	Speech and music, $M = 4\ 000$ Bandwidth: 4 000 Hz = 4 kHz	4K00R3EGN
Sound broadcasting, single-sideband, suppressed carrier	$B_n = M$ - lowest modulation frequency	Speech and music, $M = 4\ 500$ lowest modulation frequency = 50 Hz; Bandwidth: 4 450 Hz = 4.45 kHz	4K45J3EGN

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
4. Television			
Television, vision and sound	Refer to relevant CCIR documents for the bandwidths of the commonly used television systems	Number of lines = 625; Nominal video bandwidth: 5 MHz Sound carrier relative to video carrier = 5.5 MHz; Total vision bandwidth: 6.25 MHz; FM sound bandwidth including guardbands: 750 kHz RF channel bandwidth: 7 MHz	6M25C3F-- 750KF3EGN
5. Facsimile			
Analogue facsimile by sub-carrier frequency modulation of a single-sideband emission with reduced carrier, monochrome	$B_n = C + \frac{N}{2} + DK$ $K = 1.1$ (typically)	$N = 1\ 100$ corresponding to an index of cooperation of 352 and a cyler rotation speed of 60 rpm. Index of cooperation is the product of the drum diameter and number of lines per unit of length. $C = 1\ 900$ $D = 400$ Hz Bandwidth: 2 890 Hz = 2.89 kHz	2K89R3CMN
Analogue facsimile; frequency modulation of an audio frequency sub-carrier which modulates the main carrier, single-sideband suppressed carrier	$B_n = 2M + 2DK$ $M = \frac{N}{2}$ $K = 1.1$ (typically)	$N = 1\ 100$ $D = 400$ Hz Bandwidth: 1 980 Hz = 1.98 kHz	1K98J3C--

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
6. Composite Emissions			
Double-sideband, television relay	$B_n = 2C + 2M + 2D$	Video limited to 5 MHz, audio on 6.5 MHz frequency modulated sub-carrier, sub-carrier deviation = 50 kHz: $C = 6.5 \times 10^6$ $D = 50 \times 10^3$ Hz $M = 15\ 000$ Bandwidth: 13.13×10^6 Hz = 13.13 MHz	13M1A8W--
Double-sideband radio-relay system, frequency division multiplex	$B_n = 2M$	10 voice channels occupying baseband between 1 kHz and 164 kHz; $M = 164\ 000$ Bandwidth: 328 000 Hz = 328 kHz	328KA8E--
Double-sideband emission of VOR with voice (VOR = VHF omnidirectional radio range)	$B_n = 2C_{max} + 2M + 2DK$ $K = 1$ (typically)	The main carrier is modulated by: — a 30 Hz sub-carrier — a carrier resulting from a 9 960 Hz tone frequency modulated by a 30 Hz tone — a telephone channel — a 1 020 Hz keyed tone for continual Morse identification $C_{max} = 9\ 960$ $M = 30$ $D = 480$ Hz Bandwidth: 20 940 Hz = 20.94 kHz	20K9A9WWF

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
Independent sidebands; several telegraph channels with error-correction together with several telephone channels with privacy; frequency division multiplex	$B_n = \text{sum of } M \text{ for each sideband}$	Normally composite systems are operated in accordance with standardized channel arrangements (e.g. CCIR-Rec. 348-2). 3 telephone channels and 15 telegraphy channels require the bandwidth 12 000 Hz = 12 kHz	12K0B9WWF
III-A. FREQUENCY MODULATION			
1. Signal with Quantized or Digital Information			
Telegraphy without error-correction (single channel)	$B_n = 2M + 2DK$ $M = \frac{B}{2}$ $K = 1.2$ (typically)	$B = 100$ $D = 85$ Hz (170 Hz shift) Bandwidth: 304 Hz	304HF1BBN
Telegraphy, narrow-band direct-printing with error-correction (single-channel)	$B_n = 2M + 2DK$ $M = \frac{B}{2}$ $K = 1.2$ (typically)	$B = 100$ $D = 85$ Hz (170 Hz shift) Bandwidth: 304 Hz	304HF1BCN
Selective calling signal	$B_n = 2M + 2DK$ $M = \frac{B}{2}$ $K = 1.2$ (typically)	$B = 100$ $D = 85$ Hz (170 Hz shift) Bandwidth: 304 Hz	304HF1BCN
Four-frequency duplex telegraphy	$B_n = 2M + 2DK$ $B = \text{Modulation rate in bauds of the faster channel. If the channels are synchronized:}$ $M = \frac{B}{2}$ (otherwise $M = 2B$) $K = 1.1$ (typically)	Spacing between adjacent frequencies = 400 Hz; Synchronized channels $B = 100$ $M = 50$ $D = 600$ Hz Bandwidth: 1 420 Hz = 1.42 kHz	1K42F7BDX

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
2. Telephony (Commercial Quality)			
Commercial telephony	$B_n = 2M + 2DK$ $K = 1$ (typically, but under certain conditions a higher value may be necessary)	For an average case of commercial telephony, $D = 5\ 000\ \text{Hz}$ $M = 3\ 000$ Bandwidth: $16\ 000\ \text{Hz}$ $= 16\ \text{kHz}$	16K0F3EJN
3. Sound Broadcasting			
Sound broadcasting	$B_n = 2M + 2DK$ $K = 1$ (typically)	Monaural $D = 75\ 000\ \text{Hz}$ $M = 15\ 000$ Bandwidth: $180\ 000\ \text{Hz}$ $= 180\ \text{kHz}$	180KF3EGN
4. Facsimile			
Facsimile by direct frequency modulation of the carrier; black and white	$B_n = 2M + 2DK$ $M = \frac{N}{2}$ $K = 1.1$ (typically)	$N = 1\ 100\ \text{elements/sec}$; $D = 400\ \text{Hz}$ Bandwidth: $1\ 980\ \text{Hz}$ $= 1.98\ \text{kHz}$	1K98F1C--
Analogue facsimile	$B_n = 2M + 2DK$ $M = \frac{N}{2}$ $K = 1.1$ (typically)	$N = 1\ 100\ \text{elements/sec}$; $D = 400\ \text{Hz}$ Bandwidth: $1\ 980\ \text{Hz}$ $= 1.98\ \text{kHz}$	1K98F3C--

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
5. Composite Emissions (see Table III-B)			
Radio-relay system, frequency division multiplex	$B_n = 2f_p + 2DK$ $K = 1$ (typically)	60 telephone channels occupying baseband between 60 kHz and 300 kHz; rms per-channel deviation: 200 kHz; continuity pilot at 331 kHz produces 100 kHz rms deviation of main carrier. $D = 200 \times 10^3 \times 3.76 \times 2.02 = 1.52 \times 10^6\ \text{Hz}$; $f_p = 0.331 \times 10^6\ \text{Hz}$; Bandwidth: $3.702 \times 10^6\ \text{Hz}$ $= 3.702\ \text{MHz}$	3M70F8EJF
Radio-relay system; frequency division multiplex	$B_n = 2M + 2DK$ $K = 1$ (typically)	960 telephone channels occupying baseband between 60 kHz and 4 028 kHz; rms per-channel deviation: 200 kHz; continuity pilot at 4 715 kHz produces 140 kHz rms deviation of main carrier. $D = 200 \times 10^3 \times 3.76 \times 5.5 = 4.13 \times 10^6\ \text{Hz}$; $M = 4.028 \times 10^6$; $f_p = 4.715 \times 10^6$; $(2M + 2DK) > 2f_p$ Bandwidth: $16.32 \times 10^6\ \text{Hz}$ $= 16.32\ \text{MHz}$	16M3F8EJF

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
Radio-relay system; frequency division multiplex	$B_n = 2f_p$	600 telephone channels occupying baseband between 60 kHz and 2 540 kHz; rms per-channel deviation: 200 kHz; continuity pilot at 8 500 kHz produces 140 kHz rms deviation of main carrier. $D = 200 \times 10^3 \times 3.76 \times 4.36 = 3.28 \times 10^6$ Hz; $M = 2.54 \times 10^6$; $K = 1$; $f_p = 8.5 \times 10^6$; $(2M + 2DK) < 2f_p$ Bandwidth: 17×10^6 Hz = 17 MHz	17M0F8EJF
Stereophonic sound broadcasting with multiplexed subsidiary telephony sub-carrier	$B_n = 2M + 2DK$ $K = 1$ (typically)	Pilot tone system; $M = 75\ 000$ $D = 75\ 000$ Hz Bandwidth: $300\ 000$ Hz = 300 kHz	300KF8EHF

III-B. MULTIPLYING FACTORS FOR USE IN COMPUTING D , PEAK FREQUENCY DEVIATION, IN FM FREQUENCY DIVISION MULTIPLEX (FM/FDM) MULTI-CHANNEL EMISSIONS		
For FM/FDM systems the necessary bandwidth is: $B_n = 2M + 2DK$ The value of D , or peak frequency deviation, in these formulae for B_n is calculated by multiplying the rms value of per-channel deviation by the appropriate "Multiplying factor" shown below. In the case where a continuity pilot of frequency f_p exists above the maximum modulation frequency, M , the general formula becomes: $B_n = 2f_p + 2DK$ In the case where the modulation index of the main carrier produced by the pilot is less than 0.25, and the rms frequency deviation of the main carrier produced by the pilot is less than or equal to 70% of the rms value of per-channel deviation, the general formula becomes either $B_n = 2f_p \text{ or } B_n = 2M + 2DK$ whichever is greater.		
Number of telephone channels N_c	Multiplying factor ¹	
	(peak factor) x antilog	$\left[\frac{\text{value in dB above modulation reference level}}{20} \right]$
$3 < N_c < 12$	4.47 x antilog	$\left[\frac{\text{a value in dB specified by the equipment manufacturer or station licensee, subject to administration approval}}{20} \right]$
$12 \leq N_c < 60$	3.76 x antilog	$\left[\frac{2.6 + 2 \log N_c}{20} \right]$

¹ In the above chart, the multipliers 3.76 and 4.47 correspond to peak factors of 11.5 dB and 13.0 dB, respectively.

Number of telephone channels N_c	Multiplying factor ¹	
	(peak factor) x antilog	$\left[\frac{\text{value in dB above modulation reference level}}{20} \right]$
$60 \leq N_c < 240$	3.76 x antilog	$\left[\frac{-1 + 4 \log N_c}{20} \right]$
$N_c \geq 240$	3.76 x antilog	$\left[\frac{-15 + 10 \log N_c}{20} \right]$

Description of Emission	Necessary Bandwidth		Designation of Emission
	Formula	Sample Calculation	
IV. PULSE MODULATION			
1. Radar			
Unmodulated pulse emission	$B_n = \frac{2K}{t}$ <p>K depends upon the ratio of pulse duration to pulse rise time. Its value usually falls between 1 and 10 and in many cases it does not need to exceed 6</p>	Primary Radar Range resolution: 150 m $K = 1.5$ (triangular pulse where $t \approx t_r$, only components down to 27 dB from the strongest are considered) $\text{Then } t = \frac{2 (\text{range resolution})}{\text{velocity of light}}$ $= \frac{2 \times 150}{3 \times 10^8}$ $= 1 \times 10^{-6} \text{ seconds}$ Bandwidth: $3 \times 10^6 \text{ Hz}$ $= 3 \text{ MHz}$	3M00P0NAN
2. Composite Emissions			
Radio-relay system	$B_n = \frac{2K}{t}$ $K = 1.6$	Pulse position modulated by 36 voice channel baseband; pulse width at half amplitude = 0.4 μs . Bandwidth: $8 \times 10^6 \text{ Hz}$ $= 8 \text{ MHz}$ (Bandwidth independent of the number of voice channels)	8M00M7EJT

¹ In the above chart, the multiplier 3.76 corresponds to a peak factor of 11.5 dB.

Table of Transmitter Frequency Tolerances
(See Article 5)

§ 1. Frequency tolerance is defined in Article 1 and is expressed in parts in 10⁶, unless otherwise indicated.

§ 2. The power shown for the various categories of stations is the peak envelope power for single-sideband transmitters and the mean power for all other transmitters, unless otherwise indicated. The term "power of a radio transmitter" is defined in Article 1.

§ 3. For technical and operational reasons, certain categories of stations may need more stringent tolerances than those shown in the table.

Frequency Bands (lower limit exclusive, upper limit inclusive) and Categories of Stations	Tolerances applicable until 1 January 1990 to transmitters in use and to those to be installed before 2 January 1985	Tolerances applicable to new transmitters installed after 1 January 1985 and to all transmitters after 1 January 1990

Notes in the Table of Transmitter Frequency Tolerances

SUP Existing notes a) to r)

1) For coast station transmitters used for direct-printing telegraphy or for data transmission, the tolerance is 15 Hz.

2) For coast station transmitters used for direct-printing telegraphy and for data transmission the tolerance is 15 Hz. This tolerance is applicable to equipment installed after 1 January 1976 and to all equipment after 1 January 1985. For equipment installed before 2 January 1976 the tolerance is 40 Hz.

3) For ship station transmitters used for direct-printing telegraphy or for data transmission, the tolerance is 40 Hz. This tolerance is applicable to equipment installed after 1 January 1976 and to all equipment after 1 January 1985. For equipment installed before 2 January 1976 the tolerance is 100 Hz (with a maximum deviation of 40 Hz for short periods of the order of 15 minutes).

4) For ship station transmitters used for direct-printing telegraphy or for data transmission, the tolerance is 40 Hz.

5) If the emergency transmitter is used as the reserve transmitter for the main transmitter, the tolerance for ship station transmitters applies.

6) In countries covered by the North American Regional Broadcasting Agreement (NARBA) the tolerance of 20 Hz may continue to be applied.

7) For single-sideband radiotelephone transmitters the tolerance is:

- in the bands 1 606.5 (1 605 Region 2) - 4 000 kHz and 4 - 29.7 MHz for peak envelope powers of 200 W or less and 500 W or less, respectively, 50 Hz;
- in the bands 1 606.5 (1 605 Region 2) - 4 000 kHz and 4 - 29.7 MHz for peak envelope powers above 200 W and 500 W, respectively, 20 Hz.

8) For radiotelegraphy transmitters with frequency shift keying the tolerance is 10 Hz.

9) For coast station single-sideband radiotelephone transmitters the tolerance is 20 Hz.

10) For single-sideband transmitters operating in the frequency bands 1 606.5 (1 605 Region 2) - 4 000 kHz and 4 - 29.7 MHz which are allocated exclusively to the aeronautical mobile (R) service, the tolerance on the carrier (reference) frequency is:

- a) for all aeronautical stations, 10 Hz;
- b) for all aircraft stations operating on international services, 20 Hz;
- c) for aircraft stations operating exclusively on national services, 50 Hz*.

11) For ship station single-sideband radiotelephone transmitters the tolerance is:

- a) in the band 1 606.5 (1 605 Region 2) - 4 000 kHz:
 - 100 Hz for transmitters in use or to be installed before 2 January 1982;
 - 50 Hz for transmitters installed after 1 January 1982, but before 1 January 1985;
- b) in the band 4 000 - 23 000 kHz:
 - 100 Hz for transmitters in use before 2 January 1978;
 - 50 Hz for transmitters installed after 1 January 1978.

(See also Appendix 17.)

12) For A1A emissions the tolerance is 50 parts in 10^6 .

* Note: In order to achieve maximum intelligibility, it is suggested that administrations encourage the reduction of this tolerance to 20 Hz.

13) For transmitters used for single-sideband radiotelephony or for frequency shift keying radiotelegraphy the tolerance is 40 Hz.

14) For radiobeacon transmitters in the band 1 606.5 (1 605 Region 2) - 1 800 kHz the tolerance is 50 parts in 10^6 .

15) For A3E transmitters with carrier power of 10 kW or less the tolerance is 20 parts in 10^6 and 15 parts in 10^6 in the bands 1 606.5 (1 605 Region 2) - 4 000 kHz and 4 - 29.7 MHz respectively.

16) For A1A emissions the tolerance is 10 parts in 10^6 .

17) In the A1A Morse working frequency bands, a frequency tolerance of 200 parts in 10^6 may be applicable to existing transmitters, provided that the emissions are contained within the band in question.

18) In the A1A Morse calling frequency bands frequency tolerances of 40 parts in 10^6 in the bands between 4 MHz and 23 MHz and of 30 parts in 10^6 in the 25 MHz band are recommended as far as possible.

19) For ship station transmitters in the band 26 175 - 27 500 kHz, on board small craft, with a carrier power not exceeding 5 W operating in or near coastal waters and utilizing A3E or F3E and G3E emissions, the frequency tolerance is 40 parts in 10^6 .

20) The tolerance is 50 Hz for single-sideband radiotelephone transmitters, except for those transmitters operating in the band 26 175 - 27 500 kHz, and not exceeding a peak envelope power of 15 W, for which the basic tolerance of 40 parts in 10^6 applies.

21) It is suggested that administrations avoid carrier frequency differences of a few hertz, which cause degradations similar to periodic fading. This could be avoided if the frequency tolerance were 0.1 Hz, a tolerance which would also be suitable for single-sideband emissions.

22) For non-vehicular mounted portable equipment with a transmitter mean power not exceeding 5 W, the tolerance is 40 parts in 10^6 .

23) For transmitters of a mean power of 50 W or less operating at frequencies below 108 MHz a tolerance of 3 000 Hz applies.

24) In the case of television stations of:

- 50 W (vision peak envelope power) or less in the band 29.7 - 100 MHz;
- 100 W (vision peak envelope power) or less in the band 100 - 960 MHz

and which receive their input from other television stations or which serve small isolated communities, it may not, for operational reasons, be possible to maintain this tolerance. For such stations, the tolerance is 2 000 Hz.

For stations of 1 W (vision peak envelope power) or less this tolerance may be relaxed further to:

- 5 kHz in the band 100 - 470 MHz;
- 10 kHz in the band 470 - 960 MHz.

25) For transmitters for system M (NTSC) the tolerance is 1 000 Hz. However, for low power transmitters using this system note 24) applies.

26) For multi-hop radio-relay systems employing direct frequency conversion the tolerance is 30 parts in 10^6 .

27) For coast and ship station transmitters in the band 156 - 174 MHz put into service after 1 January 1973 a tolerance of 10 parts in 10^6 shall apply. This tolerance is applicable to all transmitters, including survival craft stations, after 1 January 1983.

28) For a channel spacing of 50 kHz the tolerance is 50 parts in 10^6 .

29) These tolerances apply to channel spacings equal to or greater than 20 kHz.

30) This tolerance is not applicable to survival craft stations operating on the frequency 243 MHz.

31) For transmitters used by on-board communication stations a tolerance of 5 parts in 10^6 shall apply.

32) For non-vehicular mounted portable equipment with a transmitter mean power not exceeding 5 W the tolerance is 15 parts in 10^6 .

33) Where specific frequencies are not assigned to radar stations, the bandwidth occupied by the emissions of such stations shall be maintained wholly within the band allocated to the service and the indicated tolerance does not apply.

34) For transmitters using time-division multiplex the tolerance of 300 may be increased to 500.

35) This tolerance applies only to such emissions for which the necessary bandwidth does not exceed 3 000 kHz; for larger bandwidth emissions a tolerance of 300 applies.

36) In applying this tolerance administrations should be guided by the latest relevant CCIR Recommendations.

MOD AP4

APPENDIX 8

Table of Maximum Permitted Spurious Emission Power Levels

(See Article 5)

1. The following table indicates the maximum permitted levels of spurious emissions, in terms of the mean power level of any spurious component supplied by a transmitter to the antenna transmission line.
2. Spurious emission from any part of the installation other than the antenna and its transmission line shall not have an effect greater than would occur if this antenna system were supplied with the maximum permitted power at that spurious emission frequency.
3. These levels shall not, however, apply to emergency position-indicating radiobeacon (EPIRB) stations, emergency locator transmitters, ships' emergency transmitters, lifeboat transmitters, survival craft stations or maritime transmitters when used in emergency situations.
4. For technical or operational reasons, specific services may demand more stringent levels than those specified in the table. The levels applied to these services shall be those agreed upon by the appropriate world administrative radio conference. More stringent levels may also be fixed by specific agreement between the administrations concerned.
5. For radiodetermination stations, until acceptable methods of measurement exist, the lowest practicable power of spurious emission should be achieved.
6. (transferred to Column A of the table)

Frequency Band Containing the Assignment (lower limit exclusive, upper limit inclusive)	For any spurious component the attenuation (mean power within the necessary bandwidth relative to the mean power of the spurious component concerned) shall be at least that specified in Columns A and B below and the absolute mean power levels given shall not be exceeded (Note 1)	
	A	B
	Levels applicable until 1 January 1994 to transmitters now in use and to those installed before 2 January 1985	Levels applicable to transmitters installed after 1 January 1985 and to all transmitters after 1 January 1994
9 kHz to 30 MHz	40 decibels 50 milliwatts (Notes 2, 3, 4)	40 decibels 50 milliwatts (Notes 4, 7, 8)
30 MHz to 235 MHz		
— mean power above 25 watts	60 decibels 1 milliwatt (Note 5)	60 decibels 1 milliwatt (Note 9)
— mean power 25 watts or less	40 decibels 25 microwatts (Notes 5, 6)	40 decibels 25 microwatts

(continued)

(continued)

**Notes in the Table of Maximum Permitted
Spurious Emission Power Levels**

<p>235 MHz to 960 MHz</p> <p>— mean power above 25 watts</p> <p>— mean power 25 watts or less</p>	<p>No level is specified for transmitters operating on assigned frequencies above 235 MHz.</p>	<p>60 decibels 20 milliwatts (Notes 10, 11)</p> <p>40 decibels 25 microwatts (Notes 10, 11)</p>
<p>960 MHz to 17.7 GHz</p> <p>— mean power above 10 watts</p> <p>— mean power 10 watts or less</p>		<p>50 decibels 100 milliwatts (Notes 10, 11, 12, 13)</p> <p>100 microwatts (Notes 10, 11, 12, 13)</p>
<p>Above 17.7 GHz</p>	<p>For these transmitters the power of spurious emissions shall be as low as practicable.</p>	<p>Due to the diverse nature of technologies employed by services operating above 17.7 GHz, further study by the CCIR is required prior to the specification of levels. To the extent possible, the values to be observed should be those shown in appropriate CCIR Recommendations. Until suitable Recommendations have been adopted, the lowest possible values achievable shall be employed (see Recommendation 66).</p>

1) When checking compliance with the provisions of the table, it shall be verified that the bandwidth of the measuring equipment is sufficiently wide to accept all significant components of the spurious emission concerned.

2) For transmitters of mean power exceeding 50 kilowatts and which operate below 30 MHz over a frequency range approaching an octave or more, a reduction below 50 milliwatts is not mandatory, but a minimum attenuation of 60 decibels shall be provided and every effort should be made to comply with the level of 50 milliwatts.

3) For hand-portable equipment of mean power less than 5 watts which operates below 30 MHz, the attenuation shall be at least 30 decibels, but every effort should be made to attain 40 decibels attenuation.

4) For mobile transmitters which operate below 30 MHz any spurious component shall have an attenuation of at least 40 decibels without exceeding the value of 200 milliwatts, but every effort should be made to comply with the level of 50 milliwatts wherever practicable.

5) For frequency modulated maritime mobile radiotelephone equipment which operates above 30 MHz, the mean power of any spurious emission falling in any other international maritime mobile channel, due to products of modulation, shall not exceed a level of 10 microwatts and the mean power of any other spurious emission on any discrete frequency within the international maritime mobile band shall not exceed a level of 2.5 microwatts. Where, exceptionally, transmitters of mean power above 20 watts are employed, these levels may be increased in proportion to the mean power of the transmitter.

6) For transmitters having a mean power of less than 100 milliwatts, it is not mandatory to comply with an attenuation of 40 decibels provided that the mean power level does not exceed 10 microwatts.

7) For transmitters of a mean power exceeding 50 kilowatts which can operate on two or more frequencies covering a frequency range approaching an octave or more, whilst a reduction below 50 milliwatts is not mandatory, a minimum attenuation of 60 decibels shall be provided.

8) For hand-portable equipment of mean power less than 5 watts, the attenuation shall be 30 decibels, but every practicable effort should be made to attain 40 decibels attenuation.

9) Administrations may adopt a level of 10 milliwatts provided that harmful interference is not caused.

AP8-5

10) Where several transmitters feed a common antenna or closely spaced antennae on neighbouring frequencies, every practicable effort should be made to comply with the levels specified.

11) Since these levels may not provide adequate protection for receiving stations in the radio astronomy and space services, more stringent levels might be considered in each individual case in the light of the geographical position of the stations concerned.

12) These levels are not applicable to systems using digital modulation techniques, but may be used as a guide. Values for these systems may be provided by the relevant CCIR Recommendations, when available (see Recommendation 66).

13) These levels are not applicable to stations in the space services, but the levels of their spurious emissions should be reduced to the lowest possible values compatible with the technical and economic constraints to which the equipment is subject. Values for these systems may be provided by the relevant CCIR Recommendation, when available (see Recommendation 66).

Part II. Alphabetical index of coast stations

Name of the station	See Part III page	Name of the station	See Part III page	Name of the station	See Part III page
---------------------	-------------------	---------------------	-------------------	---------------------	-------------------

Part III. Particulars of coast stations

Names of countries arranged in alphabetical order of abbreviations.
Names of stations in alphabetical order.

Name of the station ¹	Call sign ^{2,3}	Emission			Service		Charges ^{9,10}	Geographical coordinates of the transmitting antenna (longitude and latitude in degrees, minutes and seconds)	Remarks ^{11,12}	
		Frequencies kHz or MHz	Class	Power (kW) ⁶	Nature ^{7,8}	Hours of service (UTC)				
1	2	3a ⁴	3b ⁵	4	5	6	7	8	9	10

- ¹ Indicate for each country the coast station or coast stations to which radiotelegrams intended for high-frequency transmission to ship stations should be sent.
- ² Indicate if maritime mobile service identity is provided.
- ³ The call sign of the station shall be followed, where appropriate, by the maritime mobile service identity or the identification number or the selective calling signal, in brackets, that the station uses.
- ⁴ Transmitting frequencies. The normal working frequency is printed in heavy type.
- ⁵ Watch and/or receiving frequencies or channels.
- ⁶ In the case of directive antennae, indicate under the power, the azimuth of the direction or directions of maximum gain, in degrees, beginning from True North clockwise.
- ⁷ Indicate if selective calling is provided and, if so, the system employed.
- ⁸ Indicate if narrow-band direct-printing telegraphy is provided.
- ⁹ The land-line telegraph charge of the country to which the coast station is subject and the charge applied by this country to telegrams destined for adjacent countries are given in Part IV of this List.
- ¹⁰ If the accounts for charges are settled by a private enterprise, the name and address of such private enterprise should, if necessary, be stated.
- ¹¹ Indicate if radar service is provided.
- ¹² The List should contain information concerning the times of transmission of traffic lists, and the hours of watchkeeping of the coast station on the various frequencies, etc. Coast or coast earth stations open to public correspondence and providing service for transmission and reception of radiotelegrams by radiotelephony shall be indicated in the List of Coast Stations.

Part IV. Inland telegraph rates, limitrophic rates, etc.

List V. List of Ship Stations

Particulars of ship stations

The information concerning these stations shall be published as shown below:

Name of ship	Call sign	Country	Auxiliary installations	Class of ship	Nature of service	Hours of service	Telegraph transmission frequency bands	Telephone transmission frequency bands	Ship charge per word for radiotelegrams	Ship charge for a radiotelephone call of three minutes	Remarks
1	2	3	4	5	6	7	8	9	10	11	12

Column 1 The stations shall be arranged in alphabetical order of the names of the ships, irrespective of nationality. In the case of duplication of names, the name of the ship shall be followed by the call sign (separated from the name by a fraction bar).

Column 2 Call sign. This column also contains the maritime mobile service identity or the selective call number or signal, where appropriate.

Column 3 Country having jurisdiction over the station (indicated by the appropriate symbol).

Column 4 Auxiliary installations, including information concerning:

- a) number of lifeboats fitted with radio apparatus, and
- b) types and number of emergency position-indicating radiobeacons (optional), the operating frequency being indicated by one of the following letters:

- A = 2 182 kHz
- B = 121.5 MHz
- C = 243 MHz

A figure following the letter indicates the number of radiobeacons. The letter "X" signifies that the number of radiobeacons has not been communicated.

Columns 5 to 7 In the form of service symbols (see Appendix 10). In addition, the list of the symbols used in Column 5 to designate the class of ship is given in the Preface to the List.

Columns 8 and 9 Indication of the frequency bands and classes of emission by means of the following symbols:

<i>Radiotelegraphy</i>	<i>Radiotelephony</i>
W = 110 - 150 kHz	T = 1 605 - 4 000 kHz
X = 405 - 535 kHz	U = 4 000 - 27 500 kHz
Y = 1 605 - 3 800 kHz	V = 156 - 174 MHz
Z = 4 000 - 27 500 kHz	

These symbols should, if necessary, be followed by references to brief notes and indications of the frequencies for which the transmitters are adjusted, which shall appear at the end of the List.

Column 10 Basic ship charge per word for radiotelegrams ¹.

Column 11 Minimum charge for a radiotelephone call of three minutes ¹. The information in Columns 10 and 11 shall be followed by a note reference to indicate the administration or private enterprise to which the accounts should be sent. In case of a change of address of the operating authority, a second note reference after the charge should give the new address and the date from which the change will take effect.

Column 12 When two or more ship stations of the same nationality bear the same name, or if the accounts for charges should be sent direct to the owner of the ship, the name of the shipping line or the firm to which the ship belongs shall be given in this column.

In addition, if there is no room in the appropriate column, further information relating to Columns 1 to 11 may be given in Column 12 by means of a note reference. This column may comprise several lines.

Indicate if maritime mobile service identity is provided.

Indicate if selective calling is provided and, if so, the system employed.

Indicate if narrow-band direct-printing telegraphy is provided.

¹ These charges are fixed or approved by each administration.

List VI. List of Radiodetermination and Special Service Stations

(For navigational purposes, this List should be used with caution. See Article 35 of the Radio Regulations.)

Part A. Alphabetical index of stations.

Name of the station	Call sign	Nature of the service	See part B, page
1	2	3	4

Part B. Particulars of stations.

1. Direction-finding stations

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

Name of the station	Geographical coordinates (longitude and latitude in degrees, minutes and seconds) of: a) the receiving antenna of the direction-finding station b) the transmitting antenna of the direction-finding station c) the transmitting antenna of the station mentioned in Column 8	Call sign	Frequencies (kHz or MHz) and classes of emission			Power (kW)	Name and call sign of the station with which communication should be established if the direction-finding station is not equipped with a transmitter	Charges	Remarks a) sectors in which bearings are normally accurate and references to national or international publications other than the present list; b) hours of service (UTC), etc.
			For calling the direction-finding station	For transmitting to the direction-finding station the signals necessary for taking bearings	For the transmission of the bearings by the direction-finding station				
1	2	3	4	5	6	7	8	9	10

2. Radiobeacon stations

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

Name of the station	Geographical coordinates of the transmitting antenna of the radiobeacon (longitude and latitude in degrees, minutes and seconds)	Characteristic signal of the radiobeacon	Call sign of the radiobeacon (if any)	Emission			Normal range in nautical miles	Name and call sign of the station to which requests for the emission of beacon signals may be addressed	Frequency to be used to call the station indicated in Column 9 (kHz or MHz)	Remarks a) sectors normally reliable and references to national or international publications other than this list; b) hours of service (UTC); c) description of the emission; d) charges, etc.
				Frequency (kHz or MHz)	Class	Frequency of modulation (if any) (Hz)				
1	2	3	4	5	6	7	8	9	10	11

3. Ocean-station vessels

Ocean Regions in alphabetical order.
Names of stations in alphabetical order.

1	2	3	4	Radiobeacon					Direction-finding			13
				5	6	7	8	9	10	11	12	
Name of the station	Geographical position assigned to the station	Call sign of the station vessel	Frequency for calling the station (kHz or MHz)	Characteristic signal	Transmitting frequency (kHz or MHz)	Class of emission	Frequency of modulation (if any) (Hz)	Normal range in nautical miles	Frequency for transmitting to the station the signals necessary for taking bearings (kHz or MHz)	Frequency for the transmission by the station of the bearings (kHz or MHz)	Power of the transmitter (kW)	Remarks a) references to national or international publications other than this list; b) hours of service (UTC); c) description of the radiobeacon emission.

4. Direction-finder calibration stations

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

1	2	3	4	Emission			8	9	10	11
				5	6	7				
Name of the station	Geographical coordinates of the transmitting antenna of the radiobeacon (longitude and latitude in degrees, minutes and seconds)	Characteristic signal	Call sign of the radiobeacon (if any)	Frequency (kHz or MHz)	Class	Frequency of modulation (if any) (Hz)	Normal range in nautical miles	Name and call sign of the station to which requests may be addressed	Frequency to be used to call the station mentioned in Column 9 (kHz or MHz)	Remarks a) sectors normally reliable and references to national or international publications other than this list; b) hours of service (UTC); c) description of the emission; d) charges, etc.

5. Stations transmitting standard frequency and time signals

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

1	2	3	4	5	6
Name of the station	Call sign	Frequencies (kHz or MHz)	Class of emission	Times of emission (UTC)	Method ¹

¹ General instructions concerning time signals.

SUP

6. Stations transmitting standard frequencies

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

Name of the station	Call sign	Frequencies (kHz or MHz)	Class of emission	Times of emission (UTC)	Remarks ¹
1	2	3	4	5	6

¹ General instructions concerning meteorological bulletins including code used.

8. Stations transmitting notices to navigators

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

Name of the station	Call sign	Frequencies (kHz or MHz)	Class of emission	Times of emission (UTC)	Remarks
1	2	3	4	5	6

9. Stations transmitting medical advice

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

Name of the station	Call sign	Frequencies (kHz or MHz)	Class of emission	Hours of service (UTC)	Remarks
1	2	3	4	5	6

10. Stations transmitting epidemiological bulletins

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

Name of the station	Call sign	Frequencies (kHz or MHz)	Class of emission	Times of emission (UTC)	Remarks
1	2	3	4	5	6

11. Stations transmitting Ursigrams

Names of the countries arranged in alphabetical order of abbreviations.
Names of the stations in alphabetical order.

Name of the station	Call sign	Frequencies (kHz or MHz)	Class of emission	Times of emission (UTC)	Remarks and nature of information
1	2	3	4	5	6

12. Fixed earth stations in the maritime radionavigation-satellite service

Names of the countries notifying the stations in alphabetical order of country symbols.
Names of stations in alphabetical order.

1	Name by which station is known			Transmission of radio-navigation information			Reception of radio-navigation information		5	6	7
	Geographical coordinates (in degrees and minutes) of the transmitter site			3a	3b	3c	4a	4b			
				Frequency (MHz or GHz)	Class of emission, necessary bandwidth and description of transmission	Power (kW)	Frequency (MHz or GHz)	Class of emission, necessary bandwidth and description of transmission	Identity of associated space station(s)	Operating administration or company	Remarks
											Special methods of modulation, charges, etc.

13. Space stations in the maritime radionavigation-satellite service

Names of the countries notifying the stations in alphabetical order of country symbols.
Names of stations by alphabetical and/or numerical order of designation of stations.

1	Transmission of radionavigation information to ships			Reception of radio-navigation information from ships		4	5	6	7	
	2a	2b	2c	3a	3b					
	Identity of the station	Frequency (MHz or GHz)	Class of emission, necessary bandwidth and description of transmission	Power (W)	Frequency (MHz or GHz)	Class of emission, necessary bandwidth and description of transmission	Service area or areas on the Earth	Name of locality and country in which the associated fixed earth station(s) is (are) located	Operating administration or company	Remarks
										Orbital information, special channelling arrangements, special modulation methods, charges, etc.

Note : The Secretary-General, if he considers it necessary, may introduce in this list additional sections to cover new systems that may be developed and used.

List VIII. List of International Monitoring Stations

(See Article 20)

Note: Throughout this List those stations nominated by administrations, which may participate in the international monitoring system, are marked (IMS).

Part I. Centralizing offices

Names of countries arranged in alphabetical order of abbreviations.

- National centralizing office (postal and telegraphic address, telephone number, any other information)

*Part II. Monitoring of emissions from stations of terrestrial radiocommunication services**A. Particulars of monitoring stations carrying out frequency measurements*

Names of countries arranged in alphabetical order of abbreviations.

Names of stations in alphabetical order.

- Name and geographical coordinates of the station (longitude and latitude in degrees and minutes)
- Hours of service (UTC)
- Ranges of measurable frequencies (kHz, MHz or GHz)
- Accuracy of measurements ¹
- Remarks

¹ Indicate the maximum attainable accuracy for each frequency range.

B. Particulars of monitoring stations carrying out field strength or power flux-density measurements

Names of countries arranged in alphabetical order of abbreviations.

Names of stations in alphabetical order.

- Name and geographical coordinates of the station (longitude and latitude in degrees and minutes)
- Hours of service (UTC)
- Ranges of frequencies (kHz, MHz or GHz)
- Maximum and minimum values of measurable field strengths or power flux-densities
- Accuracy of measurements in dB ¹
- Remarks

C. Particulars of monitoring stations carrying out direction-finding measurements

Names of countries arranged in alphabetical order of abbreviations.

Names of stations in alphabetical order.

- Name and geographical coordinates of the station (longitude and latitude in degrees, minutes and seconds)
- Hours of service (UTC)
- Ranges of frequencies (kHz, MHz or GHz)
- Type of antennae in use
- Remarks

¹ Indicate the maximum attainable accuracy for each frequency range.

D. Particulars of monitoring stations carrying out bandwidth measurements

Names of countries arranged in alphabetical order of abbreviations.

Names of stations in alphabetical order.

- Name and geographical coordinates of the station (longitude and latitude in degrees and minutes)
- Hours of service (UTC)
- Ranges of frequencies (kHz, MHz or GHz)
- Method(s) of measurement ¹
- Resolution at –60 dB (if appropriate)
- Remarks

E. Particulars of monitoring stations carrying out automatic spectrum occupancy surveys

Names of countries arranged in alphabetical order of abbreviation.

Names of stations in alphabetical order.

- Name and geographical coordinates of the station (longitude and latitude in degrees and minutes)
- Hours of service (UTC)
- Ranges of frequencies (kHz, MHz or GHz)
- Method(s) employed
- Remarks

Part III. Monitoring of emissions from stations of space radiocommunication services

Particulars of monitoring stations carrying out measurements related to stations in the space radiocommunication services.

Names of countries arranged in alphabetical order of symbols.

Names of stations in alphabetical order.

- Name and geographical coordinates of the station (longitude and latitude in degrees, minutes and seconds)
- Hours of service (UTC)
- Information on antennae in use (e.g. diameter or gain as a function of frequency; slew rate, if applicable; etc.)
- Range of azimuth and elevation angles
- Maximum attainable accuracy in determining orbital positions of space stations
- Information on system polarization
- System noise temperature
- Ranges of frequencies with the maximum attainable accuracy of frequency measurement for each frequency range
- Ranges of frequencies in which field strength or power flux-density measurements can be performed
- Minimum value of measurable field strength or power flux-density with indication of attainable accuracy of measurement

¹ See the relevant CCIR Recommendations and Reports.

AP9 (List VIII A)-19

- Information available for bandwidth measurements ¹
- Information available for spectrum occupancy measurements
- Information available for orbit occupancy measurements
- Remarks

**List VIII A. List of Space Radiocommunication Stations and
Radio Astronomy Stations**

The Board shall prepare and keep up to date the contents of this List grouped in such a way as to permit administrations to more easily identify all stations pertaining to a given satellite network. Furthermore, the Board shall introduce the necessary improvements in the presentation of the List without in any way altering the basic data specified in the Radio Regulations.

SUP

Radiocommunication Statistics

¹ See the relevant CCIR Recommendations and Reports.

Service Document Symbols

(See Article 26 and Appendix 9)

■	Station classified as situated in a region of heavy traffic (see Article 60) (“TI”) ¹	D30°	Directive antenna having maximum radiation in the direction of 30° (expressed in degrees from True North, from 0 to 360 clockwise)
○	By day (“HJ”) ¹	DR	Directive antenna provided with a reflector
●	By night (“HN”) ¹	EA	Space station in the amateur-satellite service
[]	A ship which carries lifeboats fitted with radio apparatus; a number inside the square brackets shows the number of such lifeboats (“S”) ¹	EB	Space station in the broadcasting-satellite service (sound broadcasting)
Δ	(SUP)	EC	Space station in the fixed-satellite service
AL	Aeronautical radionavigation land station	ED	Space telecommand space station
AM	Aeronautical radionavigation mobile station	EG	Space station in the maritime mobile-satellite service
AT	Amateur station	EH	Space research space station
AX	Aeronautical fixed station	EK	Space tracking space station
BC	Broadcasting station, sound	EM	Meteorological-satellite space station
BT	Broadcasting station, television	EN	Radionavigation-satellite space station
C	Continuous operation during hours shown	ER	Space telemetering space station
CA	Cargo ship	EV	Space station in the broadcasting-satellite service (television)
CO	Station open to official correspondence exclusively	EX	Experimental station
CP	Station open to public correspondence	FA	Aeronautical station
CR	Station open to limited public correspondence	FB	Base station
CV	Station open exclusively to correspondence of a private agency	FC	Coast station
		FE	(SUP)
		FL	Land station
		FP	Port station
		FR	Receiving station only, connected with the general network of telecommunication channels
		FS	Land station established solely for the safety of life
		FX	Fixed station

¹ The symbol shown in parentheses may be used in notifications and service documents.

GMT	Greenwich Mean Time	RD	Directional radiobeacon
GS	Station on board a warship or a military or naval aircraft	RG	Radio direction-finding station
H	Scheduled operation	RM	Maritime radionavigation mobile station
H8	8-hour service provided by a ship station of the third category	RT	Revolving radiobeacon
H16	16-hour service provided by a ship station of the second category	SM	Meteorological aids station
H24	Continuous throughout the twenty-four hours	SS	Standard frequency and time signal station
HJ	Day service	TA	Space operation earth station in the amateur-satellite service
HN	Night service	TC	Earth station in the fixed-satellite service
HT	Transition period service	TD	Space telecommand earth station
HX	Intermittent throughout the twenty-four hours, or station having no specific working hours	TE	Transmitting earth station
I	Intermittent operation during the time indicated	TF	Fixed earth station in the radiodetermination-satellite service
LR	Radiolocation land station	TG	Mobile earth station in the maritime mobile-satellite service
MA	Aircraft station	TH	Earth station in the space research service
ME	Space station	TI	Earth station in the maritime mobile-satellite service at a specified fixed point
ML	Land mobile station	TK	Space tracking earth station
MO	Mobile station	TL	Mobile earth station in the radiodetermination-satellite service
MR	Radiolocation mobile station	TM	Earth station in the meteorological-satellite service
MS	Ship station	TN	Earth station in the radionavigation-satellite service
ND	Non-directional antenna	TP	Receiving earth station
NL	Maritime radionavigation land station	TR	Space telemetering earth station
OD	Oceanographic data station	TS	Television, sound channel
OE	Oceanographic data interrogating station	TT	Earth station in the space operation service
OT	Station open exclusively to operational traffic of the service concerned	TV	Television, vision channel
PA	Passenger ship	UTC	Coordinated Universal Time
RA	Radio astronomy station		
RC	Non-directional radiobeacon		

(The symbols may be modified as the situation requires.)

MOD AP11

APPENDIX 11

Documents with Which Ship and Aircraft Stations Shall Be Provided

(See Articles 24, 26, 44, 46, 49, 55, 57, 59 and Appendix 9)

Section I. Ship Stations for Which a Radiotelegraph Installation Is Required by International Agreement

These stations shall be provided with:

1. the licence prescribed by Article 24;
2. certificates of the operator or operators;
3. the log (diary of the radio service) in which the following are recorded as they occur, together with the time of their occurrence;
 - a) all communications relating to distress traffic in full;
 - b) urgency and safety communications;
 - c) observance of watch on the international distress frequency during silence periods;
 - d) communications exchanged between the ship station and land or mobile stations;
 - e) service incidents of all kinds;
 - f) if the ship's rules permit, the position of the ship at least once a day;
 - g) the opening and closing of each period of service;
4. the Alphabetical List of Call Signs of Stations used in the Maritime Mobile Service;
5. the List of Coast Stations;

6. the List of Ship Stations (the carriage of the supplement is optional);
7. the List of Radiodetermination and Special Service Stations;
8. the Manual for Use by the Maritime Mobile and Maritime Mobile-Satellite Services;
9. telegraph tariffs of the countries for which the station most frequently accepts radiotelegrams.

SUP 10.

Section II. Other Ship Radiotelegraph Stations

These stations shall be provided with the documents mentioned in items 1 to 6, 8 and 9 of Section I.

Section III. Ship Stations for Which a Radiotelephone Installation Is Required by International Agreement

These stations shall be provided with:

1. the licence prescribed by Article 24;
2. certificates of the operator or operators;
3. the log (diary of the radio service) in which the following are recorded as they occur, together with the time of their occurrence:
 - a) a summary of all communications relating to distress, urgency and safety traffic;
 - b) a summary of communications exchanged between the ship station and land or mobile stations;

- c) a reference to important service incidents;
 - d) if the ship's rules permit, the position of the ship at least once a day;
4. a list of coast stations with which communications are likely to be conducted, showing watchkeeping hours, frequencies and charges;
 5. the provisions of the Radio Regulations and of the CCITT Resolutions and Recommendations applicable to the maritime mobile radiotelephone service, or the Manual for Use by the Maritime Mobile and Maritime Mobile-Satellite Services.

Section IV. Other Ship Radiotelephone Stations

These stations shall be provided with:

1. the documents mentioned in items 1 and 2 of Section III;
2. the documents mentioned in items 3, 4 and 5 of Section III, in accordance with the requirements of the administrations concerned.

Section V. Ship Stations Equipped with Multiple Installations

These stations shall be provided with:

1. for each installation, if necessary, the documents mentioned in items 1 to 3 of Section I, or in items 1, 2 and 3 of Section III;
2. for only one installation, the other documents mentioned in Sections I or III, as appropriate.

Section VI. Aircraft Stations

These stations shall be provided with:

1. the documents mentioned in items 1 and 2 of Section I;
2. the log (diary of the radio service) as defined in item 3 of Section I, unless administrations have adopted other arrangements for recording all information which the log should contain;
3. the documents containing official information relating to stations which the aircraft station may use for the execution of its service.

Section II. Diagram and Map

Hours of Service for Ship Stations of the Second and Third Categories

(See Articles 26 and 58)

Section I. Table

Hours of Service Ship's Time or Zone Time (See Nos. 4058 and 4059)	
16 hours (H16)	8 hours (H8)
from to 0000 - 0400 h 0800 - 1200 h 1600 - 1800 h 2000 - 2200 h plus 4 hours (see No. 4058)	from to 0800 - 1200 h 1800 - 2200 h ^a plus 2 hours (see No. 4059)

^a Two continuous hours of service between 1800 and 2200 hours, ship's time or zone time, at times decided by the administration, master or responsible person.

Note a: This diagram indicates the *fixed* and *elected* hours of service maintained by ships of the second and third categories in terms of zone time. (The hours of service shown exclude those which are determined by the administration, master, or responsible person.)

The *fixed* hours of watch are shown thus:

I) for ships of the second category:

II) for ships of the second and third categories:

III) for ships of the third category, period over which two continuous hours of service may be elected:

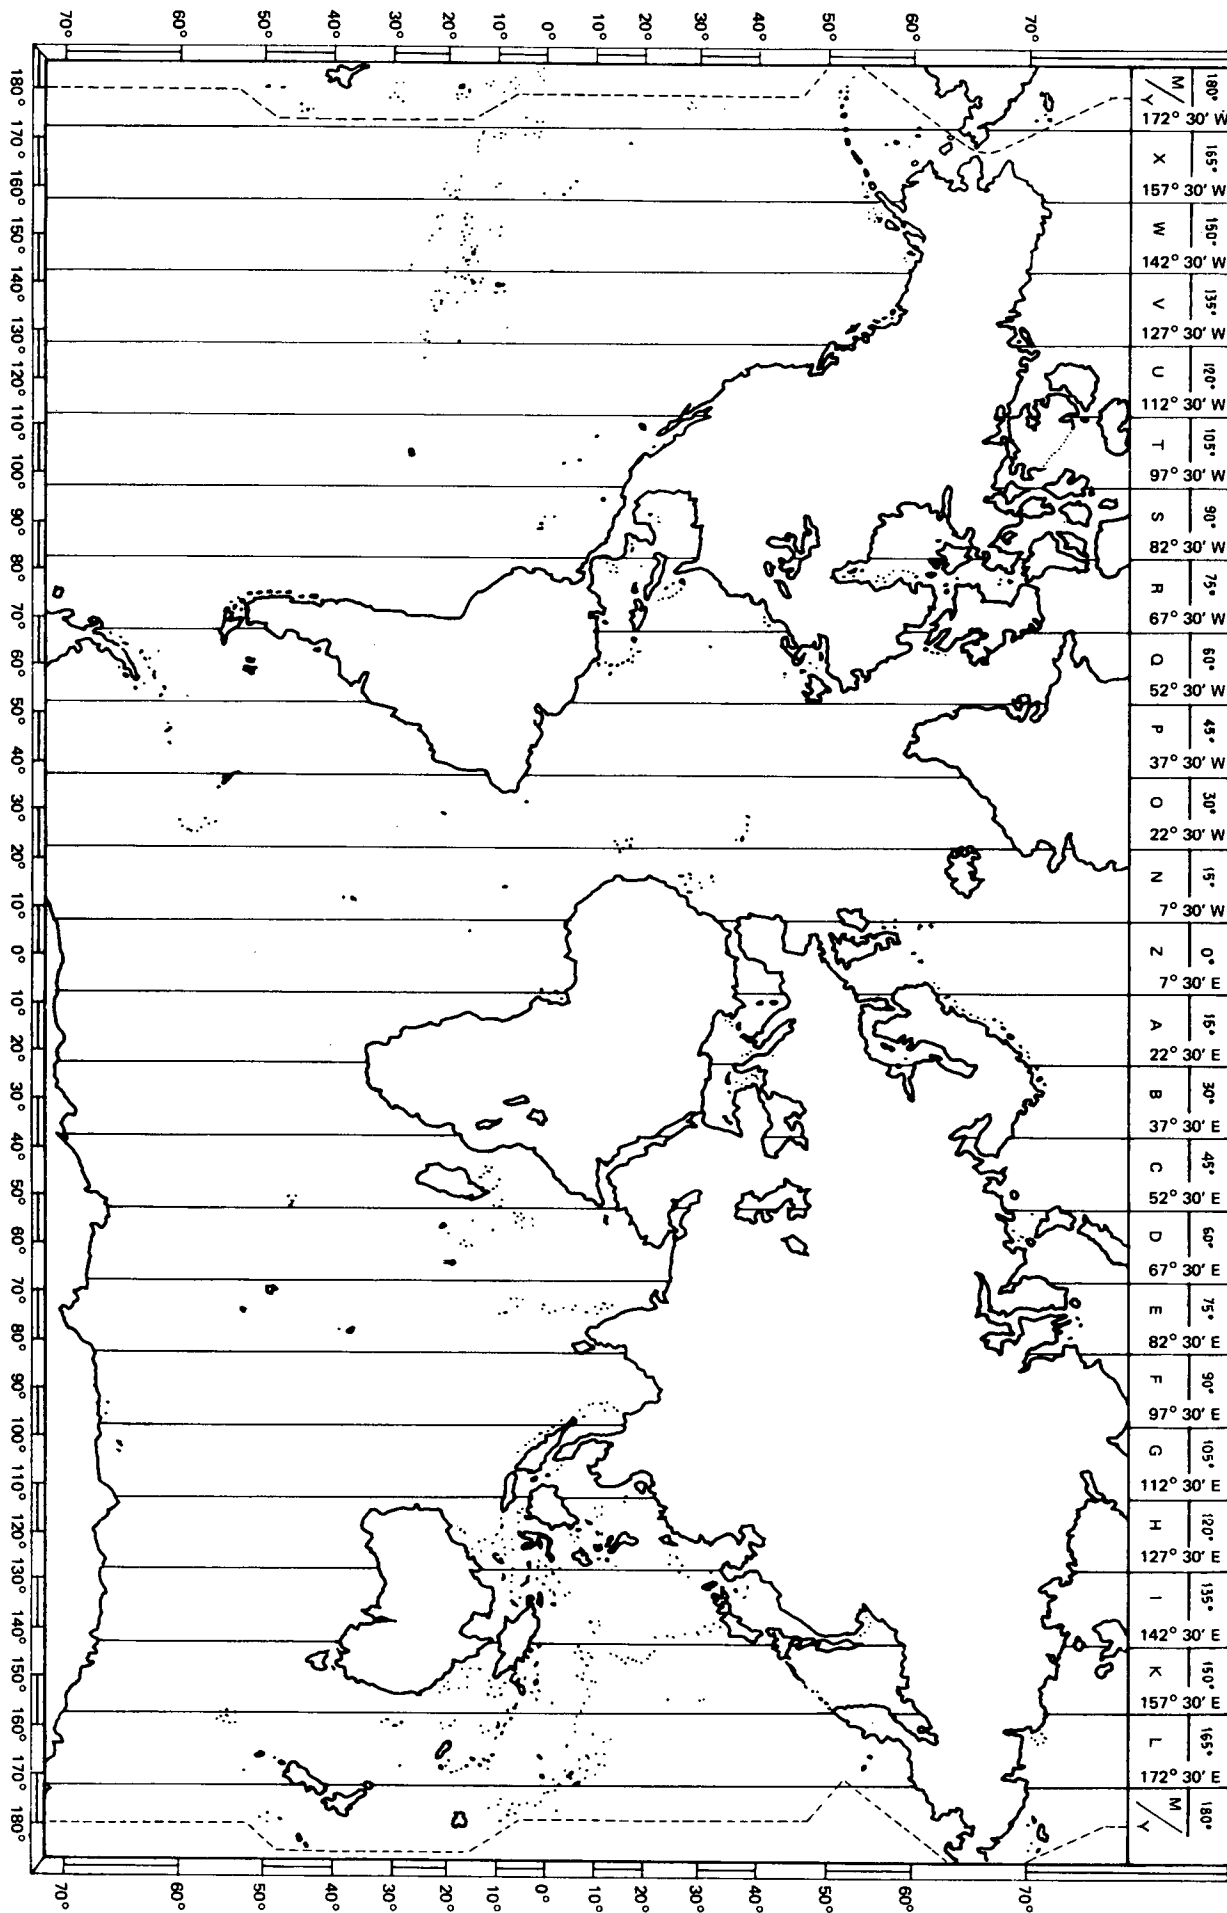

Note b: Also shown (in black) is the specific service period 0830 – 0930 that ships of the fourth category are encouraged to provide (see No. 4062).

TIME ZONES AND HOURS OF SERVICE OF SHIP STATIONS

TIME ZONES

AP12-4

**Miscellaneous Abbreviations and Signals to Be Used
in Radiotelegraphy Communications Except in the
Maritime Mobile Service**

(See Article 52)

SECTION I. Q CODE

Introduction

1. The series of groups QRA to QUZ, listed in this Appendix, are for use by all services.

2. The QAA to QNZ series are reserved for the aeronautical service and the QOA to QQZ series are reserved for the maritime services. These series are not listed in these Regulations*.

3. Certain Q code abbreviations may be given an affirmative or negative sense by sending YES or NO respectively, immediately following the abbreviation.

4. The meanings assigned to Q code abbreviations may be amplified or completed by the addition of appropriate other groups, call signs, place names, figures, numbers, etc. It is optional to fill in the blanks shown in parentheses. Any data which is filled in where blanks appear shall be sent in the same order as shown in the text of the following tables.

5. Q code abbreviations are given the form of a question when followed by a question mark. When an abbreviation is used as a question and is followed by additional or complementary information, the question mark should follow this information.

6. Q code abbreviations with numbered alternative significations shall be followed by the appropriate figure to indicate the exact meaning intended. This figure shall be sent immediately following the abbreviation.

7. All times shall be given in Coordinated Universal Time (UTC) unless otherwise indicated in the question or reply.

* Note by the General Secretariat: Series QOA to QQZ are now shown in Appendix 14.

Abbreviations Available for All Services

A. List of Abbreviations in Alphabetical Order

Abbreviation	Question	Answer or Advice
QRA	What is the name of your station?	The name of my station is . . .
QRB	How far approximately are you from my station?	The approximate distance between our stations is . . . nautical miles (or kilometres)
QRC	By what private enterprise (or State Administration) are the accounts for charges for your station settled?	The accounts for charges of my station are settled by the private enterprise . . . (or State Administration).
QRD	Where are you bound for and where are you from?	I am bound for . . . from . . .
QRE	What is your estimated time of arrival at . . . (or over . . .) (place)?	My estimated time of arrival at . . . (or over . . .) (place) is . . . hours.
QRF	Are you returning to . . . (place)?	I am returning to . . . (place). or Return to . . . (place).
QRG	Will you tell me my exact frequency (or that of . . .)?	Your exact frequency (or that of . . .) is . . . kHz (or MHz).
QRH	Does my frequency vary?	Your frequency varies.
QRI	How is the tone of my transmission?	The tone of your transmission is . . . 1. good 2. variable 3. bad.
QRJ	How many radiotelephone calls have you to book?	I have . . . radiotelephone calls to book.

Abbreviation	Question	Answer or Advice
QRK	What is the intelligibility of my signals (<i>or those of . . .</i>)?	The intelligibility of your signals (<i>or those of . . .</i>) is . . . 1. bad 2. poor 3. fair 4. good 5. excellent.
QRL	Are you busy?	I am busy (<i>or I am busy with . . .</i>). Please do not interfere.
QRM	Are you being interfered with?	I am being interfered with (1. nil 2. slightly 3. moderately 4. severely 5. extremely).
QRN	Are you troubled by static?	I am troubled by static (1. nil 2. slightly 3. moderately 4. severely 5. extremely).
QRO	Shall I increase transmitter power?	Increase transmitter power.
QRP	Shall I decrease transmitter power?	Decrease transmitter power.
QRQ	Shall I send faster?	Send faster (. . . words per minute).
QRR	Are you ready for automatic operation?	I am ready for automatic operation. Send at . . . words per minute.
QRS	Shall I send more slowly?	Send more slowly (. . . words per minute).

Abbreviation	Question	Answer or Advice
QRT	Shall I stop sending?	Stop sending.
QRU	Have you anything for me?	I have nothing for you.
QRV	Are you ready?	I am ready.
QRW	Shall I inform . . . that you are calling him on . . . kHz (<i>or MHz</i>)?	Please inform . . . that I am calling him on . . . kHz (<i>or MHz</i>).
QRX	When will you call me again?	I will call you again at . . . hours (on . . . kHz (<i>or MHz</i>)).
QRY	What is my turn? (<i>Relates to communication</i>)	Your turn is Number . . . (<i>or according to any other indication</i>). (<i>Relates to communication</i>).
QRZ	Who is calling me?	You are being called by . . . (on . . . kHz (<i>or MHz</i>)).
QSA	What is the strength of my signals (<i>or those of . . .</i>)?	The strength of your signals (<i>or those of . . .</i>) is . . . 1. scarcely perceptible 2. weak 3. fairly good 4. good 5. very good.
QSB	Are my signals fading?	Your signals are fading.
QSC	Are you a cargo vessel?	I am a cargo vessel.
QSD	Is my keying defective?	Your keying is defective.
QSE	What is the estimated drift of the survival craft?	The estimated drift of the survival craft is . . . (<i>figures and units</i>)

Abbreviation	Question	Answer or Advice
QSF	Have you effected rescue?	I have effected rescue and am proceeding to ... base (with ... persons injured requiring ambulance).
QSG	Shall I send ... telegrams at a time?	Send ... telegrams at a time.
QSH	Are you able to home on your D/F equipment?	I am able to home on my D/F equipment (on station ...).
QSI		I have been unable to break in on your transmission. <i>or</i> Will you inform ... (<i>call sign</i>) that I have been unable to break in on his transmission (on ... kHz (<i>or</i> MHz)).
QSJ	What is the charge to be collected to ... including your internal charge?	The charge to be collected to ... including my internal charge is ... francs.
QSK	Can you hear me between your signals and if so can I break in on your transmission?	I can hear you between my signals; break in on my transmission.
QSL	Can you acknowledge receipt?	I am acknowledging receipt.
QSM	Shall I repeat the last telegram which I sent you (<i>or</i> some previous telegram)?	Repeat the last telegram which you sent me (<i>or</i> telegram(s) number(s) ...).
QSN	Did you hear me (<i>or</i> ... (<i>call sign</i>)) on ... kHz (<i>or</i> MHz)?	I did hear you (<i>or</i> ... (<i>call sign</i>)) on ... kHz (<i>or</i> MHz).
QSO	Can you communicate with ... direct (<i>or</i> by relay)?	I can communicate with ... direct (<i>or</i> by relay through ...).

Abbreviation	Question	Answer or Advice
QSP	Will you relay to ... free of charge?	I will relay to ... free of charge.
QSQ	Have you a doctor on board (<i>or</i> is ... (<i>name of person</i>) on board)?	I have a doctor on board (<i>or</i> ... (<i>name of person</i>) is on board).
QSR	Shall I repeat the call on the calling frequency?	Repeat your call on the calling frequency; did not hear you (<i>or</i> have interference).
QSS	What working frequency will you use?	I will use the working frequency ... kHz (<i>normally only the last three figures of the frequency need be given</i>).
QSU	Shall I send or reply on this frequency (<i>or</i> on ... kHz (<i>or</i> MHz) (with emissions of class ...)?	Send or reply on this frequency (<i>or</i> on ... kHz (<i>or</i> MHz) (with emissions of class ...).
QSV	Shall I send a series of V's on this frequency (<i>or</i> ... kHz (<i>or</i> MHz)?	Send a series of V's on this frequency (<i>or</i> ... kHz (<i>or</i> MHz).
QSW	Will you send on this frequency (<i>or</i> on ... kHz (<i>or</i> MHz) (with emissions of class ...)?	I am going to send on this frequency (<i>or</i> on ... kHz (<i>or</i> MHz) (with emissions of class ...).
QSX	Will you listen to ... (<i>call sign</i> (s)) on ... kHz (<i>or</i> MHz)?	I am listening to ... (<i>call sign</i> (s)) on ... kHz (<i>or</i> MHz).
QSY	Shall I change to transmission on another frequency?	Change to transmission on another frequency (<i>or</i> on ... kHz (<i>or</i> MHz)).
QSZ	Shall I send each word or group more than once?	Send each word or group twice (<i>or</i> ... times).
QTA	Shall I cancel telegram number ...?	Cancel telegram number ...
QTB	Do you agree with my counting of words?	I do not agree with your counting of words; I will repeat the first letter or digit of each word or group.

Abbreviation	Question	Answer or Advice
QTC	How many telegrams have you to send?	I have ... telegrams for you (<i>or</i> for ...).
QTD	What has the rescue vessel or rescue aircraft recovered?	... (<i>identification</i>) has recovered... 1. ... (<i>number</i>) survivors 2. wreckage 3. ... (<i>number</i>) bodies.
QTE	What is my TRUE bearing from you? <i>or</i>	Your TRUE bearing from me is ... degrees at ... hours. <i>or</i>
	What is my TRUE bearing from ... (<i>call sign</i>)? <i>or</i>	Your TRUE bearing from ... (<i>call sign</i>) was ... degrees at ... hours. <i>or</i>
	What is the TRUE bearing of ... (<i>call sign</i>) from ... (<i>call sign</i>)?	The TRUE bearing of ... (<i>call sign</i>) from ... (<i>call sign</i>) was ... degrees at ... hours.
QTF	Will you give me the position of my station according to the bearings taken by the D/F stations which you control?	The position of your station according to the bearings taken by the D/F stations which I control was ... latitude ... longitude (<i>or other indication of position</i>), class ... at ... hours.
QTG	Will you send two dashes of ten seconds each followed by your call sign (repeated ... times) (on ... kHz (<i>or</i> MHz))? <i>or</i>	I am going to send two dashes of ten seconds each followed by my call sign (repeated ... times) (on ... kHz (<i>or</i> MHz)). <i>or</i>
	Will you request ... to send two dashes of ten seconds followed by his call sign (repeated ... times) on ... kHz (<i>or</i> MHz)?	I have requested ... to send two dashes of ten seconds followed by his call sign (repeated ... times) on ... kHz (<i>or</i> MHz).

Abbreviation	Question	Answer or Advice
QTH	What is your position in latitude and longitude (<i>or according to any other indication</i>)?	My position is ... latitude ... longitude (<i>or according to any other indication</i>).
QTI	What is your TRUE track?	My TRUE track is ... degrees.
Q TJ	What is your speed? (<i>Requests the speed of a ship or aircraft through the water or air respectively.</i>)	My speed is ... knots (<i>or ... kilometres per hour or ... statute miles per hour</i>). (<i>Indicates the speed of a ship or aircraft through the water or air respectively.</i>)
QTK	What is the speed of your aircraft in relation to the surface of the earth?	The speed of my aircraft in relation to the surface of the earth is ... knots (<i>or ... kilometres per hour or ... statute miles per hour</i>).
QTL	What is your TRUE heading?	My TRUE heading is ... degrees.
QTM	What is your MAGNETIC heading?	My MAGNETIC heading is ... degrees.
QTN	At what time did you depart from ... (<i>place</i>)?	I departed from ... (<i>place</i>) at ... hours.
QTO	Have you left dock (<i>or port</i>)? <i>or</i>	I have left dock (<i>or port</i>). <i>or</i>
	Are you airborne?	I am airborne.
QTP	Are you going to enter dock (<i>or port</i>)? <i>or</i>	I am going to enter dock (<i>or port</i>). <i>or</i>
	Are you going to alight (<i>or land</i>)?	I am going to alight (<i>or land</i>).
QTQ	Can you communicate with my station by means of the International Code of Signals?	I am going to communicate with your station by means of the International Code of Signals.
QTR	What is the correct time?	The correct time is ... hours.

Abbreviation	Question	Answer or Advice
QTS	Will you send your call sign for tuning purposes or so that your frequency can be measured now (or at ... hours) on ... kHz (or MHz)?	I will send my call sign for tuning purposes or so that my frequency may be measured now (or at ... hours) on ... kHz (or MHz).
QTT		The identification signal which follows is superimposed on another transmission.
QTU	What are the hours during which your station is open?	My station is open from ... to ... hours.
QTV	Shall I stand guard for you on the frequency of ... kHz (or MHz) (from ... to ... hours)?	Stand guard for me on the frequency of ... kHz (or MHz) (from ... to ... hours).
QTW	What is the condition of survivors?	Survivors are in ... condition and urgently need ...
QTX	Will you keep your station open for further communication with me until further notice (or until ... hours)?	I will keep my station open for further communication with you until further notice (or until ... hours).
QTY	Are you proceeding to the position of incident and if so when do you expect to arrive?	I am proceeding to the position of incident and expect to arrive at ... hours (on ... date).
QTZ	Are you continuing the search?	I am continuing the search for ... (aircraft, ship, survival craft, survivors or wreckage).
QUA	Have you news of ... (call sign)?	Here is news of ... (call sign).
QUB	Can you give me in the following order information concerning: the direction in degrees TRUE and speed of the surface wind; visibility; present weather; and amount, type and height of base of cloud above surface elevation at ... (place of observation)?	Here is the information requested : ... (The units used for speed and distances should be indicated.)

Abbreviation	Question	Answer or Advice
QUC	What is the number (or other indication) of the last message you received from me (or from ... (call sign))?	The number (or other indication) of the last message I received from you (or from ... (call sign)) is ...
QUD	Have you received the urgency signal sent by ... (call sign of mobile station)?	I have received the urgency signal sent by ... (call sign of mobile station) at ... hours.
QUE	Can you use telephony in ... (language), with interpreter if necessary; if so, on what frequencies?	I can use telephony in ... (language) on ... kHz (or MHz).
QUF	Have you received the distress signal sent by ... (call sign of mobile station)?	I have received the distress signal sent by ... (call sign of mobile station) at ... hours.
QUG	Will you be forced to alight (or land)?	I am forced to alight (or land) immediately. or I shall be forced to alight (or land) at ... (position or place) at ... hours.
QUH	Will you give me the present barometric pressure at sea level?	The present barometric pressure at sea level is ... (units).
QUI	Are your navigation lights working?	My navigation lights are working.
QUJ	Will you indicate the TRUE track to reach you (or ...)?	The TRUE track to reach me (or ...) is ... degrees at ... hours.
QUK	Can you tell me the condition of the sea observed at ... (place or coordinates)?	The sea at ... (place or coordinates) is ...

Abbreviation	Question	Answer or Advice
QUL	Can you tell me the swell observed at ... (<i>place or coordinates</i>) ?	The swell at ... (<i>place or coordinates</i>) is ...
QUM	May I resume normal working?	Normal working may be resumed.
QUN	Will vessels in my immediate vicinity ... <i>or</i> (in the vicinity of ... latitude ... longitude) <i>or</i> (in the vicinity of ...) please indicate their position, TRUE course and speed?	My position, TRUE course and speed are ...
QUO	Shall I search for ... 1. aircraft 2. ship 3. survival craft in the vicinity of ... latitude ... longitude (<i>or according to any other indication</i>)?	Please search for ... 1. aircraft 2. ship 3. survival craft in the vicinity of ... latitude ... longitude (<i>or according to any other indication</i>).
QUP	Will you indicate your position by ... 1. searchlight 2. black smoke trail 3. pyrotechnic lights?	My position is indicated by ... 1. searchlight 2. black smoke trail 3. pyrotechnic lights.
QUQ	Shall I train my searchlight nearly vertical on a cloud, occulting if possible and, if your aircraft is seen, deflect the beam up wind and on the water (<i>or land</i>) to facilitate your landing?	Please train your searchlight on a cloud, occulting if possible and, if my aircraft is seen or heard, deflect the beam up wind and on the water (<i>or land</i>) to facilitate my landing.

Abbreviation	Question	Answer or Advice
QUR	Have survivors ... 1. received survival equipment 2. been picked up by rescue vessel 3. been reached by ground rescue party?	Survivors ... 1. are in possession of survival equipment dropped by ... 2. have been picked up by rescue vessel 3. have been reached by ground rescue party.
QUS	Have you sighted survivors or wreckage? If so, in what position?	Have sighted ... 1. survivors in water 2. survivors on rafts 3. wreckage in position ... latitude ... longitude (<i>or according to any other indication</i>).
QUT	Is position of incident marked?	Position of incident is marked by... 1. flame or smoke float 2. sea marker 3. sea marker dye 4. ... (<i>specify other marking</i>).
QUU	Shall I home ship or aircraft to my position?	Home ship or aircraft ... (<i>call sign</i>) ... 1. to your position by transmitting your call sign and long dashes on ... kHz (<i>or MHz</i>) 2. by transmitting on ... kHz (<i>or MHz</i>) TRUE track to reach you.
QUW	Are you in the search area designated as ... (<i>designator or latitude and longitude</i>) ?	I am in the ... (<i>designation</i>) search area.
QUY	Is position of survival craft marked?	Position of survival craft was marked at ... hours by... 1. flame or smoke float 2. sea marker 3. sea marker dye 4. ... (<i>specify other marking</i>).

B. Lists of Signals According to the Nature of Questions, Answer or Advice

Abbreviation	Question	Answer or Advice
	Name	
QRA	What is the name of your station ?	The name of my station is ...
	Route	
QRD	Where are you bound for and where are you from ?	I am bound for ... from ...
	Position	
QRB	How far approximately are you from my station ?	The approximate distance between our stations is ... nautical miles (or kilometres).
QTH	What is your position in latitude and longitude (or according to any other indication) ?	My position is ... latitude ... longitude (or according to any other indication).
QTN	At what time did you depart from ... (place) ?	I departed from ... (place) at ... hours.
	Quality of Signals	
QRI	How is the tone of my transmission ?	The tone of your transmission is ... 1. good 2. variable 3. bad.
QRK	What is the intelligibility of my signals (or those of ...) ?	The intelligibility of your signals (or those of ...) is ... 1. bad 2. poor 3. fair 4. good 5. excellent.

Abbreviation	Question	Answer or Advice
	Strength of Signals	
QRO	Shall I increase transmitter power ?	Increase transmitter power.
QRP	Shall I decrease transmitter power ?	Decrease transmitter power.
QSA	What is the strength of my signals (or those of ...) ?	The strength of your signals (or those of ...) is ... 1. scarcely perceptible 2. weak 3. fairly good 4. good 5. very good.
QSB	Are my signals fading ?	Your signals are fading.
	Keying	
QRQ	Shall I send faster ?	Send faster (... words per minute).
QRR	Are you ready for automatic operation ?	I am ready for automatic operation. Send at ... words per minute.
QRS	Shall I send more slowly ?	Send more slowly (... words per minute).
QSD	Is my keying defective ?	Your keying is defective.
	Interference	
QRM	Are you being interfered with ?	I am being interfered with (1. nil 2. slightly 3. moderately 4. severely 5. extremely).

Abbreviation	Question	Answer or Advice
QRN	Are you troubled by static ?	I am troubled by static (1. nil 2. slightly 3. moderately 4. severely 5. extremely).
Adjustment of Frequency		
QRG	Will you tell me my exact frequency (or that of...)?	Your exact frequency (or that of...) is... kHz (or MHz).
QRH	Does my frequency vary ?	Your frequency varies.
QTS	Will you send your call sign for tuning purposes or so that your frequency can be measured now (or at... hours) on... kHz (or MHz)?	I will send my call sign for tuning purposes or so that my frequency may be measured now (or at... hours) on... kHz (or MHz).
Choice of Frequency and/or Class of Emission		
QSN	Did you hear me (or... (call sign)) on... kHz (or MHz)?	I did hear you (or... (call sign)) on... kHz (or MHz).
QSS	What working frequency will you use?	I will use the working frequency... kHz (normally only the last three figures of the frequency need be given).
QSU	Shall I send or reply on this frequency (or on... kHz (or MHz)) (with emissions of class...)?	Send or reply on this frequency (or on... kHz (or MHz)) (with emissions of class...).
QSV	Shall I send a series of V's on this frequency (or... kHz (or MHz))?	Send a series of V's on this frequency (or... kHz (or MHz)).

Abbreviation	Question	Answer or Advice
QSW	Will you send on this frequency (or on... kHz (or MHz)) (with emissions of class...)?	I am going to send on this frequency (or on... kHz (or MHz)) (with emissions of class...).
QSX	Will you listen to... (call sign(s)) on... kHz (or MHz)?	I am listening to... (call sign(s)) on... kHz (or MHz).
Change of Frequency		
QSY	Shall I change to transmission on another frequency?	Change to transmission on another frequency (or on... kHz (or MHz)).
Establishing Communication		
QRL	Are you busy?	I am busy (or I am busy with...). Please do not interfere.
QRV	Are you ready?	I am ready.
QRX	When will you call me again?	I will call you again at... hours (on... kHz (or MHz)).
QRY	What is my turn? (Relates to communication.)	Your turn is Number... (or according to any other indication). (Relates to communication.)
QRZ	Who is calling me?	You are being called by... (on... kHz (or MHz)).
QSC	Are you a cargo vessel?	I am a cargo vessel.
QSR	Shall I repeat the call on the calling frequency?	Repeat your call on the calling frequency; did not hear you (or have interference).
QTT	Can you communicate with my station by means of the International Code of Signals?	I am going to communicate with your station by means of the International Code of Signals.

Abbreviation	Question	Answer or Advice
QUE	Can you use telephony in . . . (<i>language</i>), with interpreter if necessary; if so, on what frequencies?	I can use telephony in . . . (<i>language</i>) on . . . kHz (<i>or</i> MHz).
	Time	
QTR	What is the correct time?	The correct time is . . . hours.
QTU	What are the hours during which your station is open?	My station is open from . . . to . . . hours.
	Charges	
QRC	By what private enterprise (<i>or</i> State Administration) are the accounts for charges for your station settled?	The accounts for charges of my station are settled by the private enterprise . . . (<i>or</i> State Administration).
QSJ	What is the charge to be collected to . . . including your internal charge?	The charge to be collected to . . . including my internal charge is . . . francs.
	Transit	
QRW	Shall I inform . . . that you are calling him on . . . kHz (<i>or</i> MHz)?	Please inform . . . that I am calling him on . . . kHz (<i>or</i> MHz).
QSO	Can you communicate with . . . direct (<i>or</i> by relay)?	I can communicate with . . . direct (<i>or</i> by relay through . . .).
QSP	Will you relay to . . . free of charge?	I will relay to . . . free of charge.
QSQ	Have you a doctor on board (<i>or</i> is . . . (<i>name of person</i>) on board)?	I have a doctor on board (<i>or</i> . . . (<i>name of person</i>) is on board).
QUA	Have you news of . . . (<i>call sign</i>)?	Here is news of . . . (<i>call sign</i>).

Abbreviation	Question	Answer or Advice
QUC	What is the number (<i>or other indication</i>) of the last message you received from me (<i>or</i> from . . . (<i>call sign</i>))?	The number (<i>or other indication</i>) of the last message I received from you (<i>or</i> from . . . (<i>call sign</i>)) is . . .
	Exchange of Correspondence	
QRJ	How many radiotelephone calls have you to book?	I have . . . radiotelephone calls to book.
QRU	Have you anything for me?	I have nothing for you.
QSG	Shall I send . . . telegrams at a time?	Send . . . telegrams at a time.
QSI		I have been unable to break in on your transmission. <i>or</i> Will you inform . . . (<i>call sign</i>) that I have been unable to break in on his transmission (on . . . kHz (<i>or</i> MHz)).
QSK	Can you hear me between your signals and if so can I break in on your transmission?	I can hear you between my signals; break in on my transmission.
QSL	Can you acknowledge receipt?	I am acknowledging receipt.
QSM	Shall I repeat the last telegram which I sent you (<i>or</i> some previous telegram)?	Repeat the last telegram which you sent me (<i>or</i> telegram(s) number(s) . . .).
QSZ	Shall I send each word or group more than once?	Send each word or group twice (<i>or</i> . . . times).
QTA	Shall I cancel telegram number . . .?	Cancel telegram number . . .

Abbreviation	Question	Answer or Advice
QTB	Do you agree with my counting of words?	I do not agree with your counting of words; I will repeat the first letter or digit of each word or group.
QTC	How many telegrams have you to send?	I have ... telegrams for you (<i>or for ...</i>).
QTV	Shall I stand guard for you on the frequency of ... kHz (<i>or MHz</i>) (from ... to ... hours)?	Stand guard for me on the frequency of ... kHz (<i>or MHz</i>) (from ... to ... hours).
QTX	Will you keep your station open for further communication with me until further notice (<i>or until ... hours</i>)?	I will keep my station open for further communication with you until further notice (<i>or until ... hours</i>).
	Movement	
QRE	What is your estimated time of arrival at ... (<i>or over</i>) ... (<i>place</i>)?	My estimated time of arrival at ... (<i>or over ...</i>) (<i>place</i>) is ... hours.
QRF	Are you returning to ... (<i>place</i>)?	I am returning to ... (<i>place</i>). <i>or</i> Return to ... (<i>place</i>).
QSH	Are you able to home on your D/F equipment?	I am able to home on my D/F equipment (on station ...).
QTI	What is your TRUE track?	My TRUE track is ... degrees.
Q TJ	What is your speed?	My speed is ... knots (<i>or ... kilometres per hour or ... statute miles per hour</i>).
	<i>(Requests the speed of a ship or aircraft through the water or air respectively.)</i>	<i>(Indicates the speed of a ship or aircraft through the water or air respectively.)</i>

Abbreviation	Question	Answer or Advice
QTK	What is the speed of your aircraft in relation to the surface of the earth?	The speed of my aircraft in relation to the surface of the earth is ... knots (<i>or ... kilometres per hour or ... statute miles per hour</i>).
QTL	What is your TRUE heading?	My TRUE heading is ... degrees.
QTM	What is your MAGNETIC heading?	My MAGNETIC heading is ... degrees.
QTN	At what time did you depart from ... (<i>place</i>)?	I departed from ... (<i>place</i>) at ... hours.
QTO	Have you left dock (<i>or port</i>)? <i>or</i> Are you airborne?	I have left dock (<i>or port</i>). <i>or</i> I am airborne.
QTP	Are you going to enter dock (<i>or port</i>)? <i>or</i> Are you going to alight (<i>or land</i>)?	I am going to enter dock (<i>or port</i>). <i>or</i> I am going to alight (<i>or land</i>).
QUG	Will you be forced to alight (<i>or land</i>)?	I am forced to alight (<i>or land</i>) immediately. <i>or</i> I shall be forced to alight (<i>or land</i>) at ... (<i>position or place</i>) at ... hours.
QUJ	Will you indicate the TRUE track to reach you (<i>or ...</i>)?	The TRUE track to reach me (<i>or ...</i>) is ... degrees at ... hours.
QUN	Will vessels in my immediate vicinity ... <i>or</i> (in the vicinity of ... latitude ... longitude) <i>or</i> (in the vicinity of ...) please indicate their position, TRUE course and speed?	My position, TRUE course and speed are ...

Abbreviation	Question	Answer or Advice
Meteorology		
QUB	Can you give me in the following order information concerning: the direction in degrees TRUE and speed of the surface wind; visibility; present weather; and amount, type and height of base of cloud above surface elevation at ... (place of observation)?	Here is the information requested ... <i>(The units used for speed and distances should be indicated.)</i>
QUH	Will you give me the present barometric pressure at sea level?	The present barometric pressure at sea level is ... (units).
QUK	Can you tell me the condition of the sea observed at ... (place or coordinates)?	The sea at ... (place or coordinates) is ...
QUL	Can you tell me the swell observed at ... (place or coordinates)?	The swell at ... (place or coordinates) is ...
Radio Direction-Finding		
QTE	What is my TRUE bearing from you? <i>or</i> What is my TRUE bearing from ... (call sign)? <i>or</i> What is the TRUE bearing of ... (call sign) from ... (call sign)?	Your TRUE bearing from me is ... degrees at ... hours. <i>or</i> Your TRUE bearing from ... (call sign) was ... degrees at ... hours. <i>or</i> The TRUE bearing of ... (call sign) from ... (call sign) was ... degrees at ... hours.
QTF	Will you give me the position of my station according to the bearings taken by the D/F stations which you control?	The position of your station according to the bearings taken by the D/F stations which I control was ... latitude ... longitude (or other indication of position), class ... at ... hours.

Abbreviation	Question	Answer or Advice
QTG	Will you send two dashes of ten seconds each followed by your call sign (repeated ... times) (on ... kHz (or MHz))? <i>or</i> Will you request ... to send two dashes of ten seconds followed by his call sign (repeated ... times) on ... kHz (or MHz)?	I am going to send two dashes of ten seconds each followed by my call sign (repeated ... times) (on ... kHz (or MHz)). <i>or</i> I have requested ... to send two dashes of ten seconds followed by his call sign (repeated ... times) on ... kHz (or MHz).
Suspension of Work		
QRT	Shall I stop sending?	Stop sending.
QUM	May I resume normal working?	Normal working may be resumed.
Urgency		
QUD	Have you received the urgency signal sent by ... (call sign of mobile station)?	I have received the urgency signal sent by ... (call sign of mobile station) at ... hours.
QUG	Will you be forced to alight (or land)?	I am forced to alight (or land) immediately. <i>or</i> I shall be forced to alight (or land) at ... (position or place) at ... hours.
Distress		
QUF	Have you received the distress signal sent by ... (call sign of mobile station)?	I have received the distress signal sent by ... (call sign of mobile station) at ... hours.
QUM	May I resume normal working?	Normal working may be resumed.
Search and Rescue		
QSE	What is the estimated drift of the survival craft?	The estimated drift of the survival craft is ... (figures and units).

Abbreviation	Question	Answer or Advice
QSF	Have you effected rescue?	I have effected rescue and am proceeding to . . . base (with . . . persons injured requiring ambulance).
QTD	What has the rescue vessel or rescue aircraft recovered?	. . . (<i>identification</i>) has recovered . . . 1. . . . (<i>number</i>) survivors 2. wreckage 3. . . . (<i>number</i>) bodies.
QTW	What is the condition of survivors?	Survivors are in . . . condition and urgently need . . .
QTY	Are you proceeding to the position of incident and if so when do you expect to arrive?	I am proceeding to the position of incident and expect to arrive at . . . hours (on . . . date).
QTZ	Are you continuing the search?	I am continuing the search for . . . (aircraft, ship, survival craft, survivors or wreckage).
QUI	Are your navigation lights working?	My navigation lights are working.
QUN	Will vessels in my immediate vicinity . . . <i>or</i> (in the vicinity of . . . latitude longitude . . .) <i>or</i> (in the vicinity of . . .) please indicate their position, TRUE course and speed?	My position, TRUE course and speed are . . .
QUO	Shall I search for . . . 1. aircraft 2. ship 3. survival craft in the vicinity of . . . latitude . . . longitude (<i>or according to any other indication</i>)?	Please search for . . . 1. aircraft 2. ship 3. survival craft in the vicinity of . . . latitude . . . longitude (<i>or according to any other indication</i>).

Abbreviation	Question	Answer or Advice
QUP	Will you indicate your position by . . . 1. searchlight 2. black smoke trail 3. pyrotechnic lights?	My position is indicated by . . . 1. searchlight 2. black smoke trail 3. pyrotechnic lights.
QUQ	Shall I train my searchlight nearly vertical on a cloud, occulting if possible and, if your aircraft is seen, deflect the beam up wind and on the water (<i>or land</i>) to facilitate your landing?	Please train your searchlight on a cloud, occulting if possible and, if my aircraft is seen or heard, deflect the beam up wind and on the water (<i>or land</i>) to facilitate my landing.
QUR	Have survivors . . . 1. received survival equipment 2. been picked up by rescue vessel 3. been reached by ground rescue party?	Survivors . . . 1. are in possession of survival equipment dropped by . . . 2. have been picked up by rescue vessel 3. have been reached by ground rescue party.
QUS	Have you sighted survivors or wreckage? If so, in what position?	Have sighted . . . 1. survivors in water 2. survivors on rafts 3. wreckage in position . . . latitude . . . longitude (<i>or according to any other indication</i>).
QUT	Is position of incident marked?	Position of incident is marked by... 1. flame or smoke float 2. sea marker 3. sea marker dye 4. . . . (<i>specify other marking</i>).

Abbreviation	Question	Answer or Advice
QUU	Shall I home ship or aircraft to my position?	Home ship or aircraft... (<i>call sign</i>)... 1. to your position by transmitting your call sign and long dashes on . . . kHz (<i>or</i> MHz) 2. by transmitting on . . . kHz (<i>or</i> MHz) TRUE track to reach you.
QUW	Are you in the search area designated as... (<i>designator or latitude and longitude</i>)?	I am in the . . . (<i>designation</i>) search area.
QUY	Is position of survival craft marked?	Position of survival craft was marked at . . . hours by . . . 1. flame or smoke float 2. sea marker 3. sea marker dye 4. . . . (<i>specify other marking</i>).
	Identification	
QTT		The identification signal which follows is superimposed on another transmission.

SECTION II. MISCELLANEOUS ABBREVIATIONS AND SIGNALS

Abbreviation or Signal	Definition
AA	All after . . . (<i>used after a question mark to request a repetition</i>).
AB	All before . . . (<i>used after a question mark to request a repetition</i>).
ADS	Address (<i>used after a question mark to request a repetition</i>).
<u>AR</u>	End of transmission (. _ . _ . to be sent as one signal).
<u>AS</u>	Waiting period (. _ . . . to be sent as one signal).
BK	Signal used to interrupt a transmission in progress.
BN	All between . . . and . . . (<i>used after a question mark to request a repetition</i>).
BQ	A reply to an RQ.
CFM	Confirm (<i>or</i> I confirm).
CL	I am closing my station.
COL	Collate (<i>or</i> I collate).
CP	General call to two or more specified stations (<i>see Article 52</i>).
CQ	General call to all stations (<i>see Article 52</i>).
CS	Call sign (<i>used to request a call sign</i>).
<u>DDD</u>	Used to identify the transmission of the distress message by a station not itself in distress (<i>see No. 3164</i>).
DE	From (<i>used to precede the call sign of the calling station</i>).
DF	Your bearing at . . . hours was . . . degrees, in the doubtful sector of this station, with a possible error of . . . degrees.
DO	Bearing doubtful. Ask for another bearing later (<i>or</i> at . . . hours).
E	East (Cardinal).
ER	Here . . .
ETA	Estimated time of arrival.
ITP	The punctuation counts.
K	Invitation to transmit.
KMH	Kilometers per hour.
KTS	Nautical miles per hour (<i>Knots</i>).
MIN	Minute (<i>or</i> Minutes).

Abbreviation or Signal	Definition
MPH	Statute miles per hour.
MSG	Prefix indicating a message to or from the master of a ship concerning its operation or navigation.
N	North (Cardinal).
NIL	I have nothing to send to you.
NO	No (<i>Negative</i>).
NW	Now.
OK	We agree (<i>or It is correct</i>).
OL	Ocean Letter.
P	Prefix indicating a private radiotelegram.
PBL	Preamble (<i>used after a question mark to request a repetition</i>).
R	Received.
REF	Reference to . . . (<i>or Refer to . . .</i>).
RPT	Repeat (<i>or I repeat</i>) (<i>or Repeat . . .</i>).
RQ	Indication of a request.
S	South (Cardinal).
SIG	Signature (<i>used after a question mark to request a repetition</i>).
SLT	Radiomaritime Letter.
<u>SOS</u>	Distress Signal (. . . — — — . . . <i>to be sent as one signal</i>).
SS	Indicator preceding the name of a ship station.
SVC	Prefix indicating a service telegram.
SYS	Refer to your service telegram.
TFC	Traffic.
TR	Used by a land station to request the position and next port of call of a mobile station (<i>see No. 3691</i>); used also as a prefix to the reply.
TTT	This group when sent three times constitutes the safety signal (<i>see No. 3221</i>).
TU	Thank you.
TXT	Text (<i>used after a question mark to request a repetition</i>).
<u>VA</u>	End of work (. . . — — — <i>to be sent as one signal</i>).
W	West (Cardinal).

Abbreviation or Signal	Definition
WA	Word after . . . (<i>used after a question mark to request a repetition</i>).
WB	Word before . . . (<i>used after a question mark to request a repetition</i>).
WD	Word(s) <i>or</i> Group(s).
XQ	Prefix used to indicate an operating communication in the fixed service.
XXX	This group when sent three times constitutes the urgency signal (<i>see No. 3196</i>).
YES	Yes (<i>Affirmative</i>).

**Miscellaneous Abbreviations and Signals to Be Used
for Radiocommunications in the Maritime Mobile Service**

(See Articles 37, 63 and 65)

SECTION I. Q CODE

Introduction

1. The series of groups listed in this Appendix range from QOA to QUZ.
2. The QOA to QQZ series are reserved for the maritime mobile service.
3. Certain Q code abbreviations may be given an affirmative or negative sense by sending, immediately following the abbreviation, the letter C or the letters NO (in radiotelephony spoken as : CHARLIE or NO).
4. The meanings assigned to Q code abbreviations may be amplified or completed by the appropriate addition of other groups, call signs, place names, figures, numbers, etc. It is optional to fill in the blanks shown in parentheses. Any data which is filled in where blanks appear shall be sent in the same order as shown in the text of the following tables.
5. Q code abbreviations are given the form of a question when followed by a question mark in radiotelegraphy and RQ (ROMEO QUEBEC) in radiotelephony. When an abbreviation is used as a question and is followed by additional or complementary information, the question mark (or RQ) should follow this information.
6. Q code abbreviations with numbered alternative significations shall be followed by the appropriate figure to indicate the exact meaning intended. This figure shall be sent immediately following the abbreviation.

7. All times shall be given in Coordinated Universal Time (UTC) unless otherwise indicated in the question or reply.

8. An asterisk * following a Q code abbreviation means that this signal has a meaning similar to a signal appearing in the International Code of Signals.

Abbreviations Available for the Maritime Mobile Service

A. List of Abbreviations in Alphabetical Order

Abbreviation	Question	Answer or Advice
QOA	Can you communicate by radiotelegraphy (500 kHz)?	I can communicate by radiotelegraphy (500 kHz).
QOB	Can you communicate by radiotelephony (2 182 kHz)?	I can communicate by radiotelephony (2 182 kHz).
QOC	Can you communicate by radiotelephony (channel 16 - frequency 156.80 MHz)?	I can communicate by radiotelephony (channel 16 - frequency 156.80 MHz).
QOD	Can you communicate with me in... 0. Dutch 5. Italian 1. English 6. Japanese 2. French 7. Norwegian 3. German 8. Russian 4. Greek 9. Spanish?	I can communicate with you in... 0. Dutch 5. Italian 1. English 6. Japanese 2. French 7. Norwegian 3. German 8. Russian 4. Greek 9. Spanish.
QOE	Have you received the safety signal sent by... (<i>name and/or call sign</i>)?	I have received the safety signal sent by... (<i>name and/or call sign</i>).
QOF	What is the commercial quality of my signals?	The quality of your signals is... 1. not commercial 2. marginally commercial 3. commercial.
QOG	How many tapes have you to send?	I have... tapes to send.
QOH	Shall I send a phasing signal for... seconds?	Send a phasing signal for... seconds.
QOI	Shall I send my tape?	Send your tape.
QOJ	Will you listen on... kHz (<i>or</i> MHz) for signals of emergency position-indicating radiobeacons?	I am listening on... kHz (<i>or</i> MHz) for signals of emergency position-indicating radiobeacons.

Abbreviation	Question	Answer or Advice
QOK	Have you received the signals of an emergency position-indicating radiobeacon on... kHz (<i>or</i> MHz)?	I have received the signals of an emergency position-indicating radiobeacon on... kHz (<i>or</i> MHz).
QOL	Is your vessel fitted for reception of selective calls? If so, what is your selective call number or signal?	My vessel is fitted for the reception of selective calls. My selective call number or signal is ...
QOM	On what frequencies can your vessel be reached by a selective call?	My vessel can be reached by a selective call on the following frequency/ies ... (periods of time to be added if necessary).
QOT	Do you hear my call; what is the approximate delay in minutes before we may exchange traffic?	I hear your call; the approximate delay is ... minutes.
QRA	What is the name of your vessel (<i>or</i> station)?	The name of my vessel (<i>or</i> station) is...
QRB	How far approximately are you from my station?	The approximate distance between our stations is... nautical miles (<i>or</i> kilometres).
QRC	By what private enterprise (<i>or</i> State Administration) are the accounts for charges for your station settled?	The accounts for charges of my station are settled by the private enterprise... (<i>or</i> State Administration).
QRD	Where are you bound for and where are you from?	I am bound for... from...
QRE	What is your estimated time of arrival at... (<i>or</i> over...) (<i>place</i>)?	My estimated time of arrival at... (<i>or</i> over...) (<i>place</i>) is... hours.
QRF	Are you returning to... (<i>place</i>)?	I am returning to... (<i>place</i>). <i>or</i> Return to... (<i>place</i>).

Abbreviation	Question	Answer or Advice
QRG	Will you tell me my exact frequency (or that of...)?	Your exact frequency (or that of...) is... kHz (or MHz).
QRH	Does my frequency vary?	Your frequency varies.
QRI	How is the tone of my transmission?	The tone of your transmission is... 1. good 2. variable 3. bad.
QRJ	How many radiotelephone calls have you to book?	I have... radiotelephone calls to book.
QRK	What is the intelligibility of my signals (or those of... (name and/or call sign))?	The intelligibility of your signals (or those of... (name and/or call sign)) is... 1. bad. 2. poor 3. fair 4. good 5. excellent.
QRL	Are you busy?	I am busy (or I am busy with... (name and/or call sign)). Please do not interfere.
QRM	Is my transmission being interfered with?	Your transmission is being interfered with... 1. nil 2. slightly 3. moderately 4. severely 5. extremely.

Abbreviation	Question	Answer or Advice
QRN	Are you troubled by static?	I am troubled by static... 1. nil 2. slightly 3. moderately 4. severely 5. extremely
QRO	Shall I increase transmitter power?	Increase transmitter power.
QRP	Shall I decrease transmitter power?	Decrease transmitter power.
QRQ	Shall I send faster?	Send faster (... words per minute).
QRR	Are you ready for automatic operation?	I am ready for automatic operation. Send at... words per minute.
QRS	Shall I send more slowly?	Send more slowly (... words per minute).
QRT	Shall I stop sending?	Stop sending.
QRU	Have you anything for me?	I have nothing for you.
QRV	Are you ready?	I am ready.
QRW	Shall I inform... that you are calling him on... kHz (or MHz)?	Please inform... that I am calling him on... kHz (or MHz).
QRX	When will you call me again?	I will call you again at... hours (on... kHz (or MHz)).
QRY	What is my turn? (Relates to communication)	Your turn is Number... (or according to any other indication). (Relates to communication).
QRZ	Who is calling me?	You are being called by... (on... kHz (or MHz)).

Abbreviation	Question	Answer or Advice
QSA	What is the strength of my signals (or those of... <i>(name and/or call sign)</i>)?	The strength of your signals (or those of... <i>(name and/or call sign)</i>) is... 1. scarcely perceptible 2. weak 3. fairly good 4. good 5. very good.
QSB	Are my signals fading?	Your signals are fading.
QSC	Are you a low traffic ship station?	I am a low traffic ship station.
QSD	Are my signals mutilated?	Your signals are mutilated.
QSE*	What is the estimated drift of the survival craft?	The estimated drift of the survival craft is... <i>(figures and units)</i> .
QSF*	Have you effected rescue?	I have effected rescue and am proceeding to... base (with... persons injured requiring ambulance).
QSG	Shall I send... telegrams at a time?	Send... telegrams at a time.
QSH	Are you able to home with your direction-finding equipment?	I am able to home with my direction-finding equipment (on... <i>(name and/or call sign)</i>).
QSI		I have been unable to break in on your transmission. <i>or</i> Will you inform... <i>(name and/or call sign)</i> that I have been unable to break in on his transmission (on... kHz (or MHz)).

Abbreviation	Question	Answer or Advice
QSJ	What is the charge to be collected to... including your internal charge?	The charge to be collected to... including my internal charge is... francs.
QSK	Can you hear me between your signals and if so may I break in on your transmission?	I can hear you between my signals; break in on my transmission.
QSL	Can you acknowledge receipt?	I am acknowledging receipt.
QSM	Shall I repeat the last telegram which I sent you (or some previous telegram)?	Repeat the last telegram which you sent me (or telegram(s) number(s)...).
QSN	Did you hear me (or... <i>(name and/or call sign)</i>) on... kHz (or MHz)?	I did hear you (or... <i>(name and/or call sign)</i>) on... kHz (or MHz).
QSO	Can you communicate with... <i>(name and/or call sign)</i> direct (or by relay)?	I can communicate with... <i>(name and/or call sign)</i> direct (or by relay through...).
QSP	Will you relay to... <i>(name and/or call sign)</i> free of charge?	I will relay to... <i>(name and/or call sign)</i> free of charge.
QSQ	Have you a doctor on board (or is... <i>(name of person)</i> on board)?	I have a doctor on board (or... <i>(name of person)</i> is on board).
QSR	Shall I repeat the call on the calling frequency?	Repeat your call on the calling frequency; did not hear you (or have interference).
QSS	What working frequency will you use?	I will use the working frequency ... kHz (or MHz) <i>(in the high frequency bands normally only the last three figures of the frequency need be given)</i> .
QSU	Shall I send or reply on this frequency (or on... kHz (or MHz)) (with emissions of class...)?	Send or reply on this frequency (or on... kHz (or MHz)) (with emissions of class...).

Abbreviation	Question	Answer or Advice
QSV	Shall I send a series of V's (or signs) for adjustment on this frequency (or on ... kHz (or MHz))?	Send a series of V's (or signs) for adjustment on this frequency (or on ... kHz (or MHz)).
QSW	Will you send on this frequency (or on ... kHz (or MHz)) (with emissions of class...)?	I am going to send on this frequency (or on ... kHz (or MHz)) (with emissions of class...).
QSX	Will you listen to ... (name and/or call sign(s)) on ... kHz (or MHz), or in the bands .../channels ...?	I am listening to ... (name and/or call sign(s)) on ... kHz (or MHz), or in the bands .../channels ...
QSY	Shall I change to transmission on another frequency?	Change to transmission on another frequency (or on ... kHz (or MHz)).
QSZ	Shall I send each word or group more than once?	Send each word or group twice (or ... times).
QTA	Shall I cancel telegram (or message) number...?	Cancel telegram (or message) number...
QTB	Do you agree with my counting of words?	I do not agree with your counting of words; I will repeat the first letter or digit of each word or group.
QTC	How many telegrams have you to send?	I have... telegrams for you (or for... (name and/or call sign)).
QTD*	What has the rescue vessel or rescue aircraft recovered?	... (identification) has recovered... 1. ... (number) survivors 2. wreckage 3. ... (number) bodies.

Abbreviation	Question	Answer or Advice
QTE	What is my TRUE bearing from you? <i>or</i> What is my TRUE bearing from... (name and/or call sign)? <i>or</i> What is the TRUE bearing of... (name and/or call sign) from... (name and/or call sign)?	Your TRUE bearing from me is... degrees at... hours. <i>or</i> Your TRUE bearing from... (name and/or call sign) was... degrees at... hours. <i>or</i> The TRUE bearing of... (name and/or call sign) from... (name and/or call sign) was... degrees at... hours.
QTF	Will you give me my position according to the bearings taken by the direction-finding stations which you control?	Your position according to the bearings taken by the direction-finding stations which I control was... latitude... longitude (or other indication of position), class... at... hours.
QTG	Will you send two dashes of ten seconds each (or carrier) followed by your call sign (or name) (repeated... times) on... kHz (or MHz)? <i>or</i> Will you request... (name and/or call sign) to send two dashes of ten seconds each (or carrier) followed by his call sign (and/or name) (repeated... times) on... kHz (or MHz)?	I am going to send two dashes of ten seconds each (or carrier) followed by my call sign (or name) (repeated... times) on... kHz (or MHz). <i>or</i> I have requested... (name and/or call sign) to send two dashes of ten seconds each (or carrier) followed by his call sign (and/or name) (repeated... times) on... kHz (or MHz).

Abbreviation	Question	Answer or Advice
QTH	What is your position in latitude and longitude <i>(or according to any other indication)</i> ?	My position is... latitude... longitude <i>(or according to any other indication)</i> .
QTI*	What is your TRUE course?	My TRUE course is... degrees.
Q TJ*	What is your speed? <i>(Requests the speed of a ship or aircraft through the water or air respectively).</i>	My speed is... knots <i>(or kilometres per hour or... statute miles per hour)</i> . <i>(Indicates the speed of a ship or aircraft through the water or air respectively).</i>
QTK*	What is the speed of your aircraft in relation to the surface of the earth?	The speed of my aircraft in relation to the surface of the earth is... knots <i>(or... kilometres per hour or... statute miles per hour)</i> .
QTL*	What is your TRUE heading?	My TRUE heading is... degrees.
QTM*	What is your MAGNETIC heading?	My MAGNETIC heading is... degrees.
QTN	At what time did you depart from ... <i>(place)</i> ?	I departed from... <i>(place)</i> at... hours.
QTO	Have you left dock <i>(or port)</i> ? Are you airborne? <i>or</i>	I have left dock <i>(or port)</i> . I am airborne. <i>or</i>
QTP	Are you going to enter dock <i>(or port)</i> ? <i>or</i> Are you going to alight <i>(or land)</i> ?	I am going to enter dock <i>(or port)</i> . <i>or</i> I am going to alight <i>(or land)</i> .
Q TQ	Can you communicate with my station by means of the International Code of Signals (INTERCO)?	I am going to communicate with your station by means of the International Code of Signals (INTERCO).

Abbreviation	Question	Answer or Advice
QTR	What is the correct time?	The correct time is... hours.
QTS	Will you send your call sign <i>(and/or name)</i> for... seconds?	I will send my call sign <i>(and/or name)</i> for... seconds.
QTT		The identification signal which follows is superimposed on another transmission.
QTU	What are the hours during which your station is open?	My station is open from... to... hours.
QTV	Shall I stand guard for you on the frequency of... kHz <i>(or MHz)</i> : <i>(from... to... hours)</i> ?	Stand guard for me on the frequency of... kHz <i>(or MHz)</i> : <i>(from... to... hours)</i> .
QTW*	What is the condition of survivors?	Survivors are in... condition and urgently need...
QTX	Will you keep your station open for further communication with me until further notice <i>(or until... hours)</i> ?	I will keep my station open for further communication with you until further notice <i>(or until... hours)</i> .
QTY*	Are you proceeding to the position of incident and if so when do you expect to arrive?	I am proceeding to the position of incident and expect to arrive at... hours <i>(on... date)</i> .
QTZ*	Are you continuing the search?	I am continuing the search for... <i>(aircraft, ship, survival craft, survivors or wreckage)</i> .
QUA	Have you news of... <i>(name and/or call sign)</i> ?	Here is news of... <i>(name and/or call sign)</i> .
QUB*	Can you give me in the following order information concerning: the direction in degrees TRUE and speed of the surface wind; visibility; present weather; and amount, type and height of base of cloud above surface elevation at... <i>(place of observation)</i> ?	Here is the information requested: ... <i>(The units used for speed and distances should be indicated).</i>

Abbreviation	Question	Answer or Advice
QUC	What is the number (<i>or other indication</i>) of the last message you received from me (<i>or from... (name and/or call sign)</i>)?	The number (<i>or other indication</i>) of the last message I received from you (<i>or from... (name and/or call sign)</i>) is...
QUD	Have you received the urgency signal sent by... (<i>name and/or call sign</i>)?	I have received the urgency signal sent by... (<i>name and/or call sign</i>) at... hours.
QUE	Can you speak in... (<i>language</i>), with interpreter if necessary; if so, on what frequencies?	I can speak in... (<i>language</i>) on ... kHz (<i>or</i>) MHz).
QUF	Have you received the distress signal sent by... (<i>name and/or call sign</i>)?	I have received the distress signal sent by... (<i>name and/or call sign</i>) at... hours.
QUH*	Will you give me the present barometric pressure at sea level?	The present barometric pressure at sea level is... (<i>units</i>).
QUM	May I resume normal working?	Normal working may be resumed.
QUN	1. <i>When directed to all stations:</i> Will vessels in my immediate vicinity... <i>or</i> (in the vicinity of... latitude... longitude) <i>or</i> (in the vicinity of...) please indicate their position, TRUE course and speed? 2. <i>When directed to a single station:</i> Please indicate your position, TRUE course and speed?	My position, TRUE course and speed are...
QUO*	Shall I search for... 1. aircraft 2. ship 3. survival craft in the vicinity of... latitude... longitude (<i>or according to any other indication</i>)?	Please search for... 1. aircraft 2. ship 3. survival craft in the vicinity of... latitude... longitude (<i>or according to any other indication</i>).

Abbreviation	Question	Answer or Advice
QUP*	Will you indicate your position by... 1. searchlight 2. black smoke trail 3. pyrotechnic lights?	My position is indicated by... 1. searchlight 2. black smoke trail 3. pyrotechnic lights.
QUR*	Have survivors... 1. received survival equipment 2. been picked up by rescue vessel 3. been reached by ground rescue party?	Survivors... 1. are in possession of survival equipment dropped by... 2. have been picked up by rescue vessel 3. have been reached by ground rescue party.
QUS*	Have you sighted survivors or wreckage? If so, in what position?	Have sighted... 1. survivors in water 2. survivors on rafts 3. wreckage in position... latitude... longitude (<i>or according to any other indication</i>).
QUT*	Is position of incident marked?	Position of incident is marked by... 1. flame or smoke float 2. sea marker 3. sea marker dye 4. ... (<i>specify other marking</i>).
QUU*	Shall I home ship or aircraft to my position?	Home ship or aircraft... (<i>name and/or call sign</i>)... 1. to your position by sending your call sign and long dashes on... kHz (<i>or</i>) MHz 2. by sending on... kHz (<i>or</i>) MHz) TRUE track to reach you.
QUW*	Are you in the search area designated as... (<i>designator or latitude and longitude</i>)?	I am in the... (<i>designation</i>) search area.
QUX	Do you have any navigational warnings or gale warnings in force?	I have the following navigational warning(s) or gale warning(s) in force:

Abbreviation	Question	Answer or Advice
QUY*	Is position of survival craft marked?	Position of survival craft was marked at... hours by... 1. flame or smoke float 2. sea marker 3. sea marker dye 4. ... (specify other marking).
QUZ	May I resume restricted working?	Distress phase still in force, restricted working may be resumed.

B. List of Signals according to the Nature of Questions, Answer or Advice

Abbreviation	Question	Answer or Advice
	Name	
QRA	What is the name of your vessel (or station)?	The name of my vessel (or station) is...
	Route	
QRD	Where are you bound for and where are you from?	I am bound for... from...
	Position	
QRB	How far approximately are you from my station?	The approximate distance between our stations is... nautical miles (or kilometres).
QTH	What is your position in latitude and longitude (or according to any other indication)?	My position is... latitude... longitude (or according to any other indication).
QTN	At what time did you depart from... (place)?	I departed from... (place) at... hours.
	Quality of Signals	
QOF	What is the commercial quality of my signals?	The quality of your signals is... 1. not commercial 2. marginally commercial 3. commercial.
QRI	How is the tone of my transmission?	The tone of your transmission is... 1. good 2. variable 3. bad.
QRK	What is the intelligibility of my signals (or those of... (name and/or call sign))?	The intelligibility of your signals (or those of... (name and/or call sign)) is... 1. bad 2. poor 3. fair 4. good 5. excellent.

Abbreviation	Question	Answer or Advice
Strength of Signals		
QRO	Shall I increase transmitter power?	Increase transmitter power.
QRP	Shall I decrease transmitter power?	Decrease transmitter power.
QSA	What is the strength of my signals (or those of... (name and/or call sign))?	The strength of your signals (or those of... (name and/or call sign)) is... 1. scarcely perceptible 2. weak 3. fairly good 4. good 5. very good.
QSB	Are my signals fading?	Your signals are fading.
Keying		
QRQ	Shall I send faster?	Send faster (... words per minute).
QRR	Are you ready for automatic operation?	I am ready for automatic operation. Send at... words per minute.
QRS	Shall I send more slowly?	Send more slowly (... words per minute).
QSD	Are my signals mutilated?	Your signals are mutilated.
Interference		
QRM	Is my transmission being interfered with?	Your transmission is being interfered with... 1. nil 2. slightly 3. moderately 4. severely 5. extremely.

Abbreviation	Question	Answer or Advice
Interference (cont.)		
QRN	Are you troubled by static?	I am troubled by static... 1. nil 2. slightly 3. moderately 4. severely 5. extremely.
Adjustment of Frequency		
QRG	Will you tell me my exact frequency (or that of...)?	Your exact frequency (or that of...) is... kHz (or MHz).
QRH	Does my frequency vary?	Your frequency varies.
QTS	Will you send your call sign (and/or name) for... seconds?	I will send my call sign (and/or name) for... seconds.
Choice of Frequency and / or Class of Emission		
QSN	Did you hear me (or... (name and/or call sign)) on...kHz (or MHz)?	I did hear you (or... (name and/or call sign)) on...kHz (or MHz).
QSS	What working frequency will you use?	I will use the working frequency ...kHz (or MHz) (in the high frequency bands normally only the last three figures of the frequency need be given).
QSU	Shall I send or reply on this frequency (or on...kHz (or MHz)) (with emissions of class...)?	Send or reply on this frequency (or on... kHz (or MHz)) (with emissions of class...).
QSV	Shall I send a series of V's (or signs) for adjustment on this frequency (or...kHz (or MHz))?	Send a series of V's (or signs) for adjustment on this frequency (or... kHz (or MHz)).

Abbreviation	Question	Answer or Advice
	Choice of Frequency and/or Class of Emission (cont.)	
QSW	Will you send on this frequency (or on... kHz (or MHz)) (with emissions of class...)?	I am going to send on this frequency (or on... kHz (or MHz)) (with emissions of class...).
QSX	Will you listen to ... (name and/or call sign(s)) on ... kHz (or MHz), or in the bands .../channels ...?	I am listening to ... (name and/or call sign(s)) on ... kHz (or MHz), or in the bands .../channels ...
	Change of Frequency	
QSY	Shall I change to transmission on another frequency?	Change to transmission on another frequency (or on ... kHz (or MHz)).
	Establishing Communication	
QOA	Can you communicate by radiotelegraphy (500 kHz)?	I can communicate by radiotelegraphy (500 kHz).
QOB	Can you communicate by radiotelephony (2 182 kHz)?	I can communicate by radiotelephony (2 182 kHz).
QOC	Can you communicate by radiotelephony (channel 16-frequency 156-80 MHz)?	I can communicate by radiotelephony (channel 16-frequency 156-80MHz).
QOD	Can you communicate with me in... 0. Dutch 5. Italian 1. English 6. Japanese 2. French 7. Norwegian 3. German 8. Russian 4. Greek 9. Spanish?	I can communicate with you in... 0. Dutch 5. Italian 1. English 6. Japanese 2. French 7. Norwegian 3. German 8. Russian 4. Greek 9. Spanish.
QOT	Do you hear my call; what is the approximate delay in minutes before we may exchange traffic?	I hear your call; the approximate delay is ... minutes.

Abbreviation	Question	Answer or Advice
	Establishing Communication (cont.)	
QRL	Are you busy?	I am busy (or I am busy with... (name and/or call sign)). Please do not interfere.
QRV	Are you ready?	I am ready.
QRX	When will you call me again?	I will call you again at... hours (on... kHz (or MHz)).
QRY	What is my turn? (Relates to communication)	Your turn is Number... (or according to any other indication). (Relates to communication)
QRZ	Who is calling me?	You are being called by... (on ... kHz (or MHz)).
QSC	Are you a low traffic ship station?	I am a low traffic ship station.
QSR	Shall I repeat the call on the calling frequency?	Repeat your call on the calling frequency; did not hear you (or have interference).
QTQ	Can you communicate with my station by means of the International Code of Signals (INTERCO)?	I am going to communicate with your station by means of the International Code of Signals (INTERCO).
QUE	Can you speak in... (language), with interpreter if necessary; if so, on what frequencies?	I can speak in... (language) on... kHz (or MHz).
	Selective Calls	
QOL	Is your vessel fitted for reception of selective calls? If so, what is your selective call number or signal?	My vessel is fitted for the reception of selective calls. My selective call number or signal is ...

Abbreviation	Question	Answer or Advice
	Selective calls (cont.)	
QOM	On what frequencies can your vessel be reached by a selective call?	My vessel can be reached by a selective call on the following frequency/ies ... (periods of time to be added if necessary).
	Time	
QTR	What is the correct time?	The correct time is... hours.
QTU	What are the hours during which your station is open?	My station is open from... to... hours.
	Charges	
QRC	By what private enterprise (or State Administration) are the accounts for charges for your station settled?	The accounts for charges of my station are settled by the private enterprise... (or State Administration).
QSJ	What is the charge to be collected to... including your internal charge?	The charge to be collected to... including my internal charge is... francs.
	Transit	
QRW	Shall I inform... that you are calling him on... kHz (or MHz)?	Please inform... that I am calling him on... kHz (or MHz).
QSO	Can you communicate with... (name and/or call sign) direct (or by relay)?	I can communicate with... (name and/or call sign) direct (or by relay through...).
QSP	Will you relay to... (name and/or call sign) free of charge?	I will relay to... (name and/or call sign) free of charge.
QSQ	Have you a doctor on board (or is... (name of person) on board)?	I have a doctor on board (or... (name of person) is on board).
QUA	Have you news of... (name and/or call sign)?	Here is news of... (name and/or call sign).

Abbreviation	Question	Answer or Advice
	Transit (cont.)	
QUC	What is the number (or other indication) of the last message you received from me (or from... (name and/or call sign))?	The number (or other indication) of the last message I received from you (or from... (name and/or call sign)) is...
	Exchange of Correspondence	
QOG	How many tapes have you to send?	I have... tapes to send.
QOH	Shall I send a phasing signal for... seconds?	Send a phasing signal for... seconds.
QOI	Shall I send my tape?	Send your tape.
QRJ	How many radiotelephone calls have you to book?	I have... radiotelephone calls to book.
QRU	Have you anything for me?	I have nothing for you.
QSG	Shall I send... telegrams at a time?	Send... telegrams at a time.
QSI		I have been unable to break in on your transmission. or Will you inform... (name and/or call sign) that I have been unable to break in on his transmission (on... kHz (or MHz)).
QSK	Can you hear me between your signals and if so may I break in on your transmission?	I can hear you between my signals; break in on my transmission.
QSL	Can you acknowledge receipt?	I am acknowledging receipt.
QSM	Shall I repeat the last telegram which I sent you (or some previous telegram)?	Repeat the last telegram which you sent me (or telegram(s) number(s)...).

Abbreviation	Question	Answer or Advice
Exchange of Correspondence (cont.)		
QSZ	Shall I send each word or group more than once?	Send each word or group twice (or... times).
QTA	Shall I cancel telegram (or message) number...?	Cancel telegram (or message) number...
QTB	Do you agree with my counting of words?	I do not agree with your counting of words; I will repeat the first letter or digit of each word or group.
QTC	How many telegrams have you to send?	I have... telegrams for you (or for... (name and/or call sign)).
QTV	Shall I stand guard for you on the frequency of... kHz (or MHz) (from... to... hours)?	Stand guard for me on the frequency of... kHz (or MHz) (from... to... hours).
QTX	Will you keep your station open for further communication with me until further notice (or until... hours)?	I will keep my station open for further communication with you until further notice (or until... hours).
Movement		
QRE	What is your estimated time of arrival at... (or over...) (place)?	My estimated time of arrival at... (or over...) (place) is... hours.
QRF	Are you returning to... (place)?	I am returning to... (place). <i>or</i> Return to... (place).
QSH	Are you able to home with your direction-finding equipment?	I am able to home with my direction-finding equipment (on... (name and/or call sign)).
QTI*	What is your TRUE course?	My TRUE course is... degrees.

Abbreviation	Question	Answer or Advice
Movement (cont.)		
QTJ*	What is your speed? (Requests the speed of a ship or aircraft through the water or air respectively.)	My speed is... knots (or... kilometres per hour or... statute miles per hour). (Indicates the speed of a ship or aircraft through the water or air respectively.)
QTK*	What is the speed of your aircraft in relation to the surface of the earth?	The speed of my aircraft in relation to the surface of the earth is... knots (or... kilometres per hour or... statute miles per hour).
QTL*	What is your TRUE heading?	My TRUE heading is... degrees.
QTM*	What is your MAGNETIC heading?	My MAGNETIC heading is... degrees.
QTN	At what time did you depart from... (place)?	I departed from... (place) at... hours.
QTO	Have you left dock (or port)? <i>or</i> Are you airborne?	I have left dock (or port). <i>or</i> I am airborne.
QTP	Are you going to enter dock (or port)? <i>or</i> Are you going to alight (or land)?	I am going to enter dock (or port). <i>or</i> I am going to alight (or land).
QUN	1. When directed to all stations: Will vessels in my immediate vicinity... (in the vicinity of... latitude... longitude) (in the vicinity of...) please indicate their position, TRUE course and speed? 2. When directed to a single station: Please indicate your position, TRUE course and speed?	My position, TRUE course and speed are...

Abbreviation	Question	Answer or Advice
	Meteorology	
QUB*	Can you give me in the following order information concerning: the direction in degrees TRUE and speed of the surface wind; visibility; present weather; and amount, type and height of base of cloud above surface elevation at... (<i>place of observation</i>)?	Here is the information requested: ... <i>(The units used for speed and distances should be indicated).</i>
QUH*	Will you give me the present barometric pressure at sea level?	The present barometric pressure at sea level is... (<i>units</i>).
QUX	Do you have any navigational warnings or gale warnings in force?	I have the following navigational warning(s) or gale warning(s) in force:
	Radio Direction-Finding	
QTE	What is my TRUE bearing from you? <i>or</i> What is my TRUE bearing from... (<i>name and/or call sign</i>)?	Your TRUE bearing from me is... degrees at... hours. <i>or</i> Your TRUE bearing from... (<i>name and/or call sign</i>) was... degrees at... hours.
	<i>or</i> What is the TRUE bearing of... (<i>name and/or call sign</i>) from... (<i>name and/or call sign</i>)?	The TRUE bearing of... (<i>name and/or call sign</i>) from... (<i>name and/or call sign</i>) was... degrees at... hours.
QTF	Will you give me my position according to the bearings taken by the direction-finding stations which you control?	Your position according to the bearings taken by the direction-finding stations which I control was... latitude... longitude (<i>or other indication of position</i>), class... at... hours.

Abbreviation	Question	Answer or Advice
	Radio Direction-Finding (cont.)	
QTG	Will you send two dashes of ten seconds each (<i>or carrier</i>) followed by your call sign (<i>or name</i>) (repeated... times) (on... kHz (<i>or MHz</i>))? <i>or</i> Will you request... (<i>name and/or call sign</i>) to send two dashes of ten seconds each (<i>or carrier</i>) followed by his call sign (<i>and/or name</i>) (repeated... times) on... kHz (<i>or MHz</i>)?	I am going to send two dashes of ten seconds each (<i>or carrier</i>) followed by my call sign (<i>or name</i>) (repeated... times) (on... kHz (<i>or MHz</i>)). <i>or</i> I have requested... (<i>name and/or call sign</i>) to send two dashes of ten seconds each (<i>or carrier</i>) followed by his call sign (<i>and/or name</i>) (repeated... times) on... kHz (<i>or MHz</i>).
	Suspension of Work	
QRT	Shall I stop sending?	Stop sending.
QUM	May I resume normal working?	Normal working may be resumed.
QUZ	May I resume restricted working?	Distress phase still in force. restricted working may be resumed.
	Safety	
QOE	Have you received the safety signal sent by... (<i>name and/or call sign</i>)?	I have received the safety signal sent by... (<i>name and/or call sign</i>).
QUX	Do you have any navigational warnings or gale warnings in force?	I have the following navigational warning(s) or gale warning(s) in force:
	Urgency	
QUD	Have you received the urgency signal sent by... (<i>name and/or call sign</i>)?	I have received the urgency signal sent by... (<i>name and/or call sign</i>) at... hours.

Abbreviation	Question	Answer or Advice
Distress		
QOJ	Will you listen on... kHz (or MHz) for signals of emergency position-indicating radiobeacons?	I am listening on... kHz (or MHz) for signals of emergency position-indicating radiobeacons.
QOK	Have you received the signals of an emergency position-indicating radiobeacon on... kHz (or MHz)?	I have received the signals of an emergency position-indicating radiobeacon on... kHz (or MHz)
QUF	Have you received the distress signal sent by... (name and/or call sign)?	I have received the distress signal sent by... (name and/or call sign) at... hours.
QUM	May I resume normal working?	Normal working may be resumed.
QUZ	May I resume restricted working?	Distress phase still in force. restricted working may be resumed.
Search and Rescue		
QSE*	What is the estimated drift of the survival craft?	The estimated drift of the survival craft is... (figures and units).
QSF*	Have you effected rescue?	I have effected rescue and am proceeding to... base (with... persons injured requiring ambulance).
QTD*	What has the rescue vessel or rescue aircraft recovered?	... (identification) has recovered... 1. ... (number) survivors 2. wreckage 3. ... (number) bodies.
QTW*	What is the condition of survivors?	Survivors are in... condition and urgently need...
QTY*	Are you proceeding to the position of incident and if so when do you expect to arrive?	I am proceeding to the position of incident and expect to arrive at... hours (on... date).

Abbreviation	Question	Answer or Advice
Search and Rescue (cont.)		
QTZ*	Are you continuing the search?	I am continuing the search for... (aircraft, ship, survival craft, survivors or wreckage).
QUN	1. When directed to all stations: Will vessels in my immediate vicinity... (in the vicinity of... latitude... longitude) (in the vicinity of...) please indicate their position, TRUE course and speed? 2. When directed to a single station: Please indicate your position, TRUE course and speed?	My position, TRUE course and speed are...
QUO*	Shall I search for... 1. aircraft 2. ship 3. survival craft in the vicinity of... latitude... longitude (or according to any other indication)?	Please search for... 1. aircraft 2. ship 3. survival craft in the vicinity of... latitude... longitude (or according to any other indication).
QUP*	Will you indicate your position by... 1. searchlight 2. black smoke trail 3. pyrotechnic lights?	My position is indicated by... 1. searchlight 2. black smoke trail 3. pyrotechnic lights.
QUR*	Have survivors... 1. received survival equipment 2. been picked up by rescue vessel 3. been reached by ground rescue party?	Survivors... 1. are in possession of survival equipment dropped by... 2. have been picked up by rescue vessel 3. have been reached by ground rescue party.

Abbreviation	Question	Answer or Advice
	Search and Rescue (cont.)	
QUS*	Have you sighted survivors or wreckage? If so, in what position?	Have sighted... 1. survivors in water 2. survivors on rafts 3. wreckage in position... latitude... longitude (or according to any other indication).
QUT*	Is position of incident marked?	Position of incident is marked by... 1. flame or smoke float 2. sea marker 3. sea marker dye 4. ... (specify other marking).
QUU*	Shall I home ship or aircraft to my position?	Home ship or aircraft... (name and/or call sign)... 1. to your position by sending your call sign and long dashes on... kHz (or MHz) 2. by sending on... kHz (or MHz) TRUE track to reach you.
QUW*	Are you in the search area designated as... (designator or latitude and longitude)?	I am in the... (designation) search area.
QUY*	Is position of survival craft marked?	Position of survival craft was marked at... hours by... 1. flame or smoke float 2. sea marker 3. sea marker dye 4. ... (specify other marking).
QUZ	May I resume restricted working?	Distress phase still in force. restricted working may be resumed.
	Identification	
QTT		The identification signal which follows is superimposed on another transmission.

SECTION II. MISCELLANEOUS ABBREVIATIONS AND SIGNALS

Abbreviation or Signal	Definition
AA	All after... (used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition).
AB	All before... (used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition).
ADS	Address (used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition).
<u>AR</u>	End of transmission.
<u>AS</u>	Waiting period.
BK	Signal used to interrupt a transmission in progress.
BN	All between... and... (used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition).
BQ	A reply to an RQ.
<u>BT</u>	Signal to mark the separation between different parts of the same transmission.
C	Yes or "The significance of the previous group should be read in the affirmative".
CFM	Confirm (or I confirm).
CL	I am closing my station.
COL	Collate (or I collate).
CORREC-TION	Cancel my last word or group. The correct word or group follows (used in radiotelephony, spoken as KOR-REK-SHUN).

Note: When used in radiotelegraphy a bar over the letters composing a signal denotes that the letters are to be sent as one signal.

Abbreviation or Signal	Definition
CP	General call to two or more specified stations (<i>see Article 63</i>).
CQ	General call to all stations.
CS	Call sign (<i>used to request a call sign</i>).
DE	"from..." (<i>used to precede the name or other identification of the calling station</i>).
DF	Your bearing at... hours was... degrees, in the doubtful sector of this station, with a possible error of... degrees.
DO	Bearing doubtful. Ask for another bearing later (<i>or at... hours</i>).
E	East (Cardinal point) (<i>see No. 3098</i>).
ETA	Estimated time of arrival.
INTERCO	International Code of Signals groups follow (<i>used in radiotelephony, spoken as IN-TER-CO</i>).
K	Invitation to transmit.
\overline{KA}	Starting signal.
KTS	Nautical miles per hour (<i>Knots</i>).
MIN	Minute (<i>or Minutes</i>).
MSG	Prefix indicating a message to or from the master of a ship concerning its operation or navigation.
N	North (Cardinal point) (<i>see No. 3098</i>).
NIL	I have nothing to send to you.
NO	No (<i>Negative</i>).
NW	Now.
NX	Notice to Mariners (<i>or Notice to Mariners follows</i>).
OK	We agree (<i>or It is correct</i>).
OL	Ocean Letter.
P	Prefix indicating a private radiotelegram.
PBL	Preamble (<i>used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition</i>).
PSE	Please.
R	Received.
REF	Reference to... (<i>or Refer to...</i>).
RPT	Repeat (<i>or I repeat</i>) (<i>or Repeat...</i>).

Abbreviation or Signal	Definition
RQ	Indication of a request.
S	South (Cardinal point) (<i>see No. 3098</i>).
SIG	Signature (<i>used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition</i>).
SLT	Radiomaritime Letter.
SVC	Prefix indicating a service telegram.
SYS	Refer to your service telegram.
TFC	Traffic.
TR	Used by a land station to request the position and next port of call of a mobile station (<i>see Nos. 4741 and 4942</i>); used also as a prefix to the reply.
TU	Thank you.
TXT	Text (<i>used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition</i>).
\overline{VA}	End of work.
W	West (Cardinal point) (<i>see No. 3098</i>).
WA	Word after... (<i>used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition</i>).
WB	Word before... (<i>used after a question mark in radiotelegraphy or after RQ in radiotelephony (in case of language difficulties) or after RPT, to request a repetition</i>).
WD	Word(s) or Group(s).
WX	Weather report (<i>or Weather report follows</i>).
XQ	Prefix used to indicate the transmission of a service note.
YZ	The words which follow are in plain language.

SINPO and SINPFEMO Codes

(See CCIR Recommendation No. 251)

SINPO signal reporting code

Rating scale	S	I	N	P	O
	Signal strength	Degrading effect of			Overall rating
		Interference	Noise	Propagation disturbance	
5	Excellent	Nil	Nil	Nil	Excellent
4	Good	Slight	Slight	Slight	Good
3	Fair	Moderate	Moderate	Moderate	Fair
2	Poor	Severe	Severe	Severe	Poor
1	Barely audible	Extreme	Extreme	Extreme	Unusable

SINPFEMO signal reporting code

Rating scale	S	I	N	P	F	E	M	O
	Signal strength	Degrading effect of			Frequency of fading	Modulation		Overall rating
		Interference	Noise	Propagation disturbance		Quality	Depth	
5	Excellent	Nil	Nil	Nil	Nil	Excellent	Maximum	Excellent
4	Good	Slight	Slight	Slight	Slow	Good	Good	Good
3	Fair	Moderate	Moderate	Moderate	Moderate	Fair	Fair	Fair
2	Poor	Severe	Severe	Severe	Fast	Poor	Poor or Nil	Poor
1	Barely audible	Extreme	Extreme	Extreme	Very fast	Very poor	Continuously overmodulated	Unusable

Special remarks :

- a) A signal report shall consist of the code word SINPO or SINPFEMO followed by a group of five or eight numerals, rating, respectively, the five or eight characteristics of the particular signal code.
- b) The letter X shall be used instead of a numeral for characteristics not rated.
- c) Although the code word SINPFEMO is intended for radiotelephony, it may be used for radiotelegraphy.
- d) The overall rating for radiotelegraphy shall be as indicated in Tables I and II, below.

TABLE I

Overall rating	Mechanized Operations
5. Excellent 4. Good 3. Fair 2. Poor 1. Unusable	4-channel time-division multiplex 2-channel time-division multiplex Marginal single start-stop printer BK's, XQ's and call signs readable Unreadable

TABLE II

Overall rating	Morse Operation
5. Excellent 4. Good 3. Fair 2. Poor 1. Unusable	High speed 100 wpm 50 wpm BK's, XQ's and call signs readable Unreadable

e) The overall rating for telephony shall be as indicated in Table III.

TABLE III

Overall rating	Operating Condition	Quality
5. Excellent 4. Good 3. Fair	Signal quality unaffected Signal quality slightly affected Signal quality seriously affected.	} Commercial } Marginally commercial
2. Poor 1. Unusable	Channel usable by operators or by experienced subscribers Channel just usable by operators Channel unusable by operators	

**Channelling of the Maritime Mobile Radiotelephone Bands
Between 4 000 and 23 000 kHz**

(See Article 60, Section IV)

1. Radiotelephone channelling arrangements for the frequencies to be used by coast and ship stations in the bands allocated to the maritime mobile service are indicated in two sections as follows:

Section A – Table of single-sideband transmitting frequencies for duplex (two-frequency) operation (in kHz);

Section B – Table of single-sideband transmitting frequencies for simplex (single-frequency) operation and for intership cross-band (two-frequency) operation (in kHz).

2. The technical characteristics for single-sideband transmitters are specified in Appendix 17.

3. One or more series of frequencies from Section A (with the exception of those frequencies mentioned in paragraph 5 below) may be assigned to each coast station, which uses these frequencies associated in pairs (see No. 4381); each pair consists of a transmitting and a receiving frequency. The series shall be selected with due regard to the areas served and so as to avoid, as far as possible, harmful interference between the services of different coast stations.

4. The frequencies in Section B are provided for worldwide common use by ships of all categories, according to traffic requirements, for ship transmissions to coast stations and for intership communication. They are also authorized for worldwide common use for transmissions by coast stations (simplex operation) provided the peak envelope power does not exceed 1 kW. (See Recommendation 304.)

5. The following frequencies in Section A are allocated for calling purposes:

- Channel No. 421 in the 4 MHz band;
- Channel No. 606 in the 6 MHz band;
- Channel No. 821 in the 8 MHz band;
- Channel No. 1221 in the 12 MHz band;
- Channel No. 1621 in the 16 MHz band;
- Channel No. 2221 in the 22 MHz band.

The remaining frequencies in Sections A and B are working frequencies.

6. a) Stations using single-sideband emissions shall operate only on the carrier frequencies shown in Sections A and B in conformity with the technical characteristics specified in Appendix 17. The upper sideband mode shall always be employed.

AP16-3

- b) Stations employing the single-sideband mode shall use only class R3E and J3E emissions. However, administrations should endeavour, as far as possible, to restrict to class J3E emissions the use of the Channels Nos. 401, 601, 801, 1201, 1601 and 2201.

7. If an administration authorizes the use of frequencies other than those indicated in Sections A and B, its radiotelephone service shall not cause harmful interference to radiotelephone stations of the maritime mobile service which use frequencies in accordance with the following Tables.

PAGE LAISSEE EN BLANC INTENTIONNELLEMENT

PAGE INTENTIONALLY LEFT BLANK

SECTION B

Table of Single-Sideband Transmitting Frequencies for Simplex (Single-Frequency) Operation and for Intership Cross-Band (Two-Frequency) Operation (in kHz)

(See paragraph 4 of this Appendix)

4 MHz Band		6 MHz Band		8 MHz Band		12 MHz Band		16 MHz Band		22 MHz Band	
Carrier frequency	Assigned frequency	Carrier frequency	Assigned frequency	Carrier frequency	Assigned frequency	Carrier frequency	Assigned frequency	Carrier frequency	Assigned frequency	Carrier frequency	Assigned frequency

**Technical Characteristics of Single-Sideband Transmitters
Used in the Maritime Mobile Service for Radiotelephony
in the Bands Between 1 606.5 (1 605 Region 2) kHz and 4 000 kHz
and Between 4 000 kHz and 23 000 kHz**

(See Article 60, Section IV)

1. Power of the carrier:

a) for class R3E emissions the power of the carrier shall be:

Bands between 1 606.5 (1 605 Region 2) kHz and 4 000 kHz

- for coast station transmitters until 1 January 1982 and for ship station transmitters in use or to be installed before 2 January 1982: 16 ± 2 dB below the peak envelope power;
- for coast station transmitters after 1 January 1982 and for ship station transmitters installed after 1 January 1982: 18 ± 2 dB below the peak envelope power;

Bands between 4 000 kHz and 23 000 kHz

- for ship station transmitters installed before 2 January 1978: 16 ± 2 dB below the peak envelope power;
- for coast station transmitters after 1 January 1978 and for ship station transmitters installed after 1 January 1978: 18 ± 2 dB below the peak envelope power;

b) for class J3E emissions the power of the carrier shall be at least 40 dB below the peak envelope power.

2. Coast and ship stations shall use only the upper sideband.

3. The transmitter audio-frequency band shall be 350 Hz to 2 700 Hz with a permitted amplitude variation of 6 dB.

4. The carrier frequencies shall be maintained within the following tolerances:

a) coast stations: ± 20 Hz;

b) ship stations:

Bands between 1 606.5 (1 605 Region 2) kHz and 4 000 kHz

- tolerance applicable to transmitters in use or to be installed before 2 January 1982: ± 100 Hz; the short-term limits (of the order of 15 minutes) shall be ± 40 Hz;
- tolerance applicable to transmitters installed after 1 January 1982 but before 2 January 1985: ± 50 Hz;
- tolerance applicable to transmitters installed after 1 January 1985 and to all transmitters after 1 January 1990: ± 40 Hz;

Bands between 4 000 kHz and 23 000 kHz

- tolerance applicable to transmitters installed before 2 January 1978: ± 100 Hz; the short-term limits (of the order of 15 minutes) shall be ± 40 Hz;
- tolerance applicable to transmitters installed after 1 January 1978 and to all transmitters after 1 January 1990: ± 50 Hz.

5. The unwanted frequency modulation of the carrier shall be sufficiently low to prevent harmful distortion.

6. When class H3E, R3E or J3E emissions are used, the power of any unwanted emission supplied to the antenna transmission line on any discrete frequency shall, when the transmitter is driven to full peak envelope power, be in accordance with the following table:

a) Transmitters in use or installed before 2 January 1982 ¹:

Separation Δ in kHz between the frequency of the unwanted emission ² and the assigned frequency ³	Minimum attenuation below peak envelope power
$1.6 < \Delta \leq 4.8$	28 dB
$4.8 < \Delta \leq 8$	38 dB
$8 < \Delta$	43 dB without exceeding the power of 50 mW

Transmitters using reduced carrier or suppressed carrier emission may, as far as concerns out-of-band emissions ⁴ and those spurious emissions ⁵ which are a result of the modulation process but do not fall in the spectrum of out-of-band emissions ⁴, be tested for compliance with this regulation by means of a two-tone-audio input signal with a frequency separation between the tones such that all intermodulation products occur at frequencies at least 1.6 kHz removed from the assigned frequency.

For notes, see page AP17-4.

b) Transmitters installed after 1 January 1982 ¹:

Separation Δ in kHz between the frequency of the unwanted emission ² and the assigned frequency ³	Minimum attenuation below peak envelope power
$1.5 < \Delta \leq 4.5$	31 dB
$4.5 < \Delta \leq 7.5$	38 dB
$7.5 < \Delta$	43 dB without exceeding the power of 50 mW

Transmitters using reduced carrier or suppressed carrier emission may, as far as concerns out-of-band emissions ⁴ and those spurious emissions ⁵ which are a result of the modulation process but do not fall in the spectrum of out-of-band emissions ⁴, be tested for compliance with this regulation by means of a two-tone-audio input signal with a frequency separation between the tones such that all intermodulation products occur at frequencies at least 1.5 kHz removed from the assigned frequency.

¹ All administrations recognize the need to reduce the level of unwanted emissions and will therefore endeavour to ensure that the new requirements will be met by all newly designed transmitters under their jurisdiction as soon as practicable before 2 January 1982.

² *Unwanted emission*: See Article 1, No. 140.

³ The assigned frequency is 1 400 Hz higher than the carrier frequency (see No. 4194).

⁴ *Out-of-band emission*: See Article 1, No. 138.

⁵ *Spurious emission*: See Article 1, No. 139.

NOC AP18

APPENDIX 18

**Table of Transmitting Frequencies in the
Band 156 – 174 MHz for Stations in the
Maritime Mobile Service**

(See No. 613 and Articles 59 and 60)

Note 1: For assistance in understanding the Table, see notes *a)* to *q)* below.

Note 2: Channels 01 to 28, except 15 and 17, correspond to the channels of Appendix 18 to the Radio Regulations, Geneva, 1959, and channels 15, 17, and 60 to 88 correspond to those additional channels made available for assignment in accordance with the provisions of Appendix 18 Mar to the Radio Regulations, Geneva, 1967 (see Resolution 308).

Note 3: Channel designators 60 to 88 were chosen for the additional channels in order to separate them clearly from the original channels.

Channel designators	Notes	Transmitting frequencies (MHz)		Inter-ship	Port operations		Ship movement		Public correspondence
		Ship stations	Coast stations		Single frequency	Two frequency	Single frequency	Two frequency	
60	<i>j)</i>	156.025	160.625			17		9	25

- a) The figures in the column headed "Intership" indicate the normal sequence in which channels should be taken into use by mobile stations.
- b) The figures in the columns headed "Port operations", "Ship movement" and "Public correspondence" indicate the normal sequence in which channels should be taken into use by each coast station. However, in some cases, it may be necessary to omit channels in order to avoid harmful interference between the services of neighbouring coast stations.
- c) Administrations may designate frequencies in the intership, port operations and ship movement services for use by light aircraft and helicopters to communicate with ships or participating coast stations in predominantly maritime support operations under the conditions specified in Nos. **4144, 4148, 4149, 4150, 4151, 4152** and **4153**. However, the use of the channels which are shared with public correspondence shall be subject to prior agreement between interested and affected administrations.
- d) The channels of the present Appendix, with the exception of 06, 15, 16, 17, 75 and 76, may also be used for high-speed data and facsimile transmissions, subject to special arrangement between interested and affected administrations.
- e) Except in the United States of America, the channels of Appendix 18, preferably two adjacent channels from the series 87, 28, 88, with the exception of 06, 15, 16, 17, 75 and 76, may be used for narrow-band direct-printing telegraphy and data transmission, subject to special arrangement between interested and affected administrations.
- f) The two-frequency channels for port operations (18, 19, 20, 21, 22, 79 and 80) may be used for public correspondence, subject to special arrangement between interested and affected administrations.
- g) Until 1 January 1983, the effective radiated power of ship stations on channels 15 and 17 shall not exceed 1 W.

- h)* The frequency 156-300 MHz (channel 06) (see Nos. 2993 and 4154) may also be used for communication between ship stations and aircraft stations engaged in coordinated search and rescue operations. Ship stations shall avoid harmful interference to such communications on channel 06 as well as to communications between aircraft stations, ice-breakers and assisted ships during ice seasons.
- i)* In France and in Belgium, the frequencies 156-050, 156-150 and 156-175 MHz are used as ship station frequencies in channels 01, 03 and 63 respectively and as coast station frequencies in channels 21, 23 and 83 respectively when the latter are used in the special semiduplex public correspondence systems employed with 1 MHz separation between transmitting and receiving frequencies. These special provisions will cease to be used not later than 1 January 1983.
- j)* Channels 60 and 88 can be used subject to special arrangements between interested and affected administrations.
- k)* The frequencies in this Table may also be used for radiocommunications on inland waterways in accordance with the conditions specified in No. 613.
- l)* Channels 15 and 17 may also be used for on-board communications provided the effective radiated power does not exceed 1 W, and subject to the national regulations of the administration concerned when these channels are used in its territorial waters. (However, see Recommendation 305).
- m)* This guardband will apply after 1 January 1983 (see Nos. 3033, 3033.1, 4393 and 4393.1).
- n)* Within the European Maritime area and in Canada these frequencies (channels 10, 67, 73) may also be used, if so required, by the individual administrations concerned, for communication between ship stations, aircraft stations and participating land stations engaged in coordinated search and rescue and anti-pollution operations in local areas, under the conditions specified in Nos. 4144, 4148, 4149, 4150, 4151, 4152 and 4153.
- o)* The preferred first three frequencies for the purpose indicated in Note c) are 156-450 MHz (channel 09), 156-525 MHz (channel 70) and 156-625 MHz (channel 72).

- p)* These channels (68, 69, 11, 71, 12, 13, 14, 74, 79, 80) are the preferred channels for the ship movement service. They may, however, be assigned to the port operations service until required for the ship movement service if this should prove to be necessary in any specific area.
- q)* This channel (86) may be used as a calling channel if such a channel is required in an automatic radiotelephone system when such a system is recommended by the CCIR.

**Technical Characteristics for Transmitters and Receivers
Used in the Maritime Mobile Service
in the Band 156 — 174 MHz**

(See Articles 59 and 60, Appendix 18 and Resolution 308)

1. Only frequency modulation with a pre-emphasis of 6 dB/octave (phase modulation) shall be used.
 2. The frequency deviation corresponding to 100% modulation shall approach ± 5 kHz as nearly as practicable. In no event shall the frequency deviation exceed ± 5 kHz.
 3. The frequency tolerance for coast and ship stations shall be 10 parts in 10^6 (see note 27) to Appendix 7).
 4. When transmitting on any of the frequencies designated in the Table in Appendix 18, the emission of each station shall be vertically polarized at the source.
 5. The audio-frequency band shall be limited to 3 000 Hz.
 6. It shall be possible to reduce, readily, the mean power of a ship station transmitter to 1 W or less.
-

**Characteristics of Equipment Used for
On-Board Communication in
the 450 — 470 MHz Bands**

(See Nos. 669 and 670)

1. The equipment should be fitted with sufficient channels for satisfactory operation in the area of intended use.

2. The effective radiated power shall be limited to the minimum required for satisfactory operation, but shall in no case exceed 2 W. Wherever practicable the equipment should be fitted with a suitable device to reduce readily the output power by at least 10 dB.

3. In the case of equipment installed at a fixed point on the ship, the height of its antenna shall not be more than 3.5 metres above the level of the bridge.

4. Only frequency modulation with a pre-emphasis of 6 dB/octave (phase modulation) shall be used.

5. The frequency deviation shall not exceed ± 5 kHz.

6. The frequency tolerance shall be 5 parts in 10^6 .

7. The audio-frequency band shall be limited to 3 000 Hz.

8. Control, telemetry and other non-voice signals shall be coded in such a manner as to minimize the possibility of false response to interfering signals.

9. If the use of a repeater station is required on board a ship, the following frequency pairs shall be used (see also No. 670):

457.525 MHz and 467.525 MHz

457.550 MHz and 467.550 MHz

457.575 MHz and 467.575 MHz

Reports of International Monitoring of Emissions

(See Article 20)

Section I. Reports Concerning Stations in the Terrestrial Radiocommunication Services

1. Reports of measurements of frequency should contain as much as necessary of the following information:

- a) identification of the monitoring station (administration or organization, and location);
- b) date of measurement;
- c) time of measurement (UTC);
- d) call sign or other means of identification, or both, of the station monitored;
- e) class of emission ¹;
- f) assigned frequency or reference frequency;
- g) frequency tolerance;
- h) measured frequency;
- i) accuracy of measurement;
- j) departure from assigned or reference frequency;

¹ The class of emission shall contain the basic characteristics listed in Article 4 and, if possible, the additional characteristics listed in Appendix 6. If any characteristic cannot be determined, indicate the unknown symbol with a dash. However, if a station is not able to identify unambiguously whether the modulation is frequency or phase modulation, indicate frequency modulation (F).

- k) additional information (e.g. period covered by measurement, drift of measured frequency during that period, quality of received signal and conditions of reception);
- l) remarks.

2. Reports of measurements of field strength or power flux-density should contain as much as necessary of the following information:

- a) identification of the monitoring station (administration or organization, and location);
- b) date of measurement;
- c) time of measurement (UTC);
- d) call sign or other means of identification, or both, of the station monitored;
- e) class of emission ¹;
- f) assigned frequency;
- g) value of measured field strength or power flux-density;
- h) estimated accuracy of measurement;
- i) value of the measured component of polarization;
- j) other elements or characteristics of the measurement;
- k) remarks.

3. Reports of observations of spectrum occupancy should as far as practicable be made in the form recommended by the IFRB and contain if possible the following information:

- a) identification of the monitoring station (administration or organization, and location);
- b) date of measurement;

¹ See page AP21-1.

- c)* time of measurement (UTC);
- d)* call sign or other means of identification, or both, of the station monitored;
- e)* class of emission ¹;
- f)* class of station and nature of service;
- g)* measured frequency;
- h)* period during which the emission was heard or recorded;
- i)* value of measured field strength or power flux-density or signal strength according to the QSA scale;
- j)* occupied bandwidth (indicate whether measured or estimated, or indicate the necessary bandwidth notified to the IFRB);
- k)* information as to the locality or area in which reception is intended;
- l)* remarks.

4. In providing these data, the symbols contained in the Radio Regulations or in the Preface to the International Frequency List should be used as far as possible.

Section II. Reports Concerning Stations in the Space Radiocommunication Services

1. Reports of measurements of frequency should contain as much as necessary of the following information:

- a)* identification of the monitoring station (administration or organization, and location);
- b)* date of measurement;
- c)* time of measurement (UTC);

¹ See page AP21-1.

- d)* call sign or other means of identification, or both, of the station monitored;
- e)* class of emission ¹;
- f)* assigned frequency or reference frequency;
- g)* frequency tolerance;
- h)* measured frequency;
- i)* accuracy of measurement;
- j)* departure from assigned or reference frequency;
- k)* additional information (e.g. period covered by measurement, drift of measured frequency during that period, quality of received signal and conditions of reception);
- l)* remarks.

2. Reports of measurements of field strength or power flux-density should contain as much as necessary of the following information:

- a)* identification of the monitoring station (administration or organization, and location);
- b)* date of measurement;
- c)* time of measurement (UTC);
- d)* call sign or other means of identification, or both, of the station monitored;
- e)* class of emission ¹;
- f)* assigned frequency;
- g)* value of measured field strength or power flux-density;

¹ See page AP21-1.

- h)* estimated accuracy of measurement;
- i)* value of the measured component of polarization;
- j)* other elements or characteristics of the measurement;
- k)* remarks.

3. Reports of observations of spectrum occupancy should as far as practicable be made in the form recommended by the IFRB and contain if possible the following information:

3.1 Reports of observations concerning emissions of space stations:

- a)* identification of the monitoring station (administration or organization, and location);
- b)* date of measurement;
- c)* time of measurement (UTC);
- d)* call sign or other means of identification, or both, of the station monitored;
- e)* class of emission ¹;
- f)* class of station and nature of service;
- g)* measured frequency;
- h)* period during which the emission was observed or recorded;
- i)* value of measured field strength or power flux-density or signal strength according to the QSA scale;
- j)* occupied bandwidth (indicate whether measured or estimated, or indicate the necessary bandwidth notified to the IFRB);
- k)* observed polarization;
- l)* information on orbit;

¹ See page AP21-1.

- m)* information as to the locality or area in which reception is intended, if known;
- n)* remarks.

3.2 Reports of observations concerning emissions of earth stations:

- a)* identification of the monitoring station (administration or organization, and location);
- b)* date of measurement;
- c)* time of measurement (UTC);
- d)* call sign or other means of identification, or both, of the station monitored;
- e)* class of emission ¹;
- f)* class of station and nature of service;
- g)* measured frequency;
- h)* period during which the emission was observed or recorded;
- i)* value of measured field strength or power flux-density or signal strength according to the QSA scale;
- j)* occupied bandwidth (indicate whether measured or estimated, or indicate the necessary bandwidth notified to the IFRB);
- k)* information as to the orbital position where reception is intended;
- l)* remarks.

4. In providing these data, the symbols contained in the Radio Regulations or in the Preface to the International Frequency List should be used as far as possible.

¹ See page AP21-1.

Report of an Irregularity or of an Infringement of the Convention or the Radio Regulations ¹

(See Articles 21 and 22)

Particulars concerning the station infringing the Regulations:

- 1. Name ¹ if known (in BLOCK letters)
- 2. Call sign or other identification (in BLOCK letters)
- 3. Nationality, if known
- 4. Frequency used (kHz, MHz, GHz or THz)
- 5. Class of emission ²
- 6. Class of station and nature of service, if known
- 7. Location ^{3, 4, 5}

Particulars concerning the station, the centralizing office or inspection service reporting the irregularity or infringement:

- 8. Name (in BLOCK letters)
- 9. Call sign or other identification (in BLOCK letters)
- 10. Nationality
- 11. Location ^{3, 4}

Particulars of the irregularity or infringement:

- 12. Name ⁶ of the station (in BLOCK letters) in communication with the station committing the irregularity or infringement
- 13. Call sign or other identification (in BLOCK letters) of the station in communication with the station committing the irregularity or infringement
- 14. Date and time ⁷
- 15. Nature of the irregularity or infringement ⁸
- 16. Extracts from ship log or other information supporting the report

Particulars concerning the transmitting station interfered with ⁹:

- 17. Name of the station (in BLOCK letters)
- 18. Call sign or other identification (in BLOCK letters)
- 19. Frequency assigned (kHz, MHz, GHz or THz)
- 20. Frequency measured at the time of the interference
- 21. Class of emission ² and bandwidth (indicate whether measured or estimated, or indicate the necessary bandwidth notified to the IFRB)
- 22. Receiving location ^{3, 4} (in BLOCK letters) where the interference was experienced

23. Certificate:
I certify that the foregoing report represents, to the best of my knowledge, a complete and accurate account of what took place.

Signatures¹⁰ Date:
.

¹⁰ This report shall be signed by the operator who has reported the infringement and countersigned by the Master of the ship or person responsible for the aircraft, or the officer in charge of the station in the case of an infringement reported by a station of the mobile service. When the report originates from a centralizing office or from an inspection service, it shall be signed by the head of that office or service and countersigned by an official of the administration sending it.

Instructions for filling in this form

¹ Each report shall refer to only one station (see note 6). If it is forwarded as a letter, it shall be in duplicate, and whenever practicable should be typewritten. It may also be forwarded as a telegram.

² The class of emission shall contain the basic characteristics listed in Article 4 and, if possible, the additional characteristics listed in Appendix 6. If any characteristic cannot be determined, indicate the unknown symbol with a dash. However, if a station is not able to identify unambiguously whether the modulation is frequency or phase modulation, indicate frequency modulation (F).

³ In the case of land, fixed, or earth stations, the position shall be expressed in latitude and longitude (Greenwich). If the position cannot be furnished, the area of operation should be indicated.

⁴ In the case of ship or aircraft stations, the position shall be expressed either in latitude and longitude (Greenwich) or by a true bearing in degrees and distance in nautical miles, or in kilometres, from some well known place. If the position cannot be furnished, the area of operation should be indicated.

⁵ Where space stations are concerned, information shall be furnished on the orbit.

⁶ If both communicating stations infringe the Regulations, a separate report shall be made for each of these stations.

⁷ The time must be expressed as Coordinated Universal Time (UTC) by a group of four figures (0000 to 2359). If the infringement is prolonged or repeated, the dates and times shall be shown.

⁸ A separate report is required for each irregularity or infringement, unless they are repeated within a short time.

⁹ This information is to be given only in case of a complaint about interference.

For use of the administration only

1. Company controlling the installation of the station against which complaint is made
2. Name of the operator of the station held responsible for the irregularity or infringement of the Regulations
3. Action taken

MOD AP8

APPENDIX 23

Report of Harmful Interference

(See Article 22)

Particulars concerning the station causing the interference:

- a. Name, call sign or other means of identification
- b. Frequency measured Date:
Time (UTC):
- c. Class of emission ¹
- d. Bandwidth (indicate whether measured or estimated)
- e. Measured field strength or power flux-density ²
Date:
Time (UTC):
- f. Observed polarization
- g. Class of station and nature of service
- h. Location/position/area/bearing (QTE)
- i. Location of the facility which made the above measurements

Particulars concerning the transmitting station interfered with:

- j. Name, call sign or other means of identification
- k. Frequency assigned

¹ The class of emission shall contain the basic characteristics listed in Article 4 and, if possible, the additional characteristics listed in Appendix 6. If any characteristic cannot be determined, indicate the unknown symbol with a dash. However, if a station is not able to identify unambiguously whether the modulation is frequency or phase modulation, indicate frequency modulation (F).

² When measurements are not available, signal strengths according to the QSA scale should be provided.

- l. Frequency measured Date:
Time (UTC):
- m. Class of emission ¹
- n. Bandwidth (indicate whether measured or estimated, or indicate the necessary bandwidth notified to the IFRB)
- o. Location/position/area
- p. Location of the facility which made the above measurements

Particulars furnished by the receiving station experiencing the interference:

- q. Name of station
- r. Location/position/area
- s. Dates and times (UTC) of occurrence of harmful interference
- t. Bearings (QTE) or other particulars
- u. Nature of interference
- v. Field strength or power flux-density of the wanted emission at the receiving station experiencing the interference ²
Date:
Time (UTC):
- w. Polarization of the receiving antenna or observed polarization
- x. Action requested

Note: For convenience and brevity, telegraphic reports shall be in the format above, using the letters in the order listed in lieu of the explanatory titles, but only those letters for which information is provided should be used. However, sufficient information shall be provided to the administration receiving the report, so that an appropriate investigation can be conducted.

For notes, see page AP23-1.

NOC AP16

APPENDIX 24

Phonetic Alphabet and Figure Code

(See Articles 37 and 65)

1. When it is necessary to spell out call signs, service abbreviations and words, the following letter spelling table shall be used:

Letter to be transmitted	Word to be used	Spoken as *
A	Alfa	<u>AL</u> FAH
B	Bravo	<u>BRAH</u> VOH
C	Charlie	<u>CHAR</u> LEE or <u>SHAR</u> LEE
D	Delta	<u>DELL</u> TAH
E	Echo	<u>ECK</u> OH
F	Foxtrot	<u>FOKS</u> TROT
G	Golf	GOLF
H	Hotel	HOH <u>TELL</u>
I	India	<u>IN</u> DEE AH
J	Juliett	<u>JEW</u> LEE <u>ETT</u>
K	Kilo	<u>KEY</u> LOH
L	Lima	<u>LEE</u> MAH

* The syllables to be emphasized are underlined.

Letter to be transmitted	Word to be used	Spoken as *
M	Mike	MIKE
N	November	NO <u>VEM</u> BER
O	Oscar	<u>OSS</u> CAH
P	Papa	PAH <u>PAH</u>
Q	Quebec	KEH <u>BECK</u>
R	Romeo	<u>ROW</u> ME OH
S	Sierra	SEE <u>AIR</u> RAH
T	Tango	<u>TANG</u> GO

APPENDIX 25 Mar2

**Frequency Allotment Plan for Coast Radiotelephone Stations
Operating in the Exclusive Maritime Mobile Bands
Between 4 000 and 23 000 kHz**

(See Nos. 4198 and 4212 of the
Radio Regulations and Appendix 16)

3. However, stations of the same country, when communicating between themselves, may use any other table recognized by their administration.

Note by the General Secretariat: This appendix is not published in the present Final Acts.

* Each syllable should be equally emphasized.

AP26-1

NOC AP26

APPENDIX 26

Aer

**Frequency Allotment Plan for the Aeronautical Mobile Service
and Related Information**

This Appendix to the Radio Regulations (Geneva, 1959) was published as a separate booklet. As far as the Aeronautical Mobile (R) Service is concerned, a revised Plan was adopted in 1966 by the Aeronautical Conference: it is contained in Appendix 27. However, the Plan adopted in 1959 for the Aeronautical Mobile (OR) Service remains in force, so that for this service reference should be made to Appendix 26. Copies of Appendix 26 (1959 edition) are obtainable from the General Secretariat of the ITU.

NOC AP27

APPENDIX 27 *

Aer

MOD AP27 Aer2 *

APPENDIX 27 Aer2 *

**MOD Frequency Allotment Plan for the Aeronautical Mobile (R) Service
and Related Information between 2 850 kHz and 17 970 kHz**

**Frequency Allotment Plan for the Aeronautical Mobile (R)
Service and Related Information Between 2 850 kHz and 22 000 kHz**

This Appendix is published as a separate booklet. It contains provisions relating exclusively to the Aeronautical Mobile (R) Service, which have replaced the provisions relating to this service that are contained in Appendix 26. Reference should therefore be made exclusively to Appendix 27 as far as the Aeronautical Mobile (R) Service is concerned.

* Up to 31.1.1983 at 2359 UTC, then replaced by the Appendix 27 Aer2.

* See Annex to Resolution 404.

Method for the Determination of the Coordination Area Around an Earth Station in Frequency Bands Between 1 GHz and 40 GHz Shared Between Space and Terrestrial Radiocommunication Services

1. *Objectives*

The coordination area (see No. 165) is determined by calculating, in all directions of azimuth from the earth station, the coordination distances (see No. 167) and drawing to scale on an appropriate map the coordination contour (see No. 166).

It must be emphasized that the presence or installation of a terrestrial station within the coordination area of an earth station would not necessarily preclude the successful operation of either the earth station or that terrestrial station, since the method is based on the most unfavourable case assumptions as regards interference.

For the determination of the coordination area two cases may have to be considered:

- 1) for the earth station when it is transmitting (and hence capable of interfering with terrestrial stations);
- 2) for the earth station when it is receiving (and hence capable of being interfered with by terrestrial stations).

Where an earth station is intended to transmit a variety of classes of emissions, the earth station parameters to be used in the determination of the coordination contour shall be those which lead to the greatest coordination distances, for each earth station antenna beam and in each allocated frequency band which the earth station proposes to share with the terrestrial services.

Where an earth station is intended to receive a variety of classes of emissions, the earth station parameters to be used in the determination of the coordination contour shall be those which lead to the greatest coordination distances, for each earth station antenna beam and in each allocated

frequency band which the earth station proposes to share with the terrestrial services, except in the case where the administration responsible for the earth station determines that a smaller coordination contour would adequately protect all the transmissions intended to be received by the earth station. When the determination of such a smaller coordination contour is based on a departure from the procedure of this Appendix, the notifying administration shall indicate, in detail, the nature of such departure.

If subsequently an administration decides to protect its receiving earth station through notification of a coordination contour which is greater than the one it had notified under a departure from the method of this Appendix, it must re-coordinate the earth station. Any resulting greater protection shall be effective from the date of publication of the notice in Part II of the IFRB weekly circular.

This Appendix provides methods which are suitable for either graphical or computer determination of the coordination area.

It is suggested to draw, together with the coordination contour, auxiliary contours based on less unfavourable assumptions than those chosen for the determination of the coordination contour. These auxiliary contours may be used during subsequent negotiations between the administrations concerned with a view to eliminating from the discussions (without the need for more precise calculations) the case of certain existing or planned stations located within the coordination area. The determination and use of these auxiliary contours is explained in Annex I to this Appendix.

2. *General considerations*

2.1 *Concept of minimum permissible transmission loss*

The determination of coordination distance, as the distance from an earth station beyond which interference from or to a terrestrial station may be considered to be negligible, is based on the premise that the attenuation of an unwanted signal is a monotonically increasing function of distance.

The amount of attenuation required between an interfering transmitter and an interfered-with receiver is given by the minimum permissible transmission loss (dB) for $p\%$ of the time, a value which must be exceeded by the predicted transmission loss for $(100 - p)\%$ of the time.

$$L(p) = P_{t'} - P_r(p) \quad (1)$$

where:

$P_{t'}$ * : maximum available transmitting power level (dBW) in the reference bandwidth at the input to the antenna of an interfering station;

$P_r(p)$: permissible level of an interfering emission (dBW) in the reference bandwidth, to be exceeded for no more than $p\%$ of the time at the output of the receiving antenna of an interfered-with station, where the interfering emission originates from a single source.

$P_{t'}$ and $P_r(p)$ are defined for the same radio frequency bandwidth (reference bandwidth) and $L(p)$ and $P_r(p)$ for the same percentage of the time, dictated by the performance criteria of the interfered-with system.

For the small percentages of the time which are of interest here, it is necessary to distinguish between two significantly different attenuation mechanisms:

- attenuation of signals subject to tropospheric propagation via near-great circle paths; mode (1) see § 3;
- attenuation of signals subject to scatter due to hydrometeors; mode (2) see § 4.

* Primes refer to the parameters associated with the interfering station.

2.2 Concept of minimum permissible basic transmission loss

In the case of propagation mode (1) the transmission loss is defined in terms of separable parameters, viz.: a basic transmission loss, (i.e. attenuation between isotropic antennae) and the effective antenna gains at either end of an interference path. The minimum permissible basic transmission loss may then be expressed as:

$$L_b(p) = P_{t'} + G_{t'} + G_r - P_r(p) \quad (2)$$

where:

$L_b(p)$: minimum permissible basic transmission loss (dB) for $p\%$ of the time; this value must be exceeded by the predicted basic transmission loss for $(100 - p)\%$ of the time;

$G_{t'}$: gain (dB relative to isotropic) of the transmitting antenna of the interfering station. If the interfering station is an earth station, this is the antenna gain towards the physical horizon on the azimuth considered; in the case of a terrestrial station, the maximum antenna gain is to be used;

G_r : gain (dB relative to isotropic) of the receiving antenna of the interfered-with station. If the interfered-with station is an earth station, this is the gain towards the physical horizon on the azimuth considered; in the case of a terrestrial station, the maximum antenna gain is to be used.

Annex II provides numerical and graphical methods to determine the angle between the earth station antenna main beam and the physical horizon, and also the horizon antenna gain, as functions of azimuth angle.

When considering non-geostationary satellites, $G_{t'}$ or G_r (whichever pertains to the earth station antenna) is variable with time. In such cases,

an equivalent time-invariant earth station antenna gain is to be used *. This equivalent gain is either 10 dB less than the maximum horizon antenna gain or is that value of horizon antenna gain exceeded for no more than 10% of the time (if available), whichever is the greater.

2.3 Derivation and tabulation of interference parameters

2.3.1 Permissible level of the interfering emission

The permissible level of the interfering emission (dBW) in the reference bandwidth, to be exceeded for no more than $p\%$ of the time at the output of the receiving antenna of a station subject to interference, from each source of interference, is given by the general formula below:

$$P_r(p) = 10 \log (kT_e B) + J + M(p) - W \quad (3)$$

where:

$$M(p) \equiv M(p_0/n) = M_0(p_0) \quad (4)$$

with:

- k : Boltzmann's constant, 1.38×10^{-23} J/K;
- T_e : thermal noise temperature of the receiving system (K), at the output of the receiving antenna (see *Note 1*);
- B : reference bandwidth (Hz) (bandwidth, of the interfered-with system, over which the power of the interfering emission can be averaged);

J : ratio (dB) of the permissible long term (20% of the time) interfering emission power to the thermal noise power of the receiving system, referred to the output terminals of the receiving antenna (see *Note 2*);

p_0 : percentage of the time during which the interference from all sources may exceed the permissible value;

n : number of expected entries of interference, assumed to be uncorrelated;

p : percentage of the time during which the interference from one source may exceed the permissible value; since the entries of interference are not likely to occur simultaneously: $p = p_0/n$;

$M_0(p_0)$: ratio (dB) between the permissible powers of the interfering emission, during $p_0\%$ and 20% of the time, respectively, for all entries of interference (see *Note 3*);

$M(p)$: ratio (dB) between the permissible powers of the interfering emission during $p\%$ of the time for one entry of interference, and during 20% of the time for all entries of interference;

W : equivalence factor (dB) relating interference from interfering emissions to that caused by the introduction of additional thermal noise of equal power in the reference bandwidth. It is positive when the interfering emissions would cause more degradation than thermal noise (see *Note 4*).

Tables I and II list values for the above parameters.

In certain cases, an administration may have reason to believe that, for its specific earth station, a departure from the values associated with the earth station, as listed in Table II, may be justified. Attention is drawn

* This equivalent antenna gain is not to be used when the earth station antenna points in the same direction for appreciable periods of time (e.g. when working to space probes or to satellites which are almost geostationary).

to the fact that for specific systems the bandwidths B or, as for instance in the case of demand assignment systems, the percentages of the time p and p_0 may have to be changed from the values given in Table II. For further information see § 2.3.2.

Note 1: The noise temperature, in kelvins, of the receiving system, referred to the output terminals of the receiving antenna, may be determined from:

$$T_e = T_a + (e - 1) 290 + eT_r \quad (5a)$$

where:

T_a : noise temperature (K) contributed by the receiving antenna;

e : numerical loss in the transmission line (e.g. a waveguide) between antenna and receiver front end;

T_r : noise temperature (K) of the receiver front end, including all successive stages, referred to the front end input.

For radio-relay receivers and where the waveguide loss of a receiving earth station is not known, a value of $e = 1.0$ is to be used.

Note 2: The factor J (dB) is defined as the ratio of total permissible long term (20% of the time) power of interfering emissions in the system, to the long term thermal radio frequency noise power in a single receiver. In the computation of this factor, the interfering emission is considered to have a flat power spectral density, its actual spectrum shape being taken into account by the factor W (see below). For example, in a 50-hop terrestrial hypothetical reference circuit, the total allowable additive interference power is 1 000 pW0p (CCIR Recommendation 357-3) and the mean thermal noise power in a single hop may be assumed to be 25 pW0p. Therefore, since in a frequency-division multiplex/frequency modulation (FDM/FM) system the ratio of a flat interfering noise power to the thermal noise power in the same reference band is the same before and after demodulation, J is given by the ratio 1 000/25 expressed in dB, i.e. $J = 16$ dB. In a fixed-satellite service system, the total allowable interference power is also 1 000 pW0p (CCIR Recommendation 356-4), but the thermal noise contribution of the down-link is not likely to exceed 7 000 pW0p, hence $J \geq -8.5$ dB.

In digital systems interference is measured and prescribed in terms of the bit error rate or its permissible increase. While the bit error rate increase is additive in a reference circuit comprising tandem links, the radio frequency power of interfering emissions giving rise to such bit error rate increase is not additive, because bit error rate is not a linear function of the level of the radio frequency power of interfering emissions. Thus, it may be necessary to protect each receiver individually. For digital radio-relay systems operating above 10 GHz, and for all digital satellite systems, the long term interference power may be of the same order of magnitude as the long term thermal noise, hence $J = 0$ dB. For digital radio-relay systems operating below 10 GHz, long term interference power should not decrease the receiver fade margin by more than 1 dB. Thus the long term interference power should be about 6 dB below the thermal noise power and hence $J = -6$ dB.

Note 3: $M_0(p_0)$ (dB) is the "interference margin" between the short term ($p_0\%$) and the long term (20%) allowable powers of an interfering emission.

For analogue radio-relay and fixed-satellite systems in bands between 1 GHz and 15 GHz, this is equal to the ratio (dB) between 50 000 and 1 000 pW0p (17 dB).

In the case of digital systems, system performance at frequencies above 10 GHz can, in most areas of the world, usefully be defined as the percentage of the time p_0 for which the wanted signal is allowed to drop below its operating threshold, defined by a given bit error rate. During non-faded operation of the system, the desired signal will exceed its threshold level by some margin M_s which depends on the rain climate in which the station operates. The greater this margin, the greater the enhancement of the interfering emission which would degrade the system to threshold performance. As a first order estimate it may be assumed that, for small percentages of the time (of the order of 0.001% to 0.003%), the level of interfering emissions may be allowed to equal the thermal noise which exists at the demodulator input during faded conditions. Thus, M_0 in Tables I and II may, for digital systems operating above 10 GHz, be assumed to be equal to the fade margin M_s of the system. For digital radio-relay systems

operating below 10 GHz it is assumed that the short term power of an interfering emission can be allowed to exceed the long term power of the interfering emission by an amount equal to the fade margin of the system minus J , i.e. 41 dB, where $J = -6$ dB.

Note 4: The factor W (dB) is the ratio of radio frequency thermal noise power to the power of an interfering emission in the reference bandwidth when both produce the same interference after demodulation (e.g. in a FDM/FM system it would be expressed for equal voice channel performance; in a digital system it would be expressed for equal bit error probabilities). For FM signals, it is defined as follows:

$$W = 10 \log \left\{ \frac{\text{Interference power in the receiving system after demodulation}}{\text{Thermal noise power in the receiving system after demodulation}} \times \frac{\text{Thermal noise power at the output of the receiving antenna in the reference bandwidth}}{\text{Power of the interfering emission at the radio frequency in the reference bandwidth, at the output of the receiving antenna}} \right\} \quad (5b)$$

The factor W depends on the characteristics of the wanted and the interfering signals. To avoid the need for considering a wide range of characteristics, upper limit values were determined for the factor W . When the wanted signal uses frequency modulation with r.m.s. modulation indices which are greater than unity, W is not higher than 4 dB. In such cases, a conservative figure of 4 dB will be used for the factor W in (3), regardless of the characteristics of the interfering signal. For low-index FDM/FM systems a very small reference bandwidth (4 kHz) implies values of W not greater than 0 dB. In such cases, a conservative figure of 0 dB will be used for W in (3), regardless of the characteristics of the interfering signal.

When the wanted signal is digital, W is usually equal to or less than 0 dB, regardless of the characteristics of the interfering signal.

2.3.2 Coordination parameters for very narrow-band transmissions (receiving earth station)

2.3.2.1 General

In the case of an earth station which receives both broad-band and very narrow-band transmissions (e.g. single channel per carrier (SCPC) transmissions) it may be desirable to draw two separate coordination contours: one for the narrow-band transmissions and one for broad-band transmissions, giving the specific sections of frequency bands used for very narrow-band transmissions.

2.3.2.2 Pre-assigned narrow-band transmissions

For such transmissions, it is appropriate to change the value of the reference bandwidth to the value of the bandwidth occupied by one such narrow-band transmission.

2.3.2.3 Demand-assigned narrow-band transmissions

For such transmissions, in addition, it may be appropriate to take into account the reduced probability that a particular frequency channel will be suffering interference at the time when it is actually selected for use at an earth station.

Administrations shall furnish all relevant technical data used in the determination of the coordination contour(s) for such transmissions.

3. Determination of coordination distance for propagation mode (1) – Great circle propagation mechanisms

3.1 Radio-climatic zones

In the calculation of coordination distance for propagation mode (1), the world is divided into three basic radio-climatic zones termed Zones A, B and C. These Zones are defined as follows:

Zone A: Entirely land.

Zone B: Seas, oceans and substantial bodies of inland water (as a criterion of a substantial body of water, one which can encompass a circle of diameter 100 km) at latitudes greater than 23°30' N or S, but excepting the Black Sea and the Mediterranean.

Zone C: Seas, oceans and substantial bodies of inland water (as a criterion of a substantial body of water, one which can encompass a circle of diameter 100 km) at latitudes less than 23°30' N or S, and the Black Sea and the Mediterranean.

3.2 *Calculation of coordination distance for paths within a single radio-climatic zone*

3.2.1 *General*

Equation (2) provides the value of minimum permissible basic transmission loss $L_b(p)$ for $p\%$ of the time. From this minimum permissible basic transmission loss, the coordination distance in each radio-climatic zone is derived using either of two alternative methods. The first method, described in § 3.2.2, is a numerical method comprising several mathematical equations, and is intended principally for use with the aid of a computer. The second method is a graphical method and is described in § 3.2.3.

Where the distance derived in § 3.2.2 or § 3.2.3 lies entirely within the boundary of the radio-climatic zone appropriate to the earth station, that distance is taken as the actual coordination distance for propagation mode (1). If the distance extends beyond the boundary of one radio-climatic zone, the overall coordination distance is obtained using the method given in § 3.3.

3.2.2 *Numerical method*

The minimum permissible basic transmission loss is related to coordination distance by the following expression:

$$L_b(p) = A_0 + \beta d_1 + A_h \tag{6}$$

in which:

$$A_0 = 120 + 20 \log f \text{ (dB)}$$

β : rate of attenuation (dB/km)

d_1 : coordination distance for propagation mode (1) (km)

A_h : horizon angle correction (dB)

f : frequency (GHz)

A_h is given by:

$$A_h = 20 \log (1 + 4.5 f^{1/2} \epsilon) + f^{1/2} \epsilon \quad \text{for } \epsilon > 0^\circ \tag{7a} *$$

$$A_h = 8 \epsilon \quad \text{for } -0.5^\circ \leq \epsilon \leq 0^\circ \tag{7b}$$

$$A_h = -4 \quad \text{for } \epsilon \leq -0.5^\circ \tag{7c}$$

in which ϵ = horizon angle ** (degrees)

From equation (6) the coordination distance d_1 may be found as follows:

$$d_1 = (L_b(p) - A_0 - A_h) / \beta \tag{8}$$

The value of β depends on the radio-climatic zone and the percentage of time p , and is the sum of three components:

$$\beta = \beta_z + \beta_v + \beta_o \tag{9}$$

* Equation (7a) and thus Fig. 1 should be used with caution at frequencies higher than about 20 GHz or for horizon angles above 5° until further studies have been completed by the CCIR in accordance with Resolution 60.

** Horizon angle is defined here as the angle viewed from the centre of the earth station antenna, between the horizontal plane and a ray that grazes the visible physical horizon in the direction concerned.

in which :

β_z : rate of attenuation (dB/km) due to all effects except atmospheric gases

β_v : rate of attenuation (dB/km) due to atmospheric water vapour

β_o : rate of attenuation (dB/km) due to oxygen

β_z depends on the radio-climatic zone, frequency and the percentage of time as follows:

for Zone A,

$$\beta_{zA} = 0.154 (1 + 3.05 \log f)^{0.4} (0.9028 + 0.0486 \log p)^2 \quad (10)$$

for Zones B and C,

$$\beta_{zB} = \beta_{zC} = (0.272 + 0.047 \log p)^2 \quad (11)$$

β_v depends on the frequency and the density of water vapour in the air as follows (β_v may be neglected when $f < 15$ GHz):

$$\beta_v = 3.5 \times 10^{-4} \rho \left[\frac{1}{\left(1 - \frac{22.3}{f}\right)^2 + \frac{9}{f^2}} + \frac{1}{\left(1 + \frac{22.3}{f}\right)^2} \right] + 3 \times 10^{-6} \rho f^2 \quad (12)$$

where ρ is the water vapour density (g/m^3), and depends on the radio-climatic zone. The following values are to be used:

Zone A, $\rho = 1 \text{ g/m}^3$

Zone B, $\rho = 2 \text{ g/m}^3$

Zone C, $\rho = 5 \text{ g/m}^3$

β_o depends on the frequency as follows:

$$\beta_o = 68 \times 10^{-4} \times f^2 \left\{ \frac{1}{(60 - f)^2} + \frac{1}{(60 + f)^2} + \frac{1}{(f^2 + 0.36)} \right\} \quad (13)$$

Thus the coordination distance in Zone A is derived for the appropriate frequency, percentage of time and horizon angle using equations (7), (8), (9), (10), (12) and (13). Similarly, the coordination distance in Zone B or C is derived using equations (7), (8), (9), (11), (12) and (13).

3.2.3 Graphical method

The equations given in § 3.2.2 have been converted into graphical form, to provide a second method of obtaining coordination distance for propagation mode (1). It is emphasized that the procedure described in this Section is an alternative to that described in § 3.2.2. and each administration should use the method which is considered most convenient.

The minimum permissible basic transmission loss $L_b(p)$ is obtained from equation (2). The "coordination loss", L_1 , is obtained from the minimum permissible basic transmission loss by subtraction of the horizon angle correction A_h :

$$L_1 = L_b(p) - A_h \quad (14)$$

Values for the horizon angle correction are obtained from Fig. 1 for the appropriate frequency and horizon angle *.

The coordination distance in each radio-climatic zone is to be obtained as follows. Taking Zone A first, the coordination distance for 0.01% of the time, $d_A(0.01)$ is obtained with the appropriate value of coordination loss L_1 and frequency from Fig. 2. The Zone A coordination distance for $p\%$ of the time is then obtained by multiplying the distance for 0.01% of the time by the factor Δp_A given in Fig. 3.

$$d_A = d_A(0.01) \times \Delta p_A \quad (15)$$

In a similar manner, the coordination distance in Zone B is obtained using values for $d_B(0.01)$ and Δp_{BC} obtained from Figs. 4 and 3 respectively. The coordination distance in Zone C is obtained using values for $d_C(0.01)$ and Δp_{BC} obtained from Figs. 5 and 3 respectively.

* Horizon angle is defined here as the angle viewed from the centre of the earth station antenna, between the horizontal plane and a ray that grazes the visible physical horizon in the direction concerned.

3.3 Mixed paths

If the distance being calculated extends through more than one radio-climatic zone (mixed path), the prediction is made as follows:

Designating the successive path sections in different zones by use of the suffixes $i, j, k \dots$, it follows that:

$$L_b(p) - A_0 - A_h = \beta_i d_i \quad (16)$$

where β_i is the rate of attenuation in the first zone (i).

Now, in the direction considered, if the value d_i is greater than the distance D_i in the first zone (i), it follows that:

$$L_b(p) - A_0 - A_h - \beta_i D_i = \beta_j d_j \quad (17)$$

and so d_j is found. If the value d_j is greater than the distance D_j of the path in the second zone (j), it can then be stated that:

$$L_b(p) - A_0 - A_h - \beta_i D_i - \beta_j D_j = \beta_k d_k \quad (18)$$

from which d_k may be found. This method may be extended as necessary, and in the case given the total distance d_1 may now be expressed as:

$$d_1 = D_i + D_j + d_k \quad \text{km} \quad (19)$$

Annex III provides examples for the graphical application of this procedure.

3.4 Maximum coordination distance for propagation mode (1)

In the process of determining the coordination distance for propagation mode (1), if values result which exceed the appropriate value given in Fig. 6 or in Table III, the coordination distance for propagation mode (1) shall be the value given in Fig. 6 or in Table III. In the case of mixed paths, the values to be considered are those given for Zones B or C, as appropriate. In the case of mixed paths with more than one segment in Zone A, the total distance in Zone A shall not exceed the value given in Fig. 6 or in Table III for Zone A.

4. Determination of the coordination contour for propagation mode (2) – Scattering from hydrometeors

The determination of the coordination contour for scattering from hydrometeors (rain-scatter) is predicated on a path geometry which is substantially different from that of the great circle propagation mechanisms. As a first approximation, energy is scattered isotropically by rain, so that interference may result for large scattering angles, and for beam intersections away from the great circle path.

4.1 Normalized transmission loss $L_2(0.01)$

To determine the coordination contour associated with rain-scatter it is necessary to calculate a "normalized transmission loss", given by:

$$L_2(0.01) = P_r + \Delta G - P_r(p) - F(p, f) \quad (20)$$

where:

ΔG : difference (dB) between the maximum gain of terrestrial station antennae in the frequency band under investigation and the value of 42 dB. When the earth station is a transmitting station, the values shown in Table I should be used; when it is a receiving station, the values shown in Table II should be used.

$F(p, f)$: correction (dB) to relate the effective percentage of the time p to 0.01% in the frequency band under consideration (see Fig. 7).

All other parameters have been defined in § 2. For terrestrial stations, values of P_r are listed in Table II.

4.2 Rain-climatic zones

The world has been divided into five basic rain-climatic zones numbered 1 to 5 as shown in Fig. 8. The climatic characteristics of these zones for 0.01% of the time are given in Table IV.

4.3 Calculation of the rain-scatter distance d_r

4.3.1 Numerical method

The normalized transmission loss is composed of six terms:

$$L_2(0.01) = A_1 - A_2 + A_3 - A_4 - A_5 + A_6 \quad (21)$$

in which

$$A_1 = 157 + 20 \log d_r - 20 \log f \text{ (dB)} \quad (22)$$

where d_r is the rain-scatter distance (km).

$$A_2 = 26 + 14 \log R - 5.88 \times 10^{-5} (d_r - 40)^2 \text{ (dB)} \quad (23)$$

where R is the surface rainfall rate in mm/h (Table IV). The horizon distance of the terrestrial station is taken to be 40 km.

$$A_3 = 0.005 (f - 10)^{1.7} R^{0.4} \text{ (dB)} \quad \text{for } 10 < f < 40 \text{ GHz} \quad (24a)$$

$$= 0 \text{ (dB)} \quad \text{for } f \leq 10 \text{ GHz} \quad (24b)$$

$$A_4 = 10 \log \left[\frac{2.17}{\gamma \cdot D} \left(1 - 10^{- (\gamma \cdot D)/5} \right) \right] \text{ (dB)} \quad \text{for } f > 5 \text{ GHz} \quad (25a)$$

$$= 0 \text{ (dB)} \quad \text{for } f \leq 5 \text{ GHz} \quad (25b)$$

where D is the diameter of the rain cell in km (Table IV)

and

$$\gamma = 0.008 R (f - 5) \quad \text{for } f > 5 \text{ GHz} \quad (26a)$$

$$= 0 \quad \text{for } f \leq 5 \text{ GHz} \quad (26b)$$

$$A_5 = 10 \log D \text{ (dB)} \quad (27)$$

$$A_6 = d_o \beta_o + d_v \beta_v \quad (28)$$

where

$$d_o = 0.7 d_r + 32 \text{ km} \quad \text{for } d_r < 340 \text{ km} \quad (29a)$$

$$= 270 \text{ km} \quad \text{for } d_r \geq 340 \text{ km} \quad (29b)$$

$$d_v = 0.7 d_r + 32 \text{ km} \quad \text{for } d_r < 240 \text{ km} \quad (30a)$$

$$= 200 \text{ km} \quad \text{for } d_r \geq 240 \text{ km} \quad (30b)$$

β_v is given in (12), where ρ is to be replaced by ρ_m (Table IV).

β_o is given in (13).

Thus, for a given rain-climatic zone the parameters in Table IV are used to calculate the rain-scatter distance d_r by an iterative process.

4.3.2 Graphical method

The equations of § 4.3.1 have been converted into graphical form to give an alternative method of determining rain-scatter distance d_r .

To obtain the rain-scatter distance for rain-climatic Zone 1, the normalized transmission loss, obtained by solving equation (20), is used together with the appropriate frequency in Fig. 9 to yield the rain-scatter distance d_r .

Figs. 10 to 13 show corresponding curves for rain-climatic Zones 2 to 5. In all cases, the rain climate to be chosen is that which corresponds to the location of the earth station.

4.4 Maximum rain-scatter distances

In the process of determining the rain-scatter distance for propagation mode (2), if values result which exceed the appropriate value given in Table V, the rain-scatter distance d_r for propagation mode (2) shall be the value given in that Table.

4.5 Construction of the rain-scatter coordination contour

Due to the peculiar geometry associated with rain-scatter propagation, the location of the centre of the rain-scatter coordination contour does not coincide with the location of the earth station. The distance by which these locations are separated is designated Δd .

The rain-scatter distance d_r , together with the elevation angle ε_s of the main beam of the earth station antenna, are used to determine Δd using the equation:

$$\Delta d = 5.88 \times 10^{-5} (d_r - 40)^2 \cot \varepsilon_s \quad (\text{km}) \quad (31)$$

Alternatively, Δd may be determined from Fig. 14.

The distance Δd is measured on a map of appropriate scale from the earth station location along the azimuth of the main beam of the earth station antenna; a circle of radius d_r is drawn around the point so reached. The circle is the rain-scatter coordination contour.

The rain-scatter coordination distance, to be labelled d_2 , is the distance from the earth station site to the rain-scatter coordination contour on the azimuth under consideration.

4.6 *Absence of mixed path effects*

As the only significant rain-scatter is that occurring in the general area of the earth station, the question of a mixed path does not arise. The rain-climatic zone relevant to the earth station is applied, together with the appropriate maximum rain-scatter distance from Table V.

5. *Minimum value of coordination distance*

If the method for determining d_1 , the coordination distance for propagation mode (1), leads to a result less than 100 km, d_1 shall be taken as equal to 100 km. Similarly, if the method for determining the rain-scatter distance d_r leads to a result less than 100 km, d_r shall be taken as equal to 100 km.

6. *Coordination distance*

On any azimuth, the greater of the coordination distances d_1 or d_2 is the coordination distance to be used for the coordination procedure.

An example of a coordination contour is shown in Fig. 15.

7. *Mobile (except aeronautical mobile) earth stations*

For the purpose of establishing whether prior agreement with another administration under the provisions of Nos. 1108 to 1111 is required, it is necessary to determine the coordination area which would encompass all coordination areas determined for each location within the service area within which operation of the mobile earth stations is proposed.

The preceding method may be used for this purpose by determining the appropriate individual coordination contours for a sufficiently large number of locations within and on the periphery of the proposed service area and by determining from those a composite coordination area which contains all possible individual coordination areas.

8. *Revision of propagation data*

The material contained in sections 3, 4 and 6 and in Annex III of this Appendix is based, directly or indirectly, on propagation data compiled, interpreted and documented in CCIR Reports and Recommendations. Knowledge regarding propagation is subject to change as new data becomes available, and such change may require or strongly suggest corresponding amendments to the propagation-related material in this Appendix.

Resolution 60 provides for the mechanism by which an updating of the propagation-related elements of this Appendix is to be implemented.

TABLE I
Parameters Required for the Determination of Coordination Distance
for a Transmitting Earth Station

Space Radiocommunication Service Designation	Space Operation	Fixed-Satellite Mobile-Satellite	Fixed-Satellite	Space Research	Fixed-Satellite Mobile-Satellite Meteorological-Satellite	Fixed-Satellite ⁽¹⁾	Fixed-Satellite	Fixed-Satellite ⁽⁵⁾	Fixed-Satellite ⁽⁵⁾	Fixed-Satellite ⁽⁵⁾	Fixed-Satellite

(¹) Parameters associated with these services may vary over a rather wide range. Further study is required before representative values become available.

(²) A = analogue modulation; N = digital modulation.

(³) See note (3) in Section 2. $M_0(p_0)$ may assume values between 5 and 40 dB, depending on frequency, rain-climatic zone and system design.

(⁴) These values are estimated for 1 Hz bandwidth and are 30 dB below the total power assumed for emission.

(⁵) These values assume a radio frequency bandwidth of no less than 100 MHz, and are 20 dB below total power assumed per emission.

(⁶) In these bands, the parameters for the terrestrial stations associated with transhorizon systems have been used. If an administration believes that transhorizon systems do not need to be considered the line-of-sight radio-relay parameters associated with the frequency band 3 400 – 4 200 MHz may be used to determine the coordination area in accordance with paragraph 2.3.1.

(⁷) In certain systems in the fixed-satellite service it may be desirable to choose a greater reference bandwidth B when the system requirements indicate that this may be done. However, a greater bandwidth will result in smaller coordination distances and a later decision to reduce the reference bandwidth may require recoordination of the earth station. For narrow-band transmissions the reference bandwidth B should be assumed to be equal to the bandwidth occupied.

(⁸) For the definition of E , see Annex I.

ANNEX I

Determination and Use of Auxiliary Contours

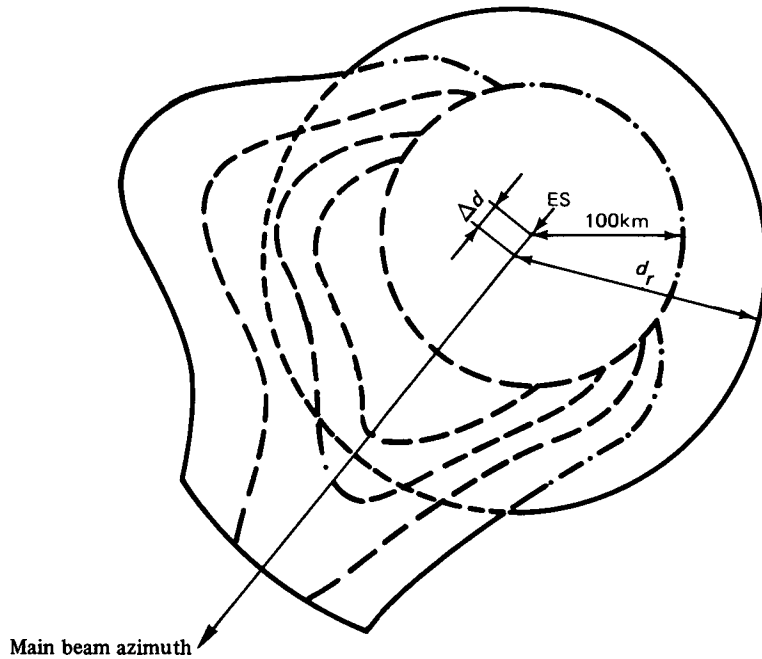

FIGURE 15

Example of a coordination contour

ES: Earth station

- Coordination contour
- · - · - · - Contour for propagation mode (1)
- - - - - Contour for propagation mode (2)
- - - - - Auxiliary contours for propagation mode (1)

Note: If by using the auxiliary contours it is seen that a terrestrial station can be eliminated with respect to propagation mode (1) then:

- if that terrestrial station is outside the contour for propagation mode (2) it may be eliminated from any further consideration;
- if that terrestrial station is within the contour for propagation mode (2) it must still be considered, but for this mode only.

1. Introduction

For great circle propagation mechanisms mode (1) auxiliary contours are of great value in eliminating certain existing or planned terrestrial stations falling within the coordination area without recourse to precise and arduous calculations. The work of both the earth station administration and the affected administrations is therefore eased during subsequent negotiations if these auxiliary contours are supplied.

2. Determination of the auxiliary contours

Two types of contours may be determined, depending on whether the earth station is used for transmission or reception.

2.1 Transmitting earth station

From equation (2) one may isolate the terms $G_r - P_r(p)$ and define an interference sensitivity factor S (dBW) of the interfered-with terrestrial stations:

$$S = G_r - P_r(p) \tag{32}$$

Table I shows values of this factor for various types of terrestrial stations.

The coordination contour is associated with a (maximum) sensitivity factor S and labelled with its value.

The auxiliary contours are determined in the same way as the corresponding coordination contour for propagation mode (1), but using terrestrial station interference sensitivity factor S values (dBW) which are 5, 10, 15, 20 dB, etc. lower than the value (given in Table I) corresponding to the coordination contour.

2.2 Receiving earth station

From equation (2) one may, likewise, isolate the terms $P_{t'} + G_{t'}$ and define the equivalent isotropically radiated power E (dBW) of the interfering terrestrial stations:

$$E = P_{t'} + G_{t'} \quad (33)$$

values for which are listed in Table II.

The coordination contour is associated with a maximum value for E and labelled with this value.

The auxiliary contours are determined in the same way as the corresponding coordination contour, for propagation mode (1), but using terrestrial station e.i.r.p. values E (dBW) which are 5, 10, 15, 20 dB, etc. lower than the value (given in Table II) corresponding to the coordination contour.

3. Use of auxiliary contours

The auxiliary contours, the coordination contour for great circle propagation mode (1) and the coordination contour for rain-scatter mode (2) are all plotted on the same diagram for a given shared band. An illustrative example is given in Fig. 15.

For each terrestrial station situated within the coordination area, a two stage procedure may be applied, one for the great circle propagation mechanism and the other for scattering from hydrometeors.

3.1 Great circle propagation mechanisms mode (1)

If a transmitting terrestrial station is outside the coordination area corresponding to mode (1), it need not be considered further with respect to mode (1).

For each transmitting terrestrial station situated within the coordination area corresponding to mode (1), the e.i.r.p. value in the direction of the earth station is determined. If this value is less than the value

associated with the nearest contour defining an area outside of which the station is situated, the station may be considered not to cause more than a permissible level of interference and therefore may be eliminated from further consideration with respect to mode (1).

For each receiving terrestrial station, the analogous procedure may be applied using the interference sensitivity factor instead of the e.i.r.p. value.

3.2 Elimination of a terrestrial station and rain-scatter propagation mechanism mode (2)

Terrestrial stations eliminated by the above procedure from further consideration with regard to propagation mode (1) need, nevertheless, be further considered with regard to propagation mode (2) when they lie within the rain-scatter coordination area.

ANNEX II

Antenna Gain in the Direction of the Earth Station Horizon for Geostationary Satellites

1. General

The gain component of the earth station antenna in the direction of the physical horizon around an earth station is a function of the angular separation ϕ between the antenna main beam axis and the horizon direction under consideration. Therefore, knowledge of the angle ϕ is required for each azimuth.

The elevation ϵ_s and azimuth α_s of geostationary satellites as seen from an earth station at a latitude ζ are uniquely related. Fig. II-1 shows the possible location arcs of geostationary satellites in a rectangular elevation/azimuth plot, each arc corresponding to an earth station latitude.

Specific relative satellite longitudes may not be known beforehand, but even when they are, the possibility of the addition of a new satellite or the repositioning of an existing one suggests that all or a portion of the applicable arc be considered to hold satellites.

2. *Graphical method for the determination of $\varphi(\alpha)$*

With the correct arc or segment of arc chosen and suitably marked in Fig. II-1, the horizon profile $\varepsilon(\alpha)$ is added to the plot of Fig. II-1, as shown in Fig. II-2, where an example is given for an earth station located at 45° N latitude for a satellite expected to be located somewhere between relative longitudes of 10° E and 45° W.

For each point on the local horizon $\varepsilon(\alpha)$ the smallest distance to the arc is determined and measured on the elevation scale. The example of Fig. II-2 shows the determination of the off-beam angle φ at an azimuth $\alpha (= 210^\circ)$ with a horizontal elevation $\varepsilon (= 4^\circ)$. The measurement of φ yields a value of 26°.

When this is done for all azimuths (in suitable increments, e.g. 5°), a relationship $\varphi(\alpha)$ results.

3. *Numerical method for the determination of $\varphi(\alpha)$*

For this purpose the following equations may be used:

$$\psi = \arccos(\cos \zeta \cdot \cos \delta) \tag{34}$$

$$\alpha'_s = \arccos(\tan \zeta \cdot \cot \psi) \tag{35}$$

$$\alpha_s = \alpha'_s + 180^\circ \text{ for earth stations located in the northern hemisphere and satellites located west of the earth station} \tag{36a}$$

$$\alpha_s = 180^\circ - \alpha'_s \text{ for earth stations located in the northern hemisphere and satellites located east of the earth station} \tag{36b}$$

$$\alpha_s = 360^\circ - \alpha'_s \text{ for earth stations located in the southern hemisphere and satellites located west of the earth station} \tag{36c}$$

$$\alpha_s = \alpha'_s \text{ for earth stations located in the southern hemisphere and satellites located east of the earth station} \tag{36d}$$

$$\varepsilon_s = \arccos \tan \left(\frac{K - \cos \psi}{\sin \psi} \right) - \psi \tag{37}$$

$$\varphi(\alpha) = \arccos [\cos \varepsilon \cdot \cos \varepsilon_s \cdot \cos (\alpha - \alpha_s) + \sin \varepsilon \cdot \sin \varepsilon_s] \tag{38}$$

where:

- ζ : latitude of the earth station
- δ : difference in longitude between the satellite and the earth station
- ψ : great circle arc between the earth station and the sub-satellite point
- α_s : satellite azimuth as seen from the earth station
- ε_s : satellite elevation angle as seen from the earth station
- α : azimuth of the pertinent direction
- ε : elevation angle of the horizon in the pertinent azimuth α
- $\varphi(\alpha)$: angle between the main beam axis and the horizon direction corresponding to the pertinent azimuth α
- K : orbit radius/earth radius, assumed to be 6.62

All arcs mentioned above are in degrees.

4. *Determination of antenna gain*

The relationship $\varphi(\alpha)$ may be used to derive a function for the horizon antenna gain, G (dB) as a function of the azimuth α , by using the actual earth station antenna pattern, or a formula giving a good approximation. For example, in cases where the ratio between the antenna diameter and the wavelength is not less than 100, the following equation should be used:

$$G(\varphi) = G_{\max} - 2.5 \times 10^{-3} \left(\frac{D}{\lambda}\varphi\right)^2 \quad \text{for } 0 < \varphi < \varphi_m \quad (39a)$$

$$G(\varphi) = G_1 \quad \text{for } \varphi_m \leq \varphi < \varphi_r \quad (39b)$$

$$G(\varphi) = 32 - 25 \log \varphi \quad \text{for } \varphi_r \leq \varphi < 48^\circ \quad (39c)$$

$$G(\varphi) = -10 \quad \text{for } 48^\circ \leq \varphi \leq 180^\circ \quad (39d)$$

where: D = antenna diameter } expressed in the same unit
 λ = wavelength

$$G_1 = \text{gain of the first sidelobe} = 2 + 15 \log \frac{D}{\lambda}$$

$$\varphi_m = \frac{20\lambda}{D} \sqrt{G_{\max} - G_1} \text{ (degrees)}$$

$$\varphi_r = 15.85 \left(\frac{D}{\lambda}\right)^{-0.6} \text{ (degrees)}$$

When it is not possible, for antennae with $\frac{D}{\lambda}$ of less than 100, to use the above reference antenna pattern and when neither measured data nor a relevant CCIR Recommendation accepted by the administrations concerned can be used instead, administrations may use the reference diagram as described below:

$$G(\varphi) = G_{\max} - 2.5 \times 10^{-3} \left(\frac{D}{\lambda}\varphi\right)^2 \quad \text{for } 0 < \varphi < \varphi_m \quad (40a)$$

$$G(\varphi) = G_1 \quad \text{for } \varphi_m \leq \varphi < 100 \frac{\lambda}{D} \quad (40b)$$

$$G(\varphi) = 52 - 10 \log \frac{D}{\lambda} - 25 \log \varphi \quad \text{for } 100 \frac{\lambda}{D} \leq \varphi < 48^\circ \quad (40c)$$

$$G(\varphi) = 10 - 10 \log \frac{D}{\lambda} \quad \text{for } 48^\circ \leq \varphi \leq 180^\circ \quad (40d)$$

where: D = antenna diameter } expressed in the same unit
 λ = wavelength

$$G_1 = \text{gain of the first sidelobe} = 2 + 15 \log \frac{D}{\lambda}$$

$$\varphi_m = \frac{20\lambda}{D} \sqrt{G_{\max} - G_1} \text{ (degrees)}$$

The above patterns may be modified as appropriate to achieve a better representation of the actual antenna pattern.

In cases where $\frac{D}{\lambda}$ is not given, it may be estimated from the expression $20 \log \frac{D}{\lambda} \approx G_{\max} - 7.7$, where G_{\max} is the main lobe antenna gain in dB.

ANNEX III

Graphical Method for the Determination of Coordination Distance for Mixed Paths

1. Two zones

The procedure to be followed in the case of a mixed path involving two zones is illustrated by the example shown in Fig. III-1(a). The earth

station is situated in Zone A at a distance of 75 km from Zone B. The graphical presentation described below is particularly useful where more than one boundary between zones may be involved, as in this example.

In the example given below, the coordination loss is assumed to be 180 dB, the frequency 20 GHz, and the percentage of time 0.01%. The procedure is as follows:

- 1.1 determine the distance entirely in Zone A that would give the coordination loss. Mark this distance (in this case it is 160 km) from the origin along the abscissa axis of linear graph paper as indicated by the point A (Fig. III-1(b));
- 1.2 determine the distance entirely in Zone B that would give the same coordination loss. Mark this distance (in this case it is 530 km) from the origin along the ordinate axis of the chart as indicated by the point B;
- 1.3 draw a straight line between points A and B representing these distances from the origin;
- 1.4 starting from the origin, the distance of 75 km from the earth station to Zone B is set off along the abscissa axis of the chart as indicated by the point A_1 ;
- 1.5 starting from point A_1 the Zone B path length of 150 km is then set off parallel to the ordinate axis of the chart as indicated by the point B_1 ;
- 1.6 the further distance in the next Zone A region is then measured parallel to the abscissa axis from the point B_1 to the point of intersection of the mixed path curve as indicated by X. In Fig. III-1(b), this distance is 40 km;
- 1.7 the coordination distance is the sum of distances $0A_1$, A_1B_1 and B_1X and is equal to:

$$75 + 150 + 40 = 265 \text{ km}$$

2. Three zones

In some special cases, the mixed path involves all three radio-climatic Zones A, B and C. A solution to this problem can be found in adding a third dimension to the procedure to be followed for mixed paths

involving only two zones. Theoretically, it means that the third coordinate has to be determined for a point having coordinates corresponding to the known distances in the first two zones and lying in a plane defined by three points on the axes X, Y and Z, corresponding to distances in Zones A, B and C, respectively, that would give the required basic transmission loss.

In practice, the procedure can be reduced to a simple graphical method shown in Fig. III-2(a) assuming for example a coordination loss (L_1) of 180 dB at a frequency of 20 GHz. It is required to find the coordination distance from the earth station in the direction given in Fig. III-2(a). Here an earth station is situated in Zone A at a distance of 75 km in a given azimuthal direction from Zone B. In the same azimuthal direction Zone B is 150 km long and followed by an unknown portion in Zone C (Fig. III-2(a)).

In this case, the procedure to be applied should be as follows (Fig. III-2(b)):

- 2.1 repeat the same procedure as for mixed paths involving only two zones, given in steps 1.1 to 1.5 above, and continue as follows:
- 2.2 from the point B_1 draw a line parallel to the line AB to intersect the abscissa axis as indicated by the point D;
- 2.3 determine the distance, entirely in Zone C, that would give the coordination loss. Mark this distance (in this case it is 350 km) from the origin along the ordinate axis of the chart as indicated by the length 0C. Draw a straight line between points C and A;
- 2.4 at the point D draw a line parallel to the ordinate axis to intersect the line CA as indicated by X;
- 2.5 the distance between the points D and X, which is the unknown distance in Zone C, is found to be 85 km;
- 2.6 the coordination distance is then the sum of the distances $0A_1$, A_1B_1 , and DX and in this example is equal to:

$$75 + 150 + 85 = 310 \text{ km}$$

**Method of Calculation for Determining if Coordination is
Required Between Geostationary-Satellite Networks
Sharing the Same Frequency Bands**

1. *Introduction*

The method of calculation for determining if coordination is required under provision No. 1060 is based on the concept that the noise temperature of a system subject to interference increases as the level of the interfering emission increases. It can, therefore, be applied irrespective of the modulation characteristics of these satellite networks, and of the precise frequencies used.

In this method, the apparent increase in the equivalent satellite link noise temperature resulting from an interfering emission of a given system is calculated (see § 2 below) and the ratio of this increase to the equivalent satellite link noise temperature, expressed as a percentage, is compared to a threshold value (see § 3 below).

2. *Calculation of the apparent increase in equivalent noise temperature of the satellite link subject to an interfering emission*

Two possible cases are considered:

Case I: wanted and interfering networks share one or more frequency bands, each in the same direction of transmission;

Case II: wanted and interfering networks share one or more frequency bands, each in opposite directions of transmission (bidirectional use).

These two cases cover all relative satellite positions from closely-spaced to near-antipodal positions.

Let A be a satellite link of network R associated with satellite S and A' be a satellite link of network R' associated with satellite S'. The symbols relating to satellite link A' bear primes, those relating to satellite link A do not bear primes.

The parameters are defined as follows (for satellite link A):

- T : the equivalent satellite link noise temperature, referred to the output of the receiving antenna of the earth station (K);
- T_s : the receiving system noise temperature of the space station, referred to the output of the receiving antenna of the space station (K);
- T_e : the receiving system noise temperature of the earth station, referred to the output of the receiving antenna of the earth station (K);
- ΔT_s : apparent increase in the receiving system noise temperature of the satellite S, caused by an interfering emission, referred to the output of the receiving antenna of this satellite (K);
- ΔT_e : apparent increase in the receiving system noise temperature of the earth station e_R , caused by an interfering emission, referred to the output of the receiving antenna of this station (K);
- p_s : maximum power density per Hz delivered to the antenna of satellite S (averaged over the worst 4 kHz band for a carrier frequency below 15 GHz or over the worst 1 MHz band above 15 GHz) (W/Hz);
- $g_3(\eta)$: transmitting antenna gain of satellite S in the direction η (numerical power ratio);

- η_A : direction, from satellite S, of the receiving earth station e_R of satellite link A;
- $\eta_{e'}$: direction, from satellite S, of the receiving earth station e'_R of satellite link A';
- Note:* The product $p_s g_3(\eta_{e'})$ is the maximum e.i.r.p. per Hz of satellite S in the direction of the receiving earth station e'_R of satellite link A';
- η_s : direction, from satellite S, of satellite S';
- p_e : maximum power density per Hz delivered to the antenna of the transmitting earth station e_T (averaged over the worst 4 kHz band for a carrier frequency below 15 GHz or over the worst 1 MHz band above 15 GHz) (W/Hz);
- $g_2(\delta)$: receiving antenna gain of satellite S in the direction δ (numerical power ratio);
- δ_A : direction, from satellite S, of the transmitting earth station e_T of satellite link A;
- $\delta_{e'}$: direction, from satellite S, of the transmitting earth station e'_T of satellite link A';
- δ_s : direction, from satellite S, of satellite S';
- θ_t : topocentric angular separation in degrees between the two satellites¹, taking the longitudinal station-keeping tolerances into account;
- Note:* Only the topocentric angle θ_t should be used in dealing with Case I;

¹ A method for calculation of the topocentric angular separation is given in Annex I.

- θ_g : geocentric angular separation in degrees between the two satellites, taking the longitudinal station-keeping tolerances into account;
- Note:* Only the geocentric angle θ_g should be used in dealing with Case II;
- $g_t(\theta_t)$: transmitting antenna gain of the earth station e_T in the direction of satellite S' (numerical power ratio);
- $g_d(\theta_t)$: receiving antenna gain of the earth station e_R in the direction of satellite S' (numerical power ratio);
- k : Boltzmann's constant (1.38×10^{-23} J/K);
- I_d : free-space transmission loss¹ on the down-link (numerical power ratio), evaluated from satellite S to the receiving earth station e_R for satellite link A;
- Note:* The free-space transmission loss on any down-link evaluated from the satellites S or S' to the receiving earth stations e_R or e'_R is considered to be equal to I_d ;
- I_u : free-space transmission loss¹ on the up-link (numerical power ratio), evaluated from the earth station e_T , to satellite S for satellite link A;
- Note:* The free-space loss on any up-link evaluated from the earth stations e_T or e'_T to the satellite S or S' is considered to be equal to I_u ;
- I_s : free-space transmission loss¹ on the inter-satellite link (numerical power ratio), evaluated from satellite S' to satellite S;

¹ A method for calculation of the free-space transmission loss is given in Annex II.

γ : transmission gain of a specific satellite link subject to interference evaluated from the output of the receiving antenna of satellite S to the output of the receiving antenna of the earth station e_R (numerical power ratio, usually less than 1).

2.2 General method

In the following equations, the frequency to be used for the calculation of I_d , I_u , and I_s is the average frequency of the band common to both networks in the direction considered. If, in a given direction, there is no overlap of the assigned frequency bands of the two networks, the corresponding value (ΔT_s or ΔT_e) is taken to be equal to zero. For cases where the Appendix 3 data have not been published, the assigned frequency band for that network shall be considered as being the frequency range as provided for in Appendix 4.

2.2.1 Case I – Wanted and interfering networks sharing the same frequency band in the same direction of transmission

The gains $g_1(\theta_t)$ and $g_4(\theta_t)$ are those of the earth stations concerned. When neither measured data nor a relevant CCIR Recommendation accepted by the administrations concerned are available the radiation patterns set out in Annex III should be used.

2.2.1.1 Simple frequency-changing transponder on board the satellite

The parameters ΔT_s and ΔT_e are given by the following equations:

$$\Delta T_s = \frac{p'_e g'_1(\theta_t) g_2(\delta_{e'})}{kl_u} \quad (1)$$

$$\Delta T_e = \frac{p'_s g'_3(\eta_e) g_4(\theta_t)}{kl_d} \quad (2)$$

The symbol ΔT will be used to denote the apparent increase in the equivalent noise temperature for the entire satellite link referred to the output of the receiving antenna of the receiving earth station e_R due to the interfering emission from link A'.

This increase is the result of the interfering emissions entering at both the satellite and the earth station receiver of link A and can accordingly be expressed as:

$$\Delta T = \gamma \Delta T_s + \Delta T_e \quad (3)$$

Hence,

$$\Delta T = \gamma \frac{p'_e g'_1(\theta_t) g_2(\delta_{e'})}{kl_u} + \frac{p'_s g'_3(\eta_e) g_4(\theta_t)}{kl_d} \quad (4)$$

An example calculation for the application of the method of this Appendix in Case I is given in Annex IV.

In the same way, the increase $\Delta T'$ in the equivalent noise temperature for the entire satellite link, referred to the output of the receiving antenna of the receiving earth station e'_R , under the effect of the interference caused by satellite link A, is given by the following equations:

$$\Delta T'_s = \frac{p_e g_1(\theta_t) g'_2(\delta_e)}{kl_u} \quad (5)$$

$$\Delta T'_e = \frac{p_s g_3(\eta_e) g'_4(\theta_t)}{kl_d} \quad (6)$$

$$\Delta T' = \gamma' \frac{p_e g_1(\theta_t) g'_2(\delta_e)}{kl_u} + \frac{p_s g_3(\eta_e) g'_4(\theta_t)}{kl_d} \quad (7)$$

2.2.1.2 *Cases requiring independent treatment of the up-link and the down-link*

If there is a change of modulation in the satellite or if the transmission originates on board the satellite, then the apparent increase in the noise temperature must be related to the total receiving system noise temperature of the specific link being examined (the space station or the earth station, whichever is applicable). In this case, the equivalent noise temperature of the entire satellite link and the transmission gain are not used and equations (1) and (2) above are used separately as required (see § 2.3).

2.2.2 *Case II – Wanted and interfering networks sharing the same frequency band in opposite directions of transmission (bidirectional use)*

The calculation method below only applies to interfering emissions between satellites.

Interference between earth stations using the same frequency band in opposite directions of transmission (bidirectional use) is to be dealt with by coordination procedures analogous to those used for coordination between earth and terrestrial stations.

All the equations relating to Case II shall use the geocentric angle θ_g .

2.2.2.1 *Simple frequency-changing transponder on board the satellite*

The noise temperature increase ΔT_s referred to the output of the receiving antenna of the satellite of link A is given by:

$$\Delta T_s = \frac{P'_s g'_3 (\eta_s) g_2 (\delta_s)}{k l_s} \quad (8)$$

The apparent increase in equivalent link noise temperature is then given by:

$$\Delta T = \gamma \Delta T_s \quad (9)$$

The increase $\Delta T'$ in the equivalent noise temperature of the link A' caused by interfering emissions from the satellite associated with the link A is given by:

$$\Delta T' = \gamma' \Delta T'_s = \frac{\gamma' P_s g_3 (\eta_s) g'_2 (\delta_s)}{k l_s} \quad (10)$$

2.2.2.2 *Cases requiring independent treatment of the up-link and down-link*

In this case equation (8) is used directly with T_s to obtain the percentage increase. The increase $\Delta T'_s$ in the noise temperature of link A' caused by interfering emissions from the satellite associated with link A is obtained in a similar manner.

2.2.3 *Consideration of polarization isolation*

The polarization isolation factor described in this paragraph shall be considered only if the administration responsible for each network has consented to such a course and has notified its polarization or published it for coordination under No. 1060. In this case, the apparent increase in the equivalent satellite link noise temperature shall be determined by the following expressions:

$$\text{Case I} \quad \Delta T = \frac{\gamma \Delta T_s}{Y_u} + \frac{\Delta T_e}{Y_d}$$

$$\text{Case II} \quad \Delta T = \frac{\gamma \Delta T_s}{Y_{ss}}$$

where the values of ΔT_s and ΔT_e are those given in § 2.2.1 and § 2.2.2 and the values of the factors of polarization isolation Y_u , Y_d and Y_{ss} are those given in the table below.

Polarization		Factor of polarization isolation (numerical ratio) Y
network R	network R'	
LHC	RHC	4
LHC	L	1.4
RHC	L	1.4
LHC	LHC	1
RHC	RHC	1
L	L	1

where LHC = left-hand circular (anti-clockwise)
 RHC = right-hand circular (clockwise)
 L = linear

2.3 *Determination of the satellite links to be considered in calculating the increase in equivalent satellite link noise temperature (Case I only)*

The greatest increase in equivalent satellite link noise temperature caused to any link of another satellite network, existing or planned, by interfering emissions of the proposed satellite network must be determined.

The most unfavourably sited transmitting earth station of the interfering satellite network should be determined for each satellite receiving antenna of the network subject to interference by superimposing the "Earth-to-space" service areas of the interfering network on the space station receiving antenna gain contours plotted on a map of the Earth's surface. The most unfavourably sited transmitting earth station is the one in the direction of which the satellite receiving antenna gain of the network subject to interference is the greatest.

The most unfavourably sited receiving earth station of the network subject to interference should be determined in an analogous manner for each "space-to-Earth" service area of that network. The most unfavourably sited receiving earth station is the one in the direction of which the satellite transmitting antenna gain of the interfering network is the greatest.

2.4 *Use of information furnished under Appendix 4*

When an administration elects to use information furnished under Appendix 4 with the calculation procedures of sections 2.2.1.1 and 2.2.2.1 in order to formulate comments to the advance publication of a new network, the calculations need to be made for both sets of values of γ and T furnished. The greater of the two values of $\Delta T/T$ resulting from these calculations is the one to be used.

3. *Comparison between calculated percentage increase in noise temperature and the threshold value*

3.1 *Simple frequency-changing transponder on board the satellite*

The calculated values of the $\frac{\Delta T}{T}$ and $\frac{\Delta T'}{T'}$, expressed as percentages, shall be compared with the threshold value of 4%.

- If the calculated value of $\frac{\Delta T}{T}$, expressed as a percentage, due to any interfering emission from satellite link A' to satellite link A, is no greater than the threshold value, coordination is not required with respect to interference from link A' to link A.
- If the calculated value of $\frac{\Delta T}{T}$, expressed as a percentage, is greater than the threshold value, coordination is required.

The comparison of $\frac{\Delta T'}{T'}$ with the threshold value, expressed as a percentage, shall be carried out in a similar manner.

3.2 Cases requiring independent treatment of the up-link and the down-link

- a) In the case of interference into only one link, the up-link or the down-link, the value $\Delta T_e/T_e$ or $\Delta T_s/T_s$, expressed as a percentage, shall be compared with the threshold value of 4%.
- b) In the case of interference into both the up-link and the down-link, between which there is a change of modulation on board the satellite, the values of $\Delta T_e/T_e$ and $\Delta T_s/T_s$, expressed as a percentage, shall each be compared with the threshold value of 4%.

When none of the calculated values due to any interfering emission from satellite link A' to satellite link A is greater than the threshold value, coordination is not required with respect to interference from link A' to link A.

When at least one of the calculated values exceeds the threshold value, coordination is required.

The comparison of $\frac{\Delta T_e'}{T_e'}$ or $\frac{\Delta T_s'}{T_s'}$, expressed as a percentage, with the threshold value shall be carried out in a similar manner.

4. Consideration of narrow-band carriers

The method of calculation described in this Appendix may underestimate the interference from slow swept TV carriers into certain narrow-band (single channel per carrier – SCPC) carriers.

In order to facilitate coordination between the satellite systems and to reduce the number of administrations involved in this procedure, the administrations whose SCPC assignments are either recorded in the Master Register or are under coordination may inform an administration notifying its new assignment of the radio frequency channels used in their systems for SCPC transmission, so that the notifying administration may be able to avoid using these channels for FM-TV transmissions.

Conversely, administrations introducing new systems using SCPC transmissions may seek appropriate information from other administrations on their FM-TV transmissions.

ANNEX I

Calculation of the Topocentric Angular Separation Between Two Geostationary Satellites

The topocentric angular separation θ_t between two geostationary satellites from a given earth station can be determined by using the equation:

$$\theta_t = \arccos \left(\frac{d_1^2 + d_2^2 - \left(84\,332 \sin \frac{\theta_g}{2} \right)^2}{2 d_1 \cdot d_2} \right)$$

where d_1 and d_2 are the distances, in km, from the earth station to the two satellites respectively, and evaluated as d by the method described in Annex II, and θ_g is as defined in § 2.1.

ANNEX II

Calculation of the Free-Space Transmission Loss

The free-space transmission loss L can be determined by using the following equation:

$$L = 20 (\log f + \log d) + 32.45 \quad (\text{dB})$$

where:

f : frequency (MHz);

d : distance (km).

a) The distance d between an earth station and a geostationary satellite is given by the equation:

$$d = 42\,644 \sqrt{1 - 0.2954 \cos \psi} \quad (\text{km})$$

where:

$$\cos \psi = \cos \zeta \times \cos \beta$$

where:

ζ : latitude of the earth station;

β : difference in longitude between the satellite and the earth station.

Note: If $\cos \psi < 0.151$ the satellite is below the horizontal plane.

b) The distance d_s between two geostationary satellites is determined as follows:

$$d_s = 84\,332 \sin \frac{\theta_g}{2} \quad (\text{km})$$

θ_g : geocentric angular separation as defined in § 2.1.

ANNEX III

Radiation Pattern for Earth Station Antennae to Be Used When They Are Not Published

When neither measured data nor relevant CCIR Recommendations accepted by the administrations concerned are available then administrations should use the reference patterns as described below (dB):

a) for values of $\frac{D}{\lambda} \geq 100^*$ (maximum gain ≥ 48 dB approx.)

$$G(\varphi) = G_{\max} - 2.5 \times 10^{-3} \left(\frac{D}{\lambda} \varphi\right)^2 \quad \text{for } 0 < \varphi < \varphi_m$$

$$G(\varphi) = G_1 \quad \text{for } \varphi_m \leq \varphi < \varphi_r$$

$$G(\varphi) = 32 - 25 \log \varphi \quad \text{for } \varphi_r \leq \varphi < 48^\circ$$

$$G(\varphi) = -10 \quad \text{for } 48^\circ \leq \varphi \leq 180^\circ$$

where D = antenna diameter } expressed in the same unit
 λ = wavelength }

φ = off-axis angle of the antenna, in degrees, equal to θ_t or θ_g as applicable

$$G_1 = \text{gain of the first sidelobe} = 2 + 15 \log \frac{D}{\lambda}$$

$$\varphi_m = \frac{20\lambda}{D} \sqrt{G_{\max} - G_1} \quad (\text{degrees})$$

$$\varphi_r = 15.85 \left(\frac{D}{\lambda}\right)^{-0.6} \quad (\text{degrees})$$

b) for values of $\frac{D}{\lambda} < 100^*$ (maximum gain < 48 dB approx.)

$$G(\varphi) = G_{\max} - 2.5 \times 10^{-3} \left(\frac{D}{\lambda} \varphi\right)^2 \quad \text{for } 0 < \varphi < \varphi_m$$

$$G(\varphi) = G_1 \quad \text{for } \varphi_m \leq \varphi < 100 \frac{\lambda}{D}$$

$$G(\varphi) = 52 - 10 \log \frac{D}{\lambda} - 25 \log \varphi \quad \text{for } 100 \frac{\lambda}{D} \leq \varphi < 48^\circ$$

$$G(\varphi) = 10 - 10 \log \frac{D}{\lambda} \quad \text{for } 48^\circ \leq \varphi \leq 180^\circ$$

The above patterns may be modified as appropriate to achieve a better representation of the actual antenna pattern.

* In cases where $\frac{D}{\lambda}$ is not given, it may be estimated from the expression $20 \log \frac{D}{\lambda} \approx G_{\max} - 7.7$, where G_{\max} is the main lobe antenna gain in dB.

ANNEX IV

Example of an Application of Appendix 29

1. *General*

In this example of Case I (see § 2.2.1), two identical satellite networks each with a simple frequency-changing transponder and a global coverage antenna are assumed.

All topocentric angles θ_t are assumed to be equal to 5°.

For this angular separation and for an earth station antenna with $\frac{D}{\lambda}$ greater than 100, the reference radiation pattern ($32 - 25 \log \theta_t$) gives a gain of 14.5 dB in the direction of the satellite of the other network.

The input data are furnished in § 2 below and are expressed in dB values except for the parameters T and θ_t . In § 3 the calculations are performed in dB.

It may be noted that since both satellites use global beams there is practically no antenna discrimination between wanted and unwanted signals at the satellite, and that this constitutes a worst case.

2. *Input data*

The values of the network parameters given in the table below are derived from those published in accordance with Appendix 3 or 4.

	Symbol*	Value	Unit
Up-link at 6 175 MHz	P'_e	- 37	dB (W/Hz)
	$G'_1(\theta_t)$	14.5	dB
	$G_2(\delta_e')$	15.5	dB
	L_u	200	dB
Down-link at 3 950 MHz	P'_s	- 57	dB (W/Hz)
	$G'_3(\eta_e)$	15.5	dB
	$G_4(\theta_t)$	14.5	dB
	L_d	196	dB
	$10 \log \Upsilon$	- 15	dB
	T	105	K
	θ_t	5	degrees

3. *Calculation of $\frac{\Delta T}{T}$*

From equation (1)

$$10 \log \Delta T_s = P'_e + G'_1(\theta_t) + G_2(\delta_e') + 228.6 - L_u$$

$$= - 37 + 14.5 + 15.5 + 228.6 - 200 = 21.6 \text{ dBK}$$

Therefore,

$$\Delta T_s = 145 \text{ K}$$

From equation (2)

$$10 \log \Delta T_e = P'_s + G'_3(\eta_e) + G_4(\theta_t) + 228.6 - L_d$$

$$= - 57 + 15.5 + 14.5 + 228.6 - 196 = 5.6 \text{ dBK}$$

* All capital symbols, except T , refer to parameters given in logarithmic units.

Therefore,

$$\Delta T_e = 3.6 \text{ K}$$

From equation (3)

$$\begin{aligned}\Delta T &= \gamma \Delta T_s + \Delta T_e \\ &= 0.032 \times 145 + 3.6 = 8.2 \text{ K}\end{aligned}$$

Thus

$$\frac{\Delta T}{T} \times 100 = \frac{8.2 \times 100}{105} = 7.8\%$$

4. *Conclusion*

In the example shown, the percentage increase in equivalent satellite link noise temperature is 7.8%. Since it exceeds the threshold value of 4%, coordination between the two networks is required.

for the Broadcasting-Satellite Service in
Frequency Bands 11.7 - 12.2 GHz (in Regions 2 and 3)
and 11.7 - 12.5 GHz (in Region 1)**

ARTICLE 1

General Definitions

For the purposes of this Appendix the following terms shall have the meanings defined below:

- Conference:* World Administrative Radio Conference for the Planning of the Broadcasting-Satellite Service in Frequency Bands 11.7 - 12.2 GHz (in Regions 2 and 3) and 11.7 - 12.5 GHz (in Region 1), called in short World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977;
- Plan:* The Plan for Regions 1 and 3 and its annexes;
- Frequency assignment in accordance with the Plan:* Any frequency assignment which appears in the Plan or for which the procedure of Article 4 of this Appendix has been successfully applied.

ARTICLE 2

Frequency Bands

2.1 The provisions of this Appendix apply to the broadcasting-satellite service in the frequency bands between 11.7 GHz and 12.5 GHz in Region 1 and between 11.7 GHz and 12.2 GHz in Regions 2 and 3 and to the other services to which these bands are allocated, so far as their relationship to the broadcasting-satellite service in these bands is concerned.

ARTICLE 3

Execution of the Provisions and the Associated Plan

- 3.1 The Members of the Union in Regions 1 and 3 shall adopt, for their broadcasting-satellite space stations operating in the frequency bands referred to in this Appendix, the characteristics specified in the Plan for those Regions.
- 3.2 The Members of the Union in Region 2 shall apply the interim provisions contained in Article 12 of this Appendix. These provisions will govern the broadcasting-satellite service in Region 2 until detailed plans for Region 2, drawn up by a future regional administrative radio conference, have entered into force.
- 3.3 The Members of the Union shall not change the characteristics specified in the Plan, or establish new broadcasting-satellite space stations or stations in the other services to which these frequency bands are allocated, except as provided for in the Radio Regulations and the appropriate Articles and Annexes of this Appendix.

ARTICLE 4

Procedure for Modifications to the Plan

4.1 When an administration intends to make a modification ¹ to the Plan, i.e. either:

- to modify the characteristics of any of its frequency assignments to a space station ² in the broadcasting-satellite service which are shown in the Plan, or for which the procedure in this Article has been successfully applied, whether or not the station has been brought into use, or
- to include in the Plan a new frequency assignment to a space station in the broadcasting-satellite service, or
- to cancel a frequency assignment to a space station in the broadcasting-satellite service,

the following procedure shall be applied before any notification of the frequency assignment is made to the International Frequency Registration Board (see Article 5 of this Appendix).

4.2 The term “frequency assignment in accordance with the Plan” used in this and the following articles is defined in Article 1.

4.3 *Proposed modifications to a frequency assignment in accordance with the Plan or the inclusion in the Plan of a new frequency assignment*

4.3.1 An administration proposing a modification to the characteristics of a frequency assignment in accordance with the Plan or the inclusion of a new frequency assignment in the Plan shall seek the agreement of those administrations:

4.3.1.1 having a frequency assignment to a space station in the broadcasting-satellite service in the same channel or an adjacent channel, which is in accordance with the Plan or in respect of which modifications to the Plan have been published by the Board in accordance with the provision of this Article; or

4.3.1.2 having a frequency assignment to a space station in the broadcasting-satellite service in Region 2 with the necessary bandwidth, any portion of which falls within the necessary bandwidth of the proposed assignment and which is recorded in the Master Register; or

- which has been coordinated or is being coordinated under the provisions of Resolution 33 ³; or
- which appears in a Region 2 plan ⁴ to be adopted at a future regional administrative radio conference, taking account of modifications which may be introduced subsequently in accordance with the final acts of that conference; or

¹ The intention not to employ energy dispersal consistent with section 3.18 of Annex 8 shall be treated as a modification and thus subject to the appropriate provisions of this Article.

² The expression “frequency assignment to a space station”, wherever it appears in this Article, shall be understood to refer to a frequency assignment associated with a given orbital position. See Annex 10 for the orbital position limitations.

³ Replaces Resolution No. **Spa2** – 3 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

⁴ The Region 2 plan to be adopted at a future regional administrative radio conference shall not degrade the protection afforded to the frequency assignments in the Plan below the limits specified in this Appendix.

4.3.1.3 having no frequency assignment in the broadcasting-satellite service in the channel concerned but in whose territory the power flux-density value exceeds the prescribed limit as a result of the proposed modification; or

4.3.1.4 having a frequency assignment in the band 11.7 - 12.2 GHz to a space station in the fixed-satellite service which is recorded in the Master Register or which has been coordinated or is being coordinated under the provisions of No. 1060 of the Radio Regulations; or those of paragraph 7.2.1 of this Appendix which are considered to be affected.

A frequency assignment is considered to be affected when the limits shown in Annex 1 are exceeded.

4.3.2 An administration intending to modify characteristics in the Plan shall send to the Board, not earlier than five years but not later than eighteen months before the date on which the assignment is to be brought into use, the relevant information listed in Annex 2. If the assignment is not brought into use by that date, the modification shall lapse.

4.3.2.1 Where as a result of the intended modification the limits defined in Annex 1 are not exceeded, this fact shall be indicated when submitting to the Board the information required by 4.3.2. The Board shall then publish this information in a special section of its weekly circular.

4.3.2.2 In all other cases the administration shall notify the Board of the names of the administrations whose agreement it considers should be sought in order to arrive at the agreement referred to in 4.3.1 as well as of those with which agreement has already been reached.

4.3.3 The Board shall determine on the basis of Annex 1 the administrations whose frequency assignments are considered to be affected within the meaning of 4.3.1. The Board shall include the names of those administrations with the information received under 4.3.2.2 and shall publish the complete information in a special section of its weekly circular. The Board shall immediately send the results of its calculations to the administration proposing the modification to the Plan.

4.3.4 The Board shall send a telegram to the administrations listed in the special section of the weekly circular drawing their attention to the information it contains and shall send them the results of its calculations.

4.3.5 An administration which feels that it should have been included in the list of administrations whose services are considered to be affected may, giving the technical reasons for so doing, request the Board to include its name. The Board shall study this request on the basis of Annex 1 and shall send a copy of the request with an appropriate recommendation to the administration proposing the modification to the Plan.

4.3.6 Any modification to a frequency assignment which is in accordance with the Plan or any inclusion in the Plan of a new frequency assignment which would have the effect of exceeding the limits specified in Annex 1 shall be subject to the agreement of all affected administrations.

4.3.7 The administration seeking agreement or the administration with which agreement is sought may request any additional technical information it considers necessary. The administrations shall inform the Board of such requests.

4.3.8 Comments from administrations on the information published pursuant to 4.3.3 should be sent either directly to the administration proposing the modification or through the Board. In any event the Board shall be informed that comments have been made.

4.3.9 An administration which has not notified its comments either to the administration seeking agreement or to the Board within a period of one hundred and twenty days following the date of the weekly circular referred to in 4.3.2.1 or 4.3.3 shall be understood to have agreed to the proposed modification. This time-limit may be extended by eighty days for an administration which has requested additional information under 4.3.7 or for an administration which has requested the assistance of the Board under 4.3.17. In the latter case the Board shall inform the administrations concerned of this request.

4.3.10 If, in seeking agreement, an administration modifies its initial proposal, it shall again apply the provisions of 4.3.2 and the consequent procedure with respect to any other administration whose services might be affected as a result of modifications to the initial proposal.

4.3.11 If no comments have been received on the expiry of the periods specified in 4.3.9, or if agreement has been reached with the administrations which have made comments and with which agreement is necessary, the administration proposing the modification may continue with the appropriate procedure in Article 5 and shall inform the Board, indicating the final characteristics of the frequency assignment together with the names of the administrations with which agreement has been reached.

4.3.12 The agreement of the administrations affected may also be obtained in accordance with this Article, for a specified period.

4.3.13 When the proposed modification to the Plan involves developing countries, administrations shall seek all practicable solutions conducive to the economical development of the broadcasting-satellite systems of these countries.

4.3.14 The Board shall publish in a special section of its weekly circular the information received under 4.3.11 together with the names of any administrations with which the provisions of this Article have been successfully applied. The frequency assignment concerned shall enjoy the same status as those appearing in the Plan and will be considered as a frequency assignment in accordance with the Plan.

4.3.15 When an administration proposing to modify the characteristics of a frequency assignment or to make a new frequency assignment receives notice of disagreement from an administration whose agreement it has sought, it should first endeavour to solve the problem by exploring all possible means of meeting its requirement. If the problem still cannot be solved by such means, the administration whose agreement has been sought should endeavour to overcome the difficulties as far as possible, and shall state the technical reasons for any disagreement if the administration seeking the agreement requests it to do so.

4.3.16 If no agreement is reached between the administrations concerned, the Board shall carry out any study that may be requested by these administrations; the Board shall inform them of the result of the study and shall make such recommendations as it may be able to offer for the solution of the problem.

4.3.17 An administration may at any stage in the procedure described, or before applying it, request the assistance of the Board, particularly in seeking the agreement of another administration.

4.3.18 The relevant provisions of Article 5 of this Appendix shall be applied when frequency assignments are notified to the Board.

4.4 *Cancellation of frequency assignments*

When a frequency assignment in accordance with the Plan is released, whether or not as a result of a modification, the administration concerned shall immediately so inform the Board. The Board shall publish this information in a special section of its weekly circular.

4.5 *Master copy of the Plan*

4.5.1 The Board shall maintain an up-to-date master copy of the Plan taking account of the application of the procedure specified in this Article. The Board shall prepare a document listing the amendments to be made to the Plan as a result of modifications made in accordance with the procedure in this Article.

4.5.2 The Secretary-General shall be informed by the Board of modifications made to the Plan and shall publish an up-to-date version of the Plan in an appropriate form when justified by the circumstances.

ARTICLE 5

**Notification, Examination and Recording in the Master
Register of Frequency Assignments to Space Stations
in the Broadcasting-Satellite Service in Regions 1 and 3**

5.1 *Notification*

5.1.1 Whenever an administration intends to bring into use a frequency assignment to a space station in the broadcasting satellite service, it shall notify this frequency assignment to the Board. For this purpose, the notifying administration shall apply the following provisions.

5.1.2 For any notification under 5.1.1, an individual notice for each frequency assignment shall be drawn up as prescribed in Annex 2, the various sections of which specify the basic characteristics to be provided as appropriate. It is recommended that the notifying administration should also apply any other data it may consider useful.

5.1.3 Each notice must reach the Board not earlier than three years before the date on which the frequency assignment is to be brought into use. In any case, the notice must reach the Board not later than ninety days before that date¹.

5.1.4 Any frequency assignment the notice of which reaches the Board after the applicable period specified in 5.1.3 shall, where it is to be recorded, bear a remark in the Master Register to indicate that it is not in conformity with 5.1.3.

5.1.5 Any notice made under 5.1.1 which does not contain the characteristics specified in Annex 2 shall be returned by the Board immediately by airmail to the notifying administration with the relevant reasons.

5.1.6 Upon receipt of a complete notice, the Board shall include its particulars, with the date of receipt, in its weekly circular which shall contain the particulars of all such notices received since the publication of the previous circular.

5.1.7 The circular shall constitute the acknowledgement to the notifying administration of the receipt of a complete notice.

5.1.8 Complete notices shall be considered by the Board in order of receipt. The Board shall not postpone its finding unless it lacks sufficient data to reach a decision; moreover, the Board shall not act upon any notice which has a technical bearing on an earlier notice still under consideration by the Board, until it has reached a finding with respect to such earlier notice.

5.2 *Examination and recording*

5.2.1 The Board shall examine each notice:

- a) with respect to its conformity with the Convention and the relevant provisions of the Radio Regulations and Annex 1 of this Appendix (with the exception of those relating to conformity with the Plan);
- b) with respect to its conformity with the Plan.

¹ Where appropriate, the notifying administration shall initiate the procedure for modifying the Plan in sufficient time to ensure that this limit is observed.

5.2.2 Where the Board reaches a favourable finding with respect to 5.2.1, the frequency assignment of an administration shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d. In relations between administrations all frequency assignments brought into use in conformity with the Plan and recorded in the Master Register shall be considered to have the same status irrespective of the dates entered in Column 2d for such frequency assignments.

5.2.3 Whenever a frequency assignment is recorded in the Master Register, the finding reached by the Board shall be indicated by a symbol in Column 13a.

5.2.4 Where the Board reaches an unfavourable finding with respect to 5.2.1, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board may be able to offer with a view to a satisfactory solution of the problem.

5.2.5 Where the notifying administration resubmits the notice and the finding of the Board becomes favourable with respect to 5.2.1, the notice shall be treated as in 5.2.2.

5.2.6 If the notifying administration resubmits the notice without modification and insists on its reconsideration, and if the Board's finding with respect to 5.2.1 remains unfavourable, the notice is returned to the notifying administration in accordance with 5.2.4. In this case, the notifying administration undertakes not to bring into use the frequency assignment until the condition specified in 5.2.5 is fulfilled. The agreement of the administrations affected can also be obtained in accordance with Article 4 for a specified period. In that event the Board shall be notified of the agreement and the frequency assignment shall be recorded in the Master Register with a note indicating that the frequency assignment is valid only for the period specified. The notifying administration using the frequency assignment over a specified period shall not subsequently invoke this fact to justify the continued use of the frequency beyond the period specified unless it obtains the agreement of the administration(s) concerned.

5.2.7 If a frequency assignment notified in advance of bringing into use has received in conformity with 5.1.3 a favourable finding by the Board with respect to the provisions of paragraph 5.2.1, it shall be entered provisionally in the Master Register with a special symbol in the Remarks Column indicating the provisional nature of that entry.

5.2.8 When the Board has received confirmation that the frequency assignment has been brought into use, the Board shall remove the symbol in the Master Register.

5.2.9 The date in Column 2c shall be the date of bringing into use notified by the administration concerned. It is given for information only.

5.3 *Cancellation of entries in the Master Register*

5.3.1 If an administration has not confirmed the bringing into use of a frequency assignment under 5.2.8, the Board will make inquiries of the administration not earlier than six months after the expiry of the period specified in 5.1.3. On receipt of the relevant information, the Board will either modify the date of coming into use or cancel the entry.

5.3.2 If the use of any recorded frequency assignment is permanently discontinued, the notifying administration shall so inform the Board within ninety days, whereupon the entry shall be removed from the Master Register.

ARTICLE 6

**Coordination, Notification and Recording in the Master
International Frequency Register of Frequency Assignments
to Terrestrial Stations affecting Broadcasting-Satellite Frequency
Assignments in the Bands 11.7 - 12.2 GHz (in Regions 2 and 3)
and 11.7 - 12.5 GHz (in Region 1)^{1, 2}**

Section I. Coordination Procedure to Be Applied

6.1.1 Before an administration notifies to the Board a frequency assignment to a terrestrial transmitting station, it shall initiate coordination with any other administration having a frequency assignment to a broadcasting-satellite station in conformity with the Plan if

- the necessary bandwidths of the two transmissions overlap; and
- the power flux-density which would be produced by the proposed terrestrial transmitting station exceeds the value derived in accordance with Annex 3 at one or more points on the edge of the service area which is within the coverage area of the broadcasting-satellite station of that administration.

6.1.2 For the purpose of effecting coordination, the administration responsible for the terrestrial station shall send to the administrations concerned, by the fastest possible means, a copy of a diagram drawn to an appropriate scale indicating the location of the terrestrial station and all other data of the proposed frequency assignment and the approximate date on which it is planned to bring the station into use.

6.1.3 An administration with which coordination is sought shall acknowledge receipt of the coordination data immediately by telegram. If no acknowledgement is received within fifteen days of dispatch, the administration seeking coordination may dispatch a telegram requesting acknowledgement of receipt of the coordination data, to which the receiving administration shall reply. Upon receipt of the coordination data an administration with which coordination is sought shall promptly examine the matter with regard to interference³ which would be caused to its frequency assignments in conformity with the Plan and shall, within an overall period of sixty days from dispatch of the coordination data, either notify the administration requesting coordination of its agreement to the proposals or, if this is not possible, indicate the reasons therefor and make such suggestions as it may be able to offer with a view to a satisfactory solution of the problem.

6.1.4 No coordination is required when an administration proposes to change the characteristics of an existing assignment in such a way as not to increase the level of interference to the service to be rendered by the broadcasting-satellite stations of other administrations, in conformity with the Plan.

¹ These procedures do not involve any dispensation from the procedures prescribed for terrestrial stations in Article 12 of the Radio Regulations where stations other than those of the broadcasting-satellite service are involved.

² The procedures for coordination, notification and recording of assignments to terrestrial stations affecting broadcasting-satellite stations in Region 2 are contained in Article 12 of the Radio Regulations, except that the need for the coordination referred to in Nos. 1148 to 1154 of the Radio Regulations shall be determined on the basis of Annex 3.

³ The criteria to be employed in evaluating interference levels shall be based on the relevant CCIR Recommendations or, in the absence of such Recommendations, shall be agreed between the administrations concerned.

- 6.1.5 An administration seeking coordination may request the Board to endeavour to effect coordination where:
- a) an administration with which coordination is sought fails to acknowledge receipt under paragraph 6.1.3 within thirty days of dispatch of the coordination data;
 - b) an administration which has acknowledged receipt under paragraph 6.1.3 fails to give a decision within ninety days of dispatch of the coordination data;
 - c) the administration seeking coordination and an administration with which coordination is sought disagree on the acceptable level of interference; or
 - d) coordination between administrations is not possible for any other reason.

In so doing, it shall furnish the Board with the necessary information to enable it to endeavour to effect such coordination.

6.1.6 Either the administration seeking coordination or an administration with which coordination is sought, or the Board, may request any additional information which they may require to assess the level of interference to the services concerned.

6.1.7 Where the Board receives a request under paragraph 6.1.5 a), it shall forthwith send a telegram to the administration concerned requesting immediate acknowledgement.

6.1.8 Where the Board receives an acknowledgement following its action under paragraph 6.1.7 or where the Board receives a request under paragraph 6.1.5 b), it shall forthwith send a telegram to the administration concerned requesting an early decision in the matter.

6.1.9 Where the Board receives a request under paragraph 6.1.5 d), it shall endeavour to effect coordination in accordance with the provisions of paragraph 6.1.2. Where the Board receives no acknowledgement of its request for coordination within the period specified in paragraph 6.1.3, it shall act in accordance with paragraph 6.1.7.

6.1.10 Where an administration fails to reply within thirty days of dispatch of the Board's telegram sent under paragraph 6.1.7 requesting an acknowledgement or fails to give a decision on the matter within sixty days of dispatch of the Board's telegram of request sent under paragraph 6.1.8, the administration with which coordination was sought shall be considered to have undertaken that no complaint will be made in respect of any harmful interference which may be caused by the terrestrial station being coordinated to the service rendered or to be rendered by its satellite-broadcasting station.

6.1.11 Where necessary, as part of the procedure under paragraph 6.1.5, the Board shall assess the level of interference. In any case, the Board shall inform the administrations concerned of the results obtained.

6.1.12 In the event of continuing disagreement between one administration seeking to effect coordination and one with which coordination has been sought, the administrations concerned may explore the possibility of reaching an agreement on the use of the proposed frequency assignment for a specified period.

Section II. Notification Procedure for Frequency Assignments

6.2.1 Any frequency assignment to a fixed, land or broadcasting station shall be notified to the International Frequency Registration Board if the use of the frequency concerned is capable of causing harmful interference to the service rendered or to be rendered by a broadcasting-satellite station of any other administration, or if it is desired to obtain international recognition of the use of the frequency ¹.

¹ The attention of administrations is specifically drawn to the provisions of Section I of this Article.

6.2.2 For this notification, an individual notice for each frequency assignment shall be drawn up as prescribed in Section A of Appendix 1 to the Radio Regulations, which specifies the basic characteristics to be furnished as required. It is recommended that the notifying administration should also supply the additional data called for in that Appendix, together with such further data as it may consider appropriate.

6.2.3 Whenever practicable, each notice should reach the Board before the date on which the assignment is brought into use. The notice made in accordance with paragraph 6.2.2 must reach the Board not earlier than three years and not later than ninety days before the date on which the assignment is to be brought into use.

6.2.4 Any frequency assignment, the notice of which reaches the Board less than ninety days before it is brought into use, shall, where it is to be recorded, bear a remark in the Master Register to indicate that it is not in conformity with paragraph 6.2.3.

Section III. Procedure for the Examination of Notices and the Recording of Frequency Assignments in the Master Register

6.3.1 Whatever the means of communication, including telegraph, by which a notice is transmitted to the Board, it shall be considered complete if it contains at least the appropriate basic characteristics specified in Section A of Appendix 1 to the Radio Regulations.

6.3.2 Complete notices shall be considered by the Board in the order of their receipt.

6.3.3 Any notice which is incomplete shall be returned by the Board immediately, by airmail, to the notifying administration with the reasons therefor.

6.3.4 Upon receipt of a complete notice, the Board shall include the particulars thereof, with the date of receipt, in its weekly circular; this circular shall contain the particulars of all such notices received since publication of the previous circular.

6.3.5 The circular shall constitute the acknowledgement to the notifying administration of the receipt of a complete notice.

6.3.6 Complete notices shall be considered by the Board in the order specified in paragraph 6.3.2. The Board cannot postpone the formulation of a finding unless it lacks sufficient data to reach a decision; moreover, the Board shall not act upon any notice which has a technical bearing on an earlier notice still under consideration by the Board, until it has reached a finding with respect to such earlier notice.

6.3.7 The Board shall examine each notice:

6.3.8 a) with respect to its conformity with the Convention, the relevant provisions of the Radio Regulations and the provisions of this Appendix (with the exception of those relating to the coordination procedure and the probability of harmful interference);

6.3.9 b) with respect to its conformity with the provisions of paragraph 6.1.1 relating to coordination of the use of the frequency assignment with the other administrations concerned;

6.3.10 c) where appropriate, with respect to the probability of harmful interference to a broadcasting-satellite station whose frequency assignment is in accordance with the Plan.

6.3.11 Depending upon the findings of the Board subsequent to the examination prescribed in paragraphs 6.3.8, 6.3.9 and 6.3.10, further action shall be as follows:

6.3.12 *Finding unfavourable with respect to paragraph 6.3.8*

6.3.13 Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of the Radio Regulations, it shall be examined immediately with respect to paragraphs 6.3.9 and 6.3.10.

6.3.14 If the finding is favourable with respect to paragraph 6.3.9 or 6.3.10, as appropriate, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

6.3.15 If the finding is unfavourable with respect to paragraph 6.3.9 or 6.3.10, as appropriate, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding. In those circumstances the notifying administration shall undertake not to bring into use the frequency assignment until the condition specified in paragraph 6.3.14 can be fulfilled. But the administrations concerned may explore the possibility of reaching an agreement on the use of the proposed frequency assignment for a specified period.

6.3.16 Where the notice does not include a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of the Radio Regulations, it shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board may be able to offer with a view to the satisfactory solution of the problem.

6.3.17 If the notifying administration resubmits the notice unchanged, it shall be treated in accordance with the provisions of paragraph 6.3.16.

6.3.18 If the notifying administration resubmits the notice with a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of the Radio Regulations, it shall be treated in accordance with the provisions of paragraphs 6.3.13 and 6.3.14 or 6.3.15, as appropriate.

6.3.19 If the notifying administration resubmits the notice with modifications which, after re-examination, result in a favourable finding by the Board with respect to paragraph 6.3.8, the notice shall be treated under the provisions of paragraphs 6.3.20 to 6.3.32. However, in any subsequent recording of the assignment, the date of receipt by the Board of the resubmitted notice shall be entered in Column 2d.

6.3.20 *Finding favourable with respect to paragraph 6.3.8*

6.3.21 Where the Board finds that the coordination procedure mentioned in paragraph 6.3.9 has been successfully completed with all administrations whose broadcasting-satellite services may be affected, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

6.3.22 Where the Board finds that the coordination procedure mentioned in paragraph 6.3.9 has not been applied, and the notifying administration requests the Board to effect the required coordination, the Board shall take the appropriate action necessary and shall inform the administrations concerned of the results obtained. If the Board's efforts are successful, the notice shall be treated in accordance with paragraph 6.3.21. If the Board's efforts are unsuccessful, the notice shall be examined by the Board with respect to the provisions of paragraph 6.3.10.

6.3.23 Where the Board finds that the coordination procedure mentioned in paragraph 6.3.9 has not been applied and the notifying administration does not request the Board to effect the required coordination, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this action and with such suggestions as the Board may be able to offer with a view to the satisfactory solution of the problem.

6.3.24 Where the notifying administration resubmits the notice and the Board finds that the coordination procedure mentioned in paragraph 6.3.9 has been successfully completed with all administrations whose broadcasting-satellite services may be affected, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column.

6.3.25 Where the notifying administration resubmits the notice with a request that the Board effect the required coordination, it shall be treated in accordance with the provisions of paragraph 6.3.22. However, in any subsequent recording of the assignment, the date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column.

6.3.26 Where the notifying administration resubmits the notice and states it has been unsuccessful in effecting the coordination, it shall be examined by the Board with respect to the provisions of paragraph 6.3.10. However, in any subsequent recording of the assignment, the date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column.

6.3.27 *Finding favourable with respect to paragraphs 6.3.8 and 6.3.10*

6.3.28 The assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

6.3.29 *Finding favourable with respect to paragraph 6.3.8 but unfavourable with respect to paragraph 6.3.10*

6.3.30 The notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board may be able to offer with a view to the satisfactory solution of the problem.

6.3.31 Should the notifying administration resubmit the notice with modifications which result, after re-examination, in a favourable finding by the Board with respect to paragraph 6.3.10, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the resubmitted notice shall be indicated in the Remarks Column.

6.3.32 Should the notifying administration resubmit the notice, either unchanged or with modifications which decrease the probability of harmful interference but not sufficiently to permit the provisions of paragraph 6.3.31 to be applied and should that administration insist upon reconsideration of the notice but the Board's finding remain unchanged, the notification shall again be returned to the notifying administration in accordance with paragraph 6.3.30. In those circumstances, the notifying administration shall undertake not to bring into use the proposed frequency assignment until the condition specified in paragraph 6.3.31 can be fulfilled. But the administrations concerned may explore the possibility of reaching an agreement on the use of the frequency assignment for a specified period. In that event the Board shall be notified of the agreement and the frequency assignment shall be recorded in the Master Register with a note indicating that the assignment is valid only for the specified period. The notifying administration using the frequency assignment during a specified period shall not subsequently use this circumstance to justify continued use of the frequency beyond the period specified if it does not obtain the agreement of the administration or the administrations concerned.

6.3.33 *Change in the basic characteristics of assignments already recorded in the Master Register*

6.3.34 A notice of a change in the basic characteristics of an assignment already recorded, as specified in Appendix 1 to the Radio Regulations (except those entered in Columns 3 and 4a of the Master Register), shall be examined by the Board in accordance with paragraphs 6.3.8 and 6.3.9 and, where appropriate, paragraph 6.3.10 and paragraphs 6.3.12 to 6.3.32 inclusive applied. Where the change should be recorded, the original assignment shall be amended according to the notice.

6.3.35 However, in the case of a change in the basic characteristics of an assignment which is in conformity with paragraph 6.3.8, should the Board reach a favourable finding with respect to paragraph 6.3.9 and, if applicable, paragraph 6.3.10, or find that the change does not increase the probability of harmful interference to assignments already recorded, the amended assignment shall retain the original date in Column 2d. In addition, the date of receipt by the Board of the notice relating to the change shall be entered in the Remarks Column.

6.3.36 In applying the provisions of this Section, any resubmitted notice which is received by the Board more than two years after the date of its return by the Board shall be considered as a new notice.

6.3.37 *Recording of frequency assignments notified before being brought into use*

6.3.38 If a frequency assignment notified in advance of bringing into use has received a favourable finding by the Board with respect to paragraphs 6.3.8 and 6.3.9, and, where appropriate, 6.3.10, it shall be entered provisionally in the Master Register with a special symbol in the Remarks Column indicating the provisional nature of that entry.

6.3.39 If, within the period of thirty days after the projected date of bringing into use, the Board receives confirmation from the notifying administration of the date of bringing into use, the special symbol shall be deleted from the Remarks Column. If, in the light of a request from the notifying administration received before the end of the thirty-day period, the Board finds that exceptional circumstances warrant an extension of this period, the extension shall in no case exceed one hundred and fifty days.

6.3.40 If use by a terrestrial station of an assignment which is not in conformity with the foregoing causes harmful interference to the reception of emissions from a space station in the broadcasting-satellite service using an assignment in conformity with the Plan, the administration having jurisdiction over the terrestrial station shall, on being advised, take immediate measures to eliminate the interference.

ARTICLE 7

Preliminary Procedures, Notification and Recording in the Master International Frequency Register of Frequency Assignments to Stations in the Fixed-Satellite Service in the Frequency Band 11.7 - 12.2 GHz (in Region 2) When Frequency Assignments to Broadcasting-Satellite Stations in Accordance with the Plan Are Involved ¹

Section I. Procedure for the Advance Publication of Information on Planned Fixed-Satellite Systems

7.1.1 An administration which intends to establish a fixed-satellite system shall, prior to the procedure in accordance with paragraph 7.2.1 where applicable, send to the International Frequency Registration Board, not earlier than five years before the date of bringing into service each satellite network of the planned system, the information listed in Appendix 4 to the Radio Regulations.

7.1.2 Any amendments to the information concerning a planned satellite system sent in accordance with paragraph 7.1.1 shall also be sent to the Board as soon as they become available.

7.1.3 The Board shall publish the information sent under paragraphs 7.1.1 and 7.1.2 in a special section of its weekly circular and shall also, when the weekly circular contains such information, so advise all administrations by circular telegram.

¹ These provisions do not replace the procedures prescribed in Articles 11 and 13 of the Radio Regulations when stations other than those of the broadcasting-satellite service having frequency assignments in conformity with the Plan are involved.

7.1.4 If, after studying the information published under paragraph 7.1.3, any administration is of the opinion that interference, which may be unacceptable, may be caused to its frequency assignments in conformity with the Plan, it shall within ninety days after the date of the weekly circular publishing the information listed in Appendix 4 to the Radio Regulations, send its comments to the administration concerned. A copy of these comments shall also be sent to the Board. If no such comments are received from an administration within the period mentioned above, it may be assumed that that administration has no basic objections to the planned fixed-satellite network(s) of that system of which details have been published.

7.1.5 An administration receiving comments sent in accordance with paragraph 7.1.4 shall endeavour to resolve any difficulties that may arise without considering the possibility of adjustment to broadcasting-satellite stations of other administrations. If no such means can be found, the administration concerned is then free to apply to other administrations concerned in order to solve these difficulties, provided that any modifications which may result to the Plan are in accordance with Article 4.

7.1.6 In their attempts to resolve the difficulties mentioned above, administrations may seek the assistance of the Board.

7.1.7 In complying with the provisions of paragraphs 7.1.5 and 7.1.6, an administration responsible for a planned fixed-satellite system shall, if necessary, defer its commencement of the coordination procedure of paragraph 7.2.1 or, where this is not applicable, the sending of its notices to the Board until one hundred and fifty days after the date of the weekly circular containing the information listed in Appendix 4 to the Radio Regulations on the relevant satellite network. However, in respect of those administrations with which difficulties have been resolved or which have responded favourably, the coordination procedure, where applicable, may be commenced prior to the expiry of the one hundred and fifty days mentioned above.

7.1.8 An administration, on behalf of which details of planned fixed-satellite networks in its system have been published in accordance with the provisions of paragraphs 7.1.1 to 7.1.3, shall periodically inform the Board whether or not comments have been received and of the progress made with other administrations in resolving any difficulties. The Board shall publish this information in a special section of its weekly circular and shall also, when the weekly circular contains such information, so inform all administrations by circular telegram.

Section II. Coordination Procedures to Be Applied in Appropriate Cases

7.2.1 Before an administration notifies to the Board or brings into use any frequency assignment to a space station in the fixed-satellite service, it shall seek the agreement of any other administration having a frequency assignment in conformity with the Plan, if

- any portion of the necessary bandwidth proposed for the space station in the fixed-satellite service falls within the necessary bandwidth associated with the frequency assignment to the broadcasting-satellite station, and
- the power flux-density which would be produced by the proposed fixed-satellite assignment exceeds the value specified in Annex 4.

For this purpose, the administration seeking agreement shall send to any other such administration the information listed in Appendix 3 to the Radio Regulations.

7.2.2 No additional agreement is necessary when an administration proposes to change the characteristics of an existing assignment in such a way as will, in respect of the broadcasting-satellite service of another administration, meet the requirements of paragraph 7.2.1 above, or when this assignment has previously been the subject of an agreement and when the change will not cause any increase in the interference potential specified in that agreement.

7.2.3 An administration seeking coordination under paragraph 7.2.1 shall at the same time send to the Board a copy of the request for coordination together with the information listed in Appendix 3 to the Radio Regulations and the name(s) of the administration(s) whose agreement is sought. The Board shall determine on the basis of Annex 4 which frequency assignments in conformity with the Plan are considered to be affected. The Board shall include the names of those administrations with the information received from the administration seeking coordination and shall publish this information in a special section of its weekly circular, together with a reference to the weekly circular in which details of the satellite system were published in accordance with Section I of this Article. When the weekly circular contains such information, the Board shall so inform all administrations by circular telegram.

7.2.4 An administration believing that it should have been included in the procedure under paragraph 7.2.1 shall have the right to request that it be brought into the procedure.

7.2.5 An administration whose agreement is sought under paragraph 7.2.1 shall acknowledge receipt of the coordination data immediately by telegram. If no acknowledgement is received within thirty days after the date of the weekly circular publishing the information under paragraph 7.2.3, the administration seeking coordination shall dispatch a telegram requesting acknowledgement, to which the receiving administration shall reply within a further period of thirty days. Upon receipt of the coordination data, an administration shall, having regard to the proposed date of bringing into use of the assignment for which agreement was requested, promptly examine the matter with regard to interference¹ which would be caused to the service rendered by its stations in respect of which agreement is sought under paragraph 7.2.1, and shall, within ninety days from the date of the relevant weekly circular, notify its agreement to the requesting administration. If the administration with which coordination is sought does not agree, it shall, within the same period, send to the administration seeking coordination the technical details upon which its disagreement is based, and make such suggestions as it may be able to offer with a view to a satisfactory solution of the problem. A copy of these comments shall also be sent to the Board.

7.2.6 An administration seeking coordination may request the Board to endeavour to effect coordination in those cases where:

- a) an administration whose agreement is sought under paragraph 7.2.1 fails to acknowledge receipt, under paragraph 7.2.5, within sixty days after the date of the weekly circular publishing the information relating to the request for coordination;
- b) an administration has acknowledged receipt under paragraph 7.2.5, but fails to give a decision within ninety days from the date of the relevant weekly circular;
- c) there is disagreement between the administration seeking coordination and an administration whose agreement is sought as to the acceptable level of interference;
- d) agreement between administrations is not possible for any other reason.

In so doing, it shall furnish the Board with the necessary information to enable it to endeavour to effect such coordination.

7.2.7 Either the administration seeking coordination or an administration whose agreement is sought, or the Board, may request additional information which they may require to assess the level of interference to the services concerned.

7.2.8 Where the Board receives a request under paragraph 7.2.6 a), it shall forthwith send a telegram to the administration whose agreement is sought requesting immediate acknowledgement.

¹ The criteria to be employed in evaluating interference levels shall be based upon the technical information contained in this Appendix or upon relevant CCIR Recommendations and shall be agreed between the administrations concerned.

7.2.9 Where the Board receives an acknowledgement following its action under paragraph 7.2.8, or where the Board receives a request under paragraph 7.2.6 *b*), it shall forthwith send a telegram to the administration whose agreement is sought requesting an early decision in the matter.

7.2.10 Where the Board receives a request under paragraph 7.2.6 *d*), it shall endeavour to effect coordination in accordance with the provisions of paragraph 7.2.1. The Board shall also, where appropriate, act in accordance with paragraph 7.2.3. Where the Board receives no acknowledgement to its request for coordination within the periods specified in paragraph 7.2.5, it shall act in accordance with paragraph 7.2.8.

7.2.11 Where an administration fails to reply within thirty days of dispatch of the Board's telegram requesting an acknowledgement sent under paragraph 7.2.8, or fails to give a decision in the matter within thirty days of dispatch of the Board's telegram of request under paragraph 7.2.9, it shall be deemed that the administration whose agreement was sought has undertaken:

- a*) that no complaint will be made in respect of any harmful interference which may be caused to the services rendered by its broadcasting-satellite stations by the use of the assignment for which coordination was requested;
- b*) that its broadcasting-satellite stations will not cause harmful interference to the use of the assignment for which coordination was requested.

7.2.12 Where necessary, as part of the procedure under paragraph 7.2.6, the Board shall assess the level of interference. In any case, the Board shall inform the administrations concerned of the results obtained.

7.2.13 In the event of continuing disagreement between one administration seeking to effect coordination and one whose agreement has been sought, provided that the assistance of the Board has been requested, the administration seeking coordination may, after one hundred and fifty days from the date of the request for coordination, taking into consideration the provisions of paragraph 7.3.4, send its notice concerning the proposed assignment to the Board. In those circumstances the notifying administration shall undertake not to bring the frequency assignment into use until the condition in paragraph 7.4.11.2 can be fulfilled. But the administrations concerned may explore the possibility of reaching an agreement on the use of the proposed frequency assignment for a specified period.

Section III. Notification of Frequency Assignments

7.3.1 Any frequency assignment to a space station in the fixed satellite service shall be notified to the Board:

- a*) If the use of the frequency concerned is capable of causing harmful interference to a frequency assignment of another administration which is in accordance with the Plan ¹;
- b*) If it is desired to obtain international recognition of the use of the frequency.

7.3.2 Similar notice shall be given for any frequency to be used for reception by an earth station where one or more of the conditions specified in paragraph 7.3.1 are applicable.

7.3.3 For any notification under paragraph 7.3.1 or 7.3.2, an individual notice for each frequency assignment shall be drawn up as prescribed in Appendix 3 to the Radio Regulations, the various Sections of which specify the basic characteristics to be furnished according to the case. The notifying administration shall furnish such further data as it considers appropriate.

¹ The attention of administrations is specifically drawn to the application of paragraph 7.2.1 above.

7.3.4 Each notice must reach the Board not earlier than three years before the date on which the assignment is to be brought into use. The notice must reach the Board in any case not later than ninety days¹ before this date.

7.3.5 Any frequency assignment to an earth or space station, the notice of which reaches the Board after the applicable period specified in paragraph 7.3.4, shall, where it is to be recorded, bear a mark in the Master Register to indicate that it is not in conformity with paragraph 7.3.4.

**Section IV. Procedure for the Examination of Notices and the
Recording of Frequency Assignments in the Master Register**

7.4.1 Any notice which does not contain at least those basic characteristics specified in Appendix 3 to the Radio Regulations shall be returned by the Board immediately, by airmail, to the notifying administration with the reasons therefor.

7.4.2 Upon receipt of a complete notice, the Board shall include the particulars thereof, with the date of receipt, in its weekly circular which shall contain the particulars of all such notices received since the publication of the previous circular.

7.4.3 The circular shall constitute the acknowledgement to the notifying administration of the receipt of a complete notice.

7.4.4 Complete notices shall be considered by the Board in the order of their receipt. The Board shall not postpone the formulation of a finding unless it lacks sufficient data to render a decision in connection therewith; moreover, the Board shall not act upon any notice which has a technical bearing on an earlier notice still under consideration by the Board, until it has reached a finding with respect to such earlier notice.

7.4.5 The Board shall examine each notice:

7.4.5.1 with respect to its conformity with the Convention, the relevant provisions of the Radio Regulations and the provisions of this Appendix (with the exception of those relating to the coordination procedures and the probability of harmful interference);

7.4.5.2 where appropriate, with respect to its conformity with the provisions of paragraph 7.2.1, relating to the coordination of the use of the frequency assignment with the other administrations concerned having a frequency assignment in conformity with the Plan;

7.4.5.3 where appropriate, with respect to the probability of harmful interference to the service rendered or to be rendered by a broadcasting-satellite station whose frequency assignment is in conformity with the Plan.

7.4.6 Depending upon the findings of the Board subsequent to the examination prescribed in paragraphs 7.4.5.1, 7.4.5.2 and 7.4.5.3, as appropriate, further action shall be as follows:

7.4.7 *Finding favourable with respect to paragraph 7.4.5.1 in cases where the provisions of paragraph 7.4.5.2 are not applicable*

7.4.7.1 The assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

¹ The notifying administration shall take this limit into account when deciding, where appropriate, to initiate the coordination procedure(s).

7.4.8 *Finding unfavourable with respect to paragraph 7.4.5.1*

7.4.8.1 Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of the Radio Regulations and the finding is favourable with respect to paragraphs 7.4.5.2 and 7.4.5.3, as appropriate, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

7.4.8.2 Where the notice includes a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of the Radio Regulations and the finding is unfavourable with respect to paragraph 7.4.5.2 or 7.4.5.3, as appropriate, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding. In those circumstances the notifying administration shall undertake not to bring into use the frequency assignment until the condition in paragraph 7.4.8.1 can be fulfilled. The agreement of the administrations affected can also be obtained in accordance with this Article for a specified period. In that event the Board shall be notified of the agreement and the frequency assignment shall be recorded in the Master Register with a note indicating that the frequency assignment is valid only for the period specified. The notifying administration using the frequency assignment over a specified period shall not subsequently use this circumstance to justify continued use of the frequency beyond the period specified if it does not obtain the agreement of the administration(s) concerned. The date of receipt by the Board of the original notice shall be entered in Column 2d.

7.4.8.3 Where the notice does not include a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of the Radio Regulations, it shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board may be able to offer with a view to the satisfactory solution of the problem.

7.4.8.4 If the notifying administration resubmits the notice unchanged, it shall be treated in accordance with the provisions of paragraph 7.4.8.3. If it is resubmitted with a specific reference to the fact that the station will be operated in accordance with the provisions of No. 342 of the Radio Regulations, it shall be treated in accordance with the provisions of paragraph 7.4.8.1 or 7.4.8.2, as appropriate. If it is resubmitted with modifications which, after re-examination, result in a favourable finding by the Board with respect to paragraph 7.4.5.1, it shall be treated as a new notice.

7.4.9 *Finding favourable with respect to paragraph 7.4.5.1 in cases where the provisions of paragraph 7.4.5.2 are applicable*

7.4.9.1 Where the Board finds that the coordination procedures mentioned in paragraph 7.4.5.2 have been successfully completed with all administrations whose frequency assignments in accordance with the Plan may be affected, the frequency assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

7.4.9.2 Where the Board finds that the coordination procedure mentioned in paragraph 7.4.5.2 has not been applied, and the notifying administration requests the Board to effect the required coordination, the Board shall take appropriate action and shall inform the administrations concerned of the results obtained. If the Board's efforts are successful, the notice shall be treated in accordance with paragraph 7.4.9.1. If the Board's efforts are unsuccessful, the notice shall be examined by the Board with respect to the provisions of paragraph 7.4.5.3.

7.4.9.3 Where the Board finds that the coordination procedure mentioned in paragraph 7.4.5.2 has not been applied, and the notifying administration does not request the Board to effect the required coordination, the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this action and with such suggestions as the Board may be able to offer with a view to the satisfactory solution of the problem.

7.4.9.4 Where the notifying administration resubmits the notice and the Board finds that the coordination procedure mentioned in paragraph 7.4.5.2 has been successfully completed with all administrations whose frequency assignments in conformity with the Plan may be affected, the frequency assignment shall be recorded in the Master Register. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column.

7.4.9.5 Where the notifying administration resubmits the notice with a request that the Board effect the required coordination under paragraph 7.2.1, it shall be treated in accordance with the provisions of paragraph 7.4.9.2. However, in any subsequent recording of the assignment, the date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column.

7.4.9.6 Where the notifying administration resubmits the notice and states it has been unsuccessful in effecting the coordination, the Board shall inform the administrations concerned thereof. The notice shall be examined by the Board with respect to the provisions of paragraph 7.4.5.3. However, in any subsequent recording of the assignment, the date of receipt by the Board of the resubmitted notice shall be entered in the Remarks Column.

7.4.10 *Finding favourable with respect to paragraphs 7.4.5.1 and 7.4.5.3*

7.4.10.1 The assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d.

7.4.11 *Finding favourable with respect to paragraph 7.4.5.1, but unfavourable with respect to paragraph 7.4.5.3*

7.4.11.1 The notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding and with such suggestions as the Board may be able to offer with a view to the satisfactory solution of the problem.

7.4.11.2 Should the notifying administration resubmit the notice with modifications which result, after re-examination, in a favourable finding by the Board with respect to paragraph 7.4.5.3, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the original notice shall be entered in Column 2d. The date of receipt by the Board of the resubmitted notice shall be indicated in the Remarks Column.

7.4.11.3 Should the notifying administration resubmit the notice, either unchanged, or with modifications which decrease the probability of harmful interference, but not sufficiently to permit the provisions of paragraph 7.4.11.2 to be applied, and should that administration insist upon reconsideration of the notice, but should the Board's finding remain unchanged, the notification shall again be returned to the notifying administration in accordance with paragraph 7.4.11.1. In those circumstances, the notifying administration shall undertake not to bring into use the proposed frequency assignment until the condition in paragraph 7.4.11.2 can be fulfilled. The agreement of the administrations affected can also be obtained in accordance with this Article for a specified period. In that event the Board shall be notified of the agreement and the frequency assignment shall be recorded in the Master Register with a note in the Remarks Column indicating that the assignment is valid only for the specified period. The notifying administration using the frequency assignment over a specified period shall not subsequently use this circumstance to justify continued use of the frequency beyond the period specified, if it does not obtain the agreement of the administration(s) concerned. The date of receipt by the Board of the original notice shall be entered in Column 2d.

7.4.12 *Change in the basic characteristics of assignments already recorded in the Master Register*

7.4.12.1 A notice of a change in the basic characteristics of an assignment in the fixed-satellite service already recorded, as specified in Appendix 3 to the Radio Regulations (except the name of the station or the name of the locality in which it is situated), shall be examined by the Board according to paragraph 7.4.5.1 and, where appropriate, paragraphs 7.4.5.2 and 7.4.5.3, and the provisions of paragraphs 7.4.7 to 7.4.11.3 inclusive shall apply. Where the change should be recorded, the original assignment shall be amended accordingly.

7.4.12.2 However, in the case of a change in the characteristics of an assignment which is in conformity with paragraph 7.4.5.1, should the Board reach a favourable finding with respect to paragraphs 7.4.5.2 and 7.4.5.3, where appropriate, or find that the changes do not increase the probability of harmful interference to frequency assignments in accordance with the Plan, the amended assignment shall retain the original date in Column 2d. The date of receipt by the Board of the notice relating to the change shall be entered in the Remarks Column.

7.4.12.3 In applying the provisions of this section, any resubmitted notice which is received by the Board more than two years after the date of its return by the Board shall be considered as a new notice.

7.4.13 Recording of frequency assignments in the fixed-satellite service notified before being brought into use

7.4.13.1 If a frequency assignment notified in advance of bringing into use has received a favourable finding by the Board with respect to paragraph 7.4.5.1 and, where appropriate, paragraphs 7.4.5.2 and 7.4.5.3, it shall be entered provisionally in the Master Register with a special symbol in the Remarks Column indicating the provisional nature of that entry.

7.4.13.2 If, within thirty days after the projected date of bringing into use, the Board receives confirmation from the notifying administration of the date of putting into use, the special symbol shall be deleted from the Remarks Column. In the case where the Board, in the light of a request from the notifying administration received before the end of the thirty-day period, finds that exceptional circumstances warrant an extension of this period, the extension shall in no case exceed one hundred and fifty days.

7.4.13.3 If the Board does not receive this confirmation within the period referred to in paragraph 7.4.13.2, the entry concerned shall be cancelled. The Board shall advise the administration concerned before taking such action.

Section V. Recording of Findings in the Master Register

7.5 In any case where a frequency assignment is recorded in the Master Register, the finding reached by the Board shall be indicated by a symbol in Column 13a. In addition, a remark indicating the reasons for any unfavourable finding shall be inserted in the Remarks Column.

Section VI. Categories of Frequency Assignments

7.6.1 The date in Column 2c shall be the date of putting into use notified by the administration concerned. It is given for information only.

7.6.2 If harmful interference is actually caused to the reception of any broadcasting-satellite station whose frequency assignment is in accordance with the Plan, by the use of a frequency assignment to a space radiocommunication station subsequently recorded in the Master Register in accordance with the provisions of paragraph 7.4.11.3, the station using the latter frequency assignment must, upon receipt of advice thereof, immediately eliminate this harmful interference.

7.6.3 If harmful interference to the reception of any broadcasting-satellite station whose frequency assignment is in accordance with the Plan, is actually caused by the use of a frequency assignment which is not in conformity with paragraph 7.4.5.1, the station using the latter frequency assignment must, upon receipt of advice thereof, immediately eliminate this harmful interference.

Section VII. Review of Findings

7.7.1 The review of a finding by the Board may be undertaken:

- at the request of the notifying administration;
- at the request of any other administration interested in the question, but only on the grounds of actual harmful interference;
- on the initiative of the Board itself when it considers this is justified.

7.7.2 The Board, in the light of all the data at its disposal shall review the matter, taking into account paragraph 7.4.5.1 and, where appropriate, paragraphs 7.4.5.2 and 7.4.5.3, and shall render an appropriate finding, informing the notifying administration prior either to the promulgation of its finding or to any recording action.

7.7.3 If the finding of the Board is then favourable it shall enter in the Master Register the changes that are required so that the entry shall appear in the future as if the original finding had been favourable.

7.7.4 If the finding with regard to the probability of harmful interference remains unfavourable, no change shall be made in the original entry.

**Section VIII. Modification, Cancellation and Review of Entries
in the Master Register**

7.8.1 Where the use of a recorded assignment to a station in the fixed-satellite service is suspended for a period of eighteen months, the notifying administration shall, within this eighteen-month period, inform the Board of the date on which such use was suspended and of the date on which the assignment is to be brought back into regular use.

7.8.2 Whenever it appears to the Board, whether or not as a result of action under paragraph 7.8.1, that a recorded assignment to a space station in the fixed-satellite service has not been in regular use for more than eighteen months, the Board shall inquire of the notifying administration as to when the assignment is to be brought back into regular use.

7.8.3 If no reply is received within six months of action by the Board under paragraph 7.8.2, or if the reply does not confirm that the assignment to a space station in the fixed-satellite service is to be brought back into regular use within this six-month limit, a symbol should be entered against the entry in the Master Register.

7.8.4 In case of permanent discontinuance of the use of any recorded frequency assignment, the notifying administration shall inform the Board within ninety days of such discontinuance, whereupon the entry shall be removed from the Master Register.

7.8.5 Whenever it appears to the Board from the information available that a recorded assignment has not been brought into regular operation in accordance with the notified basic characteristics, or is not being used in accordance with those basic characteristics, the Board shall consult the notifying administration and, subject to its agreement, shall either cancel or suitably modify the entry.

7.8.6 If, in connection with an inquiry by the Board under paragraph 7.8.5 the notifying administration as failed to supply the Board within forty-five days with the necessary or pertinent information, the Board shall make suitable entries in the Remarks Column of the Master Register to indicate the situation.

ARTICLE 8

Miscellaneous Provisions Relating to the Procedures

8.1 If it is requested by any administration, and if the circumstances appear to warrant, the Board, using such means at its disposal as are appropriate in the circumstances, shall conduct a study of cases of alleged contravention or non-observance of these provisions or of harmful interference.

8.2 The Board shall thereupon prepare and forward to the administration concerned a report containing its findings and recommendations for the solution of the problem.

8.3 In a case where, as a result of a study, the Board submits to one or more administrations suggestions or recommendations for the solution of a problem, and where no answer has been received from one or more of these administrations within a period of ninety days, the Board shall consider that the suggestions or recommendations concerned are unacceptable to the administrations which did not answer. If it was the requesting administration which failed to answer within this period, the Board shall close the study.

8.4 If it is requested by any administration, particularly by an administration of a country in need of special assistance, and if the circumstances appear to warrant, the Board, using such means at its disposal as are appropriate in the circumstances, shall render the following assistance:

- a) computation necessary in the application of Annexes 1, 3 and 4;
- b) any other assistance of a technical nature for completion of the procedures in this Appendix.

ARTICLE 9

Power Flux-Density Limits Between 11.7 GHz and 12.2 GHz to Protect Terrestrial Services in Regions 1 and 3 from Interference from Region 2 Broadcasting-Satellite Space Stations

9.1 The power-flux density at the Earth's surface in Regions 1 and 3, produced by emissions from a space station in the broadcasting-satellite service in Region 2 for all conditions and for all methods of modulation shall not exceed the values given in Annex 5 on the territory of any country unless the administration of that country so agrees.

ARTICLE 10

Power Flux-Density Limits Between 11.7 GHz and 12.2 GHz to Protect Space Services in Region 2 from Interference from Broadcasting-Satellite Space Stations of Regions 1 and 3

10.1 Broadcasting-satellite space stations of Regions 1 and 3 shall employ transmitting antennae whose side-lobe characteristics fall within the reference antenna pattern given in Figure 6 of Annex 8. Therefore, the power flux-density falling on the territory of any administration of Region 2 in the band 11.7 - 12.2 GHz prior to any modifications to the Plan shall not exceed, under all conditions and methods of modulation, the values produced by broadcasting-satellite stations operating in accordance with the Plan on the date of its entry into force and using the technical characteristics specified in the Plan. The power flux-density values shall be calculated using the method described in Annex 11.

10.2 In particular, the power flux-densities at a reference test point (longitude 35° W, latitude 8° S) prior to any modifications to the Plan shall not exceed the values shown in Annex 11.

ARTICLE 11

**The Plan for the Broadcasting-Satellite Service in
the Frequency Bands 11.7 - 12.2 GHz in Region 3
and 11.7 - 12.5 GHz in Region 1**

11.1 COLUMN HEADINGS OF THE PLAN

- Col. 1. *Country symbol and IFRB Serial Number* (Column 1 contains the symbol designating the country or the geographical area taken from Table No. 1 of the Preface to the International Frequency List).
- Col. 2. *Nominal orbital position*, in degrees.
- Col. 3. *Channel number* (see Table showing channel numbers and corresponding assigned frequencies).
- Col. 4. *Boresight* geographical coordinates, in degrees and tenths of a degree.
- Col. 5. *Antenna beamwidth*. This column contains two figures corresponding to the major axis and the minor axis respectively of the elliptical cross-section half-power beam, in degrees and tenths of a degree.
- Col. 6. *Orientation of the ellipse* determined as follows: in a plane normal to the beam axis, the direction of a major axis of the ellipse is specified as the angle measured anti-clockwise from a line parallel to the equatorial plane to the major axis of the ellipse to the nearest degree.
- Col. 7. *Polarization* (1 = direct, 2 = indirect)¹.
- Col. 8. *E.i.r.p.* in the direction of maximum radiation in dBW.
- Col. 9. *Remarks*.

11.2 NOTES RELATING TO THE PLAN

1. The ΔG of this assignment is ... dB.
2. To be dedicated to the Islamic programme envisaged in the Conference² documents.
3. This assignment results from a common requirement of the Administrations of Denmark and Iceland. The service area includes the Faeroe Islands and Iceland. The assignment may after consultations between the two Administrations, be used by either of them.
4. IFB – IFRB. This assignment has been included in the Plan by the Conference.
5. Assignment intended to ensure coverage of Algeria, Libya, Morocco, Mauritania and Tunisia, with the agreement of the countries concerned. If required, this assignment may be used with the characteristics of the beam TUN 150.
6. Assignments appearing in the Plan for Somalia should be coordinated with each country concerned and in particular with Ethiopia.

¹ See Annex 8, paragraph 3.2.3.

² The World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

11.3 TABLE SHOWING CORRESPONDENCE BETWEEN CHANNEL NUMBERS
AND ASSIGNED FREQUENCIES

Channel No.	Assigned frequency (MHz)	Channel No.	Assigned frequency (MHz)

ARTICLE 12

Provisions Governing the Broadcasting-Satellite Service in Region 2 Pending the Establishment of a Detailed Plan

12.1 In accordance with the principles set forth in Annex 6, the following interim provisions shall apply pending the establishment of a detailed plan for the broadcasting-satellite service for Region 2 in the frequency band 11.7 - 12.2 GHz under the terms of paragraphs 12.9 to 12.12 below.

12.2 Space stations in the broadcasting-satellite service shall be located in the following portions of the orbit:

- 75° W to 100° W longitude (however, for service to Canada, the USA and Mexico, the relevant portion shall be only between 75° W and 95° W longitude);
- 140° W to 170° W longitude.

12.2.1 Space stations in the broadcasting-satellite service may also be located in the remaining portions of the orbit, in which case they shall be operated in accordance with the provisions of Nos. 420 to 423 of the Radio Regulations. As an exception, it is accepted that, for Greenland, a position in the geostationary-satellite orbit between 55° W and 60° W may be used for the broadcasting-satellite service as a primary service. The administrations concerned should make every effort to allow for the sharing of this portion of the orbital arc by a broadcasting satellite for Greenland and space stations in the fixed-satellite service of other administrations in Region 2.

12.3 Space stations in the fixed-satellite service shall be located in portions of the orbit other than those referred to in paragraph 12.2 above. Such space stations may also be located in the portions of the orbit referred to in paragraph 12.2 above; they shall then be operated in accordance with the provisions of Nos. 420 to 423 of the Radio Regulations.

12.3.1 Space stations in the broadcasting-satellite service located in the portions of the orbit referred to in paragraph 12.2 and space stations in the fixed-satellite service located in the remaining portions of the orbit shall be operated in such a way that no unacceptable interference is caused by stations of one service to stations of other services. The level of unacceptable interference shall be determined by agreement between the administrations concerned, taking the latest CCIR Recommendations and Annexes 8 and 9 of this Appendix as a guide. Notwithstanding the above, broadcasting-satellite space stations may be located up to the edge of the portion of the orbit referred to in paragraph 12.2, provided that such stations are operated in accordance with the relevant technical characteristics for Region 2 outlined in Annex 8.

12.4 Prior to the regional administrative radio conference, referred to in paragraph 12.9 below, systems in the broadcasting-satellite service shall be regarded as experimental and shall be operated in accordance with the sharing criteria and technical characteristics contained in Annexes 8 and 9.

12.5 Administrations may implement systems which utilize values for the technical characteristics different from the values in Annex 8 of this Appendix provided that such action does not result in interference to operational or planned systems of other administrations in excess of that determined in accordance with Annex 9.

12.6 Systems in the fixed-satellite service shall be introduced in accordance with the relevant provisions of the Radio Regulations, particularly with those of Articles 11 and 13 and, where appropriate, with the provisions of Article 7 of this Appendix.

12.7 Space systems in the frequency band 11.7 - 12.2 GHz shall use, to the maximum extent technically and economically practicable, available techniques in order to make the most efficient use of the geostationary orbit and the frequency spectrum. Examples of such techniques are described in Annex 7.

12.8 The provisions of Resolution 33¹ shall continue to apply to the broadcasting-satellite service in the frequency band 11.7 - 12.2 GHz in Region 2 until such time as a detailed plan may be adopted for the broadcasting-satellite service.

12.9 A regional administrative radio conference is to be held not later than 1982 for the purpose of carrying out detailed planning for the broadcasting-satellite and fixed-satellite services, in accordance with the following terms.

12.9.1 The said regional administrative radio conference shall draw up a detailed plan for the orbit/spectrum resource available for the broadcasting-satellite service in the 11.7 - 12.2 GHz band. The plan shall provide for the detailed assignment of the orbital positions and frequency channels available, ensuring that the broadcasting-satellite service requirements submitted by the various administrations are met in an equitable manner satisfactory to all the countries concerned. It should be laid down as a matter of principle that each administration in the Region should be guaranteed a minimum number of channels (4) for the operation of the broadcasting-satellite service. Above this minimum, the special characteristics of the countries (size, time zones, language differences, etc.) shall be taken into account.

12.9.2 Planning shall be based on individual reception, but each administration may use the reception system which best meets its requirements, namely, individual or community reception, or both. Account shall also be taken of the decisions of the 1977 and 1979 World Administrative Radio Conferences and of the latest CCIR Recommendations in the case of parameters covered by its studies and research.

12.9.3 When planning the broadcasting-satellite service, it shall be borne in mind that systems should be designed with a view to reducing to a minimum technical differences and incompatibilities with the systems of other Regions.

12.9.4 The conference shall also take into account the need to make equitable provision for the requirements of the fixed-satellite service to which this frequency band is also allocated in Region 2.

12.10 All administrations in Region 2 shall submit their broadcasting-satellite service requirements to the IFRB not later than one year before the start of the regional administrative radio conference responsible for planning this service in Region 2. Each administration may update these requirements as it considers necessary. "Requirements" are understood to include the number and boundaries of service areas and the number of channels requested for each of them. Six months before the deadline for submitting requirements, the IFRB shall remind administrations of the need to submit them by means of a circular letter and/or telegram.

12.11 No systems existing or planned prior to the implementation of any detailed plan such as that referred to above shall cause interference to any systems operating in accordance with such a plan.

12.12 Existing or previously planned broadcasting-satellite systems will not necessarily be taken into account in the establishment of the detailed plan for the broadcasting-satellite service in the 11.7 - 12.2 GHz band in Region 2. Consequently, the installation or planning of such systems by an administration prior to the establishment of the said plan shall not confer upon that system any rights or recognition.

¹ Replaces Resolution No. Spa2 - 3 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

ARTICLE 13

Relationship to Resolution 507¹

13.1 The provisions and associated Plan of this Appendix shall be regarded as including a world agreement and associated Plan for Regions 1 and 3 in accordance with *resolves* 1 of Resolution 507, which requires the stations in the broadcasting-satellite service to be established and operated in accordance with such agreements and associated plans.

ARTICLE 14

Interference

14.1 The Members of the Union shall endeavour to agree on the action required to reduce harmful interference which might be caused by the application of these provisions and the associated Plan.

ARTICLE 15²

Entry into Force of the Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977

ARTICLE 16

Period of Validity of the Provisions and Associated Plan

16.1 The provisions and associated Plan have been prepared in order to meet the requirements of the broadcasting-satellite service in the bands concerned for a period of at least fifteen years from 1 January 1979.

16.2 In any event, the provisions and associated Plan shall remain in force until their revision by a competent administrative radio conference convened in accordance with the relevant provisions of the Convention in force.

¹ Replaces Resolution No. **Spa2** – 2 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

² This Article is not reproduced in this Appendix; see the footnote to the title of this Appendix.

ANNEX 1

**Limits for Determining Whether a Service of an Administration
is Considered to Be Affected by a Proposed Modification
to the Plan (Article 4, paragraph 4.3.1)¹**

1. *Limits on the change in the wanted-to-interfering signal ratio with respect to frequency assignments in accordance with the Plan*

With respect to paragraph 4.3.1.1, an administration shall be considered as being affected if the effect of the proposed modification to the Plan would result in the wanted-to-interfering signal ratio at any point within the service area associated with any of its frequency assignments in the Plan falling below either 30 dB or the value resulting from the frequency assignments in the Plan at the date of entry into force of the Final Acts², whichever is the lower.

Note: In performing the calculation, the effect at the receiver input of all the co-channel and adjacent-channel signals is expressed in terms of one equivalent co-channel interfering signal. This value is usually expressed in decibels.

2. *Limits on the change in the power flux-density to protect the broadcasting-satellite service in the band 11.7 - 12.2 GHz in Region 2*

With respect to paragraph 4.3.1.2, an administration in Region 2 shall be considered as being affected if the proposed modification to the Plan would result in exceeding the following power flux-densities at any point in the service area affected:

- 147 dB(W/m ² /27 MHz)	$0^\circ \leq \theta < 0.48^\circ$
- 139 + 25 log θ dB(W/m ² /27 MHz)	$0.48^\circ \leq \theta < 27.25^\circ$
- 103 dB(W/m ² /27 MHz)	$\theta \geq 27.25^\circ$

where θ is the difference in degrees between the longitudes of the broadcasting-satellite space station in Region 1 or 3 and the broadcasting-satellite space station affected in Region 2.

3. *Limits on the change in the power flux-density to protect the terrestrial services of other administrations*

With respect to paragraph 4.3.1.3, an administration in Region 1 or 3 shall be considered as being affected if the consequence of the proposed modification to the Plan is to increase the power flux-density arriving on any part of the territory of that administration by more than 0.25 dB over that resulting from the frequency assignments in the Plan at the time of entry into force of the Final Acts².

The same administration shall be considered as not being affected if the value of the power flux-density anywhere in its territory does not exceed the limits expressed in Annex 5.

¹ The limits specified in this Annex relate to the power flux-densities which would be obtained assuming free space propagation conditions.

² Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, which entered into force on 1 January 1979.

An administration in Region 2 shall be considered as being affected if the proposed modification to the Plan would result in exceeding a power flux-density, for any angle of arrival, at any point on its territories, of $-125 \text{ dB(W/m}^2/4 \text{ kHz)}$ when the broadcasting-satellite station uses circular polarization and $-128 \text{ dB(W/m}^2/4 \text{ kHz)}$ when the broadcasting-satellite station uses linear polarization.

4. *Limits on the change in the power flux-density to protect the fixed-satellite service in the band 11.7 - 12.2 GHz in Region 2*

With respect to paragraph 4.3.1.4, an administration in Region 2 shall be considered as being affected if the proposed modification to the Plan would result in an increase in the power flux-density on its territory of 0.25 dB or more above that resulting from the frequency assignments in the Plan at the time of entry into force of the Final Acts¹.

However, where an assignment in the Plan or its subsequent modification gives a power flux-density of less than $-138 \text{ dB(W/m}^2/27 \text{ MHz)}$ anywhere in the territory of an administration of Region 2, that administration shall be considered as not affected.

ANNEX 2

**Basic Characteristics to Be Furnished in Notices
Relating to Space Stations in the Broadcasting-Satellite Service**

1. Country and IFRB number.
2. Nominal orbital position (in degrees from the Greenwich meridian).
3. Assigned frequency or channel number.
4. Date of bringing into use.
5. Identity of the space station.
6. Service area (if necessary, the service area may be defined by a number of "test points").
7. Geographical coordinates of the intersection of the antenna beam axis with the Earth.
8. Rain-climatic zone.
9. Class of station.
10. Class of emission and necessary bandwidth.
11. Power supplied to the antenna (dBW).
12. Antenna characteristics:
 - gain of the antenna referred to an isotropic radiator;
 - shape of the beam (elliptical or circular);
 - major axis (degrees) at -3 dB points;
 - minor axis (degrees) at -3 dB points;

¹ Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, which entered into force on 1 January 1979.

- orientation of the ellipse;
 - ΔG (difference between the maximum gain and the gain in the direction of the point in the service area at which the power flux-density is at a minimum);
 - pointing accuracy;
 - type of polarization;
 - sense of polarization;
 - radiation pattern and cross-polar characteristics.
13. Station keeping accuracy.
 14. Modulation characteristics:
 - type of modulation;
 - pre-emphasis characteristics;
 - TV system;
 - sound broadcasting characteristics;
 - frequency deviation;
 - composition of the baseband;
 - type of multiplexing of the video and sound signals;
 - energy dispersal characteristics.
 15. Minimum angle of elevation in the service area.
 16. Type of reception (individual or community).
 17. Hours of operation (UTC).
 18. Coordination.
 19. Agreements.
 20. Other information.
 21. Operating administration or company.

ANNEX 3

**Method for Determining the Limiting Interfering Power
Flux-Density at the Edge of a Broadcasting-Satellite Service
Area in the Band 11.7 - 12.2 GHz (in Regions 2 and 3)
and 11.7 - 12.5 GHz (in Region 1) and for Predicting
the Power Flux-Density Produced There
by a Terrestrial Station**

1. *General*

1.1 This Annex describes a method of assessing the interference potential from terrestrial transmitters to broadcasting-satellite receivers in the band 11.7 - 12.2 GHz (12.5 GHz in Region 1).

1.2 The method is in two parts:

- a) the calculation of the maximum permissible interfering power flux-density at the edge of the broadcasting-satellite service area concerned;
- b) the calculation of the likely power flux-density produced at any point on the edge of the service area by the terrestrial transmitter of another administration.

1.3 The interference potential of the terrestrial transmitters must be considered case by case; the power flux-density produced by each terrestrial transmitter is compared to the limiting power flux-density at any point on the edge of the service area of a broadcasting-satellite station of another administration. If, for a given transmitter, the value of the power flux-density produced is lower than the value of the limiting power flux-density at any point on the edge of the service area, the interference caused to the broadcasting-satellite service by this transmitter is considered to be lower than the permissible value and no coordination is required between administrations before the terrestrial service is brought into use. Where this is not the case, coordination and further, more precise calculations derived from a mutually agreed basis are necessary.

1.4 It is emphasized that, should the calculation described in this Annex indicate that the maximum permissible power flux-density is exceeded, it does not necessarily preclude the introduction of the terrestrial service since the calculations are necessarily based on worst-case assumptions for:

- a) the nature of the terrain of the interference path;
- b) the off-beam discrimination of the broadcasting-satellite receiving installations;
- c) the necessary protection ratios for the broadcasting-satellite service;
- d) the type of reception in the broadcasting-satellite service, i.e., assuming individual reception, this being more critical than community reception for the angles of elevation concerned;
- e) the value of power flux-density to be protected in the broadcasting-satellite service;
- f) the propagation conditions between the terrestrial station and the broadcasting-satellite service area.

2. *Limit of power flux-density*

2.1 *General*

The limiting power flux-density not to be exceeded at the edge of the service area in order to protect the broadcasting-satellite service of an administration is given by the formula:

$$F = F_o - R + D + P \quad (1)$$

where

- F = the maximum permissible interfering power flux-density (dB(W/m²)) in the broadcasting-satellite necessary bandwidth;
- F_o = the wanted power flux-density (dB(W/m²)) at the edge of the service area;
- R = the protection ratio (dB) between the wanted and interfering signals;
- D = angular discrimination (dB) provided by the radiation pattern of the satellite broadcasting receiver antenna;
- P = polarization discrimination (dB) between the wanted and interfering signals.

2.2 *Wanted power flux-density (F_o)*

The value of F_o is equal to:

- a) – 103 dB(W/m²) for service areas in Regions 1 and 3;
- b) – 105 dB(W/m²) for service areas in Region 2.

2.3 Protection ratio (R)

2.3.1 The single entry protection ratio against all types of terrestrial transmissions, with the exception of amplitude-modulation multichannel television systems, is 35 dB for carrier frequency differences between the wanted and interfering signals of up to ± 10 MHz, decreasing linearly from 35 dB to 0 dB for carrier frequency differences between 10 MHz and 35 MHz, and is 0 dB for frequency differences in excess of 35 MHz (see Fig. 1).

2.3.2 The carrier frequency difference should be determined by reference to the frequency assignments in the broadcasting-satellite Plan or, in the case of assignments not contained within a plan, by reference to the description of the characteristics of the proposed or operational system. For amplitude-modulation multichannel television systems which produce peaks of high power flux-density spread over a wide range of their necessary bandwidth, the protection ratio R is 35 dB and is independent of the carrier frequency difference.

2.3.3 A signal from a terrestrial station should be considered only if its necessary bandwidth overlaps the necessary bandwidth of the broadcasting-satellite assignment.

FIGURE 1

Protection ratio R (dB) for a broadcasting-satellite signal against a single entry of interference from a terrestrial service (except for AM multichannel TV systems)

2.4 Angular discrimination (D)

2.4.1 Broadcasting-satellite service areas in Regions 1 and 3

Where the angle of elevation ϕ selected for the proposed or operational broadcasting-satellite system for the broadcasting-satellite service area concerned is equal to or greater than 19° , the value of D to be assumed in expression (1) is 33 dB. When ϕ is less than 19° , D should be derived from the expression (2.a) below.

Note: If more than one value of φ is specified for a particular service area, the appropriate value of φ should be used for each section of the edge of the service area under consideration.

$$\begin{aligned}
 D &= 0 \text{ for } 0 \leq \varphi \leq 0.5^\circ \\
 D &= 3 \varphi^2 \text{ for } 0.5^\circ < \varphi \leq 1.41^\circ \\
 D &= 3 + 20 \log_{10} \varphi \text{ for } 1.41^\circ < \varphi \leq 2.52^\circ \\
 D &= 1 + 25 \log_{10} \varphi \text{ for } 2.52^\circ < \varphi \leq 19^\circ
 \end{aligned}
 \tag{2.a}$$

Note: For the graphical determination of D see Fig. 2.

2.4.2 Broadcasting-satellite service areas in Region 2

Where the angle of elevation φ selected for the proposed or operational broadcasting-satellite system for the broadcasting-satellite service area concerned is equal to or greater than 27° , the value of D to be assumed in expression (1) is 38 dB. When φ is less than 27° , D should be derived from the expression (2.b) below.

Note: If more than one value of φ is specified for a particular service area, the appropriate value of φ should be used for each section of the edge of the service area under consideration.

$$\begin{aligned}
 D &= 0 \text{ for } 0 \leq \varphi \leq 0.45^\circ \\
 D &= 3.7 \varphi^2 \text{ for } 0.45^\circ < \varphi \leq 1.27^\circ \\
 D &= 3.9 + 20 \log_{10} \varphi \text{ for } 1.27^\circ < \varphi \leq 2.27^\circ \\
 D &= 2.1 + 25 \log_{10} \varphi \text{ for } 2.27^\circ < \varphi \leq 27^\circ
 \end{aligned}
 \tag{2.b}$$

Note: For the graphical determination of D see Fig. 2.

FIGURE 2

Discrimination D (dB) of broadcasting-satellite receiver antenna as a function of satellite elevation angle

For service areas in Regions 1 and 3, $\varphi_0 = 2^\circ$ and Curve A applies.

For service areas in Region 2, $\varphi_0 = 1.8^\circ$ and Curve B applies.

2.5 Polarization discrimination (P)

The value of P is equal to:

- a) 3 dB when the interfering terrestrial service uses linear polarization and the broadcasting-satellite service uses circular polarization or vice versa;
- b) 0 dB when the interfering terrestrial service and the broadcasting-satellite service both use circular or both use linear polarization.

3. Power flux-density produced by a terrestrial station (F_p)

The power flux-density F_p (in dB(W/m²)) produced at any point on the edge of the service area by the terrestrial station is determined from the following formula:

$$F_p = E - A + 43 \quad (3)$$

where

- E = the equivalent isotropically radiated power (dBW) of the terrestrial station in the direction of the point on the edge of the service area concerned;
- A = the total path loss in dB.

3.1 Evaluation of path loss A for a terrestrial station at a distance greater than 100 km from the edge of the service area of the broadcasting satellite

For path lengths greater than 100 km, A is given by:

$$A = 137.6 + 0.2324 d_t + 0.0814 d_m \quad (4)$$

where d_t and d_m are the overland and oversea path lengths respectively, in km.

3.2 Evaluation of path loss A for a terrestrial station at a distance equal to or less than 100 km from the edge of the service area of the broadcasting satellite

For path lengths equal to or less than 100 km, A is calculated using equations (4) and (5) and the lower value obtained is substituted in formula (3) to calculate the power flux-density produced at the point on the edge of the service area:

$$A = 109.5 + 20 \log (d_t + d_m) \quad (5)$$

The variation in A for different path lengths and percentage of oversea path is shown in Fig. 3.

3.3 Distance beyond which the method need not be applied

The method need not be applied and coordination is unnecessary when the distance between the terrestrial station and the service area of the broadcasting satellite is greater than:

- a) 400 km in the case of all overland paths, or
- b) 1 200 km in the case of all oversea or mixed paths.

FIGURE 3
 Total path loss A (dB) versus total path length $(d_l + d_m)$ (km) and percentage of oversea path

ANNEX 4

**Need for Coordination of a Fixed-Satellite Space Station
or a Broadcasting-Satellite Space Station in Region 2
with Respect to the Plan (Article 7)**

With respect to paragraph 7.2.1, coordination of a space station in the fixed-satellite service or the broadcasting-satellite service of Region 2 is required when, under assumed free space propagation conditions, the power flux-density on the territory of an administration in Region 1 or Region 3 exceeds the value derived from the following expressions:

$$\begin{aligned} & -147 \text{ dB(W/m}^2\text{/27 MHz) for } 0 \leq \theta < 0.44^\circ \\ & -138 + 25 \log \theta \text{ dB(W/m}^2\text{/27 MHz) for } 0.44^\circ \leq \theta < 19.1^\circ \\ & -106 \text{ dB(W/m}^2\text{/27 MHz) for } 19.1^\circ \leq \theta \end{aligned}$$

θ = the difference in degrees between the longitude of the interfering broadcasting-satellite or fixed-satellite space station in Region 2 and the longitude of the affected broadcasting-satellite space station in Regions 1 and 3.

ANNEX 5

**Power Flux-Density Limits Between 11.7 GHz and 12.2 GHz
to Protect the Terrestrial Services in Regions 1 and 3
from Interference from Region 2 Broadcasting-Satellite
Space Stations (Article 9)**

The power flux-density limits are as follows:

- 1) for all the territories of administrations in Regions 1 and 3:

–125 dB(W/m ² /4 kHz)	for broadcasting-satellite space stations using circular polarization;
–128 dB(W/m ² /4 kHz)	for broadcasting-satellite space stations using linear polarization;

for all angles of arrival; and

- 2) for territories of administrations in Region 3 and those in the western part of Region 1, west of longitude 30° E:

–132 dB(W/m ² /5 MHz)	for angles of arrival between 0° and 10° above the horizontal plane;
–132 + 4.2(γ – 10) dB(W/m ² /5 MHz)	for angles of arrival γ (in degrees) between 10° and 15° above the horizontal plane;
–111 dB(W/m ² /5 MHz)	for angles of arrival between 15° and 90° above the horizontal plane.

ANNEX 6

Planning Principles in Region 2

The following principles have been applied in drawing up the provisions governing the introduction of space services in the frequency band 11.7 - 12.2 GHz in Region 2:

1. *Equality for allocated services in Region 2*

Under Article 8 of the Radio Regulations, the 11.7 - 12.2 GHz band is allocated to the broadcasting-satellite, fixed-satellite and terrestrial services on an equal, primary basis. Each administration in Region 2 has the right to decide for itself which of these services are to be implemented within its own territory.

2. *Equal rights for services in the various Regions*

In accordance with No. 346 of the Radio Regulations, the principle of equal rights for different services in the same category to operate in all the Regions is recognized, provided that no harmful interference is caused to services in the other Regions.

3. *Recognition of national requirements*

All administrations in Region 2 shall take into consideration the national requirements which have been presented or will be presented in the future.

4. *Equitable rights of access to the geostationary orbit/spectrum resource*

Subject to the provisions of the Convention, the Radio Regulations and the resolutions in force, it is recognized that all administrations have the right of access to the geostationary orbit spectrum resource in order to fulfil their requirements.

5. *Flexible planning approach*¹

The plan adopted for Region 2 must be sufficiently flexible to allow for future technical developments, the identification of future requirements, changes in existing or stated requirements, requirements by administrations not represented at the Conference², further information on propagation data and various system design approaches. The plan may be modified only by a competent administrative radio conference.

6. *Efficient use of the geostationary orbit and the spectrum*

The plan for Region 2 shall use, to the maximum extent technically and economically practicable, the techniques available so as to make the most efficient use of the geostationary orbit and the frequency spectrum to fulfil the requirements both of the Region as a whole and of the individual administrations.

7. *Consultations among administrations*

Administrations planning to bring into operation systems in the 11.7 - 12.2 GHz band shall consult all the other administrations affected or concerned.

8. *Reception*

The plan for Region 2 shall have as a basis individual reception, although each administration may choose the reception system that it finds most suited to its requirements, namely, individual or community reception, or both.

¹ Paragraph 5 does not imply recognition of systems existing prior to the implementation of the plan.

² The World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

ANNEX 7

Use of the Spectrum/Orbit Resource

Since the equal sharing of the spectrum/orbit resource between the broadcasting-satellite service and the fixed-satellite service in Region 2 is inherently difficult and may impose some restrictions on both services, it is important that the technical parameters be chosen, and the techniques for efficient use of the spectrum/orbit resource be applied in such a way that both space services will benefit as much as possible.

The following techniques are among those identified as leading to a more efficient use of the spectrum/orbit resource and should therefore be applied to the maximum extent technically and economically practicable consistent with the capability of systems to fulfil the requirements for which they were designed.

1. *Clustering*

Extensive analyses have shown that orbit utilization is improved when satellites are grouped according to the sensitivity to interference and the potential for generating interference of the system of which they are a part. In most cases, this means that space stations of similar characteristics should be grouped in the same part of the orbit.

2. *Cross-polarization*

The proper use of cross-polarization can significantly improve the use of the spectrum/orbit resource by providing additional isolation between potentially interfering systems.

3. *Crossed-beam geometry*

The principle of crossed-beam geometry is that adjacent satellites should not serve adjacent service areas. In that way, discrimination from both the satellite and the earth station antennae can be used to achieve maximum isolation between systems.

4. *Paired service areas*

The principle of crossed-beam geometry can be extended: if service areas are far enough apart, then the satellite antenna discrimination alone may be sufficient to permit satellites serving these widely separated service area to be co-located in the orbit, leading to practical doubling of the orbit capacity.

5. *Frequency interleaving*

The mutual interference between channels in different systems is usually a maximum when the two carrier frequencies coincide. When channelling design is such that frequencies are interleaved, or, more generally, such that coincidence of carrier frequencies is avoided, mutual interference can in many cases be greatly reduced.

6. *Minimum space station spacings*

It is obvious that, for maximum orbit utilization, space stations should be placed as close to each other as is consistent with keeping the mutual interference to acceptable levels.

7. *Space station antenna discrimination*

The discrimination in the side-lobes of the space station antenna determines how much isolation exists between beams serving non-overlapping or non-adjacent service areas. To achieve maximum isolation, every effort should be made to improve the discrimination by technological advances in antenna design.

8. *Earth station antenna discrimination*

The side-lobe discrimination of the earth station antenna determines how much isolation is obtained from satellite spacing. To achieve maximum isolation, every effort should be made to improve the discrimination by taking advantage of technological advances in antenna design.

9. *Minimizing e.i.r.p. differences*

The interference caused by relatively high-power space stations (space stations in the broadcasting-satellite service or certain types of space stations in the fixed-satellite service) to the earth station receivers of relatively low-power satellite systems is directly proportional to the difference between their e.i.r.p. Sharing among such systems is greatly facilitated if this difference is kept as small as is consistent with the requirements.

10. *Realistic quality and reliability objectives*

The quality and reliability objectives have a significant effect on the use of the spectrum/orbit resource. If the objectives are set unnecessarily high, the capacity of the orbit is reduced. Quality and reliability objectives should be set no higher than absolutely necessary.

ANNEX 8

Technical Data Used in Establishing the Provisions and Associated Plan and Which Should Be Used for their Application

1. DEFINITIONS

1.1 *Service area*

The area on the surface of the Earth in which the administration responsible for the service has the right to demand that the agreed protection conditions be provided.

Note: In the definition of service area, it is made clear that within the service area the agreed protection conditions can be demanded. This is the area where there should be at least the wanted power flux-density and protection against interference based on the agreed protection ratio for the agreed percentage of time.

1.2 *Coverage area*

The area on the surface of the Earth delineated by a contour of a constant given value of power flux-density which would permit the wanted quality of reception in the absence of interference.

Note 1: In accordance with the provisions of No. 2674 of the Radio Regulations, the coverage area must be the smallest area which encompasses the service area.

Note 2: The coverage area, which will normally encompass the entire service area, will result from the intersection of the antenna beam (elliptical or circular) with the surface of the Earth, and will be defined by a given value of power flux-density. For example, in the case of a Region 1 or 3 country with a service planned for individual reception, it would be the area delineated by the contour corresponding to a level of $-103 \text{ dB(W/m}^2\text{)}$ for 99% of the worst month. There will usually be an area outside the service area but within the coverage area in which the power flux-density will be at least equivalent to the minimum specified value; however, protection against interference will not be provided in this area.

1.3 *Beam area*

The area delineated by the intersection of the half-power beam of the satellite transmitting antenna with the surface of the Earth.

Note: The beam area is simply that area on the Earth's surface corresponding to the -3 dB points on the satellite antenna radiation pattern. In many cases the beam area would almost coincide with the coverage area, the discrepancy being accounted for by the permanent difference in path lengths from the satellite throughout the beam area, and also by the permanent variations, if any, in propagation factors across the area. However, for a service area where the maximum dimension as seen from the satellite position is less than 0.6° (the agreed minimum practicable satellite antenna half-power beamwidth), there could be a significant difference between the beam area and the coverage area.

1.4 *Nominal orbital position*

The longitude of a position in the geostationary-satellite orbit associated with a frequency assignment to a space station in a space radiocommunication service. The position is given in degrees from the Greenwich meridian.

2. RADIO PROPAGATION FACTORS

2.1 The propagation loss on the space-to-Earth path is equal to the free space path loss plus the attenuation exceeded for not more than 1% of the worst month, the latter being given in Fig. 1 for the five rain-climatic zones shown in Fig. 2.

2.2 In using the curves of Fig. 1, the difference between clear weather attenuation and the attenuation for 99% of the worst month should be limited to a maximum of 2 dB by appropriate choice of angle of elevation.

2.3 In planning the broadcasting-satellite service, for emissions applying circular polarization, the level of the depolarized component relative to the level of the co-polar component should be taken as:

for rain-climatic zones 1 and 2: -27 dB ;
for rain-climatic zones 3, 4 and 5: -30 dB .

FIGURE 1

Predicted attenuation values exceeded for not more than 1% of the worst month (0.25% of the time) at 12 GHz in the rain-climatic zones indicated in Figure 2.

- A: Rain-climatic zone 1
- B: Rain-climatic zone 2
- C: Rain-climatic zones 3 and 4
- D: Rain-climatic zone 5

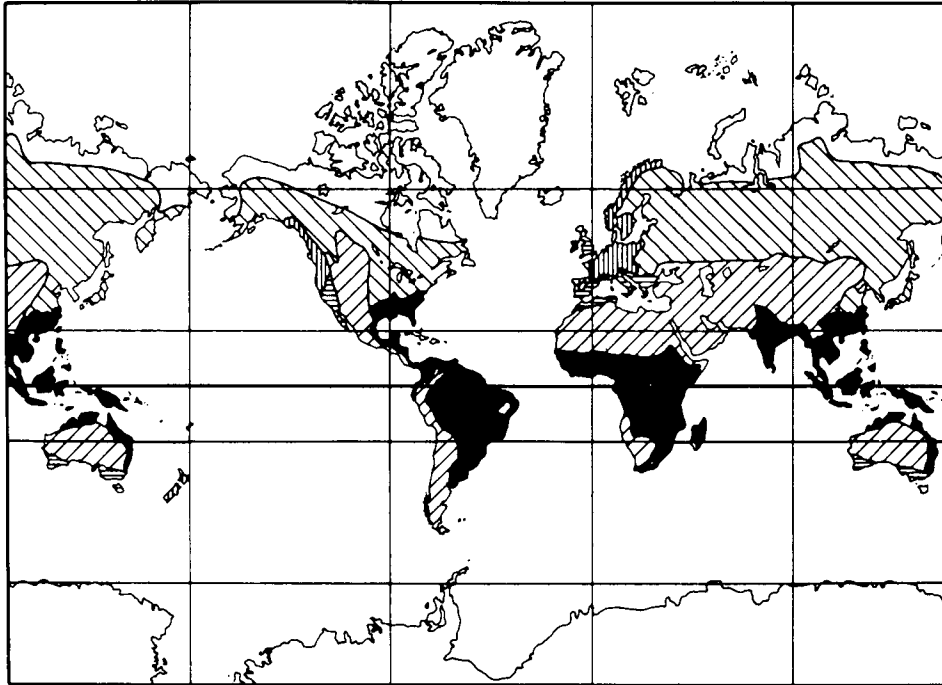

FIGURE 2

Rain-climatic zones

It should be noted that extensive measurements of attenuation due to rainfall have not been carried out in the tropical countries, especially in the African region.

3. BASIC TECHNICAL CHARACTERISTICS

3.1 *Type of modulation*

Planning of the broadcasting-satellite service is based on the use of a signal consisting of a video signal with an associated carrier, frequency-modulated by a sound signal, both frequency-modulating a carrier in the 12 GHz band, with a pre-emphasis characteristic in accordance with Fig. 3 (from CCIR Recommendation 405).

This does not preclude the use of other modulating signals having different characteristics (e.g. modulation with sound channels frequency-multiplexed within the bandwidth of a television channel, digital modulation of sound and television signals, or other pre-emphasis characteristics), provided that the use of such characteristics does not cause greater interference than that caused by the system considered in the Plan.

FIGURE 3
Pre-emphasis characteristic for television on 525- and 625-line systems

Curve A: 525-line system

Curve B: 625-line system

3.2 Polarization

3.2.1 For the planning of the broadcasting-satellite service, circular polarization shall be used in Regions 1, 2 and 3¹.

3.2.2 If possible, the polarization of different beams intended to serve the same area should be the same.

3.2.3 The terms "direct" and "indirect" used in the Plan to indicate the direction of rotation of circularly-polarized waves correspond to right-hand (clockwise) and left-hand (anti-clockwise) polarization respectively according to the following definitions:

Direct polarization (right-hand or clockwise polarization)

An elliptically or circularly-polarized wave, in which the electric field-intensity vector, observed in any *fixed plane*, normal to the direction of propagation, whilst looking in (i.e., not against) the direction of propagation, rotates *with time* in a *right-hand* or clockwise direction.

Note: For circularly-polarized plane waves, the ends of the electric vectors drawn from any points along a straight line normal to the plane of the wave front form, *at any instant*, a *left-hand* helix.

Indirect polarization (left-hand or anti-clockwise polarization)

An elliptically or circularly-polarized wave, in which the electric field-intensity vector, observed in any *fixed plane*, normal to the direction of propagation, whilst looking in (i.e., not against) the direction of propagation, rotates *with time* in a *left-hand* or anti-clockwise direction.

Note: For circularly-polarized plane waves, the ends of the electric vectors drawn from any points along a straight line normal to the plane of the wave front form, *at any instant*, a *right-hand* helix.

3.3 Carrier-to-noise ratio

For the purpose of planning the broadcasting-satellite service, the carrier-to-noise ratio is equal to 14 dB for 99% of the worst month.

The reduction in quality in the down-link due to thermal noise in the up-link is taken as equivalent to a degradation in the down-link carrier-to-noise ratio not exceeding 0.5 dB for 99% of the worst month.

¹ The Administration of the United States of America expressed concern regarding the adoption of circular polarization for Region 2 and indicated that the very probable adoption of linear polarization by the fixed-satellite service would preclude the use of cross-polarization to facilitate sharing between the two space services and would affect orbit and spectrum utilization within the Region.

The Administration of Iran expressed a reservation regarding the adoption of circular polarization for planning the broadcasting-satellite service in Region 3 and stated its intention to use linear polarization.

3.4 *Protection ratio between two FM television signals*

For planning in Regions 1 and 3 the following protection ratios have been adopted for the purpose of calculating equivalent protection margins ¹:

- 31 dB for co-channel signals;
- 15 dB for adjacent-channel signals.

3.5 *Channel spacing*

3.5.1 *Channel spacing in the Plan*

The spacing between the assigned frequencies of two adjacent channels is 19.18 MHz. The Plan gives the assigned frequencies for each channel.

3.5.2 *Grouping of channels in the same beam*

Planning in Region 1 has been carried out by trying to group all the channels radiated within a single antenna beam within a frequency range of 400 MHz, in order to simplify receiver construction.

3.5.3 *Spacing between channels feeding a common antenna*

Owing to technical difficulties in the output circuit of a satellite transmitter, spacing between the assigned frequencies of two channels feeding a common antenna must be greater than 40 MHz.

3.6 *Figure of merit (G/T) of a receiving installation in the broadcasting-satellite service*

In planning the broadcasting-satellite service, the value of the figure of merit (G/T) used is:

- 6 dB/K for individual reception;
- 14 dB/K for community reception.

The values are calculated from the following formula which allows for pointing error, polarization effects, and ageing:

$$G/T = \frac{\alpha \beta G_r}{\alpha T_a + (1 - \alpha) T_0 + (n - 1) T_0}$$

¹ The equivalent protection margin *M* is given in dB by the formula

$$M = -10 \log [10^{-M_1/10} + 10^{-M_2/10} + 10^{-M_3/10}]$$

where *M*₁ is the value in dB of the protection margin for the same channel. This is defined in the following expression where the powers are evaluated at the receiver input:

$$\frac{\text{wanted power}}{\text{sum of the co-channel interfering powers}} \text{ (dB) } - \text{co-channel protection ratio (dB)}$$

*M*₂ and *M*₃ are the values in dB of the upper and lower adjacent-channel protection margins.

The definition of the adjacent-channel protection margin is similar to that for the co-channel case except that the adjacent-channel protection ratio and the sum of the interfering powers due to transmissions in the adjacent channel are considered.

where

α : the total coupling losses, expressed as a power ratio;

β : the total losses due to the pointing error, polarization effects and ageing, expressed as a power ratio;

G_r : the effective gain of the receiving antenna, expressed as a power ratio and taking account of the method of feeding and the efficiency;

T_a : the effective temperature of the antenna;

T_0 : the reference temperature = 290 K;

n : the overall noise factor of the receiver, expressed as a power ratio.

See also CCIR Report 473-1 (Annex 1).

3.7 *Receiving antenna*

3.7.1 *Minimum diameter of receiving antenna*

For planning the broadcasting-satellite service the minimum diameter of receiving antenna considered is such that the half-power beamwidth, ϕ_o , is:

a) for individual reception: 2° in Regions 1 and 3, 1.8° in Region 2;

b) for community reception: 1° in all Regions.

3.7.2 *Receiving antenna reference patterns*

The co-polar and cross-polar reference patterns of receiving antennae are given in Figs. 4 and 5.

a) The relative antenna gain (dB) is given by the curves in Fig. 4 for:

- individual reception in Regions 1 and 3:
 - Curve A for the co-polar component;
 - Curve B for the cross-polar component;
- community reception:
 - in all Regions, Curve A' up to the intersection with Curve C, then Curve C, for the co-polar component;
 - in Regions 1 and 3, Curve B for the cross-polar component.

b) For Region 2, the relative antenna gain (dB) is given by the curves in Fig. 5 for:

- individual reception, for which use should be made of:
 - Curve A for the co-polar component;
 - Curve B for the cross-polar component;
- community reception for which Curve B should be used for the cross-polar component (the co-polar component being given in Fig. 4).

FIGURE 4

Co-polar and cross-polar reference patterns for receiving antennae

Curve A: Co-polar component for individual reception without side-lobe suppression

$$\begin{aligned}
 &0 && \text{for } 0 \leq \varphi \leq 0.25 \varphi_0 \\
 &-12 \left(\frac{\varphi}{\varphi_0} \right)^2 && \text{for } 0.25 \varphi_0 < \varphi \leq 0.707 \varphi_0 \\
 &-\left[9.0 + 20 \log_{10} \left(\frac{\varphi}{\varphi_0} \right) \right] && \text{for } 0.707 \varphi_0 < \varphi \leq 1.26 \varphi_0 \\
 &-\left[8.5 + 25 \log_{10} \left(\frac{\varphi}{\varphi_0} \right) \right] && \text{for } 1.26 \varphi_0 < \varphi \leq 9.55 \varphi_0 \\
 &-33 && \text{for } 9.55 \varphi_0 < \varphi
 \end{aligned}$$

Curve A': Co-polar component for community reception without side-lobe suppression

$$\begin{aligned}
 &0 && \text{for } 0 \leq \varphi \leq 0.25 \varphi_0 \\
 &-12 \left(\frac{\varphi}{\varphi_0} \right)^2 && \text{for } 0.25 \varphi_0 < \varphi \leq 0.86 \varphi_0 \\
 &-\left[10.5 + 25 \log_{10} \left(\frac{\varphi}{\varphi_0} \right) \right] && \text{for } 0.86 \varphi_0 < \varphi \text{ up to intersection with Curve C (then Curve C)}
 \end{aligned}$$

Curve B: Cross-polar component for both types of reception

$$\begin{aligned}
 &-25 && \text{for } 0 \leq \varphi \leq 0.25 \varphi_0 \\
 &-\left(30 + 40 \log_{10} \left| \frac{\varphi}{\varphi_0} - 1 \right| \right) && \text{for } 0.25 \varphi_0 < \varphi \leq 0.44 \varphi_0
 \end{aligned}$$

- 20 for $0.44 \varphi_o < \varphi \leq 1.4 \varphi_o$
- $\left(30 + 25 \log_{10} \left| \frac{\varphi}{\varphi_o} - 1 \right| \right)$ for $1.4 \varphi_o < \varphi \leq 2 \varphi_o$
- 30 until intersection with co-polar component curve; then as for co-polar component

Curve C: Minus the on-axis gain

Note: for values of φ_o see 3.7.1.

FIGURE 5

Reference patterns for co-polar and cross-polar components for receiving antennae for individual reception in Region 2

Curve A: Co-polar component without side-lobe suppression

- 0 for $0 \leq \varphi \leq 0.25 \varphi_o$
- $-12 \left(\frac{\varphi}{\varphi_o}\right)^2$ for $0.25 \varphi_o < \varphi \leq 0.707 \varphi_o$
- $- \left[9.0 + 20 \log_{10} \left(\frac{\varphi}{\varphi_o}\right) \right]$ for $0.707 \varphi_o < \varphi \leq 1.26 \varphi_o$
- $- \left[8.5 + 25 \log_{10} \left(\frac{\varphi}{\varphi_o}\right) \right]$ for $1.26 \varphi_o < \varphi \leq 15.14 \varphi_o$
- 38 dB for $\varphi > 15.14 \varphi_o$

Curve B: Cross-polar component

- 25 for $0 \leq \varphi \leq 0.25 \varphi_o$
- $\left(30 + 40 \log_{10} \left| \frac{\varphi}{\varphi_o} - 1 \right| \right)$ for $0.25 \varphi_o < \varphi \leq 0.44 \varphi_o$
- 20 for $0.44 \varphi_o < \varphi \leq 1.4 \varphi_o$
- $\left(30 + 25 \log_{10} \left| \frac{\varphi}{\varphi_o} - 1 \right| \right)$ for $1.4 \varphi_o < \varphi \leq 2 \varphi_o$
- 30 until intersection with co-polar component curve; then as for co-polar component

Note: for values of φ_o see 3.7.1.

3.8 Necessary bandwidth

The necessary bandwidths considered are as follows for:

- 625-line systems: 27 MHz;
- 525-line systems in Region 3: 27 MHz;
- 525-line system M of Region 2: 18 MHz and 23 MHz.

3.9 Guardbands

3.9.1 A guardband is defined as the portion of the frequency spectrum between the edge of the allocated band and the edge of the necessary bandwidth of the emission in the nearest channel.

3.9.2 For the planning of the broadcasting-satellite service, the guardbands necessary to protect the services in adjacent frequency bands are shown in the table below.

Regions	Guardband at the lower edge of the band (11.7 GHz)	Guardband at the upper edge of the band (12.2/12.5 GHz)
1	14 MHz	11 MHz
2	12 MHz	9 MHz
3	14 MHz	11 MHz

These guardbands assume maximum beam centre e.i.r.p. values of 67 dBW for Regions 1 and 3 and 63 dBW for Region 2 (values relating to individual reception), and a filter roll off of 2 dB/MHz. If smaller e.i.r.p. values are assumed, the guardbands can be reduced in width by 0.5 MHz for each decibel decrease in e.i.r.p.

3.9.3 Since developments in technology or the choice of lower e.i.r.p. values than those given above are likely to permit a reduction in the necessary guardbands, it is recommended that, for purposes other than *a priori* planning at this Conference¹, the latest CCIR Recommendations concerning spurious emissions from broadcasting satellites should be followed.

¹ The World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

3.10 *Orbital spacing*

The Plan for Regions 1 and 3 has been based generally on nominal orbital positions spaced uniformly at intervals of 6°.

3.11 *Satellite station keeping*

Space stations in the broadcasting-satellite service must be maintained in position with an accuracy of better than $\pm 0.1^\circ$ in both the N-S and E-W directions. (These tolerances lead to a maximum excursion of $\pm 0.14^\circ$ from the nominal satellite position.)

3.12 *Elevation angle of receiving antennae*

The Plan has been based on the consideration of a minimum angle of elevation of 20° to minimize the required e.i.r.p. of the satellite and to reduce the effects of shadowing and the possibility of interference from terrestrial services. However, for areas situated in latitudes above about 60°, the angle of elevation is of necessity less than 20°. Attention is also directed to Section 2.2.

For mountainous areas where an angle of 20° may not suffice, an angle of at least 30° has been provided where possible to provide an acceptable service. An angle of elevation of at least 40° has been considered for service areas subject to high precipitation (e.g., rain-climatic zone 1).

Some dry, non-mountainous areas may be given an acceptable service at angles of elevation less than 20°.

In areas with small angles of elevation, the shadowing effect of tall buildings may have to be taken into account.

In choosing a satellite position designed to give the maximum angle of elevation at the ground, the influence of such a position on the eclipse period has been borne in mind.

3.13 *Transmitting antenna*

3.13.1 *Cross-section of transmitted beam*

Planning has been based on the use of transmitting antennae with beams of elliptical or circular cross-section.

If the cross-section of the transmitted beam is elliptical, the effective beamwidth ϕ_o is a function of the angle of rotation q between the plane containing the satellite and the major axis of the beam cross-section and the plane in which the beamwidth is required.

The relationship between the maximum gain of an antenna and the half-power beamwidth can be derived from the expression:

$$G_m = 27\,843/ab$$

or

$$G_m(\text{dB}) = 44.44 - 10 \log_{10}a - 10 \log_{10}b$$

where:

a and b are the angles (in degrees) subtended at the satellite by the major and minor axes of the elliptical cross-section of the beam.

An antenna efficiency of 55% is assumed.

3.13.2 Minimum beamwidth of transmitting antenna

A minimum value of 0.6° for the half-power beamwidth of a transmitting antenna has been agreed on for planning.

3.13.3 Transmitting antenna reference patterns

The reference patterns for the co-polar and cross-polar components of satellite transmitting antennae used in preparing the Plan are given in Fig. 6.

FIGURE 6

Reference patterns for co-polar and cross-polar components for satellite transmitting antennae

Curve A: Co-polar component

$$\begin{aligned}
 & - 12 \left(\frac{\varphi}{\varphi_0} \right)^2 && \text{for } 0 \leq \varphi \leq 1.58 \varphi_0 \\
 & - 30 && \text{for } 1.58 \varphi_0 < \varphi \leq 3.16 \varphi_0 \\
 & - \left[17.5 + 25 \log_{10} \left(\frac{\varphi}{\varphi_0} \right) \right] && \text{for } 3.16 \varphi_0 < \varphi \\
 & \text{after intersection with curve C: as curve C}
 \end{aligned}$$

Curve B: Cross-polar component

$$\begin{aligned}

 & - 33 \qquad \qquad \qquad \text{for } 0.33 \varphi_0 < \varphi \leq 1.67 \varphi_0 \\
 & - \left(40 + 40 \log_{10} \left| \frac{\varphi}{\varphi_0} - 1 \right| \right) \text{ for } 1.67 \varphi_0 < \varphi \\
 & \text{after intersection with curve C: as curve C}
 \end{aligned}$$

Curve C: Minus the on-axis gain.

3.14 *Pointing accuracy of satellite antennae*

3.14.1 The deviation of the antenna beam from its nominal pointing direction must not exceed a limit of 0.1° in any direction. Moreover, the angular rotation of a transmitting beam about its axis must not exceed a limit of $\pm 2^\circ$; this latter limit is not necessary for beams of circular cross-section using circular polarization.

3.14.2 The following factors contribute to the total variation in the area on the surface of the Earth illuminated by the satellite beam:

- variations in satellite station-keeping;
- the variations caused by the pointing tolerances, which become more significant for coverage areas with low angles of elevation;
- the effect of the yaw error increases as the beam ellipse lengthens.

3.14.3 The effect of these possible variations should be assessed on a case-by-case basis, since their total effect on the area covered will vary as the geometry of the satellite beam varies, and it would not be reasonable to indicate a single value of shift in the area covered for all situations.

3.14.4 If linear polarization is used for an emission, yaw error makes a significant contribution to increasing the transmitted cross-polarized component; this increases the interference with other carriers which were originally cross-polarized with the emission in question.

3.15 *Limitation of output power in the satellite transmitter*

The output power of a space station in the broadcasting-satellite service must not rise by more than 0.25 dB relative to its nominal value throughout the life of the satellite.

3.16 *Power flux-density at edge of coverage area*

The value of the power flux-density at the edge of the coverage area for 99% of the worst month is:

- 103 dB(W/m²) for individual reception in Regions 1 and 3;
- 105 dB(W/m²) for individual reception in Region 2;
- 111 dB(W/m²) for community reception in all Regions.

3.17 *Difference between the e.i.r.p. directed towards the edge of the coverage area and that on the axis of the beam*

For planning, the absolute value of the difference between the e.i.r.p. directed towards the edge of the coverage area and that on the axis of the beam should preferably be 3 dB.

If the beam area is larger than the coverage area, the value will be less than 3 dB.

3.18 *Use of energy dispersal*

For planning, an energy dispersal value has been adopted which reduces by 22 dB the spectral power flux-density measured in a 4 kHz bandwidth in relation to that measured in the entire bandwidth; this reduction corresponds to a peak-to-peak deviation of 600 kHz.

ANNEX 9

Criteria for Sharing Between Services

1. *Protection requirements for sharing between services in the 12 GHz band*

1.1 The establishment of sharing criteria for the different services using the 12 GHz band should be based on the protection requirements listed in the table below:

Wanted service ¹	Wanted signal ¹	Interfering service ¹	Interfering signal ¹	Protection requirements ²	
				Total acceptable ³	Single entry
BSS	TV/FM	BSS, FSS, FS, BS	TV/FM	$C/I = 30 \text{ dB}^{4,7}$	$C/I = 35 \text{ dB}^4$
FSS	FDM/FM	BSS	TV/FM	$N = 500 \text{ pW0p}^8$	$N = 300 \text{ pW0p}$
FSS	TV/FM	BSS, FSS	TV/FM	$C/I = 32 \text{ dB}^5$	$C/I = 37 \text{ dB}^5$
FSS	4 ϕ -PSK	BSS, FSS	TV/FM	$C/I = 30 \text{ dB}$	$C/I = 35 \text{ dB}$
FSS	FDM/FM	FSS	FDM/FM	$N = 1000 \text{ pW0p}$	$N = 400 \text{ pW0p}$
FS	FDM/FM	BSS	TV/FM	$N = 1000 \text{ pW0p}$	$-125 \text{ dB} (W/m^2/4 \text{ kHz})^6$
BS	TV/VSB	BSS	TV/FM	$C/I = 50 \text{ dB}$	not applicable

- Notes: ¹
- BSS = broadcasting-satellite service
 - FSS = fixed-satellite service
 - BS = broadcasting service
 - FS = fixed service
 - TV = television
 - FM = frequency modulation
 - FDM = frequency division multiplex
 - 4 ϕ -PSK = four-level phase shift keying
 - VSB = vestigial sideband

- ² These limits include both up-link and down-link contributions. They are expressed:
- in dB for carrier-to-interference ratio;
 - in pW0p for noise;
 - in dB(W/m²/4 kHz) for power flux-density in a 4 kHz band.

- ³ Values in dB are protection ratios for the sum of interfering signals.
Values in pW0p represent interference noise in the worst telephone channels caused by the sum of interfering signals.

- ⁴ For BSS satellites located at the interfaces of Regions 1/3 and Region 2, the C/I ratios should be 1 dB higher.
- ⁵ See CCIR Recommendation 483.
- ⁶ This value may be suitably modified for tropical regions to take account of rain attenuation. Allowance may also be made for polarization discrimination.
- ⁷ C/I = ratio of carrier-to-interfering signal
- ⁸ N = noise power

1.2 The values given as “total acceptable” are those necessary to protect the wanted signal. The “single entry” values are those which should be used as a guide for determining sharing criteria. The total interference from all sources must be calculated, since satisfying the “single entry” criteria for each source may not guarantee that the total interference meets the above protection requirements. A “single entry” is defined as the aggregate of emissions from any one station entering any receiver in the wanted service within the channel to be protected.

1.3 The term C/I refers to the ratio of the wanted-to-interfering power at the interfered-with ground station. The value given shall be exceeded for all but 20% of the worst month for the fixed-satellite service (FSS), and for all but 1% of the worst month for the broadcasting service (BS) and the broadcasting-satellite service (BSS).

1.4 The term N refers to the post-demodulation noise power at a point of 0 dBm0 relative test tone level in any voice channel of an FDM/FM telephony system. The value given shall not be exceeded for more than 20% of the worst month.

1.5 The specified values of protection ratio (i.e., the carrier-to-interference power ratio corresponding to a specified picture quality) are applicable, for planning purposes, to television signals of any of the several television standards.

1.6 For BSS systems with FM/TV as the wanted signal, the protection ratios are given for particular reference conditions, the most important of which are:

- a) frequency deviation of the wanted signal (12 MHz peak-to-peak);
- b) quality of the wanted service (grade 4.5)¹;
- c) co-channel carriers (no carrier-frequency offset).

1.7 If system design is based on conditions other than *a*) and *b*) above, the FM/TV protection ratio is given by:

$$R = 12.5 - 20 \log (D_v/12) - Q + 1.1 Q^2 \text{ (dB)}$$

where

D_v = nominal peak-to-peak frequency deviation (MHz);

Q = the impairment grade, concerning the interference only.

1.8 When carriers are offset in frequency, condition *c*) does not apply and the adjacent channel protection ratios should be adjusted according to the frequency offset as shown in Fig. 1. For example, at a frequency offset of 20 MHz, the total acceptable ratio of protection against interference to an FM/TV signal from another FM/TV signal is 13 dB. The corresponding “single entry” value is 18 dB.

¹ Impairment grade on a 5-point scale as defined in CCIR Recommendation 500.

FIGURE 1

Reference case protection ratios relative to co-channel values

- Curve A: TV/VSB-wanted, TV/FM interfering
- Curve B: TV/FM-wanted, TV/FM interfering
- Curve C: TV/FM-wanted, TV/VSB interfering

2. *Reference antenna diameter for a fixed-satellite earth station to be used in calculating interference from space stations in the broadcasting-satellite service*

2.1 For antennae larger than 100λ (2.5 m) in the fixed-satellite service, the gain of the side-lobes is given by the equation $32 - 25 \log \theta$, where θ is the angle from the boresight (CCIR Recommendation 465). The side-lobe gain is independent of antenna diameter.

2.2 However, in the case of transmitting earth stations, the level of interference radiated into the up-link of other satellite systems would be inversely proportional to the square of the antenna diameter. In this case, the interference decreases with increasing antenna diameter. Since the 11.7 - 12.2 GHz band is only assigned in the space-to-Earth direction in the fixed-satellite service, this point is not of direct concern to the broadcasting-satellite service.

2.3 Hence it does not appear appropriate, for antenna diameters greater than 100λ , to specify a minimum antenna diameter for receiving earth stations in the fixed-satellite service sharing the band 11.7 - 12.2 GHz. It may be useful to consider a 4.5 m antenna having an efficiency of 60% and an on-axis gain of 53 dB as typical for the purpose of planning the sharing of this band; however, it should be noted that administrations in Region 2 are considering the use of antennae 3 m to 10 m in diameter.

3. *Use of energy dispersal in the broadcasting-satellite service*

3.1 Artificial energy dispersal is useful in promoting sharing between the broadcasting-satellite service and the other services to which the band is also allocated.

3.2 Such energy dispersal is achieved by the addition at baseband of a triangular waveform to the video signal to form a composite baseband which, in turn, is used to frequency-modulate the up-link carrier. The frequency of the triangular waveform is usually synchronized at a sub-multiple of the television frame frequency. Typical frequencies range from 12.5 Hz to 30 Hz.

3.3 The table below gives the relative reduction in spectral power flux-density in a 4 kHz bandwidth as a function of the peak-to-peak deviation due to the energy dispersal signal. This table is based on the following equation:

$$\left. \begin{array}{l} \text{Relative reduction (in dB)} \\ \text{in a 4 kHz band} \end{array} \right\} = 10 \log \frac{\Delta F_{pp} + \delta f_{rms}}{4}$$

where

ΔF_{pp} = peak-to-peak deviation due to the energy dispersal signal (kHz);

δf_{rms} = rms deviation due to "natural" energy dispersal (kHz).

In compiling the table below, a value of 40 kHz has been assumed for δf_{rms} , on the basis of the value of 10 dB for "natural" dispersion given in Table 4 of CCIR draft Report 631 (Rev. 76).

Reduction of spectral power flux-density relative to a 4 kHz bandwidth

Peak-to-peak deviation (kHz)	Relative reduction (dB)
0	10
100	15.44
200	17.78
300	19.29
400	20.41
500	21.30
600	22.04
700	22.67
800	23.22
900	23.71
1 000	24.15

3.4 The value of energy dispersal for the broadcasting-satellite service has been determined such that the spectral power flux-density measured in a 4 kHz bandwidth is reduced by 22 dB relative to that measured in the entire bandwidth; this reduction corresponds to a peak-to-peak deviation of 600 kHz.

ANNEX 10

Orbital Position Limitations

In applying the procedure of Article 4 for modifications to the Plan, administrations shall observe the following criteria:

- 1) No broadcasting-satellite serving an area in Region 1 and using a frequency in the band 11.7 - 12.2 GHz shall occupy a nominal orbital position further west than 37° W or further east than 146° E.
- 2) Any new orbital position in the Plan in the range of orbital arc between 37° W or 10° E associated with a new assignment, or resulting from a modification of an assignment in the Plan, shall be coincident with, or within 1° to the east of, a nominal orbital position in the Plan at the date of entry into force of the Final Acts¹.

¹ Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, which entered into force on 1 January 1979.

In the event of a modification to an assignment in the Plan, the use of a new nominal orbital position not coincident with any nominal orbital position in the Plan at the date of entry into force of the Final Acts¹ shall be associated with an 8 dB reduction in the e.i.r.p. compared to that appearing in the Plan for the assignment before modification.

ANNEX 11

Method of Calculating the Power Flux-Density Produced in the Territories of Region 2 by Space Stations in the Broadcasting-Satellite Service in Regions 1 and 3

Method of calculation

1. The power flux-density produced, under conditions of free space propagation, at a given point P on the surface of the Earth, by a satellite in the geostationary orbit, can be calculated from the following data:

- 1.1 nominal orbital position;
- 1.2 e.i.r.p., dBW;
- 1.3 characteristics of the antenna beam at half-power points (i.e. the major and minor axes together with the orientation of the corresponding ellipse);
- 1.4 geographical coordinates of the boresight (B);
- 1.5 geographical coordinates of the point P.

2. The values relevant to items 1.1 to 1.4 are indicated in the Plan. The point P can be chosen with reference to the objective of calculation. For the calculations which follow, the coordinates of point P have been taken as 35° W and 8° S.

3. To obtain the power flux-density [dB(W/m²)] produced at P, calculate:

- the distance, d (metres), between the satellite and the point P;
- the spreading attenuation, A for the distance d :

$$A = 10 \log \frac{1}{4\pi d^2}$$

- the angle φ , as seen from the satellite, between points B and P;
- φ_0 , the half-power beamwidth, in the direction of P (in the case of a circular beam φ_0 will be independent of direction);
- the relative antenna gain, δG in dB, for the calculated values of φ and φ_0 using the reference pattern for the co-polar component of the satellite transmitting antenna.

Then apply the expression*:

$$\text{pfd [dB(W/m}^2\text{)]} = \text{e.i.r.p.} + \delta G + A$$

to obtain the power flux-density produced at P.

Results

The power flux-densities produced at the coordinates 35° W, 8° S from broadcasting space stations of Regions 1 and 3, to which orbital positions from 37° W to 5° E and channels 1 to 25 have been assigned in the Plan, are given in the following table.

¹ Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, which entered into force on 1 January 1979.

* *Note:* In this expression, e.i.r.p. refers to boresight. The relative antenna gain δG is with respect to boresight antenna gain, therefore δG is negative.

Densité surfacique de puissance (DSP) produite dans la Région 2, au point: longitude = 35° Ouest, latitude = 8° Sud

**Table of Frequencies to be Used in the Bands Between 4 and 27.5 MHz
Allocated Exclusively to the Maritime Mobile Service**

(See Article 60)

In the table, where appropriate, the assignable frequencies in a given band for each usage are:

- indicated by the lowest and highest frequency, in heavy type, assigned in that band;
- regularly spaced, the number of assignable frequencies and the spacing in kHz being indicated in italics.

Table of Frequencies assignable to Ship Stations in the 25 MHz Band

(kHz)

Limit	Calling frequencies assignable to ship stations for A1A or A1B Morse telegraphy	Limit	Frequencies (non-paired) assignable to ship stations for narrow-band direct-printing telegraph and data transmission systems, at speeds not exceeding 100 bauds	Limit	Working frequencies assignable to ship stations for A1A or A1B Morse telegraphy	Limit
	<i>g)</i>		<i>b)</i>		<i>e)</i>	
25 070		25 076	25 076.3 - - 25 089.8 <i>28 frequencies spaced 0.5</i>	25 090.1	25 091.5 - - 25 108.5 <i>35 frequencies spaced 0.5</i>	25 110

a) See Appendix 16.

b) See Appendix 33.

c) The frequency bands may also be used by buoy stations for oceanographic data transmission and by stations interrogating these buoys, in accordance with the conditions set forth in Resolution 314.

d) See Appendix 32.

e) In the frequency bands to be used by ship stations for A1A Morse telegraphy working, at speeds not exceeding 40 bauds, administrations may assign additional frequencies interleaved between the extreme assignable frequencies. Any frequencies so assigned shall be multiples of 100 Hz. Administrations shall ensure a uniform distribution of such assignments within the bands and avoid, as far as possible, assigning the two frequencies at ± 100 Hz from each of the harmonically related frequencies indicated in the first line of each series in Appendix 35.

f) See Appendix 35.

g) See Appendix 34.

h) For the conditions of use of 8 364 kHz, see No. 2988.

NOC AP15A

APPENDIX 32

Table of Frequencies for Two-Frequency Operation by Coast Stations
(kHz)

**Channelling of the Maritime Mobile Bands Between 4 000 and
23 000 kHz Used for Narrow-Band Direct-Printing Telegraphy
and Data Systems (Frequencies Paired)**

(See Article 60 and Resolution 300)

Each coast station which uses paired frequencies is assigned
one or more frequency pairs from the following series;
each pair consists of a transmitting and a receiving frequency.

Series No.	4 MHz Band		6 MHz Band		8 MHz Band	
	Transmit	Receive	Transmit	Receive	Transmit	Receive
1	4 350	4 170.5	6 494.5	6 256.5	8 705	8 344
2	4 350.5	4 171	6 495	6 257	8 705.5	8 344.5
3	4 351	4 171.5	6 495.5	6 257.5	8 706	8 345

AP34-2

a) Administrations should assign the centre frequency within each channel of the appropriate group and/or common channel to ship stations equipped only with crystal-controlled oscillators and using harmonic relationships for A1A Morse telegraphy calling. However, administrations may subdivide each appropriate group channel and common channels into specific calling frequencies commencing 100 Hz from the lower end of the channel and ending 100 Hz from the upper end (see examples below) and assign these discrete frequencies to ships with synthesized transmitters. Administrations shall avoid, as far as possible, assigning the two frequencies at ± 100 Hz from each of the harmonically related centre frequencies in this Appendix.

Examples of subdivision of channels (centre frequencies in italics)

4/1/a	4 180-1	6/1/a	6 270-1	8/1/a	8 360-1	12/1/a	12 540-1	16/1/a	16 720-1
4/1/b	4 180-2	6/1/b	6 270-2	8/1/b	8 360-2	12/1/b	12 540-2	16/1/b	16 720-2
4/1/c	4 180-3	6/1/c	6 270-3	8/1/c	8 360-3	12/1/c	12 540-3	16/1/c	16 720-3
		6/1/d	6 270-4	8/1/d	8 360-4	12/1/d	12 540-4	16/1/d	16 720-4
		6/1/e	6 270-5	8/1/e	8 360-5	12/1/e	12 540-5	16/1/e	16 720-5
				8/1/f	8 360-6	12/1/f	12 540-6	16/1/f	16 720-6
				8/1/g	8 360-7	12/1/g	12 540-7	16/1/g	16 720-7
						12/1/h	12 540-8	16/1/h	16 720-8
						12/1/i	12 540-9	16/1/i	16 720-9
						12/1/j	12 541-0	16/1/j	16 721-0
						12/1/k	12 541-1	16/1/k	16 721-1
								16/1/l	16 721-2
								16/1/m	16 721-3
								16/1/n	16 721-4
								16/1/o	16 721-5

b) In the 22 MHz and 25 MHz bands the channels are not harmonically related to those in the 4 to 16 MHz bands. However, the principle of subdivision of channels into specific calling frequencies commencing 100 Hz from the lower end of the channel and ending 100 Hz from the upper end applies.

**Table of Working Frequencies, in kHz, Assignable to Ship Stations
for A1A Morse Telegraphy at Speeds Not Exceeding 40 Bauds**

(See also Note *e*) to Appendix 31)

Note: The first line in each series up to and including series No. 53 indicates the harmonically related assignable frequencies in the 4, 6, 8, 12 and 16 MHz bands. The other frequencies are not necessarily harmonically related.

**Automatic Receiving Equipment for Radiotelegraph
and Radiotelephone Alarm Signals**

(See Section II of Article 41)

1. The automatic devices intended for the reception of the radiotelegraph alarm signal shall fulfil the following conditions:

- a)* the equipment shall respond to the alarm signal transmitted by the telegraphic emissions of at least class A2B and H2B (see No. 4216);
- b)* the equipment shall respond to the alarm signal through interference (provided it is not continuous) caused by atmospherics and powerful signals other than the alarm signal, preferably without any manual adjustment being required during any period of watch maintained by the apparatus;
- c)* the equipment shall not be actuated by atmospherics or by strong signals other than the alarm signal;
- d)* the equipment shall possess a minimum sensitivity such that with negligible atmospheric interference, it is capable of being operated by the alarm signal transmitted by the emergency transmitter of a ship station at any distance from this station up to the normal range fixed for this transmitter by the International Convention for the Safety of Life at Sea, and preferably at greater distances;
- e)* the equipment shall give warning of any fault which would prevent the apparatus from performing its normal functions during watch hours.

2. The automatic devices intended for the reception of the radiotelephone alarm signal shall fulfil the following conditions:

- a)* the equipment shall respond to the alarm signal through intermittent interference caused by atmospherics and powerful signals other than the alarm signal, preferably without any manual adjustment being required during any period of watch maintained by the equipment;
- b)* the equipment shall not be actuated by atmospherics or by strong signals other than the alarm signal;
- c)* the equipment shall be effective beyond the range at which speech transmission is satisfactory and it should, as far as practicable, give warning of faults that would prevent the apparatus from performing its normal function during watch hours.

**Technical Characteristics of Emergency
Position-Indicating Radiobeacons Operating
on the Carrier Frequency 2 182 kHz**

(See Section I of Article 41)

Emergency position-indicating radiobeacons shall fulfil the following conditions:

a) the power radiated by low-power radiobeacons (Type L) shall be of a value necessary to produce at a distance of 30 nautical miles at sea level a field strength equal to or less than 10 microvolts per metre, with an initial field strength of at least 2.5 microvolts per metre;

b) the power radiated by high-power radiobeacons (Type H) shall be of a value necessary to produce at a distance of 30 nautical miles at sea level a field strength greater than 10 microvolts per metre;

c) after a period of 48 hours' continuous operation the radiated power shall not be less than 20 per cent of the initial power;

d) the radiobeacons shall be capable of class A2A (or A2B) or H2A (or H2B) emissions, with a depth of modulation between 30 and 90 per cent;

e) the audio-frequency tolerance of emissions used for emergency position-indicating radiobeacons (Nos. 3256 and 3258) are:

- ± 20 Hz for the frequency of 1 300 Hz
- ± 35 Hz for the frequency of 2 200 Hz

f) equipment shall be designed to comply with relevant CCIR Recommendations.

Narrow-Band Direct-Printing Telegraph Equipment

(See Articles 59, 60, 63 and 64)

The equipment for narrow-band direct-printing telegraph systems in the maritime mobile service shall fulfil the following conditions:

- a) the equipment shall accept signals conforming to International Telegraph Alphabet Code No. 2 at a modulation rate of 50 bauds and shall provide similar signals at its output suitable for extension to the public telegraph network;
- b) the modulation rate over the radio path shall not exceed 100 bauds;
- c) class F1B emissions shall be used, with a frequency shift of 170 Hz (*Note 1*);

Note 1: When frequency-shift keying is effected by applying audio signals to the input of a single-sideband transmitter particular care should be taken to suppress adequately the residual carrier of the single-sideband modulation process. In addition a suitable choice of the centre audio frequency will minimize the possibility of the residual carrier causing interference to nearby channels. For this reason some administrations have chosen 1 700 Hz as the centre frequency.

- d) the frequency tolerance of the transmitted signal shall be ± 40 Hz for ship stations, and shall be ± 15 Hz for coast stations (*Note 1*, *Note 2* and *Note 3*);
- e) the higher of the emitted frequencies shall correspond to "space" (start), and the lower of the emitted frequencies shall correspond to "mark" (stop) in accordance with the relevant CCIR Recommendation;
- f) where an error control system is employed the apparatus should be provided with a simple device to by-pass the error control system to permit transmission and reception over the radio path of uncorrected signals conforming with *a*) above;
- g) when an error-detecting and correcting system is used for direct-printing telegraphy in the maritime mobile service, a 7-unit ARQ system or a 7-unit forward acting error-correcting and indicating time diversity system, using the same code, shall be employed. Remaining technical characteristics of the error-detecting and correcting equipment should be in accordance with the relevant CCIR Recommendations;

Note 1: For operational purposes the associated receiving equipment should conform to the frequency stability of the transmitters.

Note 2: These tolerances shall apply to equipment installed after 1 January 1976 and to all equipment after 1 January 1985. For equipment installed before 2 January 1976 the tolerance is 100 Hz for ship station transmitters (with a maximum deviation of 40 Hz for short periods of the order of 15 minutes) and for coast station transmitters the tolerance is 40 Hz.

Note 3: Stricter tolerances may be desirable, depending on the method of operation of the service and the equipment employed.

- h)* if a station is equipped with a selective calling system in accordance with the provisions of **Appendix 39** and with a direct-printing system in accordance with the provisions of the present Appendix and uses a two block call signal, that station shall be assigned the same identification or selective call number in accordance with Nos. **2088** and **2143 to 2146** for both systems;

- i)* a station, equipped with a direct-printing system in accordance with the provisions of the present Appendix and using a two block call signal, which has not already been assigned a number in accordance with Nos. **2088** and **2143 to 2146**, should be assigned such a number for the direct-printing system;

- j)* conversion from the numerical identification to the 28-bit (4-character) pattern shall be performed according to the relevant CCIR Recommendations.

**Selective Calling System for Use in the
International Maritime Mobile Service**

(See Articles 25, 62, 63 and 65 and Appendix 9)

1. Where there is a need to fulfil immediate requirements for selective calling, the system to be used shall have the following characteristics:

1.1 the selective call signal shall consist of five figures representing the code number assigned to a ship for selective calling;

1.2 the audio-frequency signal applied to the input of the coast station transmitter shall consist of consecutive audio-frequency pulses conforming to the following:

1.2.1 the audio frequencies used to identify the figures of the code number assigned to a ship shall conform to the following series:

Figure	1	2	3	4	5	6	7	8	9	0	Figure repetition
Audio frequency (Hz)	1124	1197	1275	1358	1446	1540	1640	1747	1860	1981	2110

For example, the series of audio-frequency pulses corresponding to the selective call 12133 would be 1124-1197-1124-1275-2110 Hz, and the series corresponding to the code number 22222 would be 1197-2110-1197-2110-1197 Hz;

- 1.2.2 if the series of numbers represented by the use of only two frequencies, chosen from those in paragraph 1.2.1, are reserved for calling predetermined groups of ships, then 100 different groups of numbers are available for allocation, according to the needs of administrations;
- 1.2.3 the waveforms of the audio-frequency generators shall be substantially sinusoidal, not exceeding 2% total harmonic distortion;
- 1.2.4 the audio-frequency pulses shall be transmitted sequentially;
- 1.2.5 the difference between the maximum amplitude of any audio-frequency pulses shall not exceed 1 dB;
- 1.2.6 the duration of each audio-frequency pulse, measured between the half-amplitude points, shall be 100 ms \pm 10 ms;
- 1.2.7 the time interval between consecutive pulses, measured between the half-amplitude points, shall be 3 ms \pm 2 ms;
- 1.2.8 the rise and the decay time of each audio-frequency pulse, measured between the 10% and 90% amplitude points, shall be 1.5 ms \pm 1 ms;
- 1.2.9 the frequency tolerance of the audio frequencies given in paragraph 1.2.1 shall be \pm 4 Hz;
- 1.2.10 the selective call signal (the selective call number assigned to the ship station) shall be transmitted twice with an interval of 900 ms \pm 100 ms between the end of the first signal and the beginning of the second signal (Figure 1);
- 1.2.11 the interval between calls from a coast station to different ships shall be at least 1 second (Figure 1).

2. The additional information following the selective call signal shall be transmitted as follows:
 - 2.1 to identify the calling coast station, four figures shall be transmitted;
 - 2.2 to identify the VHF channel on which a reply is required, two "zeros" followed by two "figures" should be transmitted (see Appendix 18);
 - 2.3 the characteristics of the signals shall conform to paragraphs 1.2.1 and 1.2.3 to 1.2.9 inclusive;
 - 2.4 the composition of the signal shall be as shown in the diagram (Figure 2), the tolerance on the 350 ms interval being ± 30 ms.
3. A special "all ships call" signal to actuate the receiving selectors on all ships, regardless of their individual code number, shall consist of a continuous sequential transmission of the eleven audio-frequencies given in paragraph 1.2.1. The parameters of the audio-frequency pulses shall be in accordance with paragraphs 1.2.3, 1.2.4, 1.2.5 and 1.2.9. The duration of each audio-frequency pulse, measured between the half-amplitude points, shall be $17 \text{ ms} \pm 1 \text{ ms}$ and the interval between consecutive pulses, measured between half-amplitude points, shall not exceed 1 ms. The total duration of this "all ships call" signal should be at least five seconds.
4. Receiving selectors on ships should operate reliably in any radio conditions acceptable for satisfactory communication.
5. The receiving selector shall be designed to accept the signals as defined in paragraph 1. However, bearing in mind that coast stations may transmit additional signals (e.g. coast station identification), it is important that the reset time of the decoder should be $250 \text{ ms} \pm 40 \text{ ms}$.
6. The receiving selector should be so designed, constructed and maintained that it is resistant to atmospheric and other unwanted signals including selective calling signals other than that for which the decoder has been set up.

7. The receiving selector shall include an audible or visual means of indicating the receipt of a call and, if required, an additional facility allowing the determination of the identity of the calling station or the VHF channel on which to reply according to the needs of administrations.
8. The indicating means shall be actuated on correct reception of the calling signal, no matter whether the correct registration has occurred on the first, or the second, or both parts of the calling signal transmitted by the coast stations.
9. The indicating means shall remain actuated until reset manually.
10. The receiving selector equipment should be as simple as is practicable, be capable of reliable operation over long periods with a minimum of maintenance, and could, with advantage, include facilities for self-testing.

AP39-6

Linked Compressor and Expander Systems

(See Section IV of Article 60 and Appendix 17)

When linked compressor and expander systems are used in the international maritime mobile radiotelephone service:

- a) the characteristics of the linked compressor and expander equipment shall be in accordance with relevant CCIR Recommendations;
- b) for optimum performance the characteristics of SSB radio equipment used in conjunction with compressor and expander systems shall be in accordance with Appendix 17 and should, in addition, meet the following requirements:
 1. the short-term frequency stability (of the order of 15 minutes) of coast station transmitters should be within ± 2 Hz;
 2. the short-term frequency stability (of the order of 15 minutes) of ship station transmitters should be within ± 5 Hz;
 3. to ensure sufficient overall gain stability of the system, for the duration of a call, facilities should be provided in coast station receivers to keep the end-to-end frequency error within ± 2 Hz; similarly, facilities should be provided in ship station receivers to keep the end-to-end frequency error within ± 5 Hz;

4. the maximum permissible amplitude variation in the transmitter over the 350 – 2 700 Hz audio frequency band should be 6 dB and the differential delay should not exceed 3 ms. The receiver should have at least the same standards of performance in these respects;
5. if the pilot carrier of a class R3E emission is not used to provide a continuous signal for controlling the frequency and gain of the receiver, for example where a class J3E emission is used, the initial tuning procedure will require the provision, for a brief period, of a suitable reference tone (e.g. 1 000 Hz ± 1 Hz) at a level of the order of -10 dBm0 ± 0.5 dB;
6. where it is desired to use speech inverters or other types of privacy equipment, it should be borne in mind that the upper audio frequency of the speech channel is 2 380 Hz.

NOC AP23

APPENDIX 41

**Procedure for Obtaining Radio Direction-Finding Bearings
and Positions**
(See Article 35)

Section I. General Instructions

§ 1. Stations of the aeronautical mobile service shall use such special procedures as may be in force as a result of agreements concluded between administrations. However, if they have need to participate in direction-finding operations with stations of the maritime mobile service, the provisions of this Appendix shall be applicable.

§ 2. Before calling one or more radio direction-finding stations for the purpose of asking for a bearing or position, a mobile station shall ascertain from the List of Radiodetermination and Special Service Stations :

- a) the call signs of the stations to be called to obtain the desired bearings or position ;
- b) the frequency on which the radio direction-finding stations keep watch, and the frequency or frequencies on which they take bearings ;
- c) the radio direction-finding stations which, being linked by special circuits, can be grouped operationally with the radio direction-finding station to be called.

§ 3. The procedure to be followed by the mobile station depends on varying circumstances. Generally, the following shall be taken into account :

- a) if the radio direction-finding stations do not keep watch on the same frequency (whether it be the frequency on which bearings are taken or another frequency), a separate request for the bearings shall be made to each station or group of stations using a given frequency;

b) if all the radio direction-finding stations concerned keep watch on the same frequency, and if they are able to take bearings on a common frequency (which may be different from the listening frequency), the mobile station shall call all of them at the same time, in order that all these stations may take simultaneous bearings on the same transmission;

c) if several radio direction-finding stations are grouped by means of special circuits, only one of them, the radio direction-finding control station, shall be called even if all are furnished with transmitting apparatus. In that case, however, the mobile station shall, if appropriate, specify in the call, by means of call signs, the radio direction-finding stations from which it wishes to obtain bearings.

§ 4. The List of Radiodetermination and Special Service Stations contains information relating to :

- a) the type of signal and class of emission to be used for obtaining the bearings ;
- b) the duration of the transmission to be made by the mobile station ;
- c) the time used by the radio direction-finding station in question, if different from Coordinated Universal Time (UTC).

Section II. Rules of Procedure

§ 5. The following rules of procedure applicable to radiotelegraphy and radiotelephony are based on the use of radiotelegraphy. When used for radiotelephony, appropriate phrases may replace the service abbreviations.

To obtain a bearing

§ 6. (1) The mobile station shall call the radio direction-finding station or the radio direction-finding control station on the listening frequency indicated in the List of Radiodetermination and Special Service Stations. Depending on the type of information desired, the calling station shall transmit the appropriate service abbreviation followed, if the radio direction-finding station is a mobile station, by the service abbreviation QTH? It shall indicate, if necessary, the frequency on which it is going to transmit to enable its bearing to be taken, and then await instructions.

(2) The radio direction-finding station called shall request the calling station, by means of the appropriate service abbreviation, to transmit for the bearing. If necessary, it shall indicate the frequency to be used for this purpose and the number of times the transmission is to be repeated.

(3) After having changed, if necessary, to its new transmitting frequency, the calling station shall transmit two dashes of approximately ten seconds each, followed by its call sign. It shall repeat this signal as often as the radio direction-finding station requires.

(4) The radio direction-finding station shall determine the direction and, if possible, the sense of the bearing, and its classification (see paragraph 7).

(5) If the radio direction-finding station is not satisfied with the operation, it shall request the calling station to repeat the transmission described in (3).

(6) The radio direction-finding station shall transmit the information to the calling station in the following order :

- a) the appropriate service abbreviation ;
- b) three digits indicating the true bearing in degrees from the radio direction-finding station ;
- c) class of bearing ;
- d) time of observation ;

e) if the radio direction-finding station is mobile, its own position in latitude and longitude, preceded by the service abbreviation QTH.

(7) As soon as the calling station has received the result of the observation, it shall repeat the message, if this is considered necessary to obtain confirmation. The radio direction-finding station then shall confirm that the repetition is correct or, if necessary, correct it by repeating the message. When the radio direction-finding station is sure that the calling station has received the message correctly, it shall transmit the signal "end of work". The calling station shall repeat this signal to indicate that the operation is finished.

(8) In the absence of information to the contrary, the calling station may assume that the sense of the bearing was determined. If the radio direction-finding station has not determined the sense, it shall indicate this in the information transmitted, or report the bearing and its reciprocal.

Classification of bearings

§ 7. To estimate the accuracy and determine the corresponding class of a bearing :

- a) an operator should generally, and particularly in the maritime mobile radio direction-finding service on frequencies below 3 000 kHz, use the observational characteristics of bearings shown in the following table;
- b) the operators at a radio direction-finding station, when facilities and time permit, may take into account the probability of error in the bearing. A bearing is considered as belonging to a particular class if there is a probability of less than one in twenty that the bearing error would exceed the numerical values specified for that class shown in the following table. This probability should be determined from an analysis of the five components that make up the total variance of the bearing (instrumental, site, propagation, random-sampling and observational components).

To obtain a position determined by two or more radio direction-finding stations organized as a group

§ 8. (1) If the calling station wishes to be informed of its position by a group of radio direction-finding stations, it shall call the control station as is indicated in § 6. (1) above, and request its position by means of the appropriate service abbreviation.

(2) The control station shall reply to the call and, when the radio direction-finding stations are ready, request, by means of the appropriate service abbreviation, that the calling station transmit. When the position has been determined, the control station shall transmit to the calling station :

- a) the appropriate service abbreviation ;
- b) the position, in latitude and longitude or, if appropriate, in relation to a known geographical position ;
- c) the class of position as defined in the following sub-paragraph ;
- d) the time of observation.

(3) According to its estimate of the accuracy of the observations, the control station shall classify the position in one of the four following classes :

Class A : positions which the operator may reasonably expect to be accurate to within 5 nautical miles ;

Class B : positions which the operator may reasonably expect to be accurate to within 20 nautical miles ;

Class C : positions which the operator may reasonably expect to be accurate to within 50 nautical miles ;

Class D : positions which the operator may not expect to be accurate to within 50 nautical miles.

(4) However, for frequencies above 3 000 kHz, where the distance limits specified in the preceding sub-paragraph may not be appropriate, the control station may classify the position in accordance with current CCIR Recommendations.

To obtain simultaneous bearings from two or more radio direction-finding stations organized as a group

§ 9. On a request for bearings, the control station of a group of radio direction-finding stations shall proceed as indicated in § 8 above. It then shall transmit the bearings observed by each station of the group, each bearing being preceded by the call sign of the station which observed it.

TABLE
Classification of Bearings

Class	Bearing Error (Degrees)	Observational Characteristics					
		Signal Strength	Bearing Indication	Fading	Interference	Bearing Swing (Degrees)	Duration of Observation
A	± 2	very good or good	definite (sharp null)	negligible	negligible	less than 3	adequate
B	± 5	fairly good	blurred	slight	slight	more than 3 less than 5	short
C	± 10	weak	severely blurred	severe	strong	more than 5 less than 10	very short
D	more than ± 10	scarcely perceptible	ill-defined	very severe	very strong	more than 10	inadequate

ADD APCA

APPENDIX 43

Maritime Mobile Service Identities1. *General*

1.1 Maritime mobile service identities are formed of a series of nine digits which are transmitted over the radio path in order to uniquely identify ship stations, ship earth stations, coast stations, coast earth stations and group calls.

1.2 Ship station identities shall be in accordance with relevant CCIR and CCITT Recommendations.

1.3 These identities are formed in such a way that the identity or part thereof can be used by telephone and telex subscribers connected to the general telecommunications network to call ships automatically in the shore-to-ship direction.

1.4 There are three kinds of maritime mobile service identities:

- i) ship station identities,
- ii) group call identities,
- iii) coast station identities.

1.5 The nationality or flag of a station is given by a three-digit group, the Nationality Identification Digits (NID).

2. *Nationality Identification Digits (NID)*

Table I gives the Nationality Identification Digits (NID) allocated to each country. In accordance with Radio Regulation No. 2087 the

Secretary-General is authorized to allocate Nationality Identification Digits to countries not included in this table¹.

3. *Ship Station Identities*

The 9 digit code constituting a ship station identity is formed as follows:

N I D X X X X X X
1 2 3 4 5 6 7 8 9

wherein

N I D
1 2 3

represent the Nationality Identification Digits and X is any figure from 0 to 9.

4. *Group Call Identities*

Group call identities for calling simultaneously more than one ship are formed as follows:

0 N I D X X X X X
1 2 3 4 5 6 7 8 9

where the first figure is zero and X is any figure from 0 to 9.

The particular NID reflects only the country allocating the group call identity and so does not prevent group calls to fleets containing more than one ship nationality.

¹ Details of National Identification Digits (NID) allocations have to be worked out by the Secretary-General in close cooperation with the CCIR and CCITT in accordance with Resolution 313 and the provisions of this Appendix. Until such time as this information becomes available for final decision by the next competent conference, provisional allocations of NIDs may be issued by the Secretary-General. These allocations will therefore be subject to review and/or revision by the above-mentioned conference.

5. *Coast Station Identities*

Coast station identities are formed as follows:

0 0 N I D X X X X
1 2 3 4 5 6 7 8 9

where the first two figures are zeros and X is any figure from 0 to 9.

The NID reflects the country in which the coast station or coast earth station is located.

TABLE I	
NATIONALITY IDENTIFICATION DIGITS ¹	
Country	Digits

¹ Details of National Identification Digits (NID) allocations have to be worked out by the Secretary-General in close cooperation with the CCIR and CCITT in accordance with Resolution 313 and the provisions of this Appendix. Until such time as this information becomes available for final decision by the next competent conference, provisional allocations of NIDs may be issued by the Secretary-General. These allocations will therefore be subject to review and/or revision by the above-mentioned conference.

FINAL PROTOCOL

PAGE LAISSEE EN BLANC INTENTIONNELLEMENT

PAGE INTENTIONALLY LEFT BLANK

FINAL PROTOCOL

At the time of signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the undersigned delegates take note of the following statements made by signatory delegations :

No. 1

For the Republic of Honduras :

The Republic of Honduras, through its delegation at the World Administrative Radio Conference, Geneva, 1979, wishes to make the following reservations :

1. Its Government reserves the right to take such steps as it may deem necessary to protect its interests in the event of other Members failing to comply with the provisions of the Radio Regulations, their Annexes or appended Protocols.
2. It further declares that its Government maintains the right to formulate any reservation whatever until such time as the Final Acts of the present World Administrative Radio Conference, Geneva, 1979, are ratified.

No. 2

For the Republic of Guatemala :

The delegation of the Republic of Guatemala :

- a)* reserves its Government's rights with regard to the acceptance and total or partial ratification of the Final Acts and their application within the territorial limits recognized by the Constitution of the Republic;
- b)* does not accept the reservations made by other countries if they prove detrimental to the national interests as a result of a final appraisal which the Government of the Republic of Guatemala will formulate at the time of acceptance and ratification of the Final Acts of the Conference.

No. 3

For the Republic of the Chad :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Republic of the Chad declares that, with reference to the protection of its telecommunication interests, the sovereignty of its State may in no way be affected by the provisions adopted by this Conference or by the reservations made by other countries Members of the Union.

It therefore reserves its Government's right to take such steps as it may consider necessary to protect its telecommunication services.

No. 4

For the Algerian Democratic and Popular Republic, the Kingdom of Saudi Arabia, the State of Bahrain, the People's Republic of Bangladesh, the United Arab Emirates, the Islamic Republic of Iran, the Republic of Iraq, the Hashemite Kingdom of Jordan, the State of Kuwait, Lebanon, Libya (Socialist People's Libyan Arab Jamahiriya), the Kingdom of Morocco, the Sultanate of Oman, the Islamic Republic of Pakistan, the State of Qatar, the Syrian Arab Republic, the Somali Democratic Republic, the Democratic Republic of the Sudan, Tunisia and the People's Democratic Republic of Yemen :

The above-mentioned delegations declare that the signature and possible subsequent approval by their respective Governments of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, do not, in any way, imply the recognition of Israel.

No. 5

For Belgium :

The Belgian Administration plans to bring into service shortly a network of broadcasting stations in the band 100 — 104 MHz.

It strongly urges the administrations concerned to consider immediately the action required to render this project possible.

No. 6

For the People's Republic of Benin :

The delegation of the People's Republic of Benin reserves the right of its Government to take all the necessary steps to safeguard its interests should reservations entered by other delegations compromise the proper functioning of its telecommunication services.

No. 7

For Chile :

The delegation of Chile, bearing in mind the agreements of the World Administrative Radio Conference, Geneva, 1979, concerning the frequency assignments in the Master International Frequency Register, the provisions of Article 4, paragraph 2 of the Antarctic Treaty signed at Washington on 1 December 1959, and the contents of No. VIII of the Final Protocol of the International Telecommunication Convention, Malaga-Torremolinos, 1973, states that its Government reserves the right to assign and recognize the frequencies which it considers necessary for present and future radiocommunication services operating within the Chilean Antarctic territory, over which it exercises sovereignty.

No. 8

For Cuba :

The delegation of Cuba, acting as the representative on behalf of its Government, states that it does not recognize the legal or moral worth of the signature of the Final Acts by the representation of the Pol Pot regime at the World Administrative Radio Conference, Geneva, 1979, for the following reasons :

The genocidal Pol Pot regime does not represent the legitimate interests of the people of Kampuchea, nor does it exercise any authority over that country.

Registration of the Pol Pot regime at this Conference is a mere formality representing purely political interests, as witnessed by its failure to participate in the activities and discussions of the Conference. Exercising no authority or jurisdiction over the territory of the country, it is unable to regulate telecommunication operations there.

The delegation of Cuba considers that, in the absence of the legitimate representation of the people of Kampuchea, the People's Revolutionary Council, no signature representing Kampuchea should appear in the Final Acts of the Conference.

No. 9

For Cuba :

Signature and acceptance of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, by the Government of the Republic of Cuba does not in any way signify recognition of notification, registration and use of frequencies by the Government of the United States of America in the Cuban territory of the Province of Guantánamo which is being occupied illegally and against the wishes of the Cuban people.

The use of radio frequencies by the Government of the United States in the territory which it has usurped in Guantánamo, Cuba, constitutes an impediment to the communication services of Cuba and to the exercise of our country's sovereignty over the radio frequency spectrum, which is a limited resource.

The Government of Cuba reserves the right to take all the necessary steps to safeguard its legitimate interests.

No. 10

For the Islamic Republic of Iran :

This Conference has been unable to make adequate provision for the needs of the HF broadcasting service in the revised allocations, particularly in the 6 MHz and 7 MHz bands. Unless authority is given to the proposed HF Broadcasting Conference, by its agenda, for it to make use of some parts of the spectrum allocated to the fixed service, that Conference will not be able to plan all frequency bands to enable countries to sustain their broadcasting services in the case of varying propagation conditions throughout the solar cycle. In the absence of an adequate plan, this Administration reserves its right to take the necessary steps to use the portions of the bands 5 850 — 5 950 kHz and 7 300 — 7 400 kHz also for broadcasting services in accordance with the needs of this Administration.

No. 11

For the Democratic Republic of Afghanistan :

The delegation of the Democratic Republic of Afghanistan reserves the right for its Government to continue the use of fixed and mobile services in the exclusive maritime mobile bands below 10 MHz. These bands will be utilized for domestic requirements in a manner which will not cause harmful interference to the maritime mobile service.

No. 12

For the Islamic Republic of Mauritania :

The delegation of the Islamic Republic of Mauritania states that the signing of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, or any subsequent ratification of these Final Acts by its Government in no way implies any recognition of the State of Israel.

No. 13

For the Islamic Republic of Pakistan :

considering that :

- a) a High Frequency Broadcasting Plan is considered to be a pre-requisite to law and order in the HF spectrum;
- b) all past efforts to prepare a plan have failed repeatedly due to inadequate allocations to the broadcasting service in the HF spectrum, particularly the lower bands;
- c) no expansions of the important broadcasting bands of 6 MHz and 7 MHz have been approved by this Conference;
- d) the footnote No. 531 attached with the expanded portions of the broadcasting bands is too rigid, and does not allow flexibility to the next World Administrative Radio Conference;
- e) the period of transfer of the displaced assignments in the expanded portions of the broadcasting bands is too long;
- f) a total power of 12.5 megawatts of broadcasting by only a few countries has already spilled over from the 6 MHz and 7 MHz broadcasting bands into the adjacent fixed services bands;
- g) such out of band broadcasting will multiply, for reasons of equity if the proposed World Administrative Radio Conference fails to produce an acceptable HF Broadcasting Plan, due to inadequacy of the allocations;
- h) there will be no further opportunity to correct this shortcoming in the allocations for a very long time;

the delegation of the Government of Pakistan to this World Administrative Radio Conference of the International Telecommunication Union is unable to accept the allocations made in the table of frequencies from 5 830 kHz to 5 950 kHz and 7 300 kHz to 7 500 kHz, as well as the footnote No. 531 along with its associated implications. It, therefore, reserves the right of its Government to take all appropriate action to protect its interests.

The delegation, however, assures full cooperation and participation of its Administration in the preparation of the high frequency broadcasting plan, as per decision of this Conference. It also assures further that the above reservation will cease to be effective, as soon as an acceptable high frequency broadcasting plan has been prepared and brought into effect.

This delegation further reserves the right on accepting the implications that might arise through the non-adherence by any other Member of the Union to the provisions of these Final Acts and the Radio Regulations. In such a situation, Pakistan reserves the right to take all appropriate action to protect its interests.

No. 14

For Greece and the Socialist Federal Republic of Yugoslavia :

The present Conference has adopted for Region 1 different allocations than those for Regions 2 and 3 in the band 415 — 495 kHz. The two services to which this band is allocated, namely aeronautical radionavigation and maritime mobile, are both extremely important safety services. The above delegations consider therefore that this decision will lead to serious problems hazarding the safeguard of human life.

In order to avoid any future impact, the above delegations proposed in all the stages of this Conference such solutions as to guarantee the absolute protection of these services and especially the aeronautical radionavigation service. Since these solutions have not been adopted by this Conference, these delegations declare that their Administrations cannot undertake any responsibility for possible implications from the use of this band as it has been decided due to the international character of both services.

Moreover, the above delegations declare that they reserve the right of their Administrations to change frequency assignments to their coast stations in the band 415 — 435 kHz until the date of coming into force of a revised Copenhagen Plan, which will provide for replacement frequencies within the band 435 — 495 kHz, whenever this will be.

No. 15

For the Oriental Republic of Uruguay :

The delegation of the Oriental Republic of Uruguay declares that, in view of the reduction in the widths of the frequency bands allocated to the fixed service between 4 MHz and 27.5 MHz and the fact that no procedure for the re-assignment of frequencies has been laid down which would guarantee continued operation of its radio stations as a result of the use by the broadcasting and maritime mobile services of the portions of the band withdrawn from the fixed service, its Government reserves the right to adopt the necessary measures to continue making appropriate use of its fixed service frequencies entered in the Master International Frequency Register — which render services of fundamental importance to the country — until such time as new alternative frequencies are provided enabling its radiocommunication services to operate properly.

The delegation of the Oriental Republic of Uruguay doubts whether it will be possible to re-assign the channels to be transferred in the reduced fixed service bands, and in particular in certain areas or sub-regions in which the spectrum is already congested, despite the reduction in the technical characteristics of its circuits.

It also reserves its Government's right to adopt any measures it sees fit to protect its interests in the event of the alternative frequencies of another administration causing harm to its radiocommunication system.

No. 16

For Japan :

The interference caused by certain broadcasting stations in Region 1 operating in the LF band are endangering the operation of the aeronautical radiobeacon stations in Japan. This interference will considerably increase when new LF broadcasting transmitters are brought into use or changes to the characteristics of existing assignments to LF broadcasting stations are made.

As mentioned explicitly in the noting of the Resolution No. 7 of the Regional Administrative LF/MF Broadcasting Conference, Geneva, 1975, and in the paragraph 4.4.4.1 of the Report of the Special Preparatory Meeting of CCIR, Geneva, 1978, the use of the LF band by broadcasting stations in Region 1 could adversely affect the stations of other radiocommunication services to which this band is allocated in other regions and particularly stations in the aeronautical radionavigation service involving the safety of human life.

However, this Conference has not solved the above-mentioned problem concerning the use of the FL band. Moreover, this Conference has adopted the Resolution relating to the modification of carrier frequencies of LF broadcasting stations in Region 1, without giving due consideration to the possibility of additional interference to the aeronautical radiobeacon stations in Region 3.

The delegation of Japan therefore reserves the right of its Government to take any necessary measures, including the rearrangement of its frequency assignments in the band between 130 kHz and 526.5 kHz in disregard of the allocation in the Radio Regulations in the event that broadcasting stations in Region 1 cause grave hindrance to LF aeronautical radiobeacon stations in Japan in the frequency band between 190 kHz and 285 kHz.

No. 17

For the Federal Republic of Nigeria :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Federal Republic of Nigeria reserves for its Government the right to take such actions as it may consider necessary to safeguard its interests should reservations or wrongful interpretations of the Final Acts by other countries or organizations threaten or endanger the telecommunication services of the Federal Republic of Nigeria.

In particular the decision taken by this Conference in relation to the feeder links for BSS in the band 14.0 — 14.8 GHz is not acceptable to us for the following reasons :

- a) The World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, produced a plan for down-links in the band 11.7 — 12.5 GHz of 800 MHz bandwidth.
- b) The bandwidth which has been allocated exclusively to BSS feeder links in our preferred frequency band (14.5 — 15.3 GHz) is only 300 MHz from 14.5 — 14.8 GHz which is accepted by the Conference. This will not be enough because of the large number of administrations per orbital position.

No. 18

For the Republic of Zaire :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Republic of Zaire reserves its Government's right to take such steps as it may consider necessary to protect its radiocommunication services should Members of the Union fail to observe the provisions of the Radio Regulations, or should the reservations made by the delegations of other countries be detrimental to the satisfactory operation of Zaire's radio services.

No. 19

For Canada :

a) Mobile satellites operating in the UHF band

In developing its mobile-satellite systems under Radio Regulation No. 641, Canada agrees that such systems should be coordinated and notified according to Articles 11, 13 and 14. However, once such satellites are placed in operation, Canada considers that these systems operate with a primary status for the duration of their operational life.

b) HF broadcasting

Canada considers that the problem of severe congestion of the bands allocated to the broadcasting service at HF below 9 MHz was not resolved by this Conference. A proposal by Canada for the addition of 100 kHz of spectrum between 7 300 kHz and 7 400 kHz for this service on a world-wide basis, which would have helped to solve the problem, was rejected at the Conference by a narrow margin. For this reason, Canada reserves its right, in signing these Final Acts, to satisfy certain of its broadcasting requirements in the band segment 7 300 — 7 400 kHz. Insofar as possible, Canada, of course, will respect the rights of administrations operating in accordance with the Final Acts of this Conference.

No. 20

For the People's Republic of China :

At the time of signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the People's Republic of China, on behalf of the Chinese Government, states the following :

The Chinese delegation takes note of the decision taken by the present Conference on the convening of a World Administrative Radio Conference for the planning of the HF bands allocated to the broadcasting service and believes that it is an effective measure to solve the problem of congestion in the HF broadcasting bands and out-of-band transmissions. However, owing to historical reasons, the Chinese Administration reserves the right to continue to use those frequencies which it uses for broadcasting at present in the band 5 060 — 27 500 kHz until the establishment and implementation of the proposed HF broadcasting plan.

No. 21

For Chile :

The delegation of Chile to the World Administrative Radio Conference, Geneva, 1979, hereby declares, concerning such obligations as may arise out of the revised Radio Regulations, particularly with regard to the transfer of the existing allocations from the fixed service to other services in the HF band, that it take all the steps necessary to ensure the application of the new Regulations.

Notwithstanding the above, it reserves its Government's right to take such measures as it may consider necessary to keep in service within its national territory fixed links which it may be impossible, on technical, economic or other grounds, to transfer within the time limits established at this Conference.

No. 22

For the Republic of India :

Upon signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Republic of India does not accept any implications resulting from any reservations that might be made by any other administration in respect of the provisions in the Final Acts. The delegation of the Republic of India reserves the right of its Government to take such action as might be necessary to safeguard its interests should any administration fail to observe any of the provisions of the Radio Regulations as revised by this Conference.

No. 23

For Mexico :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of Mexico expresses the intention of its Administration to comply with the provisions of the Radio Regulations adopted by this Conference; nevertheless, it declares that its Government reserves the right to take such steps as it may consider appropriate to safeguard its interests should any Member of the Union fail to fulfil the provisions of those Regulations.

The delegation of Mexico further declares that its Administration will do all in its power to transfer its stations in the fixed and land mobile services at present registered according to the current Table of Frequency Allocations, to adapt their operation to the new Table within the prescribed time limits. However, if as a result of the Conference's decisions to reduce the bands for these services or to limit their operation in the HF bands, the said stations are unable to continue operating efficiently on their assigned frequencies or on their replacement frequencies, if any, the Government of Mexico reserves the right to take such steps as it may consider appropriate to ensure the satisfactory operation of such stations.

No. 24

For the Republic of the Ivory Coast :

The delegation of the Republic of the Ivory Coast reserves its Government's right to take such steps as it may consider necessary to ensure the protection and satisfactory operation of its telecommunication services should other Members of the Union fail to observe the provisions laid down in the Radio Regulations (World Administrative Radio Conference, Geneva, 1979).

No. 25

For the Islamic Republic of Iran :

The delegation of Iran declares that with respect to allocations in the band 150 — 285 kHz of the Table of Frequency Allocations approved by the World Administrative Radio Conference, Geneva, 1979 :

- a) existing LF high power radio broadcasting stations in Region 1 already cause harmful interference to aeronautical radionavigation ;
- b) changes in the power or frequency of LF broadcasting transmitters or bringing into use of new assignments in LF band (150 — 285 kHz) will increase this interference and consequently make the present utilization of aeronautical radionavigation much more difficult in Iran ;
- c) the Administration of the Islamic Republic of Iran therefore reserves for its country the right to take necessary measures to ensure the protection of the aeronautical radionavigation service ;
- d) it also reserves its right to use the portion 160 — 190 kHz of the band 150 — 285 kHz also for the LF broadcasting service in accordance with the needs of the country.

No. 26

For the Republic of Venezuela :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of Venezuela states the intention of its Administration to comply with the provisions of the revised Radio Regulations. However, the Government of Venezuela reserves the right to take any measures it may consider necessary to safeguard its interests, particularly with respect to the fixed and mobile services below 9 975 kHz, and also in the event that any Member of the Union should fail to comply with the provisions of the Radio Regulations, Geneva, 1979, or that the reservations made by other countries should jeopardize its planned or existing telecommunication services.

No. 27

For the Vatican City State, Italy, Portugal and Turkey :

In the view of the above-mentioned Administrations, this Conference has not made adequate provisions for the needs of the HF broadcasting service, particularly in the bands of 6 MHz and 7 MHz. This fact will not permit the Conference foreseen in Resolution 508 to plan all frequency bands allocated to HF broadcasting and will not enable countries to sustain their HF broadcasting services in the phase of varying propagation conditions throughout the solar cycle.

Therefore the above-mentioned Administrations reserve their right to take the necessary steps to meet the needs of their HF broadcasting services.

No. 28

For France, the Principality of Liechtenstein and the Confederation of Switzerland :

On signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegations of the above-mentioned countries declare that they reserve their right to take any steps they may consider appropriate to safeguard their interests if the reservations entered or any other measures adopted should have the effect to compromising the satisfactory operation of their radiocommunication services or if any Members should fail to comply with the current provisions of the Radio Regulations, and particularly if they should establish or operate, or allow to be established or operated, on their territory, without prior coordination, stations of the broadcasting service which are not in conformity with the provisions of No. 2666 of the Radio Regulations.

No. 29

For the Federative Republic of Brazil :

This Conference has adopted Resolution 4, on the period of validity of frequency assignments to space stations using the geostationary-satellite orbit. In this connection, the delegation of the Federative Republic of Brazil wishes to make the following comments :

- a) the adoption of the experimental procedures set forth in that Resolution is not necessary at this Conference, in view of the existing regulatory provisions of Article 13;
- b) the period designated for its experimental application, namely from 1 July 1980 until the next World Space Radiocommunication Conference, is inconsistent with the much longer period which would be required for its full application, in order to have significant data produced to allow for the evaluation of its usefulness;
- c) the procedures adopted by that Resolution very easily allow for a permanent priority and appropriation of frequency assignments and orbital positions by any individual country or groups of countries, which is against the principles set forth by Article 33 of the International Telecommunication Convention of the ITU, Malaga-Torremolinos, 1973, and by the Resolutions 2 and 3 that were adopted by the World Administrative Radio Conference, Geneva, 1979.

Therefore, in signing the Final Acts of this Conference, the delegation of the Federative Republic of Brazil reserves the rights for its Government with regard to the application of Resolution 4 by any individual country or groups of countries, whenever such application is considered to be in contradiction with the provisions of Articles 11 and 13, as adopted by the World Administrative Radio Conference, Geneva, 1979.

No. 30

For the State of Israel :

The delegation of Israel declares that its signature to this Agreement and its eventual approval by its Administration shall only be valid and binding in relation to administrations which apply the provisions of the Convention in their relations with Israel.

Israel considers itself, for all intents and purposes, included also in footnotes 621 (174 — 223 MHz) and 866 (15.7 — 17.3 GHz) — despite the baseless objections of only a very few delegations.

While supporting the idea of planning of the broadcasting service HF bands, as embodied in Resolution 508 of this Conference, the delegation of Israel notes :

- a) that the HF bands allocated by this Conference to the broadcasting service are insufficient for providing an adequate basis for such planning;
- b) that no steps have been taken by this Conference against “jamming” — while it is a well known fact that certain Members of the Union deliberately cause such harmful interference to the broadcasting services;
- c) that this practice of jamming renders unusable over 50% of the spectrum allocated to the broadcasting service, is totally incompatible with the very concept of planning, and is a flagrant violation of the letter and spirit of both the ITU Convention and Radio Regulations.

In these circumstances, Israel reserves the right to take any action necessary to adequately maintain and protect its broadcasting services. In so doing however, Israel will endeavour, as far as practicable, to respect the rights of administrations which operate in conformity with the Convention and the Final Acts of this Conference.

No. 31

For Turkey :

The delegation of Turkey to the World Administrative Radio Conference, Geneva, 1979, formally declares that the Government of Turkey does not, by signature of these Final Acts on its behalf, accept any obligations in respect of the additional allocation (footnote 694) of the frequency band 645 — 862 MHz to the aeronautical radionavigation service on a permitted basis to ensure protection of the aeronautical radionavigation service from its existing or planned broadcasting stations operating in accordance with the Table of Frequency Allocations in the area east of 40° East.

No. 32

For the Federal Republic of Germany, Belgium, Denmark, the United States of America, Greece, Iceland, Italy, Luxembourg, Norway, the Kingdom of the Netherlands, Portugal, the United Kingdom of Great Britain and Northern Ireland and Turkey :

The above-mentioned Administrations reserve their right to operate systems in the mobile-satellite service in the frequency range 235 — 399.9 MHz under the provisions of the relevant footnote to the Table of Frequency Allocations, subject only to coordination as prescribed in Article 14. The additional provision of this footnote imposes a condition of non-interference which could lead to a request to cease operation of a previously coordinated satellite system in the case where an administration, despite having agreed to such a satellite system, puts into service or merely plans a system that might receive harmful interference. Such a condition is unacceptable to the above Administrations.

No. 33

For Austria, Denmark, Spain, Finland, France, the Principality of Liechtenstein, Norway, Portugal, Sweden and the Confederation of Switzerland :

In signing the Final Acts of the Conference, the delegations of Austria, Denmark, Spain, Finland, France, Liechtenstein, Norway, Portugal, Sweden and Switzerland wish to make the following statement :

The World Administrative Radio Conference, Geneva, 1979, has denied the insertion of a provision into the Radio Regulations which would have allocated in some countries of Region 1 and Region 2 the frequency band 862 — 960 MHz also to the aeronautical mobile service. The proposed provision clearly restricted this service to the operation of a few channels within this band in a public radio-telephone system and subject to agreement under procedure set forth in Article 14.

The proposed provision was intended to make way for the possible integration of some aircraft stations in a ground-based integrated public radio-telephone network and to protect at the same time the other services operating in accordance with the Frequency Allocation Table.

There are urgent requirements for public mobile telephone facilities in many countries and these requirements are expected to grow even more rapidly with the improvement of the conventional public telephone networks.

The above-mentioned delegations, noting with great concern that international recognition has been denied to such an allocation, reserve the right of their Administrations to use a limited number of frequencies within the frequency band 862 — 960 MHz for communication with aircraft in a public mobile telephone network under the conditions described.

Steps will be taken to ensure that services operating according to the Frequency Allocation Table in other countries shall suffer no harmful interference from the services mentioned above.

No. 34

For the Byelorussian Soviet Socialist Republic, the Ukrainian Soviet Socialist Republic and the Union of Soviet Socialist Republics :

In the Table of Frequency Allocations, revised by the World Administrative Radio Conference, Geneva, 1979, additional frequency bands are allocated for the broadcasting service in the HF band at the expense of the bands used by the fixed service.

Taking into account that in the U.S.S.R. the stations of the fixed service have been operating in these frequency bands for a long period of time, the delegations of the Byelorussian Soviet Socialist Republic, the Ukrainian Soviet Socialist Republic and the Union of Soviet Socialist Republics are authorized to declare, that in the U.S.S.R. frequency bands additionally allocated in the HF band to the broadcasting service on the exclusive basis will be also used by the fixed service.

No. 35

For the Federal Republic of Germany :

The delegation of the Federal Republic of Germany, in signing the Final Acts of this Conference, declares that the revised allocation of HF frequency spectrum to the fixed, broadcasting and maritime services has not adequately met the requirements of the respective services of the Federal Republic of Germany, as contained in the relevant documents submitted to the World Administrative Radio Conference, Geneva, 1979.

A successful transfer of those services as well as an internationally agreed HF broadcasting plan enabling, in the bands allocated to the broadcasting service, the necessary inclusion of all out-of-band transmissions and meeting the requirements of the HF broadcasting service of the Federal Republic of Germany are the preconditions for solving existing problems.

The Federal Republic of Germany therefore reserves the right, with regard to the HF frequency spectrum, to take the necessary measures to meet the minimum requirements of the country's respective services.

No. 36

For the Kingdom of Saudi Arabia, the Republic of Cyprus, Spain, the United States of America, Greece, the United Kingdom of Great Britain and Northern Ireland, the Democratic Socialist Republic of Sri Lanka and the Republic of Zambia :

In the view of the above-mentioned Administrations this Conference has failed to make adequate provision for the needs of the HF broadcasting service in the revised allocations, particularly at 6 MHz and 7 MHz. Unless authority is given to the proposed HF Broadcasting Conference, by its agenda, for it to make use of some parts of the spectrum allocated to the fixed service, that Conference will not be able to plan all frequency bands to enable countries to sustain their broadcasting services in the face of varying propagation conditions throughout the solar cycle. In the absence of an adequate plan, the above-mentioned Administrations reserve their right to take the necessary steps to meet the needs of their HF broadcasting services.

No. 37

For the Republic of Korea :

The delegation of the Republic of Korea, on behalf of its Government reserves the right of its Government to take such action as it may consider necessary to safeguard its interests should any Members fail to comply with the requirements of the Radio Regulations (Geneva, 1979) or its Annexes attached thereto, or should reservations by other countries jeopardize its telecommunication services.

No. 38

For the United States of America :

The delegation of the United States of America formally declares that the United States of America does not, by signature of these Final Acts on its behalf, accept certain decisions taken by this Conference in regard to the Table of Frequency Allocations and the associated footnotes, and therefore, the United States of America :

1. In view of the fact that this Conference has failed to provide adequate allocations for the HF broadcasting service, particularly at 6 MHz and 7 MHz, reserves on this matter as indicated in statement No. 36 made jointly with the delegations of Saudi Arabia, Cyprus, Spain, Greece, the United Kingdom, Sri Lanka and Zambia;
2. Reserves the right to operate stations in the mobile-satellite service in the frequency range 235 to 399.9 MHz as indicated in statement No. 32 made jointly with the delegations of the Federal Republic of Germany, Belgium, Denmark, Greece, Iceland, Italy, Luxembourg, Norway, the Netherlands, Portugal, the United Kingdom and Turkey;
3. In the operation of stations in the radiolocation service on a primary basis in the bands 430 — 440 MHz, 5 650 — 5 850 MHz, 8 500 — 8 750 MHz, 8 850 — 9 000 MHz, 9 200 — 9 300 MHz, 9 500 — 9 800 MHz, 10 000 — 10 500 MHz, 13.4 — 14 GHz, 15.7 — 17.3 GHz and 33.4 — 36 GHz, cannot guarantee protection to or coordination with other services;
4. Reserves the right to operate stations of the fixed, mobile and radiolocation services on a primary basis in bands as specified in the footnotes pertinent to frequency bands 470 — 806 MHz and 890 — 960 MHz, without the condition specified in these footnotes that make such operations subject to agreement under Article 14. The United States will coordinate its usage of such services with neighbouring administrations which are affected;
5. In view of the fact that the Conference failed to provide adequate allocations for the HF maritime mobile service, particularly below 12 MHz, states its intention to satisfy maritime mobile requirements in the several HF bands below 10 MHz allocated to the mobile service on a primary basis.

No. 39

For the United States of America :

The Administration of the United States of America, calling attention to the fact that some of its broadcasting in the high frequency bands allocated to the broadcasting service are subject to willful harmful interference by administrations that are signatory to these Final Acts, and that such interference is incompatible with the rational and equitable use of these bands, declares that for as long as this interference exists, it reserves the right with respect to such interference to take necessary and appropriate actions to protect its broadcasting interests. In so doing, however, it intends to respect the rights, to the extent practicable, of administrations operating in accordance with these Final Acts.

No. 40

For the Republic of Colombia, the People's Republic of the Congo, Ecuador, the Gabon Republic, the Republic of Kenya, the Republic of Uganda, the Somali Democratic Republic and the Republic of Zaire :

The delegations of the above-mentioned countries confirm in its entirety Reservation No. 51 made at the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, and uphold its content with respect to the World Administrative Radio Conference, Geneva, 1979.

These delegations likewise affirm that the World Administrative Radio Conference, Geneva, 1979, is not competent to discuss or decide territorial questions or matters relating to the sovereignty of States.

Moreover, the above-mentioned delegations, affirming once more that, in the view of the equatorial countries, the segments of geostationary orbit which are located above their respective territories are intended to bring genuine benefits to their peoples, to the international community and particularly to the developing countries, at the same time state their opposition to the continued application of the first-come-first-served principle which serves the interests of a handful of countries which are the sole beneficiaries of this limited natural resource, to the detriment of the other members of the international community and especially the developing countries.

Lastly, the delegations of the above-mentioned countries officially declare that they do not accept and accordingly are under no circumstances bound, through the signature of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, by the resolutions, recommendations, agreements or decisions of this Conference regarding the positioning of geostationary satellites in the segments of the geostationary orbit which correspond to the territories over which these countries exercise sovereign rights.

No. 41

For the Republic of Colombia :

The delegation of Colombia to the World Administrative Radio Conference, Geneva, 1979, reserves the right of its Government to take any measures it may consider necessary in connection with its obligations under the Radio Regulations as revised by this Conference, in particular with respect to the transfer of frequency assignments to stations of the fixed service in those parts of the HF bands which have been allocated to other services.

It also reserves the right to continue using within its national territory those fixed links which are operating in accordance with the existing Radio Regulations and which, for reasons of technical and economic feasibility and others, cannot be transferred within the periods established by this Conference.

No. 42

For the Republic of Indonesia :

The delegation of the Republic of Indonesia to the World Administrative Radio Conference at Geneva, 1979 :

a) reserves the right of its Government to take any action and preservation measures to safeguard its interests should the Final Acts drawn up in this Conference be in contravention with the Constitution, Laws and Rights of the Republic of Indonesia which exist or may result from any principles on international law and those laid down in the Bogota Declaration of 3 December 1976 by Equatorial countries. In this regard the Government of the Republic of Indonesia will recognize the legitimate interests of other countries with a view to enhancing international cooperation in the peaceful uses of space for the benefit of mankind;

b) further reserves the right of its Government to take any action and preservation measures to safeguard its interests should Members of the Union fail to comply with the requirements in the Final Acts of the Conference or should reservations by other Members jeopardize its rights under the Final Acts.

No. 43

For Austria :

In signing the Final Acts of the Conference, the delegation of Austria wishes to make the following statement :

Austria does not agree with the allocations of the HF bands 5 850 kHz — 5 950 kHz and 7 300 kHz — 7 400 kHz to the fixed and mobile services, because there are no additional allocations to the broadcasting service in the 6 MHz and 7 MHz bands.

As a consequence, in the view of the Austrian Administration the proposed HF Broadcasting Conference will not be in a position to plan all frequency bands to enable countries to sustain their broadcasting services in the face of varying propagation conditions throughout the Solar cycle.

The Austrian delegation therefore reserves the right of its Administration to take necessary action to safeguard the interests of its HF broadcasting services. In doing so, the Austrian Administration will take into account the interests of the services of other countries to the greatest extent possible.

No. 44

For the People's Republic of Angola :

The delegation of the People's Republic of Angola, reserves its Government's right to take any steps it may consider necessary to safeguard the interests of its telecommunications should any Members fail to comply with the provisions of the Radio Regulations or should the reservations made by other countries jeopardize the satisfactory operation of its telecommunication services.

No. 45

For the Argentine Republic :

A. The delegation of the Republic of Argentina hereby reserves its Government's right to take such steps as it may consider appropriate to ensure the proper operation of its telecommunication services should its interests be affected by the decisions of this Conference, particularly as a result of the application of the procedure for releasing parts of the HF band in the fixed service between 4 000 and 27 500 kHz and the transfer of stations of that service from those parts to other bands.

It further states that should the reservations made by other countries prove detrimental to its telecommunication services, the Republic of Argentina reserves the right to take such measures as may be necessary to protect its own services.

B. The delegation of the Republic of Argentina hereby declares its Government does not recognize the frequency assignments which might be made directly or indirectly for any services, in any part of the radio spectrum, for the Falkland, South Georgia and South Sandwich Islands and Argentinian Antarctica between longitudes 25° and 74° W and south of latitude 60° S, over which territories the Republic of Argentina exercises sovereign rights, if such assignments are made on behalf of another State or of other States. Moreover, the Republic of Argentina reserves the right to use as its own any radio frequencies assigned in the circumstances described.

C. The delegation of the Republic of Argentina hereby declares on behalf of its Government that the illegality of the United Kingdom occupation of the Falkland, South Georgia and South Sandwich Islands has been recognized by the United Nations which, in Resolutions 2065 (XX), 3160 (XXVIII) and 31/49, called for the acceleration of negotiations between both Governments in order to terminate the colonial situation.

No. 46

For the People's Democratic Republic of Yemen :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the People's Democratic Republic of Yemen, while reaffirming its support for the international cooperation in the field of telecommunications, reserves the right of its Government to take any action that it deems necessary to safeguard its interests should any country fail in any way to comply with the provisions of the Final Acts of the aforesaid Conference, or should reservations by other countries jeopardize its telecommunication services.

No. 47

For the Republic of Iraq and the Syrian Arab Republic :

The Administrations of the above-mentioned countries confirm that according to Resolution 1 the IFRB should not accept any notification of a frequency assignment for stations located in an occupied territory which are submitted by the administration of the occupier.

No. 48

For Ireland and the United Kingdom of Great Britain and Northern Ireland :

As it was not possible to obtain the inclusion of Ireland in the footnote 621 at this Conference, the above-named delegations state that their Administrations will comply with the Radio Regulations as though Ireland had been included in that footnote.

No. 49

For the United Republic of Tanzania :

The Government of the United Republic of Tanzania reserves the right to take any action that it deems necessary to safeguard its interests in the event of Members failing in any way to comply with the provisions of the Radio Regulations, World Administrative Radio Conference Geneva, 1979, or should reservations by other countries jeopardize the operation of its radiocommunication services.

No. 50

For the People's Republic of Mozambique :

The delegation of the People's Republic of Mozambique reserves the right of its Government to take all necessary measures to safeguard its interests, should any country fail to comply with the provisions of the Radio Regulations drawn up by the World Administrative Radio Conference, Geneva, 1979, or should the reservations made by any country tend to jeopardize the efficient operation of its telecommunication services.

No. 51

For the Republic of Zambia :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Republic of Zambia, reserves the right of its Government to take any action it considers necessary to safeguard its telecommunications interests should any Member of ITU fail in any way to comply with the provisions of the Radio Regulations.

No. 52

For the Republic of the Niger :

In the light of the reservations already made, the delegation of Niger to the World Administrative Radio Conference, Geneva, 1979, reserves the right of its Government to take any necessary measures to safeguard its radiocommunication interests in the event of failure to comply with the provisions of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, and the Radio Regulations resulting from this Conference.

No. 53

For the People's Republic of the Congo :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Congo notes with misgivings the reservations made by other delegations in connection with the use and application of the Radio Regulations.

The delegation of the People's Republic of the Congo therefore reserves the right of its Government to take any necessary measures to safeguard its interests should the signatory countries of the Final Acts fail to comply with the provisions of the Radio Regulations or should the reservations made by the delegations of other countries jeopardize the satisfactory operation of its radiocommunication services.

No. 54

For the Revolutionary People's Republic of Guinea :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the People's Revolutionary Republic of Guinea notes with misgivings the reservations made by certain Members, particularly with respect to the Table of Frequency Allocations and to compliance with the provisions of the Radio Regulations.

It therefore reserves the right of its Government to take any measures it may consider necessary to safeguard its telecommunication interests.

No. 55

For the Democratic Socialist Republic of Sri Lanka :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Democratic Socialist Republic of Sri Lanka has noted that several administrations have made reservations regarding various provisions of the Final Acts of the Conference for the revision of the Radio Regulations.

The delegation of the Democratic Socialist Republic of Sri Lanka therefore reserves the right of its Government as may be deemed necessary to safeguard its interests should these reservations seriously affect the telecommunication services of the Democratic Socialist Republic of Sri Lanka.

No. 56

For the Central African Republic :

The delegation of the Central African Republic to the World Administrative Radio Conference, Geneva, 1979, notes with misgivings certain of the reservations already made with respect to the application of the provisions of the Radio Regulations, particularly the Table of Frequency Allocations. It therefore reserves the right of its Government to take any measures it may consider necessary to protect its telecommunication services and to approve the new Radio Regulations.

No. 57

For Ghana :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the Ghana delegation has noted various reservations submitted by other countries and has great concern with the frequency allocations and the new footnotes.

The Ghana delegation reserves, on behalf of its Government, the right to protect its telecommunication interests and it accepts no consequences of any reservations made by any other Government which might lead to an increase in its share in defraying the expenses of the Union.

No. 58

For the Socialist Republic of Roumania :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Socialist Republic of Roumania has noted with concern the reservations made by other countries, with particular reference to the allocations made in the Table of Frequency Allocations, and also with respect to the application of the Radio Regulations.

The delegation of Socialist Republic of Roumania therefore reserves the right of its Government to take such steps as may be deemed necessary to safeguard its interests, should these reservations jeopardize its telecommunication services.

No. 59

For the Republic of Liberia :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Republic of Liberia has noted with concern the reservations made by other countries, with particular reference to the allocations made in the Table of Frequency Allocations, and also with respect to the application of the Radio Regulations.

The delegation of the Republic of Liberia therefore reserves the right of its Government to take such steps as may be deemed necessary to safeguard its interests, should these reservations jeopardize its telecommunications services.

No. 60

For Thailand :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of Thailand, on behalf of its Government declares that :

- a)* by observing that many countries reserve their right to use the portions of the band 5 850 — 5 950 kHz and 7 300 — 7 400 kHz for broadcasting services;
- b)* does not accept the reservations made by the other countries regarding the utilization of the portions of the band 5 850 — 5 950 kHz and 7 300 — 7 400 kHz for broadcasting services and reserves the right to take any strong measures as it may consider necessary to protect its telecommunication services;
- c)* reserves the right to operate stations in the mobile, except aeronautical mobile, service on a primary basis in the band 435 — 438 MHz and shall take necessary steps to ensure that services operating according to the Frequency Allocation Table in other countries shall suffer no harmful interference from the service mentioned.

No. 61

For the United Republic of Cameroon :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the United Republic of Cameroon notes with considerable concern the reservations made by other countries with respect to the Table of Frequency Allocations and to the application of the Radio Regulations.

The delegation of the United Republic of Cameroon therefore reserves the right of its Government to take any measures it may consider necessary to safeguard its interests should any of the above-mentioned reservations jeopardize its telecommunication services.

No. 62

For Mauritius :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of Mauritius has noted with concern the reservations made by other delegations, with particular reference to the allocations made in the Table of Frequency Allocations and also with respect to the application of the Radio Regulations.

In consequence, the delegation of Mauritius reserves the right of its Government to take any action it considers necessary to safeguard its broadcasting and other telecommunications services interests should these reservations jeopardize in any way these services.

No. 63

For the Republic of Singapore :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, and after having noted the reservations deposited by other delegations, in particular with respect to the Frequency Allocations Table, the delegation of the Republic of Singapore reserves for its Government, the right to take any action it deems necessary to safeguard its interests should any Member fail in any way to comply with the provisions of the Radio Regulations drawn up by the aforesaid Conference, or should the above-mentioned reservations jeopardize the operation of its telecommunication services.

No. 64

For the Republic of the Philippines :

The delegation of the Republic of the Philippines after noting the reservations made by certain delegations, particularly, on the utilization of the frequency spectrum, reserves for its Government the right to take such action as may be necessary to safeguard its interests should certain Members fail to comply with the provisions of the Final Acts of this Conference or its Annexes or the Protocol attached thereto or against any consequences of reservations made by other countries which might have adverse effect to the interest of the Philippines.

No. 65

For Costa Rica :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of Costa Rica declares that its Administration will endeavour to comply with the provisions of the Radio Regulations approved at this Conference; nevertheless, in view of the reservations made by some countries, it reserves its Government's right :

- a) To take the necessary steps to protect the radiocommunication services in Costa Rica, should they be affected by the failure of other countries Members of the Union to comply with the Regulations or the Annexes and Protocols thereto;
- b) Not to accept those reservations made by various countries which leave the fixed and mobile services unprotected, since these services are of great importance in Costa Rica, particularly in the UHF bands, and must be protected against all manner of interference.

No. 66

For Ecuador :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of Ecuador declares that its Administration will endeavour to comply with all the provisions of the Regulations approved at this Conference; nevertheless, in view of the reservations made by other countries, it reserves its Government's right :

1. To take such steps as it considers necessary to protect the telecommunication services of Ecuador should they be affected through the failure of other countries Members of the Union to comply with the provisions of the Regulations and the Annexes thereto;
2. Not to accept the reservations made by other countries if they prove detrimental to the national interests of Ecuador;
3. To continue to use some of the existing assignments of the fixed and mobile service in the HF bands whenever it proves impossible, for technical, economic or other reasons, to transfer them within the time limits allowed by this Conference.

No. 67

For the Republic of Upper Volta :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, the delegation of the Republic of Upper Volta notes with misgivings the reservations made by some countries concerning certain provisions of the Radio Regulations.

It therefore reserves its Government's right to take such steps as it considers necessary to safeguard its interests should they be jeopardized.

No. 68

For the Hashemite Kingdom of Jordan, Lebanon and the Syrian Arab Republic :

The above-mentioned delegations to the World Administrative Radio Conference, Geneva, 1979, solemnly declare themselves bound by the provisions adopted by this Conference in conformity with the provisions of the International Telecommunication Convention.

Accordingly they reject any statements or actions which are not in conformity with the decisions taken by this Conference.

In particular, they declare the statement appearing in reservation No. 30, referring to footnotes concerning 174 — 223 MHz and 15.7 — 17.3 GHz bands as unacceptable because it is contrary to the decisions taken by the Conference in full recognition of technical bases of the objections made by the delegation of the Hashemite Kingdom of Jordan against the inclusion of Israel in the concerned footnotes.

No. 69

For the Republic of Kenya :

In view of reservations entered by certain countries to operate some services in contravention of the provisions of the Radio Regulations drawn up by the World Administrative Radio Conference, Geneva, 1979, the delegation of the Republic of Kenya reserves the right of its Government to take necessary steps as it may deem fit to protect her telecommunication services in the event of other Members failing to comply with the provisions of the Radio Regulations, as revised by this Conference, in particular reservations Nos. 13, 32, 33, 36, 38 and 43 as contained in the Final Protocol.

No. 70

For the Islamic Republic of Iran :

The delegation of the Islamic Republic of Iran declares that its Administration does not accept any implication resulting from any reservation that has been made by any other administration, or group of administrations, in respect of or relating to the provisions in the Final Acts. The delegation of the Islamic Republic of Iran reserves for its country the right of its Government to take such action as it might deem necessary to safeguard its interests in case any other administration, particularly in consequence of any of the statements numbered 11, 32, 34 and 38 under the Final Protocol, disregards or contravenes any of the provisions of the Radio Regulations as revised by this Conference, and especially if such action proves prejudicial to the needs or interests of the Islamic Republic of Iran.

No. 71

For the Republic of Mali :

After noting the reservations made by other delegations, particularly those relating to the Table of Frequency Allocations, the delegation of the Republic of Mali reserves its Government's right to take such steps as it may consider necessary to safeguard its interests should those reservations or failure to comply with the provisions of the Radio Regulations prove detrimental to the satisfactory operation of its radio services.

No. 72

For the United States of America :

With reference to statement No. 9 by the Government of the Republic of Cuba, the Government of the United States of America notes that the United States presence in Guantanamo is by virtue of a treaty in force; the United States reserves the right to meet its radiocommunication requirements there as heretofore.

No. 73

For Belgium, France, Luxembourg, the Kingdom of the Netherlands and the Confederation of Switzerland :

The delegations of the above-mentioned countries, taking note of the reservations made by several delegations in connection with the insufficient allocations made to the broadcasting service in the lower part of the HF band and the steps which the corresponding administrations accordingly propose to take, declare that their Administrations reserve the right to take any necessary measures both to ensure the satisfactory operation of the services to which this part of the spectrum is allocated and to allow an equitable use of the HF band by their broadcasting services.

No. 74

For the Algerian Democratic and Popular Republic, the Kingdom of Saudi Arabia, the State of Bahrain, the United Arab Emirates, the Republic of Iraq, the Hashemite Kingdom of Jordan, the State of Kuwait, Lebanon, Libya (Socialist People's Libyan Arab Jamahiriya), the Kingdom of Morocco, the Sultanate of Oman, the State of Qatar, the Syrian Arab Republic, the Somali Democratic Republic, the Democratic Republic of the Sudan and the People's Democratic Republic of Yemen :

After having noted the reservations already deposited, the delegations of the above-mentioned countries reserve their Governments' rights to take such action as they may deem necessary to protect their interests, should any Member fail in any way to observe the provisions of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, or should the reservations made by such Member jeopardize their telecommunications interests.

No. 75

For the Federal Republic of Germany, Australia, Austria, Belgium, Canada, Denmark, the United States of America, Finland, France, Greece, Ireland, Italy, Japan, the Principality of Liechtenstein, Luxembourg, Norway, New Zealand, Papua New Guinea, the Kingdom of the Netherlands, Portugal, the United Kingdom of Great Britain and Northern Ireland, Sweden and the Confederation of Switzerland :

The above-mentioned delegations, referring to the reservations made by the Republic of Colombia, the People's Republic of the Congo, the Republic of Ecuador, the Gabon Republic, the Republic of Kenya, the Republic of Uganda, the Somali Democratic Republic and the Republic of Zaire in statement No. 40 and by the Republic of Indonesia in statement No. 42, consider that, in as much as these statements refer to the Bogota Declaration of 3 December 1976 by equatorial countries and to the claims of those countries to exercise sovereign rights over segments of the geostationary-satellite orbit, the claims in question cannot be recognized by this Conference, and that the decisions of this Conference regarding the assignment and use of frequencies and orbital positions in the geostationary orbit are fully in accordance with the International Telecommunication Convention (Malaga-Torremolinos, 1973) by which this Conference is bound.

The above-mentioned delegations also wish to state that Resolution 3, in referring to the "relevant technical aspects concerning the special geographical situation of particular countries", does not imply a recognition of claims to any preferential rights to the geostationary orbit.

No. 76

For the United Kingdom of Great Britain and Northern Ireland :

With reference to the reservation in statement No. 45 by the Republic of Argentina, the Government of the United Kingdom of Great Britain and Northern Ireland have no doubt as to United Kingdom sovereignty over the Falkland Islands, the Falkland Island Dependencies, and the British Antarctic Territory. In this context attention is drawn to Article IV of the Antarctic Treaty, to which both the United Kingdom and Argentina are parties, which freezes territorial claims in Antarctica.

The United Kingdom Government therefore do not accept the declaration of the Argentine Republic claiming to contest United Kingdom sovereignty over the above-mentioned territories. Furthermore the United Kingdom is entitled to have frequencies assigned to it for radio services to be operated from these territories and would regard any use by the Argentine Republic of such frequencies which caused harmful interference to these assignments as a breach of the Convention and the Radio Regulations. The United Kingdom does not accept the assertion in the last paragraph of the Argentine declaration that the "Illegality of the occupation of the Falkland, South Georgia and South Sandwich Islands by the United Kingdom has been recognized by the United Nations Organization". United Nations Resolutions have simply called for the settlement of the dispute by negotiation between the two Governments.

No. 77

For the United Kingdom of Great Britain and Northern Ireland :

With reference to the reservation in statement No. 2 by the Republic of Guatemala, the Government of the United Kingdom of Great Britain and Northern Ireland have no doubt as to the sovereignty of the United Kingdom over Belize and wish formally to reserve their rights on this question.

No. 78

For the United Kingdom of Great Britain and Northern Ireland :

The delegation of the United Kingdom of Great Britain and Northern Ireland does not accept reservation No. 7 by Chile in so far as it disputes the sovereignty of Her Majesty's Government in the United Kingdom over the British Antarctic Territory. The delegation note the reference to Article 4 of the Antarctic Treaty which freezes territorial claims in Antarctica.

No. 79

For the Republic of Colombia, the People's Republic of the Congo, Ecuador, the Gabon Republic, the Republic of Kenya, the Republic of Uganda, the Somali Democratic Republic and the Republic of Zaire :

The delegations of the above-mentioned countries wish to state that preambular paragraph *e)* and the second part of operative paragraph 3.2 of Resolution 3 adopted by the World Administrative Radio Conference, Geneva, 1979, refer also to the special geographical situation of the equatorial countries in relation to the geostationary orbit, as emerged from the discussions of the ad hoc Working Group and the Committee concerned.

On this understanding, the above-mentioned delegations accepted the terms of that Resolution, which deals with the use of the geostationary orbit, bearing in mind, as was inevitable, the implications of the special geographical situation of the countries located on the Earth's equator.

Hence any planning or regulation aimed at achieving the rational use of the geostationary orbit through equitable access to it by all countries must take into consideration the position adopted in that connection by the equatorial countries.

No. 80

For Papua New Guinea :

In signing the Final Acts of the World Administrative Radio Conference, Geneva, 1979, and in the light of reservations already deposited the delegation of Papua New Guinea reserves for its Government the right to take such measures as it sees fit, to safeguard its radiocommunications interests, if other countries fail to observe the provisions adopted by the Conference and in so doing cause harmful interference to radiocommunications systems under the jurisdiction of the Government of Papua New Guinea.

No. 81

For Japan :

With regard to the reservations made by the Chilean delegation and the Argentine delegation concerning the frequency assignments in Antarctica, the delegation of Japan wishes to reaffirm the position of the Japanese Government concerning Article 4 of the Antarctic Treaty.

No. 82

For the Somali Democratic Republic :

The delegation of the Somali Democratic Republic at the World Administrative Radio Conference, Geneva, 1979, hereby declares that its Government will never accept any measures or circumstances resulting from reservations already deposited by other administrations and which may, henceforth, jeopardize the interests of the telecommunications services of Somalia.

No. 83

For Cuba :

If, as a result of Reservations Nos. 36 and 38 of the Final Protocol to the World Administrative Radio Conference, Geneva, 1979, relating to the use of the broadcasting service in bands allocated to services other than the broadcasting service in the region of 6 MHz and 7 MHz, these new bands cannot be properly used by the services to which they are allocated, the Administration of the Republic of Cuba reserves the right to use them in the manner best suited to its interests.

(The signatures follow)

(The signatures following the Final Protocol are the same as those shown on pages 4 to 10)

RESOLUTIONS

Note by the Secretary-General

In accordance with the decisions of the Conference the Resolutions have been arranged in order and numbered along the lines of the grouping and numbering system below. In addition, in doing so, it was apparent that some Resolutions in one group have direct relationship to Resolutions in other groups, and this has been reflected to facilitate consultation.

	<u>Numbers</u>
<u>RESOLUTIONS OF GENERAL APPLICATION</u>	1 - 99
- <u>Principles, general procedures and cooperation</u>	1 - 20

CA

RESOLUTION No. 1

Relating to Notification of Frequency Assignments¹

The World Administrative Radio Conference, Geneva, 1979,

referring to

- the Preamble of the Convention*,
- Article 31 of the Convention* (Special Arrangements),
- Article 7 of the Radio Regulations (Special Agreements),
- Article 12 of the Radio Regulations (Notification and Recording in the Master International Frequency Register of Frequency Assignments to Terrestrial Radiocommunication Stations),
- Article 13 of the Radio Regulations (Notification and Recording in the Master International Frequency Register of Frequency Assignments to Radio Astronomy and Space Radiocommunication Stations Except Stations in the Broadcasting-Satellite Service),
- Article 17 of the Radio Regulations (Procedure for the Bands Allocated Exclusively to the Broadcasting Service Between 5 950 kHz and 26 100 kHz);

resolves

that, unless specifically stipulated otherwise by special arrangements communicated to the Union by administrations, any notification of a frequency assignment to a station shall be made by the administration of the country on whose territory the station is located.

AY

RESOLUTION No. 2

Relating to the Equitable Use, by All Countries, with Equal Rights, of the Geostationary-Satellite Orbit and of Frequency Bands for Space Radiocommunication Services²

The World Administrative Radio Conference, Geneva, 1979,

considering

that all countries have equal rights in the use of both the radio frequencies allocated to various space radiocommunication services and the geostationary-satellite orbit for these services;

¹ Replaces Resolution No. 5 of the Administrative Radio Conference, Geneva, 1959.

* International Telecommunication Convention (Malaga-Torremolinos, 1973).

² Replaces Resolution No. Spa2 – 1 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

taking into account

that the radio frequency spectrum and the geostationary-satellite orbit are limited natural resources and should be most effectively and economically used;

having in mind

that the use of the allocated frequency bands and fixed positions in the geostationary-satellite orbit by individual countries or groups of countries can start at various dates depending on the requirements and readiness of technical facilities of countries;

resolves

1. that the registration with the IFRB of frequency assignments for space radiocommunication services and their use should not provide any permanent priority for any individual country or groups of countries and should not create an obstacle to the establishment of space systems by other countries;
2. that, accordingly, a country or a group of countries having registered with the IFRB frequencies for their space radiocommunication services should take all practicable measures to realize the possibility of the use of new space systems by other countries or groups of countries so desiring;
3. that the provisions contained in paragraphs 1 and 2 of this Resolution should be taken into account by the administrations and the permanent organs of the Union.

BP**RESOLUTION No. 3****Relating to the Use of the Geostationary-Satellite Orbit
and to the Planning of Space Services Utilizing It**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the geostationary-satellite orbit and the radio frequency spectrum are limited natural resources and are utilized by space services;
- b) that there is a need for equitable access to, and efficient and economical use of, these resources by all countries as provided for in Article 33 of the International Telecommunication Convention (Malaga-Torremolinos, 1973) and Resolution 2;
- c) that the utilization of radio frequencies and the geostationary-satellite orbit by individual countries and groups of countries can take place at various points in time, based on their requirements and the availability of the resources at their disposal;
- d) that there are growing requirements all over the world for orbital position and frequency assignments for the space services;
- e) that in the use of the geostationary-satellite orbit for space services, attention should be given to the relevant technical aspects concerning the special geographical situation of particular countries;

resolves

1. that a world space administrative radio conference shall be convened not later than 1984 to guarantee in practice for all countries equitable access to the geostationary-satellite orbit and the frequency bands allocated to space services;

2. that this conference shall be held in two sessions;
3. that the first session shall:
 - 3.1 decide which space services and frequency bands should be planned;
 - 3.2 establish the principles, technical parameters and criteria for the planning, including those for orbit and frequency assignments of the space services and frequency bands identified as per paragraph 3.1, taking into account the relevant technical aspects concerning the special geographical situation of particular countries; and provide guidelines for associated regulatory procedures;
 - 3.3 establish guidelines for regulatory procedures in respect of services and frequency bands not covered by paragraph 3.2;
 - 3.4 consider other possible approaches that could meet the objective of *resolves* 1;
4. that the second session shall be held not sooner than twelve months and not later than eighteen months after the first session and implement the decisions taken at the first session;

invites

1. *the CCIR* to carry out preparatory studies and provide the first session of the conference with technical information concerning principles, criteria and technical parameters including those required for planning space services;
2. *the IFRB* to prepare a report on the operation of the procedures of Articles 11 and 13 including information about difficulties which may be reported to the IFRB by administrations in gaining access to suitable orbital locations and frequencies, and to circulate this report to administrations at least one year before the first session of the conference;
3. *the IFRB* to carry out technical preparations for the conference in accordance with the provisions of the Radio Regulations;
4. *the administrations* to examine all aspects of the matter with a view to submitting proposals to the conference, and to cooperate actively in the above-mentioned work of the CCIR and IFRB;
5. *the Administrative Council* to take all necessary steps for the convening of the conference in accordance with this Resolution.

BY

RESOLUTION No. 4

**Relating to the Period of Validity of Frequency Assignments to Space
Stations Using the Geostationary-Satellite Orbit**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that rational and efficient use must be made of the frequency spectrum and the geostationary-satellite orbit and that account should be taken of the provisions of Resolution 2 relating to the use by all countries, with equal rights, of frequency bands for space radiocommunication services;

- b) that limiting the period of validity of frequency assignments to space stations using the geostationary-satellite orbit is a concept which could promote the attainment of these objectives;
- c) that amortizing the considerable investments made in connection with the development of space radiocommunications is a particularly heavy burden for all administrations and that these investments should be spread over a predetermined period;
- d) that efforts should be made to encourage administrations in a position to do so to develop techniques designed to improve the utilization of the frequency spectrum and the geostationary-satellite orbit with a view to increasing the total radiocommunication facilities available to the world community;
- e) that a world space administrative radio conference is due to meet around 1984 to deal with the use of the geostationary-satellite orbit and the planning of the space services using this orbit;
- f) that it would be advantageous to introduce an experimental procedure to gain experience from application of the new concept of notifying the period of validity of an assignment in space radiocommunications, but that it is not desirable to impose on administrations a statutory period identical in all cases but that on the contrary administrations should be left to propose the period of validity themselves in the light of their requirements and of the common interest;

resolves

1. that, as from 1 July 1980 until the world space administrative radio conference (see Resolution 3), frequency assignments to space radiocommunication stations located on the geostationary-satellite orbit shall be dealt with as follows:

1.1 a frequency assignment to a space station¹ on a geostationary satellite shall be deemed definitively discontinued after the expiry of the period of operation shown on the assignment notice, reckoned from the date on which the assignment was brought into service. This period shall be limited to that for which the satellite network was designed. The Board shall then invite the notifying administration to take steps to cancel the assignment. If the Board receives no reply within three months following the expiry of the period of operation, it shall insert a symbol in the Remarks Column of the Master Register to indicate that the assignment is not in conformity with this Resolution;

1.2 if a notifying administration which wishes to extend the period of operation originally shown on the assignment notice of a frequency assignment of an existing space station¹ informs the Board accordingly more than three years before the expiry of the period in question and if all other basic characteristics of that assignment remain unchanged, the Board shall amend as requested the period of operation originally recorded in the Master Register and publish that information in a special section of the weekly circular;

1.3 if, at least three years before the expiry of the period of operation recorded in the Master Register of a frequency assignment to an existing space station¹, an administration initiates the coordination procedure specified in No. 1060 to bring into service a new space station using the same assigned frequency and the same orbital position but with different technical characteristics, and if the Board finds after the notification that the new assignment conforms with the provisions of No. 1503 and does not increase, in relation to the preceding assignment, the probability of interference to the detriment of a frequency assignment recorded in the Master Register or involved in the coordination procedure, the new assignment shall be given a favourable finding and shall be entered in the Master Register;

1.4 a notifying administration which wishes to modify a basic characteristic of a frequency assignment of a space station¹ recorded in the Master Register shall initiate, in any case other than those covered by paragraphs 1.2 and 1.3, the appropriate modification procedure in accordance with the provisions of Nos. 1547 to 1551;

¹ The expression "space station" may apply to more than one satellite provided that only one satellite is in operation at any particular moment and that the stations installed on board successive satellites have identical basic characteristics.

2. that, for the application of the provisions of paragraph 1.1 above, the information concerning the period of validity of frequency assignments to space stations shall be notified in addition to that contained in Appendices 3 and 4 to the Radio Regulations;

3. that the application of this Resolution shall not prejudice in any way the decisions of the space administrative radio conference referred to in Resolution 3;

invites

the world space administrative radio conference provided for in Resolution 3 to take cognizance of the initial results of the application of this Resolution.

CG

RESOLUTION No. 5

**Relating to Technical Cooperation with the
Developing Countries in the Study of Propagation
in Tropical Areas**

The World Administrative Radio Conference, Geneva, 1979,

having noted

that the assistance provided for the developing countries by the Union in cooperation with other United Nations specialized agencies, such as the United Nations Development Programme (UNDP), in the field of telecommunication augurs well for the future;

being aware

- a) of the fact that the developing countries, particularly those in tropical areas, require adequate knowledge of radio wave propagation in their territories in order to make rational and economical use of the radio spectrum;
- b) of the importance of propagation in radiocommunications;
- c) of the importance of the work of the CCIs for the development of telecommunications in general and radiocommunications in particular;

considering

- a) the need for the developing countries themselves to study telecommunications in general and propagation in particular in their territories, this being the best means of enabling them to acquire telecommunication techniques and to plan their systems effectively and in conformity with the special conditions in the tropical areas;
- b) the scarcity of resources available in these countries;

resolves to invite the Secretary-General

- 1. to offer the assistance of the Union to developing countries in the tropical areas which endeavour to carry out national propagation studies in order to improve and develop their radiocommunications;
- 2. to assist these countries, if necessary with the collaboration of international and regional organizations such as the African Postal and Telecommunications Union (APTU), the Panafrican Telecommunication Union (PATU) and the Union of National Radio and Television Organizations of Africa (URTNA) which may be

concerned, in carrying out national propagation measurement programmes, including collecting appropriate meteorological data, on the basis of CCIR Recommendations, Questions and Study Programmes in order to improve the use of the radio spectrum;

3. to arrange funds and resources for this purpose from the UNDP or other sources in order to enable the Union to provide the countries concerned with adequate and effective technical assistance for the purpose of this Resolution;

urges administrations

to submit the results of these propagation measurements to the CCIR for consideration in its studies;

invites the Administrative Council

to follow the progress made in carrying out programmes of propagation measurements and the results achieved, and to take any action that it considers necessary.

BW

RESOLUTION No. 6

**Relating to the Preparation of a Handbook to Explain
and Illustrate the Procedures of the Radio Regulations**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the complexity of the regulatory procedures specified in Chapter IV of the Radio Regulations;
- b) the need of many administrations for a handbook to give their staff a better understanding of these procedures to help in their application;
- c) the possible use of diagrams, flow charts and other graphical aids to the understanding of complex procedures;

recognizing

1. that the World Administrative Radio Conference, Geneva, 1979, has insufficient time to develop explanatory material and diagrams for inclusion in or attachment to the Final Acts;
2. that a special effort will be required to develop a handbook to meet adequately the need referred to in b);
3. that it would be advantageous if the format of such a handbook were compatible with that of the Radio Regulations;

resolves

that the IFRB should, as soon as possible after the World Administrative Radio Conference, Geneva, 1979, prepare a handbook incorporating appropriate graphical material, including flow charts, to help the staff of administrations to apply the regulatory procedures of Chapter IV of the Radio Regulations;

instructs the Secretary-General

1. to publish the handbook prepared by the IFRB;
2. to insert the flow charts, when available, in an appropriate manner in published editions of the Radio Regulations, clearly marked to the effect that they are an aid to understanding and that they do not form part of the Radio Regulations.

AD

RESOLUTION No. 7

**Relating to the Development of
National Radio Frequency Management**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Radio Regulations contain, inter alia, procedures for the coordination, notification and registration of frequencies which specify the rights and obligations of Member countries;
- b) that the application of the above-mentioned procedures necessitates an appropriate radio frequency management unit in each Member country;
- c) that the existence of such a unit helps Member countries to safeguard their rights and to discharge their obligations under the Radio Regulations;
- d) that the application of the Radio Regulations through the agency of such units is in the interest of the international community as a whole;

noting

that such a unit requires an adequate number of suitably qualified staff;

noting further

that the administrations of many developing countries need to create or to strengthen such a unit, appropriate to their administrative structure, with responsibility for the application of the Radio Regulations at the national and international levels;

recommends

that the administrations of such countries take appropriate action;

resolves

1. that meetings shall be organized between representatives of the IFRB, the CCIR and the personnel involved in frequency management matters from administrations of developing and developed countries;
2. that such meetings shall be aimed at designing standard structures suitable for administrations of developing countries and include discussions concerning the establishment and operation of radio frequency management units;
3. that such meetings should also identify the particular needs of developing countries in establishing such units, and the means required to meet those needs;

recommends

that developing countries when planning the use of funds, particularly those received from international sources, make provision for participation in these meetings as well as for the introduction and development of such units;

invites the Administrative Council

to take the necessary measures for the organization of such meetings;

instructs the Secretary-General

1. to circulate this Resolution to all Members of the Union, drawing their attention to its importance;
2. to circulate the results of such meetings, particularly to the developing countries;
3. to inform the developing countries of the types of assistance the ITU can provide in setting up the desired structure;

draws the attention of the next Plenipotentiary Conference to

1. the particular problems identified in this Resolution;
2. the need for prompt and effective action to resolve them;
3. the need to take all practicable measures to ensure that resources are made available for this purpose.

CV

RESOLUTION No. 8

**Relating to Implementation of the Changes in Allocations
in the Bands Between 4 000 kHz and 27 500 kHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that parts of frequency bands between 4 000 kHz and 27 500 kHz that were previously allocated on an exclusive or shared basis to the fixed service have been re-allocated to other services;
- b) that existing fixed and mobile assignments must be removed progressively from those re-allocated bands to make way for other services;
- c) that the assignments to be removed, termed "displaced assignments", must be re-accommodated in other frequency bands;

recognizing

the difficulties facing administrations and the IFRB during the period of transition from the previous allocations to those made by this Conference;

resolves

1. that the transitional procedure in Annex A to this Resolution shall be used for the purpose of ensuring an orderly and equitable implementation of the changeover from the previous allocations to those made by this Conference;

2. that the provisions of No. 1242 and the associated provisions of Article 12 concerning the examination and recording in the Master Register of assignments in the bands between 4 000 kHz and 27 500 kHz allocated on an exclusive or shared basis to the fixed service shall be suspended from 1 January 1982 to 30 June 1984;
3. that the interim procedure in Annex B to this Resolution shall be used for the purpose of dealing with any urgent new frequency assignments in the relevant bands during the period of suspension of the provisions of Article 12 as specified in *resolves 2*;
4. that the review procedure in Annex C to this Resolution shall be used for the purpose of examining any urgent new assignments notified during the period of suspension of the provisions of Article 12 as specified in *resolves 2*;
5. that a special transfer procedure, described in Resolution 404, shall apply to stations in the aeronautical fixed service operating in the band 21 924 - 22 000 kHz (band allocated by this Conference exclusively to the aeronautical mobile (R) service) and shall be terminated on 1 February 1983;

invites administrations

1. when seeking re-accommodation for their mobile assignments in the bands between 4 000 kHz and 27 500 kHz re-allocated to other services, to make every effort to find replacement assignments in the bands allocated exclusively to the mobile service concerned;
2. to cooperate by not submitting notices for assignments in the relevant bands during the period of suspension of the provisions of Article 12 as specified in *resolves 2*, except for urgent new assignments to be dealt with under the interim procedure;

requests the IFRB

not to examine any notices in the relevant bands under Article 12 during the period of suspension of the provisions of that Article as specified in *resolves 2*, other than those notices requesting deletions of existing assignments.

ANNEX A TO RESOLUTION No. 8

**Transitional Procedure for the Selection and Approval
of Replacement Assignments**

PART I – PREPARATORY PHASE

**Section I. Preparation and Publication by the IFRB of
Consolidated Proposals for Replacement Assignments**

1. For the purpose of this Resolution, the term “displaced assignment” means a frequency assignment to a station in the fixed service in the parts of the bands re-allocated from the fixed service to other services for which a replacement assignment shall be found in accordance with this Resolution.
2. The Board, as soon as possible after completion of the procedure annexed to Resolution 9, shall prepare consolidated proposals for replacements for all displaced assignments listed in the Provisional Section of the Master Register in the bands between 4 000 kHz and 27 500 kHz which the World Administrative Radio Conference, Geneva, 1979, has re-allocated from the fixed service to other services.

3. The displaced assignment shall be treated in the order of the revised date recorded in Column 2d as indicated in Resolution 9. Furthermore, all displaced assignments which have the same revised date shall be treated in the following order:

- 1) assignments for national use;
- 2) assignments for international use.

In the application of this provision, the displaced assignments shall be processed in batches without any priority being applied to the assignments of any administration.

4. The displaced assignments of class of operation C shall not be treated until all displaced assignments of class of operation A or B have been satisfied.

5. Displaced assignments of class of operation C shall be as far as possible evenly distributed throughout the bands that continue to be allocated to the fixed service.

6. The Board, in complying with the provisions of this Section, shall for the purposes of protecting existing recorded assignments employ only the Master Register reconstructed in accordance with the procedure annexed to Resolution 9.

7. The Board, on 1 July 1983, shall send to each administration a document listing all the assignments concerning that administration, identifying those that were recorded in the Provisional Section of the Master Register, and those proposed as replacements.

Section II. Examination and Approval of Proposed Assignments

8. Each administration, upon receipt of the document specified in paragraph 7, shall acknowledge receipt and shall then examine the proposed replacement assignments contained therein with regard to their acceptability, following which the administration shall advise the Board as soon as possible:

- of its agreement; or
- which of the proposed assignments it finds unacceptable.

In the latter case, the administration shall inform the Board, as quickly as possible, of its reasons therefor.

9. The Board shall examine the responses under paragraph 8 and shall try, preferably by applying small adjustments, to satisfy the administration concerned with respect to the proposed assignments it found unacceptable. The Board shall do so in the following way:

- the Board shall collect all responses received under paragraph 8 within six months after 1 July 1983, and then process them together and without any priority being applied to the reply of any administration; and then
- the Board shall collect all responses received under paragraph 8 in the period from six months to nine months after 1 July 1983, and then process this second batch in the same manner as described above for the first batch.

10. The procedure described in this Section shall terminate on 1 July 1984.

Section III. Subsequent Action by the Board

11. The Board, on termination of the procedure prescribed by Sections I and II of this Annex, shall insert in the Master Register all replacement assignments that have been agreed by administrations, with annotations to indicate:

- that they shall have the same common status as the undisplaced assignments as provided for in Resolution 9; and
- their provisional nature in accordance with No. 1311.

12. The Board shall, for all assignments mentioned in paragraph 11, insert in Column 2d of the Master Register the appropriate date according to paragraph 6.3 of the Annex to Resolution 9.
13. The Board shall then publish, in recapitulatory supplements to the International Frequency List, all replacement assignments made in accordance with the procedure prescribed in Part I of this Annex.
14. The Board, on publication of the supplements prescribed in paragraph 13, shall inform by telegram any administration having outstanding displaced assignments of class of operation A which have not been satisfied.

Section IV. Implementation of Article 12

15. As from 1 July 1984, the provisions of Article 12 shall apply to frequency bands allocated to the fixed service between 4 000 kHz and 27 500 kHz.
16. Following that date, an administration, having been informed by the Board under paragraph 14 that certain of its displaced assignments have not been replaced under this transitional procedure, shall be free to select new assignments taking into account the assignments recorded in the Master Register under paragraph 11, and shall submit new notices to the Board in accordance with Article 12.

PART II – TRANSFER PHASE

Section V. Subsequent Action by Administrations

17. An administration, having received and accepted replacements for its recorded assignments that were displaced by decisions of the World Administrative Radio Conference, Geneva, 1979, shall effect the changeover from the old to the new assignment not later than:

- 1 July 1989 for frequency bands above 10 MHz; and
- 1 July 1994 for frequency bands below 10 MHz.

18. An administration shall promptly inform the Board of the date on which the changeover from an old to a replacement assignment takes place. The Board shall remove from that replacement assignment the special symbol placed in accordance with No. 1311 (see paragraph 11) in the Master Register, thus indicating that it has been implemented, and shall enter the date of the changeover in Column 2c. The date in Column 2c, originally recorded with the displaced assignment, shall be entered in the Remarks Column.

19.1 An administration, having effected the change to a replacement assignment of class of operation A, and having experienced harmful interference or having received a complaint of harmful interference involving another class of operation A assignment:

- a) shall make every effort with any other administration concerned to resolve the problem, and, if unsuccessful,
- b) may select and submit to the Board an alternative replacement assignment ¹.

19.2 An administration, having effected the change to a replacement assignment of class of operation B, and having experienced harmful interference for this class of operation, may select and submit to the Board an alternative replacement assignment ¹.

20. Following a favourable finding by the Board on the replacement assignment selected under paragraph 19.1 b) or 19.2, the administration shall be entitled to have inserted in Column 2d of the Master Register, against that assignment, the common date 1 January 1982 for class of operation A and 2 January 1982 for class of operation B.

¹ On request from an administration, the Board shall assist in the application of provision 19.1 b) or 19.2.

Section VI. Relevance of Dates in the Master Register

21. The relevance of the dates related to displaced assignments is referred to in the Annex to Resolution 9 and Article 12.

ANNEX B TO RESOLUTION No. 8**Interim Procedure Concerning Notices Relating to Assignments
in the Bands Between 4 000 kHz and 27 500 kHz
Allocated on an Exclusive or Shared Basis
to the Fixed Service**

1. During the period between 1 January 1982 and 30 June 1984, an administration, having an urgent requirement which cannot possibly be delayed until the end of that period, may notify a new assignment in the bands between 4 000 kHz and 27 500 kHz allocated on an exclusive or shared basis to the fixed service. Such notices shall contain the information listed in the appropriate section of Appendix 1.
2. An administration submitting a notice in accordance with paragraph 1 above shall be deemed to accept that its assignment:
 - a) shall be of an interim nature; and
 - b) shall be subject to the review procedure contained in Annex C to this Resolution and shall then be modified if necessary to conform to the results of that review; and
 - c) shall not cause harmful interference to any assignments recorded in the Master Register that are entitled to protection.
3. The Board, upon receipt of a complete notice under paragraph 1, shall examine it with respect to No. 1240 and shall return to the notifying administration any notice not complying with that provision together with the reasons for this action.
4. Notices in conformity with No. 1240 shall be included in a special section of the weekly circular, where they shall be annotated to show that they are subject to both the interim and review procedures contained in this Annex and Annex C to this Resolution respectively. Assignments notified under No. 1218 shall additionally be annotated to that effect.
5. The Board shall compile and maintain a Special List of all notices dealt with under paragraph 4.

ANNEX C TO RESOLUTION No. 8**Review Procedure Concerning Notices Relating to
Assignments for Stations of the Fixed Service
in the Bands Between 4 000 kHz and 27 500 kHz**

1. The Board, commencing on 1 July 1984, shall examine under the appropriate provisions of Article 12 all interim assignments contained in the Special List compiled in accordance with Annex B to this Resolution with a view to recording them in the Master Register.
2. For the purposes of this examination, interim assignments shall be processed without priority being given to the assignments of any administration; however, assignments notified under No. 1218 shall be treated first.

3. All interim assignments shall be examined by the Board with respect to the probability of harmful interference from or to assignments entered in the Master Register on a provisional basis as a result of the application of Annex A to this Resolution. Depending on the findings of the Board subsequent to this examination, further action shall be as follows:

4. *Favourable finding with respect to paragraph 3 above*

4.1 The interim assignments notified under No. 1218 shall be recorded in the Master Register, and the date 1 July 1984 shall be entered in Column 2d.

4.2 The other interim assignments shall be examined under No. 1242 with respect to frequency assignments recorded in the Master Register at the date of commencement of the interim procedure described in Annex B to the present Resolution. Depending on the findings of the Board, the appropriate provisions of Article 12 shall be applied. When such assignments are to be recorded, the date 1 July 1984 shall be entered in Column 2d.

5. *Unfavourable findings with respect to paragraph 3 above*

The Board shall, having regard to the class of operation of assignments and the contents of the reconstructed Master Register, propose suitable replacement assignments and enter them on a provisional basis with the date of 1 July 1984 in Column 2d.

6. The Board shall, upon completion of this review, compile a Temporary List of recorded and proposed replacement assignments and publish it as an Annex to its weekly circular. A copy of this List, together with a national extract thereof, shall be sent to each administration having interim assignments in the Special List mentioned in paragraph 1 of this Annex.

7. An administration, upon receipt of the List mentioned in paragraph 6, shall consider the proposed replacements for its interim assignments and shall, within five months of the date of publication of the Temporary List, inform the Board whether the proposed assignments are acceptable. If the proposed assignments are not acceptable, the administration shall give the reasons therefor.

8. Upon acceptance of a proposed assignment, the administration shall indicate the latest date of bringing into use. This date shall be within one year of the publication of the Temporary List.

9. The Board shall examine the replies under paragraph 7 and shall try, if necessary by applying small adjustments, to satisfy the administration concerned with respect to the proposed assignments it found unacceptable and propose alternative frequencies. Simultaneously, the Board shall replace the appropriate provisional entry by the new proposed frequency.

10. If, on 1 July 1985, provisional entries made under paragraphs 5 or 9 have not been accepted by the administrations concerned, the Board shall replace these entries by the corresponding interim assignments appropriately annotated. As from that date neither the Special List nor the Temporary List shall be taken into consideration.

11. An administration, having an interim assignment for which no acceptable replacement assignment has been found, shall be free to select a new replacement and shall forward a new notice under the provisions of Article 12. Upon request from an administration, the Board shall assist in the application of this provision.

CT

RESOLUTION No. 9

**Relating to the Revision of Entries in the
Master International Frequency Register in the Bands
Allocated to the Fixed Service Between 3 000 kHz and 27 500 kHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that there is a need to improve the accuracy and reliability of the Master International Frequency Register, particularly in the bands allocated on an exclusive or shared basis to the fixed service between 3 000 kHz and 27 500 kHz;
- b) that previous initiatives of the IFRB have shown that, with the cooperation of administrations, substantial improvements can be made in the accuracy and reliability of the Master Register;

recognizing

- a) that only a vigorous and cooperative worldwide attack on this problem will lead to a solution;
- b) that a procedure involving the mutual cooperation of all administrations and the IFRB is required for the purpose of revising parts of the Master Register;

recognizing also

- a) that a significant proportion of assignments for the fixed service is intended for purposes other than regular operational use;
- b) that the identification of the class of operation of such assignments in the Master Register would facilitate international frequency management of the fixed service in this part of the spectrum and should be made a standard feature of the Master Register;
- c) that the identification of the hours of regular operation would further facilitate the management of this service;
- d) that both the class and the hours of regular operation of assignments should be introduced in any procedure intended for revision of parts of the Master Register;
- e) that upon completion such action would provide a firm foundation for the transitional arrangements required to provide replacements for assignments to stations in the fixed service displaced by decisions of the World Administrative Radio Conference, Geneva, 1979;

resolves

to adopt the procedure in the Annex to this Resolution for the purpose of revising the parts of the Master Register relating to the bands allocated to the fixed service between 3 000 kHz and 27 500 kHz;

further resolves

that this Resolution shall enter into force on 1 January 1980;

invites administrations and the IFRB

to participate fully and promptly in this procedure.

ANNEX TO RESOLUTION No. 9

**Procedure for Reviewing Entries in the Master Register in Frequency Bands
Allocated to the Fixed Service Between 3 000 kHz and 27 500 kHz**

1. The Board shall extract from the Master Register and shall, as soon as possible after 1 January 1980, forward to each administration an individual National List¹ of all assignments² recorded in the Master Register on behalf of that administration or for which notices have been received prior to that date in the bands allocated exclusively or on a shared basis to the fixed service between 3 000 kHz and 27 500 kHz. The Board shall at the same time draw the attention of the administration to any assignments for which another means of telecommunication is believed to be available.
2. Each administration, upon receiving the List mentioned in paragraph 1 above, shall so inform the Board by telegram. An administration not receiving its National List by 1 April 1980 shall promptly inform the Board, which shall forthwith send to that administration a further copy of the National List. The Board shall ensure that every administration has received the National List pertaining to its own assignments.
3. Each administration, after having acknowledged receipt of its National List, shall examine the List and shall:
 - a) delete from it any of the entries no longer required;
 - b) classify the remaining entries of the fixed service with the use of the following symbols:
Symbol A – assignment for regular operational use which is not provided by another satisfactory means of telecommunication; or
Symbol B – assignment for use as a standby to some other means of telecommunication; or
Symbol C – assignment for occasional use on a reserve basis and not requiring internationally recognized protection from harmful interference;
 - c) indicate the regular hours of operation of the frequency assignment in UTC; otherwise indicate the hours of operation as day service (HJ), night service (HN), or transition period service (HT).
4. An administration, after having completed the actions described in paragraphs 2 and 3 above, shall return its annotated National List to the Board as quickly as possible and in any event not later than 31 March 1981.
5. The Board shall send to each administration an acknowledgement of receipt of its annotated National List, and shall, in cases of special difficulty or at the request of administrations, give such help and advice as the circumstances may warrant.
6. On 1 October 1981, the Board shall publish a provisional section of the Master Register relating solely to the assignments in the bands allocated to the fixed service between 3 000 kHz and 27 500 kHz. This section shall contain all assignments shown in National Lists as annotated by administrations and those shown in the National Lists which have not been returned to the Board, excluding those assignments with an unfavourable finding with respect to No. 1240, without reference to No. 342. The assignments in this provisional section shall be annotated as follows:
 - 6.1 all assignments shall bear a symbol indicating a reference to this Resolution;
 - 6.2 the dates entered in Columns 2a, 2b or 2d or the symbol entered in Column 2d and the findings shown in the appropriate part of Column 13 shall be amended as shown in the attached table;
 - 6.3 frequency assignments to fixed service stations in the parts of bands re-allocated to other services shall bear a symbol indicating that they are assignments for which replacement assignments shall be found in accordance with Resolution 8, retaining the date and status afforded in the attached table.
7. Before applying paragraphs I.2 and II.2 of the attached table to assignments of countries having a small number of assignments, the Board shall consult the administration whose assignment caused the unfavourable

¹ The Board shall determine by prior enquiries the number of copies of the National List to be sent to each administration. The National List shall be prepared in the format of the International Frequency List but the form in which the List is forwarded may, at the request of individual administrations and with the agreement of the Board, be varied to suit different circumstances.

² For the purposes of this procedure, assignments to stations of the aeronautical fixed service shall be treated as if they were stations of the fixed service within the band(s) concerned.

finding in order to ensure that no actual interference has occurred since the registration of the recorded assignment. If the administration replies that no actual interference has occurred, the Board shall enter the symbol corresponding to class of operation A for the assignment and amend the unfavourable finding. Otherwise, it shall apply the provisions of No. 1218 in order to find another frequency and shall proceed to replace the frequency in consultation with the administration concerned.

8. As soon as possible after 1 January 1982, the Board shall:

8.1 publish a supplement to the provisional section of the Master Register containing those assignments for which notices were received between 1 January 1980 and 31 December 1981 and recorded in the Master Register;

8.2 send to administrations a copy of their National List;

8.3 incorporate in the Master Register the provisional section mentioned in paragraph 6 including the assignments mentioned in paragraph 8.1 above in replacement of the corresponding entries in the frequency bands concerned.

9. Following completion of the action described above, the Board shall publish a report showing the results obtained from the operation of this procedure.

TABLE

	Column 13a	Column 2	Column 13c
I. Frequency bands below 3 900 kHz (Region 1) — 3 950 kHz (Region 3) — 4 000 kHz (Region 2)			
I.1 Lists returned to the Board:			
— A class of operation assignments	Delete any symbols indicating the finding under No. 1241	Replace the date in 2a or 2b by 1.1.82 in 2a	RES 9 SUP RR 515
— B or C class of operation assignments	idem	Replace the date in 2a or 2b by 2.1.82 in 2b	RES 9 SUP RR 515
— entries under No. 342 of the Radio Regulations	(MOD)	Replace the date by 5.1.82 in 2b	RES 9
I.2 Lists not returned to the Board:			
— assignments entered with a date in 2a	NOC	Replace the date by 3.1.82 in 2a	RES 9
— assignments entered with a date in 2b	NOC	Replace the date by 4.1.82 in 2b	RES 9
— entries under No. 342 of the Radio Regulations	(MOD)	Replace the date by 5.1.82 in 2b	RES 9

II.1 Lists returned to the Board:			
— A class of operation assignments	Delete any symbols indicating the finding under No. 1242	Replace the date or the symbol in 2d by 1.1.82	RES 9 SUP RR 515
— B or C class of operation assignments	idem	Replace the date or the symbol in 2d by 2.1.82	RES 9 SUP RR 515
— entries under No. 342 of the Radio Regulations	NOC	Replace the date or the symbol in 2d by 5.1.82	RES 9
II.2 Lists not returned to the Board:			
— finding favourable under No. 1240	NOC	Replace the date or the symbol in 2d by 3.1.82	RES 9
— entries under No. 342 of the Radio Regulations	NOC	Replace the date or the symbol in 2d by 5.1.82	RES 9

AF

RESOLUTION No. 10

**Relating to the Use of Radiotelegraph and Radiotelephone
Links by the Red Cross, Red Crescent, and Red Lion and Sun Organizations**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the worldwide relief work of the Red Cross, Red Crescent, and Red Lion and Sun Organizations is of increasing importance and often indispensable;
- b) that in such circumstances normal communication facilities are frequently overloaded, damaged, completely interrupted or not available;
- c) that it is necessary to facilitate by all possible measures the reliable intervention of these national and international organizations;
- d) that rapid and independent contact is essential to the intervention of these organizations;
- e) that for international relief work of the Red Cross, it is necessary that the national Red Cross, Red Crescent, and Red Lion and Sun Organizations be able to communicate with each other as well as with the International Committee of the Red Cross and the League of Red Cross Societies;

decides to urge administrations

1. to take account of the possible needs of the Red Cross, Red Crescent, and Red Lion and Sun Organizations for communication by radio when normal communication facilities are interrupted or not available;
2. to assign to these organizations the minimum number of necessary working frequencies in accordance with the Table of Frequency Allocations; in the case of fixed circuits between 3 MHz and 30 MHz, the frequencies shall be selected, as far as possible, adjacent to the amateur bands;
3. to take all practicable steps to protect such links from harmful interference.

CY

RESOLUTION No. 11

**Relating to the Use of Radiocommunications
for Ensuring the Safety of Ships and Aircraft
of States Not Parties to an Armed Conflict¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that international law recognizes the rights of States not parties to an armed conflict, hereinafter referred to as neutral States, to safely conduct normal commerce without risk of harm from parties to an armed conflict;

¹ Replaces Recommendation No. **Mar2** – 17 of the World Maritime Administrative Radio Conference, Geneva, 1974.

- b) that in the vicinity of armed conflict the ships and aircraft of neutral States encounter considerable risk;
- c) that for the safety of human life it is desirable to be able to identify and determine the position of these ships and aircraft in such circumstances;
- d) that radiocommunication offers a rapid means of identifying and locating such ships and aircraft prior to their entering areas of armed conflict and during their passage through the areas;

taking into account

- a) that the World Maritime Administrative Radio Conference, Geneva, 1974, adopted a Recommendation concerning medical transports as well as the safety of ships and aircraft of States not parties to an armed conflict;
- b) that the World Administrative Radio Conference, Geneva, 1979, fully treated the subject of medical transports within the Radio Regulations by adding a new Section II to Article 40, but that this Conference did not make provisions for the safety of ships and aircraft of neutral States;

resolves to invite administrations

1. to bear in mind the requirements for identification and location of and communications with ships and aircraft of neutral States, including the possible use of aeronautical secondary surveillance radar and maritime radar transponders;
2. to consider the need for, and to formulate as appropriate, an acceptable procedure to be followed in order to assist in ensuring the safety of ships and aircraft of neutral States in times of armed conflict, referring to the Annex as one possible procedure;

invites the Administrative Council

to consider placing this matter on the agenda of the next competent world administrative radio conference;

requests the Secretary-General

to communicate the contents of this Resolution to IMCO and ICAO for such actions as they may consider appropriate.

ANNEX TO RESOLUTION No. 11

**Possible Procedure for the Identification and Location of
Ships and Aircraft of Neutral States**

For the purpose of announcing and identifying ships and aircraft of States not parties to an armed conflict, referred to below as neutral transports, a complete transmission of the urgency signals described in Nos. 3196 and 3197 is followed by the addition of the single group "NNN" in radiotelegraphy and by the addition of the single word NEUTRAL, pronounced as in French "neutral", in radiotelephony.

The frequencies specified in No. 3201 may be used by neutral transports for self-identification and for establishing communications. As soon as practicable, communications shall be transferred to an appropriate working frequency.

The use of the signal as described in the first paragraph indicates that the message which follows concerns a neutral transport. The message shall convey the following data:

- a) call sign or other recognized means of identification of the neutral transport;
- b) position of the neutral transport;
- c) number and type of neutral transports;
- d) intended route;
- e) estimated time en route and of departure and arrival, as appropriate;
- f) any other information, such as flight altitude, radio frequencies guarded, languages and secondary surveillance radar modes and codes.

The provisions of Section I of Article 40 shall apply as appropriate to the use of the urgency signal by neutral transports.

The identification and location of neutral ships may be effected by means of appropriate standard maritime radar transponders.

The identification and location of neutral aircraft may be effected by the use of the secondary surveillance radar (SSR) system specified in Annex 10 to the Chicago Convention on International Civil Aviation dated 7 December 1944, which is periodically brought up to date. The SSR mode and code reserved for the exclusive use of neutral aircraft must be defined by the parties to the conflict or by one of the parties to the conflict, acting by common agreement or individually, in accordance with procedures to be recommended by the International Civil Aviation Organization.

The use of radiocommunications for announcing and identifying neutral transports is optional; however, if they are used, the provisions of the Radio Regulations and particularly those of Articles 37 and 38 apply.

DC

RESOLUTION No. 12

Relating to the New Rules for the Formation of Call Signs

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that many countries, especially developing countries, have an urgent need for new call signs;
- b) that the Radio Regulations (Geneva, 1979) contain new rules for the formation of call signs in Article 25;
- c) that under Article 69 of the Regulations, these rules will enter into force on 1 January 1981;

urges administrations concerned

to make use of the new rules for the formation of call signs contained in Article 25 of the Regulations as soon as required and even before the date established for their entry into force;

instructs the Secretary-General

to publish the information received from administrations on the use of the new rules for the formation of call signs.

DE

RESOLUTION No. 13

**Relating to the Formation of Call Signs and the Allocation
of New International Series¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the recommendation of the International Radio Conference, Atlantic City, 1947, relating to the formation of call signs;
- b) the increasing demand for call signs justified by the increased number of Members of the Union and by the increased requirements of countries which are already Members;
- c) the information supplied by the Secretary-General regarding allocations of call signs since 1947 and the possibilities of the current system of forming call signs;

believing

that call signs already in use should, as far as possible, not be changed;

noting

- a) that the former call sign series formed of three letters, or a figure and two letters, having been exhausted, a new series has been introduced formed of a letter, a figure and a letter; but in no case may the figure be 0 or 1;
- b) that the method mentioned in *noting a)* is not applicable to series beginning with one of the following letters: B, F, G, I, K, M, N, R, U, W;
- c) that a proposal has been submitted to this Conference for the formation of new call sign series by replacing the third character, which is a letter, by a digit;
- d) however, that this would require consequential changes in Section III of Article 25;

resolves

1. that the Secretary-General shall continue to urge administrations:
 - 1.1 to make the maximum use of the possibilities of the series at present allocated, to avoid, as far as possible, further requests;
 - 1.2 to review the call-sign assignments they have already made from their present allocations, with a view to releasing any series and place them at the disposal of the Union;
2. that the Secretary-General shall, upon request, furnish advice to administrations on the means of effecting the greatest economy, which should be the rule, in the use of a series of call signs;
3. that if, nevertheless, before the next competent world administrative radio conference, it appears that all the possibilities of the present system of forming call signs will be exhausted, the Secretary-General shall:
 - 3.1 explore the possibility of forming new series on the basis of the proposal mentioned in *noting c)* ;

¹ Replaces Resolution No. 8 of the Administrative Radio Conference, Geneva, 1959.

3.2 issue a circular-letter;

3.2.1 explaining the position;

3.2.2 urging the administrations to send in their proposals for possible solutions;

4. that, from the information thus submitted, the Secretary-General shall prepare a report, together with his comments and suggestions, for submission to the next competent world administrative radio conference.

DG

RESOLUTION No. 14

Relating to the Transfer of Technology

The World Administrative Radio Conference, Geneva, 1979,

considering

a) the terms of the Resolution relating to International Economic Development and Cooperation (No. 3362.S-VII) adopted by the United Nations General Assembly at its Seventh Extraordinary Session, and the terms of Section III of this Resolution, which emphasizes the role of science and technology in development;

b) the terms of General Assembly Resolution 32/160, which proclaims a Transport and Communications Decade in Africa in the period 1978-1987, during which a World Communications Year is scheduled to be proclaimed;

c) the decisions of the General Assembly relating to the preparation of an international development strategy during the Third United Nations Development Decade, i.e. in the 1980s (Resolution 33/193);

noting

that at the recent United Nations Conference on Science and Technology for Development (Vienna, August 1979), the governments adopted a Declaration relating to a Programme of Action aimed at accelerating the application of science and technology for development;

aware

of the importance of the application of science and technology in telecommunications for the purposes of developing the services and attaining social, economic and cultural objectives;

also aware

of the important role of the ITU as the United Nations specialized agency responsible for undertaking activities leading to the attainment of the objectives set forth in the International Telecommunication Convention;

resolves to urge

1. the governments of the Member countries, particularly those of the developing countries, and their administrations, to take steps to establish national telecommunication development policies to strengthen their

technical cooperation activities in order to achieve the efficient transfer of telecommunication technology, with a view to improving telecommunication services of all types, especially in the field of radiocommunications;

2. administrations to participate to the maximum extent practicable in the Study Groups of the International Consultative Committees of the Union, which are important forums for the transfer of information on the progress and application of telecommunication technology;

resolves to instruct the Secretary-General

1. to strengthen further those technical cooperation activities geared to the planning, setting up, maintenance and operation of telecommunication systems and to the training of staff for such purposes, with a view to accelerating the transfer and satisfactory application of technology in favour of development, having regard to the specific requirements of each country;

2. to seek, at the international level, the resources required to accelerate these technical cooperation programmes, particularly funds which could be allocated under the Vienna Programme of Action;

3. to bring the present Resolution to the notice of all the Member countries of the Union and the competent bodies of the United Nations;

invites the Administrative Council

to keep abreast of the progress made in the attainment of the objectives set forth in this Resolution and to report on such progress, as appropriate, to the next Plenipotentiary Conference.

CZ

RESOLUTION No. 15

**Relating to International Cooperation
and Technical Assistance in the Field of
Space Radiocommunications¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

a) that a large number of countries, Members of the International Telecommunication Union, are not in a position to take immediate advantage of satellite techniques for the development of their telecommunication services;

b) that such countries would benefit immensely through the technical assistance programmes sponsored by the Union;

recognizing

a) that international satellite-communication systems are subject to the Convention and Regulations and that they permit participation of all countries including, in particular, the developing countries, in space communication systems;

¹ Replaces Resolution No. Spa 4 of the Extraordinary Administrative Radio Conference, Geneva, 1963.

b) that a number of problems need to be solved in order that the developing countries may participate effectively in international space communication systems and integrate these systems with their national telecommunication networks;

resolves to invite the Administrative Council

1. to draw the attention of administrations to the means by which they may avail themselves of technical assistance in connection with the introduction of space communications;
2. to consider the most effective manner in which requests for such assistance by Member countries of the Union may be formulated and presented in order to secure maximum financial and other assistance;
3. to consider how best to make use of funds made available by the United Nations in accordance with its Resolution No. 1721 to give technical and other assistance to administrations of Member countries of the Union to make effective use of space communications;
4. to consider in what way the work of the Consultative Committees and other organs of the Union may be utilized in the most effective way for the information and assistance of administrations of Member countries of the Union in the development of space radiocommunications.

CX

RESOLUTION No. 16

**Relating to the Role of Telecommunications
in Integrated Rural Development**

The World Administrative Radio Conference, Geneva, 1979,

recalling

Resolution 3362 (S-VII) of the seventh special session of the United Nations General Assembly which, inter alia, requested Member States to promote integrated rural development in the developing countries;

recalling further

the importance placed on rural development by various inter-governmental conferences during the Second United Nations Development Decade, which recognized the need for the intensification of development efforts aimed at satisfying the aspirations of the rural communities and accelerating the development of infrastructure in the rural areas;

the ITU Administrative Council Resolutions No. 779 (Implementation of the International Development Strategy for the Second United Nations Development Decade) and No. 800 (Telecommunications, an important factor of economic and social development: role of the ITU in this domain), and the importance of telecommunications for social and economic development, as well as the various projects and studies undertaken by the Union to meet these objectives;

convinced

of the importance of telecommunications as an essential element of infrastructure for the rural areas;

recognizing

- a) that most developing countries are still lacking adequate telecommunication resources;
- b) that many rural areas of the world do not currently enjoy the benefits of telecommunication technology;
- c) that many populations within individual countries live in isolation from each other due to geographical barriers such as oceans, mountains, forests and deserts;
- d) that the provision of modern telecommunications and, in particular, radiocommunications, including satellite technology, can serve to overcome those difficulties and to integrate rural communities in the development process;
- e) that many developing countries are unable to provide entirely from their own resources such modern telecommunications;

noting

the proven possibilities of modern telecommunication technology as a means of bringing to the rural areas, education, health care and other welfare services of importance for social development;

noting further

the significant supporting role of an adequate rural telecommunication network in stimulating growth in agricultural activities and in other sectors important for economic and social progress;

urges Member governments

to strengthen their technical cooperation efforts for the realization of accelerated telecommunication development to serve the rural communities, bearing in mind the existing inadequacies in the resources of various developing countries;

urges also administrations

to participate actively in the studies carried out by the Autonomous Working Groups (GAS 3 and GAS 5) of the CCITT/CCIR in regard to rural telecommunications development;

requests the Secretary-General

1. to continue to give special attention to the Union's technical assistance activities for the detailed planning, operation and maintenance of the rural telecommunication infrastructure and application of appropriate technology;
2. to bring this Resolution to the attention of the appropriate United Nations bodies;
3. to continue to cooperate with the specialized agencies and organizations of the United Nations system in the field of integrated rural development;

invites the Administrative Council

to consider this Resolution, to monitor its implementation and to report on progress in the Annual Report on the activities of the Union.

DF

RESOLUTION No. 17

**Relating to the Determination, on the Basis of the Agenda,
of the Possible Committee Structure to Be Set Up at an
Administrative Radio Conference**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that some administrations, owing to lack of personnel, have difficulty in staffing their delegations at administrative radio conferences so as to be able to send at least one delegate to attend each of the committees;
- b) that at present it is difficult for administrations to predict beforehand the number and names of the committees to be set up at conferences, and the subjects to be allocated to each committee;
- c) that the Secretary-General might usefully prepare a draft structure for future conferences sufficiently in advance, in the light of relevant former conferences;

recognizing

- a) that the organization of the work of each administrative radio conference can be determined only by the conference itself, in the light of its agenda and of the proposals and other documents submitted to it;
- b) that nevertheless the organization of previous conferences can often be a helpful guide to the organization of a new conference, and that information about the organization of the work of previous conferences could therefore be of assistance to administrations in their preparations for conferences;

resolves

1. that, when the Administrative Council has established the agenda of an administrative radio conference, the Secretary-General shall send to administrations, together with a copy of the resolution containing the agenda, an invitation to give their opinion on the structure of the conference in the light of the agenda;
2. that, on receipt of replies from administrations, the Secretary-General, in consultation with the IFRB and the Director of the CCIR and guided by the experience of earlier conferences of a similar character, shall draw up a draft conference structure showing which of the articles, appendices, resolutions, recommendations and other topics contained in the agenda might be considered by each committee;
3. that the Secretary-General shall bring this draft document to the attention of the Administrative Council and shall send it as an information paper to all administrations.

CU

RESOLUTION No. 30

**Relating to the Review of Entries in the
Master International Frequency Register
at the Request of Previous Conferences**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Extraordinary Administrative Radio Conference, Geneva, 1951, adopted an International Frequency List which included entries not in conformity with the Table of Frequency Allocations, Atlantic City, 1947;
- b) that the Administrative Radio Conference, Geneva, 1959, introduced the concept of primary and secondary services thus modifying the Table of Frequency Allocations, Atlantic City, 1947, resulting in the loss of priority for certain entries in the International Frequency List;
- c) that the Administrative Radio Conference, Geneva, 1959, in the establishment of the Master International Frequency Register gave special consideration and treatment to the transfer of these entries from the Master Radio Frequency Record in accordance with the provisions of Resolution No. 4, Geneva, 1959;
- d) that, in the period between 1 January 1952 and 31 March 1953, assignments were included in the above List without examination with a symbol in Column 2d and that the Board takes these assignments into account in the examination of any assignment notice;

further considering

- e) that administrations were urged to take the required action; and
- f) that this Conference was invited to reconsider the situation;

resolves

1. that the Board shall examine, for their conformity with the new Table of Frequency Allocations, the frequency assignments to which Resolution No. 4 of the Radio Conference, Geneva, 1959, was applied and shall correct its findings accordingly with effect from the date of the entry into force of the Final Acts of this Conference. Where a finding has been modified in application of this Resolution, an appropriate remark shall be entered in the Remarks Column;
2. that the assignments with a symbol in Column 2d and not covered by Resolution 9 shall be examined with a view to the replacement of this symbol by the date of 1 April 1953;
3. that the Board shall inform the administrations concerned of any action taken with regard to these recorded assignments.

CI

RESOLUTION No. 31

**Relating to the Application of Certain Provisions of the Final Acts
of the World Broadcasting-Satellite Administrative
Radio Conference, Geneva, 1977, to Take into Account Changes Made
by the World Administrative Radio Conference, Geneva, 1979,
to the Table of Frequency Allocations for
Region 2 in the Band 11.7 - 12.7 GHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971, allocated the frequency band 11.7 - 12.2 GHz in Region 2 to the fixed-satellite, broadcasting-satellite, fixed, mobile except aeronautical mobile, and broadcasting services;
- b) that the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, established provisions and an associated Plan for the broadcasting-satellite service in the band 11.7 - 12.5 GHz in Region 1 and in the band 11.7 - 12.2 GHz in Region 3;
- c) that that Conference also established inter-regional sharing criteria based on the frequency allocations prevailing at that time;
- d) that the frequency allocations to the fixed-satellite and broadcasting-satellite services in the 12 GHz band in Region 2 have been expanded and modified by this Conference;
- e) that this Conference has also decided to incorporate the provisions and associated Plan adopted by the 1977 Conference into the Radio Regulations as Appendix 30.

recognizing

- a) that these modifications to the Table of Frequency Allocations do not introduce in principle new inter-regional sharing situations apart from that identified in *b)* below;
- b) that the provisions of Appendix 30 can be applied directly as indicated above to all sharing situations other than that between the fixed-satellite service in Regions 1 and 3 and the broadcasting-satellite service in Region 2 in the frequency band 12.2 - 12.7 GHz;
- c) that the single case referred to in *recognizing b)* above is dealt with in Resolution 700;

resolves

1. that the provisions of Article 4 and Annex 1 of Appendix 30 relating to the modification to the Plan for the broadcasting-satellite service in Regions 1 and 3, shall also be applied with respect to the protection of the broadcasting-satellite service in the band 12.2 - 12.5 GHz, and to the fixed-satellite service in the band 12.2 - 12.3 GHz allocated in Region 2;
2. that the provisions of Article 6 and Annex 3 of Appendix 30 relating to the procedure for the coordination and notification of frequency assignments to terrestrial stations affecting broadcasting-satellite frequency assignments, shall also be applied in the band 12.2 - 12.7 GHz with respect to the broadcasting-satellite service in Region 2;

3. that the provisions of Article 7 and Annex 4 of Appendix 30 and Resolution 503, which relate to the preliminary procedures, and the coordination, notification and recording of frequency assignments to stations in the fixed-satellite and broadcasting-satellite services respectively, in Region 2, shall also be applied to the band 12.2 - 12.3 GHz as allocated to the fixed-satellite service, and to the band 12.2 - 12.5 GHz as allocated to the broadcasting-satellite service in Region 2;
4. that the provisions of Article 9 and Annex 5 of Appendix 30, which specify power flux-density limits between 11.7 - 12.2 GHz to protect terrestrial services in Regions 1 and 3 from Region 2 broadcasting-satellite space stations, shall also be applied to the band 12.2 - 12.5 GHz;
5. that until the final decisions are made by the 1983 regional administrative radio conference for Region 2, in the band 12.5 - 12.7 GHz,
 - a) Article 9 and the limits in Annex 5 paragraph (1) of Appendix 30 shall be applied to the operation of Region 2 space stations in the broadcasting-satellite service, and
 - b) the power flux-density limits specified in No. 2574 shall be applied to the operation of Region 2 space stations in the fixed-satellite service with respect to the countries mentioned in Nos. 848 and 850 and in Region 3;

requests the CCIR

1. to study urgently the question of appropriate protection for terrestrial services in each affected Region in the band 12.2 - 12.7 GHz, in the context of efficient planning of the broadcasting-satellite service in Region 2, as referred to in *resolves* 4 and 5 above;
2. to prepare a special report on the subject in time for its consideration by appropriate preparatory meetings and as a guideline for the work of the said regional conference.

AI

RESOLUTION No. 32

**Relating to the Use of Frequency Assignments to
Terrestrial and Space Radiocommunication Stations
in the Band 11.7 - 12.2 GHz in Region 3 and in
the Band 11.7 - 12.5 GHz in Region 1¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, adopted Resolution No. **Sat - 2**;
- b) that No. 838 of the Radio Regulations provides that in the band 11.7 - 12.2 GHz in Region 3 and in the band 11.7 - 12.5 GHz in Region 1, existing and future fixed, mobile and broadcasting services shall not cause harmful interference to broadcasting-satellite stations operating in accordance with the decisions of that Conference;
- c) that the decisions of that Conference included a Plan for stations in the broadcasting-satellite service;
- d) that the coordination procedures described in Resolution 33 are to be applied only until the entry into force of plans pursuant to Resolution 507;

¹ Replaces Resolution No. **Sat - 2** of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

resolves

1. that all administrations using or intending to use frequency assignments to terrestrial stations in the bands covered by the Plan shall decide, as soon as possible, whether or not these assignments will affect frequency assignments in accordance with the Plan (if necessary, with the assistance of the IFRB);
2. that administrations may continue to use frequency assignments which are not in accordance with the Plan, provided that agreement is reached with the administration whose broadcasting-satellite stations are affected;
3. that the administrations seeking agreement shall inform the IFRB of the terms of the agreement reached;
4. that, upon receipt of such information, the IFRB shall insert a symbol in the Remarks Column of the Master Register indicating the duration specified in the agreement. The duration specified shall also be published in a special section of its weekly circular;
5. that Resolution No. **Sat – 2** is abrogated and superseded by this Resolution;

invites the IFRB

to assist administrations in implementing the provisions of this Resolution.

BO

RESOLUTION No. 33

**Relating to the Bringing into Use of Space Stations in the
Broadcasting-Satellite Service, Prior to the Entry into Force of
Agreements and Associated Plans for the
Broadcasting-Satellite Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that while Resolution **507** envisages plans for the broadcasting-satellite service, some administrations might nevertheless feel the need to bring stations in that service into use prior to such plans being established;
- b) that administrations should, as far as possible, avoid proliferation of space stations in the broadcasting-satellite service before such plans have been established;
- c) that a space station in the broadcasting-satellite service may cause harmful interference to terrestrial stations operating in the same frequency band, even if the latter are outside the service area of the space station;
- d) that the procedures specified in Article 11 of the Radio Regulations contain no provisions for coordination between space stations in the broadcasting-satellite service and terrestrial stations and between space stations in that service and space systems of other administrations;

¹ Replaces Resolution No. **Spa2 – 3** of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

resolves

1. that, except in those cases where agreements and associated plans for the broadcasting-satellite service have been established and have entered into force, the following procedure shall be applied:

**Section A: Coordination Procedure Between Space Stations in the
Broadcasting-Satellite Service and Terrestrial Stations**

2.1 Before an administration notifies to the IFRB or brings into use any frequency assignment to a space station in the broadcasting-satellite service in a frequency band where this frequency band is allocated, with equal rights, to the broadcasting-satellite service and to a terrestrial radiocommunication service, either in the same Region or sub-Region or in different Regions or sub-Regions, it shall coordinate the use of this assignment with any other administration whose terrestrial radiocommunication services may be affected. For this purpose, it shall inform the Board of all the technical characteristics of the station, as listed in the relevant sections of Appendix 3 to the Radio Regulations, which are necessary to assess the risk of interference to a terrestrial radiocommunication service ¹.

2.2 The Board shall publish this information in a special section of its weekly circular and shall also, when the weekly circular contains such information, so advise all administrations by circular telegram.

2.3 Any administration which considers that its terrestrial radiocommunication services may be affected shall forward its comments to the administration seeking coordination and, in any case, to the Board. These comments must be forwarded within four months from the date of the relevant IFRB weekly circular. It shall be deemed that any administration which has not forwarded comments within that period considers that its terrestrial radiocommunication services are unlikely to be affected.

2.4 Any administration which has forwarded comments on the projected station shall either give its agreement, with a copy to the Board, or, if this is not possible, send to the administration seeking coordination all the data on which its comments are based as well as any suggestions it may be able to offer with a view to a satisfactory solution of the problem.

2.5 The administration which plans to bring into use a space station in the broadcasting-satellite service as well as any other administration which believes that its terrestrial radiocommunication services are likely to be affected by the station in question may request the assistance of the Board at any time during the coordination procedure.

2.6 In the event of continuing disagreement between an administration seeking to effect coordination and one with which coordination has been sought, the administration seeking coordination shall, except in the cases where the assistance of the Board has been requested, defer the submission of its notice concerning the proposed assignment by six months from the date of publication of the information according to paragraph 2.2.

**Section B: Coordination Procedure Between Space Stations in the
Broadcasting-Satellite Service and Space Systems of
Other Administrations**

3. An administration intending to bring into use a space station in the broadcasting-satellite service shall, for the purpose of coordination with space systems of other administrations, apply the following provisions of Article 11 of the Radio Regulations:

3.1 Nos. 1041 to 1058 inclusive.

¹ The calculation methods and the interference criteria to be employed in evaluating the interference should be based upon relevant CCIR Recommendations agreed by the administrations concerned either as a result of Resolution 703 or otherwise. In the event of disagreement on a CCIR Recommendation or in the absence of such Recommendations, the methods and criteria shall be agreed between the administrations concerned. Such agreements shall be concluded without prejudice to other administrations.

3.2.1 Nos. **1060** to **1065**¹.

3.2.2 No coordination under paragraph 3.2.1 is required when an administration proposes to change the characteristics of an existing assignment in such a way as not to increase the probability of harmful interference to stations in the space radiocommunication service of other administrations.

3.2.3 Nos. **1074** to **1105** inclusive.

**Section C: Notification, Examination and Recording in the
Master Register of Assignments to Space Stations in
the Broadcasting-Satellite Service Dealt With under
this Resolution**

4.1 Any frequency assignment² to a space station in the broadcasting-satellite service shall be notified to the Board. The notifying administration shall apply for this purpose the provisions of Nos. **1495** to **1497**.

4.2 Notices made under paragraph 4.1 shall initially be treated in accordance with No. **1498**.

5.1 The Board shall examine each notice with respect to:

5.2 a) its conformity with the Convention, the Table of Frequency Allocations and the other provisions of the Radio Regulations, with the exception of those relating to the coordination procedures and to the probability of harmful interference, which are the subject of the paragraphs 5.3, 5.4, and 5.5;

5.3 b) its conformity, where applicable, with the provisions of paragraph 2.1 of Section A above, relating to coordination of the use of the frequency assignment with the other administrations concerned;

5.4 c) its conformity, where applicable, with the provisions of paragraph 3.2.1 of Section B above, relating to coordination of the use of the frequency assignment with the other administrations concerned;

5.5 d) where appropriate, the probability of harmful interference to the service rendered by a station in a space or terrestrial radiocommunication service for which a frequency assignment has already been recorded in the Master Register in conformity with the provisions of No. **1240** or **1503** as appropriate, if that assignment has not, in fact, caused harmful interference to the service rendered by a station for which an assignment has been previously recorded in the Master Register and which itself is in conformity with No. **1240** or **1503** as appropriate.

6.1 Depending upon the findings of the Board subsequent to the examination prescribed in paragraphs 5.2, 5.3, 5.4 and 5.5, further action shall be as follows:

6.2 Where the Board reaches an unfavourable finding with respect to paragraph 5.2 the notice shall be returned immediately by airmail to the notifying administration with the reasons of the Board for this finding together with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.

¹ The calculation methods and the interference criteria to be employed in evaluating the interference should be based upon relevant CCIR Recommendations agreed by the administrations concerned either as a result of Resolution **703** or otherwise. In the event of disagreement on a CCIR Recommendation or in the absence of such Recommendations, the methods and criteria shall be agreed between the administrations concerned. Such agreement shall be concluded without prejudice to other administrations.

² The expression *frequency assignment*, wherever it appears in this Resolution, shall be understood to refer either to a new frequency assignment or to a change in an assignment already recorded in the Master International Frequency Register (hereinafter called the *Master Register*).

6.3 Where the Board reaches a favourable finding with respect to paragraph 5.2, or where it reaches the same finding after resubmission of the notice, it shall examine the notice with respect to the provisions of paragraphs 5.3 and 5.4.

6.4 Where the Board finds that the coordination procedures mentioned in paragraphs 5.3 and 5.4 have been successfully completed with all administrations whose services may be affected, the assignment shall be recorded in the Master Register. The date of receipt by the Board of the notice shall be entered in Column 2d of the Master Register with an entry in the Remarks Column indicating that such recording does not prejudice in any way the decisions to be included in the agreements and associated plans referred to in Resolution 507.

6.5 Where the Board finds that the coordination procedures mentioned in paragraph 5.3 or 5.4 have not, as appropriate, been applied or have been unsuccessfully applied, the notice shall be returned immediately by airmail to the notifying administration with the reason for its return together with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.

6.6 Where the notifying administration resubmits the notice and states that it has been unsuccessful in endeavouring to effect the coordination, the notice shall be examined by the Board with respect to paragraph 5.5.

6.7 Where the notifying administration resubmits the notice and the Board finds that the coordination procedures have been successfully completed with all administrations whose services may be affected, the assignment shall be treated as indicated in paragraph 6.4.

6.8 Where the Board reaches a favourable finding with respect to paragraph 5.5, the assignment shall be recorded in the Master Register. The appropriate symbol indicating the finding by the Board shall indicate that the coordination procedures, as appropriate, referred to in paragraph 2.1 or 3.2.1 were not successfully completed. The date of receipt by the Board of the notice shall be entered in Column 2d of the Master Register, with the remark mentioned in paragraph 6.4.

6.9 Where the Board reaches an unfavourable finding with respect to paragraph 5.5, the notice shall be returned immediately by airmail to the notifying administration with the reasons for the Board's finding together with such suggestions as the Board is able to offer with a view to a satisfactory solution of the problem.

6.10 If the administration resubmits the notice unchanged with the insistence that it be reconsidered, but should the Board's unfavourable finding under paragraph 5.5 remain unchanged, the assignment shall be recorded in the Master Register. However, this entry shall be made only if the notifying administration informs the Board that the assignment has been in use for at least four months without any complaint of harmful interference having been received. The date of receipt by the Board of the original notice shall be entered in Column 2d of the Master Register, with the remark mentioned in paragraph 6.4. An appropriate remark shall be placed in Column 13 to indicate that the assignment is not in conformity with the provisions of paragraphs 5.3, 5.4 or 5.5, as appropriate. In the event that the administration concerned receives no complaint of harmful interference concerning the operation of the station in question for a period of one year from the commencement of operation, the Board shall review its finding.

6.11 If harmful interference is actually caused to the reception of any space station in the broadcasting-satellite service whose frequency assignment has been recorded in the Master Register as a result of a favourable finding with respect to paragraphs 5.2, 5.3, 5.4 and 5.5 of this Resolution, as appropriate, by the use of a frequency assignment to a space station which has been subsequently recorded in the Master Register in accordance with the provisions of paragraph 6.10 of this Resolution or of No. 1544, the station using the latter frequency assignment must, upon receipt of advice thereof, immediately eliminate this harmful interference.

6.12 If harmful interference is actually caused to the reception of any space radiocommunication station using an assignment recorded in the Master Register as a result of a favourable finding with respect to Nos. 1503 to 1512, as appropriate, by the use of an assignment to a space station in the broadcasting-satellite service which has been subsequently recorded in the Master Register in accordance with the provisions of paragraph 6.10 of this Resolution, the station using the latter assignment must, on receipt of advice thereof, immediately eliminate this harmful interference.

6.13 If harmful interference is actually caused to the reception of any terrestrial station using an assignment recorded in the Master Register as a result of a favourable finding with respect to No. 1240, by the use of an assignment to a space station in the broadcasting-satellite service which has been subsequently recorded in the Master Register in accordance with the provisions of paragraph 6.10 of this Resolution, the station, using the latter assignment must, on receipt of advice thereof, immediately eliminate this harmful interference.

6.14 If harmful interference to the reception of any station whose assignment is in accordance with paragraph 5.2 of this Resolution, is actually caused by the use of a frequency assignment which is not in conformity with Nos. 1240, 1352 or 1503, the station using the latter frequency assignment must, upon receipt of advice thereof, immediately eliminate this harmful interference.

•

CL

RESOLUTION No. 34

**Relating to the Establishment of the Broadcasting-Satellite Service
in Region 3 in the 12.5 - 12.75 GHz Frequency Band and to Sharing
with Space and Terrestrial Services in Regions 1, 2 and 3**

The World Administrative Radio Conference, Geneva, 1979,

considering

that this Conference has allocated the band 12.5 - 12.75 GHz to the broadcasting-satellite service for community reception in Region 3;

recognizing

that under Resolution 507 the Administrative Council may wish to empower a future competent administrative radio conference to establish a plan for the broadcasting-satellite service in the band 12.5 - 12.75 GHz in Region 3;

resolves

1. that, until such time as a plan may be established for the broadcasting-satellite service in the band 12.5 - 12.75 GHz in Region 3, the provisions of Resolution 33 together with Article 11 shall continue to apply to the coordination between stations in the broadcasting-satellite service in Region 3 and:

- 1) space stations in the broadcasting-satellite and fixed-satellite services in Regions 1, 2 and 3;
- 2) terrestrial stations in Regions 1, 2 and 3;

2. that the CCIR shall study urgently the technical provisions which may be appropriate for the sharing between stations in the broadcasting-satellite service in Region 3 and:

- 1) space stations in the broadcasting-satellite and fixed-satellite services in Regions 1 and 2;
- 2) terrestrial stations in Regions 1 and 2;

3. that, until such time as technical provisions are developed by the CCIR and accepted by administrations concerned under Resolution 703, the sharing between space stations in the broadcasting-satellite service in Region 3 and terrestrial services in Regions 1, 2 and 3 shall be based on the following criteria as appropriate:

- 1) the power flux-density at the Earth's surface, produced by emissions from a space station in the broadcasting-satellite service in Region 3 for all conditions and for all methods of modulation shall not exceed the limits given in Annex 5 of Appendix 30; noting that sub-paragraph 2) shall only apply with respect to protection of the broadcasting service;
- 2) in addition to 1), the provisions of No. 2574 shall apply in the countries mentioned in Nos. 848 and 850;
- 3) the limits given in 1) and 2) above may be exceeded on the territory of any country provided the administration of that country has so agreed.

AA

RESOLUTION No. 35

**Relating to a Procedure for Resolving a Disagreement
over the Technical Standards or Rules of Procedure of
the International Frequency Registration Board**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that, in accordance with No. 1001.1, the Technical Standards and Rules of Procedure of the IFRB shall be distributed to all Members of the Union and shall be open to comment from administrations;
- b) that an administration may disagree with the substantive contents of these documents;
- c) that, in the event of such a disagreement remaining unresolved, there should be a procedure for the resolution of that disagreement;

recognizing

- a) that, with respect to the Technical Standards, the CCIR could provide the best source of professional advice;
- b) that, with respect to the Rules of Procedure, a world administrative radio conference could provide the best source of interpretation of the Radio Regulations;

resolves

1. that, in the event of an unresolved disagreement over the substantive contents of the Technical Standards of the IFRB, the Board, in agreement with the administration concerned, shall refer the question to the CCIR for international study and the development of a Recommendation thereon by the next Plenary Assembly of the CCIR;
2. that, in the event of the CCIR not having formulated a Recommendation thereon, or in the event of an unresolved disagreement over the substantive contents of the Rules of Procedure of the IFRB, in either case the matter may be referred to the Administrative Council for inclusion in the agenda of the next world administrative radio conference;
3. that, pending resolution of the matter, the Board shall continue to use the particular Technical Standard or Rule of Procedure in dispute but that, following resolution of the matter by a CCIR Recommendation or by a decision of a world administrative radio conference, the Board shall promptly take the consequential action including a review of all relevant findings.

AK

RESOLUTION No. 36

Relating to the Preparation of Explanatory Information by the International Frequency Registration Board on the Application of the New Method for Designating Emissions in Notification Procedures and the Consequential Revision of the Master International Frequency Register

The World Administrative Radio Conference, Geneva, 1979,

having adopted

Article 4 and Appendix 6 containing a new system for the designation of emissions;

considering

- a) that such designations are fundamental to the notification procedures detailed in the Radio Regulations;
- b) that it is essential for this new system of designating emissions to be applied not only to new frequency assignments but also to existing entries in the Master Register;
- c) that certain new designations are more detailed than the former designations;
- d) that the IFRB does not have the means to replace automatically all former designations by the new designations;

noting

- a) that some administrations may have difficulties in implementing the new method of designating emissions when it first comes into use;
- b) that these administrations need explanatory information well in advance of the entry into force of the Final Acts of this Conference;

resolves

1. that the IFRB shall prepare explanatory information on the application of the new method of designation, including examples, in the context of the notification procedures specified in the Radio Regulations and shall make this information available to administrations as early as possible and not later than 1 October 1980;
2. that the IFRB shall proceed with the conversion of the data appearing in the Master Register in consultation with, and on the basis of information provided by, administrations;
3. that, if the Board does not receive from administrations within a reasonable time the information required in the application of *resolves* 2, it shall convert the data appearing in the Master Register as accurately as possible and insert in the Remarks Column a remark referring to the fact that the conversion was made under the terms of this paragraph;
4. that, from the date of entry into force of the present revision of the Radio Regulations, only the designations of emissions contained in Article 4 shall be used in the coordination and notification procedures. If however the Board receives, after this date, information or notifications containing the old type of designation, the Board shall not consider them incomplete for this reason alone. The Board shall, when practicable, modify the designation and, if clarification is required, shall consult the administrations concerned.

BX

RESOLUTION No. 37

**Relating to the Introduction and Development
of Computer Assistance in Radio Frequency
Management Within Administrations**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) Resolution 7 relating to the development of national radio frequency management;
- b) Resolution 6 relating to the preparation of a handbook to explain and illustrate certain provisions of the Radio Regulations;
- c) Recommendation 31 to the CCIR relating to the preparation of a handbook on computer-aided techniques in radio frequency management;

considering also

- d) the potential value of computer aids in many aspects of radio frequency management;
- e) the need for further assistance to administrations, particularly in developing countries, in introducing and developing computer facilities or in optimizing the use of their existing computer facilities as aids to radio frequency management;

resolves that the Secretary-General

shall promptly initiate a review of these problems to ensure that the following actions shall be taken in the most effective manner:

1. the holding of regional seminars particularly directed to education in this field, bearing in mind the national requirements of administrations;
2. the use of all educational resources available to the Union to provide further training in this field appropriate to the national requirements of administrations;
3. the making of appropriate arrangements, within the existing framework of the ITU, for aiding administrations in the identification of special problems in this field and helping to provide solutions, by the best possible application of computer technology;

invites the Administrative Council

to consider the recommendations of the Secretary-General and to find the necessary resources.

BR

RESOLUTION No. 38

**Relating to the Reassignment of Frequencies of Stations
in the Fixed and Mobile Services in the Bands Allocated
to the Radiolocation and Amateur Services in Region 1**

(1 625 - 1 635 kHz; 1 800 - 1 810 kHz; 1 810 - 1 850 kHz and 2 160 - 2 170 kHz)

The World Administrative Radio Conference, Geneva, 1979,

considering

that this Conference has adopted modifications to the allocation of the frequency bands between 1 606.5 kHz and 2 850 kHz;

noting

a) that the implementation of the revised Table of Frequency Allocations presents difficulties in particular for stations in the maritime mobile service in Region 1 in the bands 1 625 - 1 635 kHz, 1 800 - 1 810 kHz and 2 160 - 2 170 kHz which are being made available for radiolocation services and in the band 1 810 - 1 850 kHz which is being made available to the amateur service;

b) that this Conference has recommended the convening of a general mobile administrative radio conference not later than 1982;

emphasizing

the need for frequency assignment plans to be drawn up for Region 1 for the band 1 606.5 - 2 850 kHz in order to implement the provisions in Nos. 486 and 492 of the Radio Regulations;

invites the general mobile administrative radio conference

mentioned above to give priority to the adoption of a new assignment plan for Region 1 for the band 1 606.5 - 2 850 kHz for the maritime mobile service;

resolves

1. that in Region 1, except for the countries and frequency bands mentioned¹ in Nos. 485, 490, 491, 493 and 499, on the date of implementation of a frequency assignment plan for the maritime mobile service to be contained in the Final Acts of the competent conference, all operations of stations of the fixed and mobile services shall be terminated in the bands 1 625 - 1 635 kHz, 1 800 - 1 810 kHz, 1 810 - 1 850 kHz and 2 160 - 2 170 kHz;

2. that replacement frequencies for stations of the maritime mobile service shall be provided in the frequency assignment plan mentioned above, together with the arrangements for their implementation;

¹ No. 485, bands 1 625 - 1 635 kHz, 1 800 - 1 810 kHz and 2 160 - 2 170 kHz

No. 490, band 1 810 - 1 830 kHz

No. 491, band 1 810 - 1 830 kHz

No. 493, band 1 810 - 1 850 kHz

No. 499, band 2 160 - 2 170 kHz

3. that administrations having assignments to stations of the fixed, land mobile or aeronautical mobile (OR) services in the bands concerned shall choose and notify to the IFRB appropriate replacement assignments; and where the finding of the Board is favourable with respect to Nos. 1240 and 1241, each such replacement assignment shall have the same date and status as that which it replaced, as far as the assignments of the countries in Region 1 are concerned;
4. that the protection afforded to stations of the fixed and mobile services by Nos. 486 and 492 shall continue to apply until such time as satisfactory replacement assignments have been found and implemented in accordance with this Resolution;
5. that, after the date of implementation of the frequency assignment plan for the maritime mobile service contained in the Final Acts of the competent conference, the continued use of frequency assignments that have not been transferred in accordance with *resolves* 3 shall be only on the basis of No. 342.

AJ

RESOLUTION No. 60

**Relating to Information on the Propagation of Radio Waves
Used in the Determination of the Coordination Area**

(See Appendix 28)

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that Appendix 28 to the Radio Regulations provides a method for the determination of the coordination area which incorporates certain material concerned with radio wave propagation;
- b) that the propagation information contained in Appendix 28 is based directly or indirectly on propagation data given in the texts of the CCIR;
- c) that CCIR studies of radio wave propagation are continuing, and therefore the conclusions of these studies are subject to change and may in future show the need to revise those sections of Appendix 28 which incorporate the propagation information;
- d) that no radio wave propagation measurements have been carried out in some parts of the world;

recognizing

- a) that a period of several years is generally required to accumulate sufficient data to form reliable conclusions concerning radio wave propagation;
- b) that for administrative reasons it is desirable that the propagation information used for the determination of the coordination area should not be revised too frequently and, in any case, should be revised only if the effect of such revision on the size of the coordination area is significant;
- c) that in Appendix 28 the coordination area is determined without the need for detailed knowledge of the propagation characteristics of individual paths, and it is desirable that this approach be maintained;

invites the CCIR

to continue to study propagation data concerned with the determination of the coordination area, and to maintain the relevant CCIR texts in a format which would permit direct insertion into Appendix 28 in place of the existing Sections 3, 4, 6 or Annex III;

resolves

1. that each Plenary Assembly of the CCIR should come to a conclusion as to whether, according to the propagation information given in the most recent CCIR Recommendations, any revision of Sections 3, 4, 6 or Annex III of Appendix 28 to the Radio Regulations is warranted;
2. that when a Plenary Assembly of the CCIR has come to the conclusion that a revision of Sections 3, 4, 6 or Annex III of Appendix 28 is warranted, the Director of the CCIR shall so inform the Secretary-General of the ITU and send him the proposed amendments to Appendix 28;

requests

1. that the Administrative Council then place, as an extraordinary item, on the agenda of the next world administrative radio conference, the consideration of the conclusion of the CCIR;
2. that, if the said world administrative radio conference decides that the propagation information used in Appendix 28 is to be revised, the Secretary-General, in consultation with the IFRB, incorporate the amendments agreed at the said conference in a document which contains the new text of Sections 3, 4, 6 or Annex III of Appendix 28 in a form suitable for direct substitution in the version of Appendix 28 then in force, and send this document to all administrations;

decides

that from a date established by the said conference, the revised text shall form the basis of all subsequent determinations of the coordination area using Appendix 28.

BK

RESOLUTION No. 61

**Relating to the Division of the World into Climatic Zones
for the Purpose of Calculation of Propagation Parameters**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the propagation of radio waves, particularly at frequencies greater than 1 GHz, is significantly influenced by rain, as well as by sand and dust storms;
- b) that measured values of rainfall intensity and more particularly short-term rain intensity statistics are not available for certain geographical regions;
- c) that very little information exists on the occurrence and effects of sand and dust storms;
- d) that for the purpose of evaluating propagation characteristics, the CCIR has divided the world into five rain-climatic zones, broadly corresponding to the characteristics of the rainfall and this division is no longer adequate;
- e) that the present division of the world into such a limited number of rain-climatic zones is likely to be insufficiently precise to give a correct evaluation of attenuation and scattering by rain in some parts of the world;
- f) that the effects of dust and sand storms have not been adequately examined and evaluated, either in terms of their severity or in terms of their temporal variations;
- g) that the CCIR has some studies in progress on the effects of rain, as well as of dust and sand storms;

requests the CCIR

1. to expedite and expand the studies on the effects of rain and to give greater emphasis to the studies of sand and dust storms;
2. to advise on the nature of the studies required in geographical regions for which little information exists;
3. in the light of new data becoming available, to give particular attention to the revision of the current classification of the world into climatic zones;

resolves to urge administrations

1. to encourage and undertake, as a matter of urgency, measurements in their countries of the rates of precipitation of rain and of the spatial and temporal variations of this precipitation including its cellular structure;
2. to encourage and undertake, also as a matter of urgency, measurements of the influence of sand and dust storms on propagation;
3. to communicate the results of such measurements to the CCIR to enable the development of a better and more comprehensive description of the phenomena which apply and an improved classification of dust and sand storms and rainfall climates for application to radiocommunication problems.

AM

RESOLUTION No. 62

**Relating to the Experimental Use of Radio Waves
by Ionospheric Research Satellites ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that research into the Earth's ionosphere is very important in the study of the relationship between the Sun and the Earth and also for the effective use of radio wave transmission via the ionosphere;
- b) that successful research has been conducted with satellites such as Alouette 1 and 2, ISIS 1 and 2 and ISS in which top-side sounding equipment is installed;
- c) that similar ionospheric research satellites will be used for further research into the ionosphere and beyond;
- d) that top-side sounding equipment is operated mostly in a frequency-sweeping pulse mode;
- e) that these types of satellite are usually operated intermittently during a limited period each day according to the orbital characteristics;
- f) that operation of the sounder can be accurately commanded at will by the earth station concerned;

¹ Replaces Resolution No. **Spa2** - 4 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

resolves

that administrations may continue to permit the emissions of radio waves from ionospheric research satellites in orbit above the ionosphere in the MF and HF bands provided that suitable means are available for controlling emissions from these satellites as required by No. 2612 of the Radio Regulations to prevent harmful interference to other services.

AG

RESOLUTION No. 63

**Relating to the Protection of Radiocommunication Services
Against Interference Caused by Radiation from Industrial, Scientific
and Medical (ISM) Equipment**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that ISM equipment generates and uses locally radio frequency energy, whereby outward radiation cannot always be avoided;
- b) that there is an increasing amount of ISM equipment working on various frequencies throughout the spectrum;
- c) that in some cases a considerable part of the energy may be radiated by ISM equipment outside its working frequency;
- d) that some radio services, especially those using low field strengths, may suffer interference caused by radiation from ISM equipment, a risk which is unacceptable particularly in the case of radionavigation or other safety services;
- e) that, in order to limit the risks of interference to specified parts of the spectrum:
 - i) the preceding Radio Conferences of Atlantic City, 1947, and Geneva, 1959, have designated some frequency bands within which the radiocommunication services must accept harmful interference produced by ISM equipment;
 - ii) this Conference has accepted an increase in the number of bands to be designated for ISM equipment, but only on the condition that limits of radiation from such equipment be specified within the bands newly designated for worldwide use and outside all the bands designated for ISM equipment;

resolves

that, to ensure that radiocommunication services are adequately protected, studies are urgently required on the limits to be imposed on the radiation from ISM equipment in the entire radio spectrum, particularly in the newly designated bands;

invites the CCIR

1. to continue, in collaboration with the CISPR and the IEC, its studies relating to radiation from ISM equipment in the entire radio spectrum in order to ensure adequate protection of radiocommunication services;
2. to specify as soon as possible, in the form of Recommendations, the limits to be imposed on radiation from ISM equipment inside and outside the bands designated for their use in the Radio Regulations.

Priority should be given to the studies which would permit the formulation of a Recommendation relating to the frequency bands, newly designated for use by ISM equipment by this Conference, which are listed below:

6 765	- 6 795	kHz
433.05	- 434.79	MHz
61	- 61.5	GHz
122	- 123	GHz
244	- 246	GHz

invites the next competent world administrative radio conference

to resolve the problem of interference from ISM equipment to radiocommunication services taking into account the CCIR Recommendations.

CF

RESOLUTION No. 64

Relating to CCIR Study of Lightning Protection of Radio Equipment

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that there are areas in the world where, although the required protective devices against lightning have been installed, equipments constantly deteriorate, often very seriously, following discharges produced during electrical or violent storms;
- b) that due to circumstances such as climatic conditions, man-made environmental pollution, etc., studies have not led to conclusive results;
- c) the lack of material means and of experience among technicians confronted with this phenomenon;

considering further

No. 72 of the International Telecommunication Convention (Malaga-Torremolinos, 1973);

invites the CCIR

- 1. to study this phenomenon, in consultation with the CCITT and to formulate a Recommendation in this matter;
- 2. to include in the study of this phenomenon, in order to facilitate the application of such protection techniques and, to the extent possible, statistics on lightning with respect to climatic zones of occurrence, frequency of occurrence and magnitude of lightning as measured in terms of induced currents or voltages and their related time constants;

and invites administrations

to submit to the CCIR technical data and results of studies in this matter.

AH

RESOLUTION No. 65

**Relating to the Circulation of Current Information on
CCIR Recommendations Referred To in the
Radio Regulations**

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that reference is made in the Radio Regulations to specific CCIR Recommendations as well as to “relevant CCIR Recommendations”;
- b) that Resolution 703 provides for consultation on the applicability of those CCIR Recommendations relating to the technical criteria for sharing frequency bands between space radiocommunication and terrestrial radiocommunication services or between space radiocommunication services;
- c) that the CCIR Recommendations may be revised by CCIR Plenary Assemblies, with consequent changes of reference numbers;

considering

- a) that a correct application of the Radio Regulations requires the identification by administrations of the relevant CCIR Recommendations to be taken into account;
- b) that information on the up-dating of these Recommendations is of the utmost importance;

invites the CCIR

1. to identify and list those provisions of the Radio Regulations containing a reference to a specific CCIR Recommendation or to a “relevant CCIR Recommendation” together with the reference numbers and titles of those Recommendations;
2. to instruct the Director of the CCIR to provide the Secretary-General with the information required to up-date the list;

requests the Secretary-General

to communicate to all administrations the list of those Recommendations as well as any subsequent up-dating thereof.

AE

RESOLUTION No. 66

**Relating to the Division of the World into Regions for the
Purposes of Allocating Frequency Bands**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the present division of the world into Regions 1, 2 and 3 for the purposes of allocating frequency bands was made in 1947 and the technical bases for this division were not clearly defined;

b) that since 1947 considerable advances in radiocommunication techniques have been made and many new countries have emerged;

being aware

that this division of the world into three Regions as presently constituted, may not be appropriate to meet the requirements of all countries on an equitable basis;

recognizing

that it is not possible to carry out the required revision of the existing Regional division during this Conference;

resolves

that this division should be reviewed in the light of the major developments in radio technology and increase in the membership of the Union with countries at different stages of development;

requests the CCIR

to undertake a study of the technical and operational bases for the possible revision of the division of the world for the purposes of allocating the frequency bands, based on all relevant factors such as radio propagation, climatic conditions, natural geographical configuration of the world, state of economic and technical development, which would permit improvement in the efficient utilization of the radio frequency spectrum by all Member countries of the Union;

urges all Members of the Union

to participate actively in the above study by contributing to its work;

further requests the CCIR

to complete and submit this study not later than its XVIth Plenary Assembly, and in any case to prepare a report for consideration by the next Plenary Assembly;

invites the Administrative Council

to follow the conduct of the study and to furnish advice to the Plenipotentiary Conference with a view to this matter being suitably resolved at one of the future world administrative radio conferences of the Union.

BJ

RESOLUTION No. 67

**Relating to Improvements in the Design
and Use of Radio Equipment**

The World Administrative Radio Conference, Geneva, 1979,

considering

a) that the radio frequency spectrum is a scarce natural resource which has value only when used;

- b) that efficient utilization of the spectrum can be limited by the characteristics of both transmitting and receiving equipment;
- c) that operational aspects of radio systems can also limit the efficient utilization of the spectrum;
- d) that continuing advances in electronics and allied fields are enabling the production of more spectrum-efficient radiocommunication systems;

resolves

that administrations should encourage improvements in the design and construction of radio equipment and in the mode of operation of systems in order to improve the utilization of the radio frequency spectrum.

CD

RESOLUTION No. 68

**Relating to the Redefinition of Certain Terms Contained in Annex 2
to the International Telecommunication Convention
(Malaga-Torremolinos, 1973) and Applicable to the Radio Regulations**

The World Administrative Radio Conference, Geneva, 1979,

having considered and adopted

the terms and definitions contained in Article 1 of the Radio Regulations (Geneva, 1979) which includes a number of terms already defined in Annex 2 (“Definition of Certain Terms Used in the Convention and in the Regulations of the International Telecommunication Union”) to the International Telecommunication Convention (Malaga-Torremolinos, 1973);

believing

that some of the terms as defined in Annex 2 to the Convention which are of importance to the Radio Regulations, i.e. “harmful interference”, “telegraphy” and “telephony”, and associated terms, should be reviewed and made more precise and better adapted to current technology;

recognizing however

that, in view of Article 51, in particular No. 167, of the International Telecommunication Convention (Malaga-Torremolinos, 1973), only a Plenipotentiary Conference of the International Telecommunication Union is competent to amend the terms and their definitions contained in Annex 2 to that Convention;

recommends

that the Plenipotentiary Conference of the International Telecommunication Union, Nairobi, 1982, re-examine the definition in Annex 2 to the International Telecommunication Convention of the terms “harmful interference”, “telegraphy”, “telephony” and associated terms, taking into account the terms and definitions adopted for the purposes of the Radio Regulations by the World Administrative Radio Conference, Geneva, 1979, together with any proposals submitted by the CCIR and CCITT under Resolution No. 44 of the Plenipotentiary Conference, Malaga-Torremolinos, 1973;

instructs the Secretary-General

1. to bring this matter to the attention of that Plenipotentiary Conference;
2. to indicate in the published text of the Radio Regulations, by means of notes, those definitions which are not in alignment with Annex 2 to the Convention, drawing attention to the fact that the corresponding definitions in that Annex shall prevail over those in the Radio Regulations to the extent that there are differences between them;
3. to amend or delete these notes in the light of any relevant decisions of the Plenipotentiary Conference.

BD

RESOLUTION No. 100

**Relating to the Coordination, Notification and Recording
in the Master International Frequency Register of
Assignments to Stations in the Fixed-Satellite
Service with Respect to Stations in the
Broadcasting-Satellite Service in Region 2¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

that the Radio Regulations contain no provisions governing the coordination, notification or recording in the Master International Frequency Register of frequency assignments to stations in the fixed-satellite service in the band 12.1 - 12.3 GHz with respect to stations in the broadcasting-satellite service in Region 2;

resolves

that the provisions of Articles 11 and 13 of the Radio Regulations shall be applied in such cases until the matter is considered by a competent administrative radio conference.

BQ

RESOLUTION No. 101

**Concerning the Drawing Up of Agreements and of the Associated
Plans for Feeder Links to Space Stations in the
Broadcasting-Satellite Service Operating in the
12 GHz Band under the Plan Adopted by the
World Broadcasting-Satellite Administrative Radio Conference,
Geneva, 1977, for Regions 1 and 3**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the geostationary-satellite orbit and the frequency bands allocated to the fixed-satellite service should be utilized as efficiently as possible;

¹ Replaces Resolution No. Sat - 6 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

- b) that the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, prepared and adopted the provisions and associated Plan for the assignment of frequency channels and orbital positions in the band 11.7 - 12.5 GHz for Region 1 and 11.7 - 12.2 GHz for Region 3, contained in Appendix 30;
- c) that the feeder links to broadcasting satellites are part of the fixed-satellite service and that the use of the frequency bands for these feeder links is currently governed by Articles 11 and 13 of the Radio Regulations;
- d) that the presence of a large number of broadcasting satellites operating in geostationary orbit positions determined by the above plans will cause considerable difficulties in the coordination of the use of frequency bands for feeder links for the transmission of programmes with systems of the fixed-satellite service;
- e) that the existing sharing criteria in Article 27 have not been specifically determined for feeder links for the broadcasting-satellite service in bands in which the use of the fixed-satellite service is exclusively reserved for these feeder links;

noting

- a) that this Conference has identified certain frequency bands as available for the feeder links to broadcasting satellites (see the Table of Frequency Allocations and associated footnotes, Nos. 835, 858, 863 and 869).
- b) that the choice of bands for feeder links to broadcasting satellites shall be left to the administrations concerned;

resolves

1. that the feeder links to broadcasting satellites operating in the bands 11.7 - 12.5 GHz in Region 1 and 11.7 - 12.2 GHz in Region 3 shall be organized and operated in the bands 10.7 - 11.7 GHz, 14.5 - 14.8 GHz (limited to countries outside Europe and to Malta) and 17.3 - 18.1 GHz for Region 1 and 14.5 - 14.8 GHz and 17.3 - 18.1 GHz for Region 3 in accordance with agreements and the associated plans adopted at an administrative radio conference in which all the administrations concerned and any administrations whose services may be affected may participate; however, administrations may also use feeder links to broadcasting satellites in the band 14.0 - 14.5 GHz (limited to countries outside Europe and to Malta) or in other frequency bands allocated to the fixed-satellite service (Earth-to-space), subject to coordination with other networks in the fixed-satellite service;
2. that, pending the entry into force of such agreements and relevant plans, the administrations and the IFRB shall apply the procedures prescribed in Articles 11 and 13 and in Resolution 102 for feeder links to broadcasting satellites operating in the bands mentioned in *resolves* 1;
3. that until the Final Acts of the proposed administrative radio conference come into force the criteria given in Article 27 for sharing between terrestrial services and the fixed-satellite service shall also be applicable with regard to the feeder links for the broadcasting-satellite service in the bands mentioned above;

invites the Administrative Council

to study the question of convening an administrative radio conference in order to determine the appropriate date, the place of meeting and the agenda for such a conference;

invites the CCIR

1. to study the most appropriate technical characteristics for feeder links for the broadcasting-satellite service and the method of planning the assignment of frequency channels for the feeder links in the bands which have been allocated by the World Administrative Radio Conference, Geneva, 1979, (also see Recommendation 101);
2. to study and to determine, as a matter of urgency, suitable criteria applicable to sharing between the fixed and mobile services and feeder links to broadcasting satellites.

CS

RESOLUTION No. 102

**Relating to Coordination among Administrations of the
Technical Characteristics of Feeder Links to Space Stations in the
Broadcasting-Satellite Service in the Band 11.7 - 12.5 GHz
(Region 1) and 11.7 - 12.2 GHz (Region 3) During the Period
Between the Entry into Force of the Final Acts of the
World Administrative Radio Conference, Geneva, 1979, and the
Entry into Force of the Final Acts of a Future Conference on the
Planning of Feeder Links to Such Space Stations**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that before a conference is convened to draw up a plan for feeder links, any administration wishing to use a feeder link to a space station in the broadcasting-satellite service should be able to determine the technical characteristics of the link by agreement with all administrations sharing the same orbital position for such stations as given in the Plan contained in the Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, (Appendix 30), taking into account the relevant CCIR Recommendations;
- b) that any administration wishing to bring into use a space station in the broadcasting-satellite service in accordance with Appendix 30, and to use to that effect a frequency assignment for the feeder link, shall apply the advance publication and coordination procedures described in Article 11 for this feeder link;

resolves

1. that when publishing the advance information under No. 1044, the IFRB shall also indicate the administrations on behalf of which a frequency assignment is recorded in Appendix 30 for the same orbital position;
2. that the agreement or comments of the administrations mentioned in paragraph 1 above shall be communicated to the administration seeking coordination within four months of the date of the advance publication;
3. that a pre-coordination agreement among administrations sharing the same orbital position in the Plan may be concluded, if necessary with the assistance of the Board, during a meeting to which those administrations shall be invited and in which they may take part if they so wish;
4. that the result of this pre-coordination agreement shall be published as a complement to the normal coordination procedures carried out under Article 11 and that the conference which will be responsible for the planning of feeder links shall be informed of all pre-coordination agreements made in pursuance of this Resolution without prejudging in any way the decisions to be taken by that conference.

BZ

RESOLUTION No. 103

**Relating to Improvements in Assistance to Developing Countries in
Securing Access to the HF Bands for their
Fixed Services and in Ensuring Protection of their
Assignments from Harmful Interference**

The World Administrative Radio Conference, Geneva, 1979,

noting

the other resolutions, adopted at this Conference, relating to the special needs of developing countries;

considering

- a) that in many cases the developing countries have a need of assistance of a highly specialized nature and that this assistance must often be obtained at short notice, particularly in relation to the fixed service and the use of the HF bands;
- b) that the technical knowledge and experience of most value to the developing countries in this field is obtainable from or through the International Frequency Registration Board;

considering also

- c) that the resources of the IFRB are limited;

resolves

1. that the provisions of the Radio Regulations Nos. 1218, 1260, 1275 to 1304, 1416 and 1963 to 1966 are intended essentially for use by the administrations of developing countries;
2. that the administrations of developed countries should make the minimum possible use of these provisions;
3. that the administrations of developing countries should make the maximum possible use of these provisions.

AN

RESOLUTION No. 200 *

**Relating to the Use of Class R3E and J3E Emissions
for Distress and Safety Purposes on the Carrier
Frequency 2 182 kHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that the Radio Regulations require the use on the carrier frequency 2 182 kHz of:
 - class A3E or H3E emissions by ship, aircraft and survival craft stations;

* *Note by the General Secretariat:* See also Resolution 305.

¹ Replaces Resolution No. Mar2 – 20 of the World Maritime Administrative Radio Conference, Geneva, 1974.

- class H3E emissions by coast stations;
- the classes of emission, specified in Appendix 37, by emergency position-indicating radiobeacons;

b) that the main object of these provisions is to maintain reliable distress and safety communications by using proven techniques;

noting also

- a) the Final Report of the Panel of Experts (Geneva, 1963);
- b) the relevant CCIR studies concerning single-sideband techniques (see CCIR Question 26-1/8, Recommendations 488, 543 and 544 and Report 744);

recognizing

that the use of class R3E and J3E emissions on the carrier frequency 2 182 kHz would provide the operational advantages, inherent in single-sideband techniques, which are already being obtained on other frequencies;

recognizing, however,

that the CCIR recommends that class R3E emissions should not be used for distress and safety purposes (see CCIR Recommendation 543);

considering

- a) that a large number of equipments employing class A3E and H3E emissions will still be in use for distress and safety purposes on 1 January 1982;
- b) that single-sideband equipment must be designed to work with closer frequency tolerances and higher technical standards than those necessary for double-sideband equipment;
- c) that equipment designed for safety purposes, particularly survival craft equipment, should:
- be capable of reliable operation in varying environments, and after long periods of storage;
 - be easy to operate by an inexperienced person in all circumstances;
 - be relatively low priced;
- d) that the requirement for direction-finding and homing must be satisfied;
- e) that the need to transmit and receive the two-tone radiotelephone alarm signal, including signals from emergency position-indicating radiobeacons, must also be satisfied, taking into account the frequency tolerances in Appendix 37 and the relevant CCIR Recommendations;

resolves

1. that continuation of the study of the use of class R3E and J3E emissions for distress and safety purposes is required;
2. that this study should be completed in time for a decision on the date for the final conversion to class R3E and J3E emissions on the carrier frequency 2 182 kHz to be made by the next competent world administrative radio conference;

requests the CCIR

to continue its studies on the above-mentioned subject as a matter of urgency and, if possible, to issue Recommendations sufficiently in advance of the above-mentioned conference;

requests the Secretary-General

to communicate this Resolution to the Inter-Governmental Maritime Consultative Organization;

invites the Inter-Governmental Maritime Consultative Organization

to consider the matter as part of the study currently being undertaken of the maritime distress and safety system.

AB

RESOLUTION No. 201

**Relating to Operational Provisions, Charging and Accounting
for Public Correspondence in the Mobile Services**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the CCITT, in accordance with a request by the World Maritime Administrative Radio Conference, Geneva, 1974, has prepared two Recommendations relating to the operational provisions for the maritime mobile service, and charging, accounting, and refunds in the maritime mobile service;
- b) that this Conference has accepted the overall conclusions and most of the detailed conclusions of the report of the CCITT studies carried out in accordance with the pertinent Resolutions of the World Maritime Administrative Radio Conference, Geneva, 1974, which have now been abrogated;
- c) that as a consequence, the Additional Radio Regulations and certain provisions of the Radio Regulations relating to the operation of, and charging and accounting for, public correspondence in the mobile services have been replaced by provisions governing the general application of the CCITT Recommendations;
- d) that a number of the provisions which have been replaced referred to mobile services other than the maritime mobile service and the maritime mobile-satellite service;
- e) that the provisions contained in the two above-mentioned CCITT Recommendations relating to public correspondence apply at present only to the maritime mobile service and the maritime mobile-satellite service;
- f) further, that in any revision of the relevant CCITT Recommendations full account needs also to be taken of maritime interests, ensuring adequate time for administrations to consult these interests;

recognizing

- a) that there is at present no specific provision for international public correspondence in any mobile service other than the maritime mobile service and the maritime mobile-satellite service;
- b) that international public correspondence might nevertheless be extended in the future to mobile services other than the maritime mobile service and the maritime mobile-satellite service;

invites the CCITT

to undertake, if the need arises, studies on the operational provisions, charging and accounting for international public correspondence in the mobile services other than the maritime mobile service and the maritime mobile-satellite service, seeking to harmonize to the maximum extent possible all such provisions for the mobile services in question;

further invites the CCITT

in continuance of its work relating to the maritime mobile service and the maritime mobile-satellite service to take particular account of maritime interests therein;

resolves

that in the case of a new international public correspondence service being established in a mobile service other than the maritime mobile service or the maritime mobile-satellite service, the new service should conform as far as practicable in its operational provisions, charging and accounting with the existing provisions of the Telephone Regulations, the Telegraph Regulations and the Radio Regulations and with the relevant CCITT Recommendations, until such time as any necessary revision could be made.

DH

RESOLUTION No. 202

**Relating to the Convening of a
World Administrative Radio Conference for the Mobile Services**

The World Administrative Radio Conference, Geneva, 1979,

noting

Resolution No. 814 of the Administrative Council;

considering

- a) that the agenda of this Conference provided for partial revision of the Radio Regulations and that complete revision would require an appropriate conference to be convened to revise the substance of the remaining articles, particularly those related to the mobile services;
- b) that, as a consequence of the decisions made by this Conference, and to harmonize some provisions for the aeronautical, maritime and land mobile services, particularly to improve the provisions related to distress and safety, and as a result of technological improvements and the introduction of new systems, there is a need to revise a number of provisions concerning the mobile services;
- c) that there are new demands upon the mobile services;
- d) that this Conference has made various Recommendations which envisage the holding of a conference to deal with provisions for the mobile services;
- e) that where changes have been made by this Conference to the frequency allocations to mobile services it may be necessary for consequential changes to be made to channelling plans and other subdivisions of those frequency bands for the services concerned;

noting further

that the Final Acts of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, provide for a Frequency Allotment Plan for that service which is currently in the process of implementation and should not therefore be altered in the near future;

resolves to invite the Administrative Council

to take the necessary steps to arrange a world administrative radio conference for the mobile services to revise the provisions of the Radio Regulations which relate specifically to these services;

invites

1. the CCIR to prepare the technical and operational bases for the conference;
2. the IFRB to give its technical assistance for the preparation and the organisation of the conference.

AZ

RESOLUTION No. 300

**Relating to the Use and Notification of Paired Frequencies
Reserved for Narrow-Band Direct-Printing Telegraph
and Data Transmission Systems in the HF Bands Allocated
to the Maritime Mobile Service ¹**

(See Appendix 32)

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that certain sections of the HF bands allocated to the maritime mobile service have been reserved for narrow-band direct-printing telegraph and data transmission systems for use on a paired frequency basis only;
- b) that the number of paired frequencies in each band is limited;
- c) that a future competent conference may provide for wider bands for narrow-band direct-printing than those available at present;
- d) that for this reason the World Maritime Administrative Radio Conference, Geneva, 1974, considered it inopportune to draw up a plan at that time but that such a plan might later be rendered necessary by the congested state of channels;
- e) that, however, interim measures have to be taken by administrations and by the IFRB to provide for the orderly introduction of these new paired frequencies;

¹ Replaces Resolution No. Mar2 – 7 of the World Maritime Administrative Radio Conference, Geneva, 1974.

resolves

1. that paired frequencies in the HF bands reserved for narrow-band direct-printing telegraphy between coast stations and ship stations shall be used by these stations, and shall be notified and recorded in the Master International Frequency Register, in the following manner:

1.1 assignments of pairs of frequencies for transmission and reception shall be made solely to coast stations. Ship stations of any nationality shall use by right for their transmissions the receiving frequencies of the coast stations with which they exchange traffic;

1.2 to achieve efficient frequency usage each administration shall choose the pairs of frequencies to be assigned to coast stations according to its requirements, with the assistance of the IFRB;

1.3 the assignments thus selected and brought into service shall be notified to the IFRB on notices as shown in Appendix 1 to the Radio Regulations and administrations shall supply the basic characteristics listed in Section A or B of that Appendix, as appropriate. If the assignments conform to the Table of Frequency Allocations, to the related provisions of the Radio Regulations and to this Resolution, the Board shall enter them for information in Part 1A of its weekly circular and in the Master Register. No date will be entered in Column 2 of the Master Register and no finding resulting from a technical examination of compatibility with an existing assignment will be issued. However, the date of receipt of the notice by the Board will be entered in Part 1A of the weekly circular and in the Remarks Column of the Master Register. A reference to this Resolution shall also be entered in the Remarks Column;

1.4 any notice not in conformity with the above-mentioned provisions of the Radio Regulations or with this Resolution shall be returned to the notifying administration by the IFRB, together with any suggestion which the Board may be able to submit in this respect;

1.5 should difficulties arise between countries using the same channel, the matter shall be settled by mutual arrangements between the administrations concerned;

2. that a future competent conference be invited to examine any difficulties which may have arisen in the application of this Resolution and to take a decision, if necessary, on the status to be given to the above-mentioned assignments or on the conditions for drawing up a plan for the bands and systems in question. The entries in the Master Register under this Resolution shall in no way prejudice any decisions which may be taken by the aforementioned conference;

3. that this Resolution shall apply to assignments of paired frequencies for narrow-band direct-printing telegraphy as shown in 1.1 above, notwithstanding any other provisions of the Radio Regulations and existing resolutions of administrative radio conferences that may conflict with this Resolution.

BA

RESOLUTION No. 301

**Relating to the Notification of Non-Paired Ship Station
Frequencies Used for Narrow-Band Direct-Printing Telegraph
and Data Transmission Systems¹**

(See Appendix 33)

The World Administrative Radio Conference, Geneva, 1979,

considering

a) that certain sections of the HF bands allocated to the maritime mobile service are reserved for narrow-band direct-printing telegraph and data transmission systems operating on a non-paired frequency basis;

¹ Replaces Resolution No. Mar2 - 8 of the World Maritime Administrative Radio Conference, Geneva, 1974.

- b) the World Maritime Administrative Radio Conference, Geneva, 1974, was not in a position to decide the extent to which it was necessary to regulate the orderly use of frequencies for the transmission by ship stations of non-paired direct-printing telegraph signals or on what basis this might be done;
- c) that these questions should be considered by a subsequent competent conference;
- d) that the existing provisions of the Radio Regulations do not provide administrations with appropriate guidance for the period between the coming into force of the Final Acts of the World Maritime Administrative Radio Conference, Geneva, 1974, and the coming into force of those of the conference mentioned in c) above;

resolves

1. that, during the period referred to in d) above, any administration operating or bringing into operation non-paired narrow-band direct-printing telegraph or data transmission systems for ships, shall notify to the IFRB, for recording in the Master International Frequency Register, the frequencies on which ship stations participating in the service will be required to transmit;
2. that these notices concerning frequencies used for reception by coast stations shall not be subject to technical examination by the Board, and that the assignments notified shall be recorded in the Master Register for information only, bearing no date in Column 2, but with a suitable remark in the Remarks Column merely referring to this Resolution;
3. that these entries in the Master Register shall not prejudice any decisions which may be taken by the conference referred to in c) above.

AX

RESOLUTION No. 302

**Relating to the Manner in which the IFRB Shall Treat Notifications
Dealing with Frequency Assignments to Oceanographic Stations¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that this Conference has adopted Resolution 314 concerning the establishment of a coordinated worldwide system for the collection of data relating to oceanography; and
- b) that the IFRB requires instructions regarding the notification and registration in the Master International Frequency Register of assignments to oceanographic stations;

resolves

that the IFRB be instructed to accept for registration in the Master International Frequency Register only such notifications, submitted by administrations in accordance with Nos. 1214 to 1217 and 1219, as pertain to transmitting and receiving oceanographic stations which are land based and which are in conformity with Resolution 314. Such notifications shall be treated by the Board in accordance with No. 1245 of the Regulations. These entries in the Master Register shall not prejudice any decisions to be taken by the next administrative radio conference competent to deal with the maritime mobile service.

¹ Replaces Resolution No. Mar 19 of the World Administrative Radio Conference, Geneva, 1967.

AV

RESOLUTION No. 303

**Relating to Inter-Ship Frequencies in the Bands
Between 1 605 kHz and 3 600 kHz in Region 1¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Master International Frequency Register contains among the initial entries the frequency assignments adopted by the Extraordinary Administrative Radio Conference, Geneva, 1951, made to specific countries for inter-ship communications in the bands between 1 605 kHz and 3 600 kHz in Region 1;
- b) that provisions should be made for the notification and recording of the use of these frequencies for inter-ship communications by administrations of other countries in Region 1;

resolves

1. that the use of the frequencies referred to in a) above by other administrations should be coordinated with the administrations concerned, and subsequently notified to the International Frequency Registration Board;
2. that upon such notification the Board shall record these new assignments in the Master International Frequency Register, without any date in Columns 2a or 2b, but with an appropriate note in the Remarks Column followed by the date of receipt of the notice by the Board;

invites administrations

to review the recorded areas of operation of the frequency assignments concerned, with a view to improving sharing possibilities;

requests the IFRB

to make, where necessary, such suggestions to the administrations concerned as it may be able to offer with a view to achieving the purpose referred to in the immediately preceding paragraph.

AS

RESOLUTION No. 304

**Relating to the Implementation of the New Channelling Arrangement for
A1A Morse Radiotelegraphy in the Bands Allocated to the Maritime Mobile
Service Between 4 000 kHz and 27 500 kHz²**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that Recommendation No. **Mar 7** of the World Administrative Radio Conference, Geneva, 1967, requested administrations to study the problems relating to the future use of harmonic relationships in ships' radio equipment;

¹ Replaces Resolution No. 15 of the Administrative Radio Conference, Geneva, 1959.

² Replaces Resolution No. **Mar2** – 4 of the World Maritime Administrative Radio Conference, Geneva, 1974.

- b) that the World Maritime Administrative Radio Conference, Geneva, 1974, provided, for use by ship stations, calling and working frequencies for A1A Morse telegraphy which are not harmonically related;
- c) that it is desirable to implement the new channelling arrangement as soon as possible;

recognizing

- a) that there is a need to provide an amortization period for radio equipment dependent upon the harmonic relationship of calling and working frequencies;
- b) that developments and advances in technique, and in frequency synthesizers in particular, have led to more stable and reliable radio equipment;

resolves

1. that ship stations dependent upon harmonically related calling and working frequency assignments made prior to 1 January 1976 may continue to use such of their assignments as are within the ship calling and working bands for A1A Morse telegraphy shown in Appendix 31;
2. that, as soon as possible, ships should utilize equipment which is capable of operating in accordance with the new channelling arrangement contained in Appendix 35 for the frequencies required for their service;
3. that equipments installed after 1 January 1976 shall be capable of operating in accordance with the new channelling arrangement contained in Appendix 35 for the frequencies required for their service.

AO

RESOLUTION No. 305 *

**Relating to the Use of Class R3E and J3E Emissions on the
Carrier Frequencies 4 125 kHz and 6 215.5 kHz Used to
Supplement the Carrier Frequency 2 182 kHz
for Distress and Safety Purposes¹**

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that the Radio Regulations permit, until 1 January 1984, the use, on the carrier frequencies 4 125 kHz and 6 215.5 kHz, of class H3E emissions by coast, ship and aircraft stations (see No. 2982 and 2986);
- b) that the main object of these provisions is to maintain reliable distress and safety communications using proven techniques;

noting also

- a) the Final Report of the Panel of Experts (Geneva, 1963);
- b) relevant CCIR studies concerning single-sideband techniques (see CCIR Question 26-1/8, Recommendations 488, 543 and 544 and Report 744);

* *Note by the General Secretariat:* See also Resolution 200.

¹ Replaces Resolution No. Mar2 – 21 of the World Maritime Administrative Radio Conference, Geneva, 1974.

recognizing

that the use of class R3E and J3E emissions on the carrier frequencies 4 125 kHz and 6 215.5 kHz would provide the operational advantages, inherent in single-sideband techniques, which are already being obtained on other frequencies;

recognizing, however,

that the CCIR recommends that class R3E emissions should not be used for distress and safety purposes (see CCIR Recommendation 543);

considering

- a) that a large number of equipments employing class H3E emissions are still in use for distress and safety purposes;
- b) that equipment employing class R3E and J3E emissions must be designed to work with closer frequency tolerances and higher technical standards than those necessary for equipment employing class H3E emissions and envelope detection in the receiver;
- c) that equipment designed for safety purposes should, in all circumstances, be capable of reliable operation and be easy to operate by an inexperienced person;

resolves

that no further study of the use of class R3E and J3E emissions for distress and safety purposes on the carrier frequencies 4 125 kHz and 6 215.5 kHz is required (see CCIR Recommendations 543 and 544);

requests the Secretary-General

to communicate this Resolution to the Inter-Governmental Maritime Consultative Organization;

invites

1. the Inter-Governmental Maritime Consultative Organization to consider the matter as part of the study currently being undertaken of the maritime distress and safety system;
2. the next competent world administrative radio conference to consider this matter further.

AW

RESOLUTION No. 306

**Relating to the Use of Single-Sideband Technique
in the Radiotelephone Maritime Mobile Service Bands
Between 1 605 kHz and 4 000 kHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) Recommendation No. 28 of the Administrative Radio Conference, Geneva, 1959;

¹ Replaces Resolution No. Mar 5 of the World Administrative Radio Conference, Geneva, 1967.

- b) that the World Administrative Radio Conference, Geneva, 1967, decided to require the use of single-sideband techniques, except in certain circumstances;
- c) the desirability of replacing double-sideband emissions by single-sideband emissions as early as possible in the maritime mobile service bands between 1 605 kHz and 4 000 kHz;

resolves

that, unless otherwise specified in the Final Acts of this Conference, radiotelephone stations in the maritime mobile service operating in the bands between 1 605 kHz and 4 000 kHz shall comply with the following conditions:

1. new installations of double-sideband equipment in ship stations shall not be permitted, except in the cases covered by Nos. 2973, 4127 and 4130 of the Radio Regulations;
2. until 1 January 1982, coast and ship stations equipped for single-sideband operation shall also be equipped to transmit class H3E emissions compatible with reception by double-sideband equipment. On the carrier frequency 2 182 kHz this requirement with respect to class H3E emissions will continue beyond 1 January 1982;
3. with the following exceptions, as from 1 January 1982, the use of class R3E and J3E emissions only shall be authorized:
 - class A3E and H3E emissions for ship, survival craft and aircraft stations transmitting with a carrier frequency of 2 182 kHz;
 - class H3E emissions for coast stations transmitting with a carrier frequency of 2 182 kHz;
 - in Regions 1, 3 and in Greenland, in exceptional circumstances, class H3E emissions for coast stations sending safety messages on the carrier frequency 2 170.5 kHz;
 - classes of emission H2B, R2B and J2B for coast stations for selective calling on the carrier frequency 2 170.5 kHz;
 - the class of emission specified in Appendix 37 to the Radio Regulations for emergency position-indicating radiobeacons (see also No. 3265 of the Radio Regulations);
4. as from 1 January 1982, ship and aircraft stations required to employ single-sideband operation on the working frequencies of the maritime mobile service shall use only class H3E emissions on the carrier frequency 2 182 kHz.

AQ

RESOLUTION No. 307

**Relating to the Conversion to Single-Sideband Technique
of Stations of the Radiotelephone Maritime Mobile Service
Operating in the Bands Between 1 605 kHz and 4 000 kHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that radiotelephone stations in the maritime mobile service operating with double-sideband emissions in the bands between 1 605 kHz and 4 000 kHz use a bandwidth of the order 6 kHz;

¹ Replaces Resolution No. Mar 4 of the World Administrative Radio Conference, Geneva, 1967.

- b) that these stations will have to use single-sideband operation in future;
- c) that, during the period of conversion to single-sideband operation, every precaution must be taken to avoid harmful interference between stations operating with double-sideband emissions and those operating with single-sideband emissions;

resolves

1. that the transition to single-sideband operation in the stations referred to in *considering a)* above shall be made in accordance with the following provisions:
 - 1.1 the carrier frequency of the single-sideband channel in the upper part of the previous double-sideband channel shall be the same as the carrier frequency of that channel;
 - 1.2 the carrier frequency of the single-sideband channel in the lower part of the previous double-sideband channel shall be 3 kHz lower than the carrier frequency of the previous double-sideband channel when the latter has a carrier frequency at least of 6 kHz above that of the lower adjacent double-sideband radiotelephone channel;
 - 1.3 in Region 1, the carrier frequency of the single-sideband channel in the lower part of the previous double-sideband channel for intership communication shall be 2.5 kHz below the carrier frequency of the previous double-sideband channel when the latter has a carrier frequency 5 kHz above that of the lower adjacent double-sideband radiotelephone channel;
2. that class H3E emissions shall not be used on single-sideband channels in the lower part of previous double-sideband channels.

BB

RESOLUTION No. 308

**Relating to the Channel Spacing of Frequencies
Allocated to the Maritime Mobile Service
in the Band 156 - 174 MHz ¹**

(See Appendix 18 and Article 60)

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the expanding use of the maritime mobile frequencies in the VHF bands between 156 MHz and 174 MHz;
- b) the increasing demand for VHF channels for port operations;
- c) the increasing demand for VHF channels for public correspondence in the maritime mobile service;
- d) the need for VHF channels for the ship movement service;
- e) the need to provide VHF channels for uses other than radiotelephony, such as facsimile and narrow-band direct-printing telegraphy;

¹ Replaces Resolution No. Mar2 – 14 of the World Maritime Administrative Radio Conference, Geneva, 1974.

f) the need to provide VHF channels for communication between helicopters or light aircraft and ships in connection with anti-pollution, search and rescue, ice breaking and the operation of ships;

noting

that, in consequence of the revisions of the Radio Regulations (Geneva, 1959) made by the World Administrative Radio Conference, Geneva, 1967, and the World Maritime Administrative Radio Conference, Geneva, 1974:

a) the channel spacing for the maritime mobile VHF radiotelephone service is being reduced from 50 kHz to 25 kHz;

b) additional channels were obtained by interleaving the 25 kHz channels midway between the 50 kHz channels of Appendix 18 to the Radio Regulations (Geneva, 1959) and were numbered from 60 to 88;

c) the 25 kHz channels should be allocated on an international basis;

d) the transition from a channel spacing of 50 kHz to that of 25 kHz was scheduled as follows:

1. date by which modification of transmitters to a maximum deviation of ± 5 kHz and of receivers to increase the audio gain, where necessary, could commence 1 January 1972
2. date by which the modifications specified in paragraph d) 1. shall have been completed for all existing equipments 1 January 1973
3. date up to which coast stations should have maintained capability to receive transmissions with a maximum deviation of ± 15 kHz and after which the modification of coast station receivers should have taken place to meet the selectivity requirements for a channel spacing of 25 kHz 1 January 1973
4. date by which all new equipments shall have conformed to 25 kHz standards 1 January 1973
5. date by which all equipments shall conform to 25 kHz standards and all interleaved channels may be generally introduced 1 January 1983

resolves

1. that administrations may, in areas where this is found to be necessary, authorize the use of channels 60 to 88, excluding channels 75 and 76 which were designated as guardbands for channel 16;

2. that the technical characteristics of equipment for 25 kHz channel spacing in the maritime mobile VHF service shall be in accordance with Appendix 19;

3. that, by 1 January 1983, all equipments shall conform to 25 kHz standards; thereafter; all interleaved channels may be generally introduced.

AT

RESOLUTION No. 309

**Relating to the Unauthorized Use of Frequencies
in the Bands Allocated to the Maritime Mobile Service¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that monitoring observations of the use of frequencies in the band 2 170 - 2 194 kHz and the bands allocated exclusively to the maritime mobile service between 4 063 kHz and 25 110 kHz show that a number of frequencies in these bands are still being used by stations of services other than the maritime mobile service, notably by high-powered broadcasting stations, some of which are operating in contravention of No. 2665 of the Radio Regulations;
- b) that these stations are causing harmful interference to the maritime mobile service and that a considerable number of emissions, the sources of which could not be positively identified, were observed in these bands;
- c) that radio is the sole means of communication of the maritime mobile service;

considering in particular

- d) that it is of paramount importance that the distress and safety channels be kept free from harmful interference, since they are essential for the protection of the safety of life and property;

*resolves**to urge administrations to*

1. ensure that stations of services other than the maritime mobile service abstain from using frequencies in distress and safety channels and their guardbands and in the bands allocated exclusively to that service, except under the conditions expressly specified in Nos. 342, 518, 519, 522, or 956 to 958 of the Radio Regulations;
2. continue to make every effort to identify and locate the source of any unauthorized emission capable of endangering human life and property, and to communicate their findings to the IFRB;
3. participate in the monitoring programmes that the IFRB may organize pursuant to the present Resolution;
4. request their governments to enact such legislation as is necessary to prevent stations located off their coasts operating in contravention of No. 2665 of the Radio Regulations;

to request the IFRB to

1. continue to organize monitoring programmes, at regular intervals, in the distress and safety channels and their guardbands, and, in the bands allocated exclusively to the maritime mobile service between 4 063 kHz and 26 175 kHz, with a view to identifying the stations of other services operating in these bands;

¹ Replaces Resolution No. Mar2 – 15 of the World Maritime Administrative Radio Conference, Geneva, 1974.

2. take the necessary steps with a view to the elimination of the emissions of stations of other services operating in these bands, which cause or are likely to cause harmful interference to the maritime mobile service;
3. seek, as appropriate, the cooperation of administrations in identifying the sources of those emissions by all available means, and in securing the cessation of those emissions.

CN

RESOLUTION No. 310

**Relating to Frequency Provisions for Development and
Future Implementation of Ship Movement Telemetry,
Telecommand and Data Exchange Systems**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the need to specify radio frequencies which may be used by the maritime mobile service on a worldwide basis for ship movement requirements using digital automated data exchange, telemetry and telecommand techniques;
- b) the developments now in progress in different portions of the frequency spectrum which will require common frequency bands in the future for efficient frequency utilization;
- c) the importance of these short range systems in the safe and efficient operations of ships;
- d) the advantages to port authorities for safe and efficient port management and operations;

noting

- a) the findings of the Special Preparatory Meeting of the CCIR that frequencies in the region of 10 GHz appeared satisfactory for short range automated systems of this nature;
- b) that further operational and technical information is needed in deciding the most effective frequency utilization and sharing criteria;

resolves

1. that the next competent world administrative radio conference shall review possible frequency provisions in the light of additional studies;
2. that the CCIR shall examine and advise on bandwidths and data formats in coordination with administrations developing and testing these digital transmission systems;

requests the Secretary-General

to refer this Resolution to the Inter-Governmental Maritime Consultative Organization (IMCO) inviting it to define the operational requirement for data exchange with ships using digital transmission techniques, and to make appropriate recommendations to assist administrations in preparation for a future conference.

DB

RESOLUTION No. 311

Relating to the Introduction of a Digital Selective Calling System to Meet the Requirements of the Maritime Mobile Service¹

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that there is an urgent need for a single digital selective calling system to provide for the worldwide requirements of the maritime mobile service;
- b) that the Inter-Governmental Maritime Consultative Organization (IMCO)² indicated to the World Maritime Administrative Radio Conference, Geneva, 1974, as well as to the CCIR, its requirements for a general purpose selective calling system capable of facilitating the transmission and reception of all communications;
- c) that Articles 25, 60, 62 and 65 of the Radio Regulations provide for the use of such a system;
- d) that the studies, in response to CCIR Question 9-3/8, concerning the operational and technical characteristics of such a system, are in an advanced stage;
- e) that in the Radio Regulations, the technical provisions relating to systems are mainly based upon the Recommendations of the CCIR;
- f) that Plenary Assemblies of the CCIR are held triennially whereas administrative radio conferences, which are empowered to modify the Radio Regulations making substantial use of the Recommendations of the CCIR are held less frequently and less regularly;

is of the opinion

- a) that the Plenary Assemblies of the CCIR are likely to make appropriate Recommendations as to the operational and technical characteristics of a single digital selective calling system;
- b) that administrations should be afforded the opportunity to take advantage of the current CCIR Recommendations on selective calling systems for the maritime mobile service;

therefore resolves that

1. the CCIR be invited, in response to Question 9-3/8, to complete its studies and establish as soon as possible Recommendations for the operational and technical characteristics of a digital selective calling system;
2. each Plenary Assembly of the CCIR should arrange for the Secretary-General of the ITU to be informed of those Recommendations of the CCIR which effect the operational and technical criteria relating to the introduction of a single digital selective calling system for the maritime mobile service;
3. following the distribution to administrations of the relevant CCIR texts, the Secretary-General shall write to administrations asking them to indicate within four months which of the CCIR Recommendations, or which specific operational and technical criteria defined in the Recommendations referred to in 1 above, they agree to use in applying the pertinent provisions of the Radio Regulations;
4. after this period the Secretary-General shall distribute to administrations a summary of the replies received.

¹ Replaces Resolution No. Mar2 – 19 of the World Maritime Administrative Radio Conference, Geneva, 1974.

² IMCO Resolution No. A.420 (XI).

DA

RESOLUTION No. 312

**Relating to the Introduction of New Calling Procedures for
HF A1A Morse Telegraphy¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that there is a need for more effective utilization of the radio frequency spectrum and of the time of operational personnel on board ships;
- b) that it is desirable to improve the effectiveness of calling in the HF A1A Morse telegraphy bands;
- c) that the World Maritime Administrative Radio Conference, Geneva, 1974 adopted a new calling procedure for the HF A1A Morse telegraphy bands (Article 63 and Appendix 34);
- d) that the effectiveness of the new calling procedure requires agreement between administrations with respect to the groups specified in Appendix 34 in accordance with a planned distribution of coast stations on a regional and traffic basis;
- e) that the administrations at the 1974 Conference agreed to the Distribution Plan of Coast Stations (annexed to this Resolution) arranged by countries and areas into four groups to ensure a better distribution of calls;

invites

administrations which are providing an international public correspondence service to indicate for publication in the List of Coast Stations, the periods of service during which watch will be maintained on the common and, if necessary, the group channel or channels;

invites further

administrations which wish to enter into a group in the Distribution Plan, or administrations included in the Plan wishing to make a modification in the Plan, to coordinate as far as possible their proposed changes with other interested and affected administrations which are designated in the group concerned. An administration which has decided to enter into a group or change from a designated group in the Distribution Plan shall inform the Secretary-General of its decision and it shall be published in the Annex to the List of Coast Stations;

instructs the Secretary-General

1. to circulate this Resolution to all administrations which are responsible for coast stations in countries or areas designated in the Distribution Plan in order to obtain their agreement to the Plan or an adjustment of the Plan to meet their needs;
2. in the light of the foregoing consultation with the administrations concerned, to update the Distribution Plan which is annexed to the List of Coast Stations;
3. that, in advance of the publication of any revision of the Distribution Plan in the List of Coast Stations, any variation in the Plan should be notified through the Operational Bulletin.

¹ Replaces Resolution No. Mar2 – 5 of the World Maritime Administrative Radio Conference, Geneva, 1974.

DD

RESOLUTION No. 313

**Relating to the Introduction of a New System for Identifying Stations
in the Maritime Mobile and Maritime Mobile-Satellite Services
(Maritime Mobile Service Identities)**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the need for an identity unique to each ship for safety and telecommunication purposes;
- b) the need for this identity to be usable in automatic systems;
- c) that, in the interest of having a common address format for automatic systems, identities assigned to ship stations, ship earth stations, coast stations, coast earth stations and those used for group calls should be of a similar nature when transmitted over the radio path;

considering further

- a) that it is highly desirable that the code which forms the ship station identity or part thereof can be used by subscribers to the public switched networks for calling ships automatically;
- b) that the public switched networks in some countries have limitations, with respect to the maximum number of digits that may be dialled or keyed to indicate ship station identity;
- c) that a CCITT Recommendation¹ describes a ship station identification method which provides for this contingency;
- d) that whatever restrictions may be required should, in the interests of the development of automatic shore-to-ship operations, be as few as possible;

noting

that the CCIR is studying the implementation of the new system of identities for stations in the maritime mobile and maritime mobile-satellite service;

resolves

that, for those administrations which use this form of identification for stations in the maritime mobile service and the maritime mobile-satellite service, the allocation of identities shall be made in accordance with the provisions of Appendix 43 pending the appropriate decisions of the next competent world administrative radio conference;

invites administrations

to continue to participate in the studies of the CCIR and CCITT in this matter;

requests the Secretary-General

to prepare the Table of National Identification Digits (NID), in close collaboration with the CCIR and CCITT, and to present this Table for consideration to the next competent world administrative radio conference for inclusion in Appendix 43.

¹ CCITT Recommendation E.210/F.120.

AR

RESOLUTION No. 314

**Relating to the Establishment of a Coordinated Worldwide System
for the Collection of Data Relating to Oceanography¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the expressed desire for the establishment of a coordinated worldwide system for the collection of data relating to oceanography;
- b) that in each of the six high frequency bands allocated exclusively to the maritime mobile service, the World Administrative Radio Conference, Geneva, 1967, designated a frequency band for use in the collection of data relating to oceanography in accordance with Appendix 31 to the Radio Regulations;
- c) that use of these frequencies with maximum effectiveness is dependent upon cooperation and coordination among administrations;
- d) that certain administrations expressed the desire that a coordinated worldwide system for the transmission of data relating to oceanography be established on the basis of a coordinated plan in the bands allocated by this Conference;
- e) that, however, certain other administrations wish to use in the near future stations for the collection of data relating to oceanography within the framework of decisions taken on this matter by this Conference;
- f) that, consequently, a coordinated programme for the collection of data relating to oceanography should be established using the frequency bands referred to in *b)* above;
- g) that the Intergovernmental Oceanographic Commission (IOC) and the World Meteorological Organization (WMO) have been in consultation since 1962 with respect to cooperative efforts in the collection of data relating to oceanography (e.g. the WMO/IOC Panel of Experts on Coordination of Requirements, Geneva, 19-21 July, 1967);

resolves

1. that the IOC and WMO be invited to develop jointly, in consultation with the IFRB, and in consultation with administrations of the Members, as appropriate, a coordinated plan designed to meet existing and future requirements of all interested Members, for use by stations in the collection of data relating to oceanography in a worldwide system, within the framework of provisions made by this Conference for such a system; this plan to include the geographical distribution of oceanographic stations, their system of operation, the deployment of frequencies in the system and the manner in which oceanographic information is to be transmitted;
2. that administrations be encouraged to assign frequencies in conformity with the plan and the recommendations of IOC and WMO for the portion of the worldwide system over which they have jurisdiction;
3. that the IOC and WMO be invited further to assume jointly the responsibility, in consultation with the IFRB, for keeping such a plan current, in the light of changing requirements for data relating to oceanography;
4. that the plan developed under points 1 and 3 above shall be considered at the next administrative radio conference competent to deal with matters relating to the maritime mobile service, to determine what changes, if any, appear necessary to improve its effectiveness.

¹ Replaces Resolution No. Mar 20 of the World Administrative Radio Conference, Geneva, 1967.

AC

RESOLUTION No. 315

**Relating to the Eventual Abolition of Mobile Station Charges
for Public Correspondence in the Maritime Mobile Service**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the VIth Plenary Assembly of the CCITT, Geneva, 1976, adopted a draft Recommendation relating to charging, accounting and refunds in the maritime mobile service with the exception of the points relating, inter alia, to mobile station charges for public correspondence in the maritime mobile service;
- b) that the above draft Recommendation was subsequently amended, in the light of the decision of the VIth Plenary Assembly of the CCITT, Geneva, 1976, regarding mobile station charges and that this draft Recommendation has been approved by letter ballot;
- c) that the amended Recommendation includes the following provisions¹:

“Mobile station charges may be applied in the radiotelegram, radiotelephone, and radiotelex services, in the MF and HF bands. They shall not be applied in any of the VHF services, nor in any of the mobile-satellite services, nor in any service with automatic operation; however, mobile station charges may also be applied for radiotelegrams transmitted via VHF.”

“Mobile station charges shall be abolished for traffic exchanged after 2359 hours GMT 31 December, 1987.”;

resolves

to adopt this recommended date for the abolition of mobile station charges for public correspondence in the maritime mobile service.

CE

RESOLUTION No. 316

**Relating to Technical Cooperation with the Developing
Countries in Maritime Telecommunications²**

The World Administrative Radio Conference, Geneva, 1979,

noting

that, in the field of maritime telecommunications, the assistance provided by the Union to developing countries, in collaboration with other organizations, in particular the Inter-Governmental Maritime Consultative Organization (IMCO), has been promising;

¹ See CCITT Recommendation D.90/F.111 (paragraphs B12 and B13).

² Replaces Resolution No. **Mar2** – 18 of the World Maritime Administrative Radio Conference, Geneva, 1974.

conscious of

- a) the need for the developing countries to increase their own shipping activities and attract foreign maritime traffic in order to develop their trade;
- b) the important role that telecommunications play in maritime activities throughout the world, from the economic and safety aspects;
- c) the possibility of providing adequate safety and improved economy in shipping activities by a relatively modest investment in the installation and operation of maritime telecommunication facilities;

considering

- a) that in many developing countries there is a need to increase the efficiency of the services for:
 - safety of navigation and safety of life at sea;
 - commercially viable port operations;
 - public correspondence for passengers and crews;
- b) that in this regard the Union's technical cooperation activities could be extended to render very valuable assistance to these countries;

*resolves**to request the Secretary-General*

1. to offer the assistance of the Union to developing countries endeavouring to improve their maritime telecommunications, particularly by providing technical advice in the establishment, operation and maintenance of equipment and by assisting in training staff;
2. in this context, to seek the collaboration of IMCO, the United Nations Conference for Trade and Development (UNCTAD) and other specialized agencies of the United Nations, as appropriate;
3. to continue to give special attention to seeking the aid of the United Nations Development Programme and other sources of financial support, to enable the Union to render sufficient and effective technical assistance in the field of maritime telecommunications, when necessary in collaboration with other specialized agencies concerned;

to urge Member countries

to give priority in supporting, to the extent of their capabilities and their technical advancement, the Union's technical cooperation with developing countries in the field of maritime telecommunications by facilitating the recruitment of experts for missions to work in developing countries, by receiving students from developing countries who have been awarded a fellowship by the Union, by providing lecturers to seminars arranged by the Union and, upon request, by giving technical advice to the Union;

to invite the developing countries

to include maritime telecommunications projects as needed in their country programmes for external technical assistance and to support inter-country projects in this field.

BH

RESOLUTION No. 400

**Relating to the Treatment of Notices Concerning Frequency
Assignments to Aeronautical Stations in the Bands Allocated
Exclusively to the Aeronautical Mobile (R) Service
Between 2 850 kHz and 22 000 kHz¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Final Acts of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, entered into force on 1 September 1979;
- b) that the new Frequency Allotment Plan contained in Appendix 27 Aer2 will enter into force at 0001 hours UTC on 1 February 1983;
- c) that some administrations may wish to implement certain provisions of the new Frequency Allotment Plan in advance of the latter date when this may be done without causing harmful interference to stations operating in accordance with the present Frequency Allotment Plan;
- d) that it will therefore be necessary to provide an interim procedure to facilitate transition from the existing Frequency Allotment Plan to the new Frequency Allotment Plan;

resolves

1. that during the interim period between the date of entry into force of those Final Acts and the date of entry into force of the new Frequency Allotment Plan:
 - 1.1 the provisions of Nos. 1334 to 1341 of the Radio Regulations shall continue to be applied in the examination of notices concerning frequency assignments to aeronautical stations in the aeronautical mobile (R) service in the allotments of the existing Plan;
 - 1.2 all such assignments shall be recorded in the Master International Frequency Register in accordance with the findings reached by the IFRB;
 - 1.3 frequency assignments in a channel of the new Plan shall be examined by the IFRB in order to determine whether the protection specified in Appendix 27 Aer2 (Part I, Section IIA, paragraph 5) is afforded to the allotments in the existing Plan. In so doing the Board shall assume that the frequency will be used in accordance with the sharing conditions between areas specified in Appendix 27 Aer2 (Part I, Section IIB, paragraph 4);
 - 1.4 all such assignments mentioned in paragraph 1.3 having received a favourable finding shall be recorded in the Master International Frequency Register;
 - 1.5 the date to be entered in Column 2a or 2b of the Master International Frequency Register shall be as follows:
 - a) if the finding is favourable with respect to Nos. 1336 to 1339, the date of 29 April 1966 shall be entered in Column 2a;
 - b) if the finding is favourable with respect to No. 1341, the date of 29 April 1966 shall be entered in Column 2b;
 - c) for all other assignments (including those which may be in conformity with the new Frequency Allotment Plan but not in conformity with the present Frequency Allotment Plan) the date of receipt of the notice by the IFRB shall be entered in Column 2b;

¹ Replaces Resolution No. Aer2 – 4 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

1.6 any assignment which is in accordance with the new Frequency Allotment Plan shall be so indicated by the insertion by the IFRB of an appropriate symbol in the Remarks Column of the Master International Frequency Register;

2. that on the date of the entry into force of the new Frequency Allotment Plan, the IFRB shall examine those frequency assignments to aeronautical stations in the aeronautical mobile (R) service in the bands allocated exclusively to that service between 2 850 kHz and 22 000 kHz which are contained in the Master International Frequency Register from the point of view of their conformity with the new Frequency Allotment Plan, following the relevant parts of the procedure described in Nos. 1334 to 1341 of the Radio Regulations and shall record against them in the Master International Frequency Register a date in Column 2a or 2b as follows:

2.1 assignments with double-sideband emissions (A3E) already appearing in the Master Register on the date of the entry into force of the new Frequency Allotment Plan shall retain the date recorded in Column 2a or 2b, as appropriate, until 1 February 1983. A date in Column 2a for a frequency assignment using double-sideband emissions (A3E) shall be transferred to Column 2b on 2 February 1983. On 1 January 1987 the IFRB shall review the entries and, in consultation with the administrations concerned, cancel those entries which are no longer in use, retaining the others for information only, without a date in Column 2b;

2.2 assignments found favourable with respect to Nos. 1335 to 1339 shall have the date of 5 March 1978 entered in Column 2a;

2.3 assignments found favourable with respect to Nos. 1335 and 1341 shall have the date of 5 March 1978 entered in Column 2b;

2.4 all other assignments shall have the date of 6 March 1978 entered in Column 2b;

3. that, on the date of the entry into force of the new Frequency Allotment Plan, the allotments contained therein shall replace in the Master International Frequency Register the allotments appearing in the existing Frequency Allotment Plan;

invites administrations

to notify to the IFRB as soon as possible the cancellation of frequency assignments released as a consequence of bringing into use the allotments in the new Plan.

BI

RESOLUTION No. 401

**Relating to the Implementation of the Frequency
Allotment Plan in the Bands Allocated
Exclusively to the Aeronautical Mobile (R) Service
Between 2 850 kHz and 22 000 kHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

a) that the bands allocated exclusively to the aeronautical mobile (R) service between 2 850 kHz and 22 000 kHz by the Administrative Radio Conference, Geneva, 1959, were modified by the Extraordinary Administrative Radio Conference, Geneva, 1966;

¹ Replaces Resolution No. Aer2 - 5 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

- b) that the Extraordinary Administrative Radio Conference, Geneva, 1966, established procedures to be followed by administrations relating to the implementation of the modifications;
- c) that the necessary arrangements were made for the IFRB to carry out these procedures;

recognizing

- a) that the aeronautical mobile (R) service is primarily a safety service;
- b) that the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, further modified the said bands to provide for single-sideband techniques;
- c) that there is a need for all administrations to implement the modifications made by that Conference with a view to avoiding any harmful interference to the services rendered by stations operating in accordance with the Radio Regulations;

resolves

1. that, not later than three months before the entry into force of the new Plan, administrations shall notify the IFRB of the modifications necessary to bring the assignments existing in the Master Register into conformity with this Plan;
2. that the assignments existing in the Master Register on 1 February 1983 which are not in conformity with the decisions of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, on that date shall be treated as follows:
 - 2.1 within thirty days from 1 February 1983, the IFRB will send relevant extracts from the Master Register to the administrations concerned advising them that, in accordance with the terms of the present Resolution, the assignments in question are to be transferred to the appropriate frequencies within a period of six months after the dispatch of the extracts;
 - 2.2 if an administration fails to notify the IFRB of the transfer within the prescribed period, the original entry will be retained in the Master Register without a date in Column 2 and with a suitable remark in the Remarks Column. The administrations will be advised of this action;
3. that, if an administration so desires, the IFRB will provide it with all necessary assistance. In so doing, the IFRB will apply the provisions of Nos. 1445 to 1449 of the Radio Regulations.

BG

RESOLUTION No. 402

**Relating to the Implementation of the New Arrangement
Applicable to Bands Allocated Exclusively to
the Aeronautical Mobile (R) Service Between
2 850 kHz and 22 000 kHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the use of each of the frequency bands between 2 850 kHz and 22 000 kHz allocated exclusively to the aeronautical mobile (R) service by the Administrative Radio Conference, Geneva, 1959, was modified by the Extraordinary Administrative Radio Conference, Geneva, 1966;

¹ Replaces Resolution No. Aer2 – 3 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

- b) that the 1966 Conference resolved that administrations shall effect, as soon as possible, a progressive conversion of their radiocommunications in the aeronautical mobile (R) service from double-sideband to single-sideband operation, in consequence of which the use of the above bands has been further modified by the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, to provide single-sideband techniques;
- c) that a considerable number of frequency assignments of both aircraft and aeronautical stations will be transferred from existing frequencies to the new frequencies and channels designated by that Conference;
- d) that changes in frequency assignments should be made as soon as possible so that the advantages of the new channels designated by that Conference may be realized at the earliest opportunity;
- e) that the transfer of assignments should be made with the least possible disruption of the service rendered by each station;
- f) that the transfer of assignments should be made so as to avoid harmful interference between the stations involved during the implementation period;
- g) that the Final Acts of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, entered into force on 1 September 1979;
- h) that the new Frequency Allotment Plan contained in Appendix 27 Aer2 will enter into force on 1 February 1983;

recognizing

- a) that the aeronautical mobile (R) service is primarily a safety service;
- b) that some frequencies have been allotted for worldwide use;
- c) that the implementation of the decisions made by the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, relating to the new arrangement of the frequency bands allocated to the aeronautical mobile (R) service between 2 850 kHz and 22 000 kHz should follow an orderly procedure for the transfer of existing services from the old to the new assignments;

resolves

1. that between the entry into force of the Final Acts of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, on 1 September 1979 and the entry into force of the new Frequency Allotment Plan contained in Appendix 27 Aer2 on 1 February 1983, channel utilization for any new single-sideband operation shall be in accordance with the following provisions:

1.1 the carrier (reference) frequency of the single-sideband channel in the upper half of the previous double-sideband channel shall be the same as the carrier (reference) frequency of that channel;

1.2 the carrier (reference) frequency of the single-sideband channel in the lower half of the previous double-sideband channel shall be 3 kHz lower than the carrier (reference) frequency of that channel;

1.3 that, prior to 1 February 1983, aeronautical and aircraft stations fitted with single-sideband equipment may employ either half of the previous double-sideband channel (the single-sideband carrier (reference) frequency being that in paragraphs 1.1 and 1.2 above);

1.4 channels in the new Plan may be used by any administration provided that no harmful interference occurs to users of channels in the present Plan. For the operational use of the channels concerned administrations should take into account the provisions of No. 27/20 of Appendix 27 Aer2 to the Radio Regulations;

2. that on 1 February 1983, the frequencies appearing in Appendix 27 to the Radio Regulations shall be replaced by the frequencies appearing in Appendix 27 Aer2 (Part II, Section II, Article 2);
3. that it is necessary for administrations to take all appropriate measures with a view to converting to single-sideband operation as soon as possible by not permitting the installation of new double-sideband equipment as from 1 April 1981. Aircraft and aeronautical stations shall be capable of single-sideband operation at the earliest possible date; furthermore, they shall discontinue double-sideband emissions as early as possible, and, in any event, not later than 1 February 1983;
4. that, until 1 February 1983, aeronautical and aircraft stations equipped for single-sideband operation shall also be equipped to transmit class H3E emissions where required to be compatible with reception by double-sideband equipment;
5. that, unless otherwise specified in the Final Acts of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, the use of classes of emission H2B, J3E, J2B, J2D and J9X only shall be authorized as of 1 February 1983. Double-sideband operations may, however, be continued for domestic use until 1 February 1987 provided this operation is conducted in accordance with Nos. 299 and 307 of the Radio Regulations and that no harmful interference is caused to the international aeronautical mobile (R) service operating in the single-sideband mode. Administrations requiring such an extension of the period of full implementation of single-sideband operations are, nevertheless, urged to cease double-sideband operations as soon as possible.

CB

RESOLUTION No. 403

**Relating to the Use of Frequencies 3 023 kHz and 5 680 kHz
Common to the Aeronautical Mobile (R) and (OR) Services¹**

The World Administrative Radio Conference, Geneva, 1979,

having noted

that some anomalies appeared to exist in the conditions prescribed in Appendix 26 to the Radio Regulations (Geneva, 1959) for the use of the frequencies 3 023.5 kHz and 5 680 kHz, as contained in Article 2 of the Frequency Allotment Plan, Column 3, clauses 2a) and 2b) and that steps have been taken to remove these anomalies;

considering

- a) that the coordination of search and rescue operations at the scene of a disaster would be improved if the use of the frequencies 3 023 (previously 3 023.5) kHz and 5 680 kHz, in such operations, were extended to include communications between mobile stations and participating land stations;
- b) that it would be in the general interests of the aeronautical mobile service if the same provisions relating to the use of the frequencies 3 023 (previously 3 023.5) kHz and 5 680 kHz were applied to operations both in the aeronautical mobile (R) service and the aeronautical mobile (OR) service;

¹ Replaces Resolution No. Aer2 – 1 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

resolves

to invite administrations to apply in the aeronautical mobile (OR) service, as from the date of the coming into force of the Frequency Allotment Plan adopted by the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, the provisions governing the use of the frequencies 3 023 kHz and 5 680 kHz specified in Appendix 27 Aer2 (Part II, Section II, Article 3).

BT

RESOLUTION No. 404

**Relating to the Implementation of the New Arrangement of Bands
Allocated Exclusively to the Aeronautical Mobile (R)
Service Between 21 924 kHz and 22 000 kHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that Recommendation No. Aer2 – 5 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, recommended administrations to study the problems relating to the future use of the band 21 924 - 22 000 kHz;
- b) that the present Conference has allocated this band exclusively to the aeronautical mobile (R) service;

resolves

that there is a need to add a further frequency band to Appendix 27 Aer2, to provide worldwide frequencies suitable for long-range communications and to reduce congestion in the bands currently used;

instructs the Secretary-General

to publish the new Appendix 27 Aer2 adopted by the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, including a Plan for the band 21 924 - 22 000 kHz as indicated in the Annex to this Resolution;

recognizing

that harmful interference is liable to occur in the aeronautical mobile (R) service in this band unless, on 1 February 1983, the existing assignments in the band 21 924 - 22 000 kHz are transferred either to the new frequencies for the aeronautical mobile (R) service or to other bands more suitable for frequency assignments to stations in the aeronautical fixed service;

resolves

1. that the implementation of the decisions made by this Conference relating to this band allocated to the aeronautical mobile (R) service shall follow the orderly procedure defined below for the transfer of the existing services from the old to the new assignments;
2. that the assignments referred to in the foregoing paragraph shall be dealt with as follows:
 - 2.1 the IFRB shall send relevant extracts from the Master Register to the administrations concerned, within thirty days from 1 February 1982, advising them that, in accordance with the terms of this Resolution, the assignments concerned are to be transferred to the appropriate bands within a period of six months after the dispatch of the extracts;

2.2 if an administration does not notify the transfer within the prescribed period, the original entry shall be retained in the Master Register without a date in Column 2 and with a suitable remark in the Remarks Column. The administration concerned shall be advised of this action;

3. that, if an administration so desires, the IFRB shall give it all necessary assistance. In so doing, the IFRB shall apply the provisions of Nos. 1445 to 1449 of the Radio Regulations.

ANNEX TO RESOLUTION No. 404

**Outline of Changes to Be Made to
Appendix 27 Aer2 to the Radio Regulations**

A. APPENDIX 27 Aer2

Table of Contents *Part II. In the title, replace 17 970 kHz by 22 000 kHz.*

No. 27/10 *Replace 17 970 kHz by 22 000 kHz.*

No. 27/16 *Add the following new frequencies to the Table of Frequencies;*

CC

RESOLUTION No. 405

**Relating to the Use of Frequencies of the Aeronautical
Mobile (R) Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, adopted and developed a new Frequency Allotment Plan for the use of HF channels for the aeronautical mobile (R) service (Appendix 27 Aer2 to the Radio Regulations);
- b) that air operations are subject to continuous changes;
- c) that these changes require attention by the administrations concerned; but
- d) that, in seeking to satisfy new communication requirements, no decision should be taken that will prevent or handicap the coordinated utilization of those high frequency aeronautical mobile (R) band allotments as prescribed in the Plan;
- e) that the families of frequencies allotted to the Major World Air Route Areas (MWARAs), Regional and Domestic Air Route Areas (RDARAs) and Sub-Areas and VOLMET areas have been chosen considering propagation conditions which allow for the selection of the most suitable frequencies for the distances involved;
- f) that specific steps should be taken to ensure that the correct order of frequency is used;
- g) that it is essential to distribute the communication traffic load as uniformly as possible over the frequencies available;
- h) that frequencies have been allotted for worldwide use;

resolves

that administrations, individually or in collaboration, take the necessary steps:

1. to make as great a use as possible of higher frequencies in order to lessen the load on the HF aeronautical mobile (R) bands;
2. to make as great a use as possible of antennae of appropriate directivity and efficiency in order to minimize the possibilities of mutual interference within an area or between areas;
3. to coordinate the use of families of frequencies necessary for a given route segment in accordance with the technical principles in Appendix 27 Aer2 and in the light of the propagation data available, to ensure that the most appropriate frequencies are used with an aircraft at a given distance from the aeronautical station providing service over the route segment concerned;
4. to improve operating techniques and procedures and to use equipment which will make it possible to attain the highest possible efficiency in handling air-ground HF communications;
5. to collect precise data on the operation of their HF communication systems, particularly data having a bearing on technical and operating standards, so as to facilitate re-examination of the Plan;
6. to establish, through regional arrangements, the best method of providing the communications required for any new long-distance international or regional air operation which is not or cannot be accommodated within the system of MWARA and RDARA, in such a manner as not to cause harmful interference to the utilization of frequencies as prescribed in the Plan.

¹ Replaces Resolution No. Aer2 – 7 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

BL

RESOLUTION No. 406

**Relating to the Use of Frequency Bands, Higher than the HF Bands,
in the Aeronautical Mobile (R) Service and the Aeronautical
Mobile-Satellite (R) Service for Communication
and for Meteorological Broadcasts ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that from an aeronautical viewpoint, higher frequency bands can provide a more reliable and more interference-free communication system than HF;
- b) that from a technical and operational viewpoint, the use of VHF by aviation has progressed significantly;
- c) that the future possibility of communications utilizing satellite technology is now recognized;
- d) that, owing to the ever increasing development of aeronautical telecommunications in all areas of the world, there is an increasing demand for frequencies for communication with and for meteorological broadcasts to aircraft in flight;

resolves

that administrations, taking into account the relevant economic and technical factors, consider to the maximum extent possible meeting their requirements for communication and for meteorological broadcasts by frequencies in frequency bands, higher than the HF bands, which are allocated to the aeronautical mobile (R) service and the aeronautical mobile-satellite (R) service.

BF

RESOLUTION No. 407

**Relating to the Unauthorized Use of Frequencies
in the Bands Allocated to the Aeronautical Mobile (R) Service ²**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that monitoring observations of the use of the frequencies in the bands between 2 850 kHz and 22 000 kHz allocated exclusively to the aeronautical mobile (R) service show that a number of frequencies in these bands are still being used by stations of services other than the aeronautical mobile (R) service, notably by high-powered broadcasting stations, some of which are operating in contravention of No. 2665 of the Radio Regulations;

¹ Replaces Resolution No. Aer2 – 6 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

² Replaces Resolution No. Aer2 – 2 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

b) that these stations are causing harmful interference to the aeronautical mobile (R) service and that a considerable number of emissions, the sources of which could not be positively identified, have been observed in these bands;

c) that radio is the sole means of communication available to the aeronautical mobile (R) service and that this service is a safety service;

considering, in particular

d) that it is of paramount importance that channels directly concerned with the safe and regular conduct of aircraft operations be kept free from harmful interference, since they are essential for the protection of the safety of life and property;

resolves

to urge administrations to

1. ensure that stations of services other than the aeronautical mobile (R) service refrain from using frequencies allocated to this service other than under the conditions specified in Nos. 342 and 956 of the Radio Regulations;
2.
 - a) make every effort to identify and locate the source of any unauthorized emission capable of causing harmful interference to the aeronautical mobile (R) service, thereby endangering this safety service;
 - b) and communicate their findings to the IFRB;
3. participate in the monitoring programmes that the IFRB may organize pursuant to this Resolution;
4. request their governments to enact such legislation as is necessary to prevent stations located on board aircraft operating in contravention of No. 2665 of the Radio Regulations;

to request the IFRB to

1. continue to organize monitoring programmes in the bands exclusively allocated to the aeronautical mobile (R) service with a view to eliminating the emissions of the stations of other services operating in these bands which cause, or are likely to cause, harmful interference to the aeronautical mobile (R) service;
2. take steps to eliminate the emissions of stations of other services operating in these bands which cause, or are likely to cause, harmful interference to the aeronautical mobile (R) service;
3. seek, as appropriate, the cooperation of administrations in identifying the sources of those emissions by all available means, and in securing the cessation of those emissions.

BS

RESOLUTION No. 500

**Relating to the Modification of Carrier Frequencies
of LF Broadcasting Stations in Region 1**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that it would be advantageous, both technically and economically, to reduce interference in domestic broadcasting receivers caused by combination frequencies;
- b) that such interference is considerably reduced when the nominal values of the carrier frequencies of broadcasting stations are multiples of the channel separation;
- c) that the nominal values of the carrier frequencies of stations listed in the LF Broadcasting Plan for Region 1 (Geneva, 1975) are not multiples of the channel separation (9 kHz);
- d) that, in order to avoid interference between the stations in question, it is necessary that the modifications of the carrier frequencies of LF broadcasting stations in Region 1 be carried out on the same date, at least for all stations sharing the same channel, without reducing thereby the spacing between adjacent carrier frequencies;
- e) that modification of the carrier frequencies of LF broadcasting stations will, in certain cases, increase the interference caused to aeronautical radionavigation stations;

noting

that the aeronautical radionavigation service is a safety service;

resolves

1. that over the period 1 February 1986 to 1 February 1990 the nominal values of the carrier frequencies of all LF stations operating or planned in conformity with the LF/MF Broadcasting Agreement (Geneva, 1975) shall be reduced by 2 kHz, so that they become multiples of 9 kHz, the other characteristics of the stations remaining unchanged;
2. that, in order to ensure that all steps can be taken to avoid any additional interference to the aeronautical radionavigation service, the change of the frequencies of the broadcasting stations shall be made in groups of five channels beginning at the lowest assigned frequency;
3. that the changes shall be made in three steps, as follows:

Channels 1 to 5 on 1 February 1986	}	at 0100 UTC
Channels 6 to 10 on 1 February 1988		
Channels 11 to 15 on 1 February 1990		
4. that at the date of the first change (1 February 1986) the lower limit of the band allocated to the broadcasting service shall become 148.5 kHz and that after 1 February 1990 the allocation to the broadcasting service shall become 148.5 - 283.5 kHz;
5. that any modifications to the frequency assignment of an aeronautical radionavigation station resulting therefrom shall be notified to the Board and upon receiving a favourable finding with respect to Nos. **1240** and **1241** shall be entered in the Master Register without any change of date or status. If, however, the finding is unfavourable only with respect to No. **1241**, it shall be entered in the Master Register in accordance with the relevant provisions of Article 12 with no change in the original date;

further resolves

that administrations shall inform the IFRB at least two years in advance of making any foreseen modifications of the characteristics of their existing LF broadcasting stations or bringing into use any new stations;

requests the IFRB

to publish this information in a special section of its weekly circular;

requests the Secretary-General

to send this Resolution to the Secretary-General of ICAO.

BU

RESOLUTION No. 501

**Relating to Examination by the IFRB of the Notices Referring
to Stations in the Broadcasting Service in Region 2 in the
Band 535 - 1 605 kHz During the Period Preceding the Entry
into Force of the Final Acts of the
Regional Administrative MF Broadcasting Conference (Region 2)**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a)* that a Regional Administrative MF Broadcasting Conference (Region 2) will be convened, in two sessions, to draw up a plan for the broadcasting service in the band 535 - 1 605 kHz;
- b)* that the first session of that Conference will be held in March 1980, and the second session in November 1981;
- c)* that the relevant provisions of Article 12 have been modified by the present Conference;
- d)* that the Regional Administrative MF Broadcasting Conference (Region 2) should adopt provisions to be applied by the Board for notification and recording in the Master Register of frequency assignments included in the plan;
- e)* that it is therefore necessary to establish a procedure to be applied by the Board for the examination of notices referring to broadcasting stations in Region 2 in the band 535 - 1 605 kHz in the period between the entry into force of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, and the entry into force of the Final Acts of the Regional Administrative MF Broadcasting Conference (Region 2);

resolves

that between the date of entry into force of the Final Acts of the World Administrative Radio Conference, Geneva, 1979, and the date of entry into force of the Final Acts of the Regional Administrative MF Broadcasting Conference (Region 2), the Board shall not examine, with respect to the provisions of No. 1241, frequency assignment notices to a broadcasting station of Region 2 in the band 535 - 1 605 kHz and shall record them with no date in Column 2a or in Column 2b, the date in Column 2c being given for information only.

DJ

RESOLUTION No. 502

**Relating to the Period Between the Entry into Force of the
Final Acts of the World Broadcasting-Satellite Administrative
Radio Conference, Geneva, 1977, and the Date on Which the
Provisions and Associated Plan, Adopted by that Conference,
Are Annexed to the Radio Regulations ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, came into force on 1 January 1979;
- b) that, in its Resolution No. **Sat – 4**, the 1977 Conference requested the 1979 World Administrative Radio Conference to annex to the Radio Regulations the provisions and associated Plan established by it;
- c) that there will be an interim period between the date of entry into force of those Final Acts and the date on which the provisions and associated Plan are annexed to the Radio Regulations (Appendix **30**);

further considering

that the Final Acts of the 1977 Conference are regarded as including a World Agreement and associated Plan in accordance with Resolution No. **Spa2 – 2** of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971;

resolves

1. that both during this interim period and after the date on which they have been annexed to the Radio Regulations, the provisions and the associated Plan shall retain their integrity as a legal instrument;
2. that during this period the IFRB and the other appropriate organs of the Union shall be guided by the provisions of the Final Acts of the 1977 Conference and the Radio Regulations.

¹ Replaces Resolution No. **Sat – 3** of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

BC

RESOLUTION No. 503

**Relating to the Coordination, Notification and Recording
in the Master International Frequency Register of
Frequency Assignments to Stations in the
Broadcasting-Satellite Service in Region 2¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that a plan will be established for the broadcasting-satellite service in Region 2 in accordance with Resolution 701;
- b) that in Region 2 the broadcasting-satellite service should be operated on the basis of the principles contained in Article 12 and Annexes 6 and 7 of Appendix 30 to the Radio Regulations;
- c) that some of the provisions adopted by the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, concerning the broadcasting-satellite service in Regions 1 and 3 may also be applied in Region 2 prior to the entry into force of the plan for that Region to be established pursuant to Resolution 701;
- d) that, in the interim period, the procedures described in Resolution 33 will continue to apply in Region 2;

resolves

1. that an administration intending to bring into use a space station in the broadcasting-satellite service in Region 2 shall, for the purpose of coordination with space systems of other administrations, apply the relevant provisions of Article 11 of the Radio Regulations, i.e. Nos. 1042 to 1056 inclusive;
2. that the relevant provisions of Resolution 33 shall apply to the coordination, notification and recording of stations in the broadcasting-satellite service in Region 2, wherever a station in the broadcasting-satellite service or the fixed-satellite service in Region 2 is involved;
 - 2.1 that an administration notifying a frequency assignment to a space station in the broadcasting-satellite service in Region 2 under paragraph 4.1 of Resolution 33 shall also notify a typical receiving earth station;
3. that the coordination, notification and recording procedures for stations in the fixed-satellite service specified in Article 7 of Appendix 30 to the Radio Regulations shall also apply to stations in the broadcasting-satellite service in Region 2 with respect to stations in the broadcasting-satellite service for which a frequency assignment appears in the Plan whenever:
 - any portion of the necessary bandwidth of the proposed frequency assignment in Region 2 falls within the necessary bandwidth of a frequency assignment in Region 1 or Region 3; and
 - the power flux-density which would be produced by the proposed broadcasting-satellite frequency assignment in Region 2 exceeds the value specified in Annex 1 of Appendix 30;
4. that Annex 2 of Appendix 30 shall be used in supplying the information referred to in Section B of Resolution 33 and Section II of Article 7 of Appendix 30;

¹ Replaces Resolution No. Sat – 5 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

5. that an individual notice for each frequency assignment shall be drawn up as prescribed in Annex 2 of Appendix 30 for any frequency assignment notified under paragraph 4.1 of Resolution 33 or paragraph 2.1 of this Resolution or Section III of Article 7 of Appendix 30.

CK

RESOLUTION No. 504

**Relating to the Final Acts of the
World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977,
with Respect to Region 2**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, adopted only interim provisions for Region 2;
- b) that this Conference has adopted changes to the Table of Frequency Allocations for Region 2 that affect the conditions on which those interim provisions in the Final Acts of the 1977 Conference are based;
- c) that this Conference has also decided to incorporate the provisions and associated Plan adopted by the 1977 Conference into the Radio Regulations as Appendix 30;
- d) that a regional administrative radio conference will be convened in 1983 to carry out planning for the broadcasting-satellite service in Region 2 in accordance with Resolution 701;

resolves

1. that the provisions of Article 12 of Appendix 30 relating to arc segmentation in Region 2 are no longer applicable in the band 11.7 - 12.1 GHz and will not be applicable in the remainder of the band 11.7 - 12.2 GHz following the 1983 regional administrative radio conference;
2. that the remaining interim provisions relating solely to Region 2 in Appendix 30 shall continue to apply pending the decisions of the 1983 regional administrative radio conference after which time the Final Acts of the 1983 regional conference shall be regarded as superseding such interim provisions for Region 2 now contained in Appendix 30 subject to their formal adoption by the next competent world administrative radio conference.

CM

RESOLUTION No. 505

**Relating to the Broadcasting-Satellite Service (Sound) in the
Frequency Range 0.5 GHz to 2 GHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that several administrations have made proposals concerning frequency band allocations for broadcasting-satellite service (sound) in the range 0.5 - 2 GHz;

- b) that the frequency bands presently allocated to the broadcasting-satellite service do not provide the possibility of individual reception of sound programmes by portable receivers and receivers installed in automobiles;
- c) that the introduction of the broadcasting-satellite service (sound) in the range 0.5 - 2 GHz is technically feasible and will afford the possibility of individual reception with portable and automobile receivers;
- d) that simulated experiments have confirmed certain postulations made in theoretical studies, however, no working system has yet been demonstrated;
- e) that further studies are necessary before the implementation of operational systems;
- f) that CCIR has initiated studies concerning this service in accordance with Study Programme 34B/10;
- g) that the appropriate frequency range for the service is limited at the lower end to 0.5 GHz (because of increasing man-made noise and transmit antenna size with decreasing frequency) and at the upper end to 2 GHz (because of decreasing effective area of the receive antenna with increasing frequency);
- h) that because of the high power flux-density requirement, sharing with terrestrial services seems extremely difficult;

noting

- a) that there are proposals by administrations for the frequency range 1 429 - 1 525 MHz;
- b) that the radio astronomy service has an allocation in a lower neighbouring band and that for that reason the lower part of the band 1 429 - 1 525 MHz may not be considered for an allocation to the broadcasting-satellite service (sound);
- c) that in the experimental phase a bandwidth of a few hundred kHz would suffice;

resolves

1. that administrations shall be encouraged to carry out experiments with a broadcasting-satellite service (sound) within the band 0.5 - 2 GHz, in appropriately placed narrow sub-bands, subject to agreement of administrations concerned. One area where such a sub-band may be placed is the band 1 429 - 1 525 MHz;
2. that the CCIR shall continue and expedite studies relating to the technical characteristics of a satellite sound-broadcasting system for individual reception by portable and automobile receivers, the feasibility of sharing with terrestrial services, and the appropriate sharing criteria;
3. that the next world administrative radio conference dealing with space radiocommunication services in general or with a specific space radiocommunication service shall be authorized to consider the results of various studies and to take appropriate decisions regarding the allocation of a suitable frequency band;
4. that the aforementioned conference shall also develop appropriate procedures for protection, and if necessary re-accommodation in other bands, of assignments of terrestrial services which may be affected.

AP

RESOLUTION No. 506

Relating to the Use, by Space Stations Operating in the 12 GHz Frequency Bands Allocated to the Broadcasting-Satellite Service, of the Geostationary-Satellite Orbit and No Other¹

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that a Plan designating frequency assignments in the above-mentioned frequency bands and positions in the geostationary-satellite orbit has been adopted by the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, for Regions 1 and 3;
- b) that a similar plan for Region 2 is expected to result from a regional administrative radio conference in 1983;
- c) that the operation of space radiocommunication services in the frequency bands concerned in orbits other than the geostationary-satellite orbit would be incompatible with the plans referred to in a) and b) above;

resolves

that administrations shall ensure that their space stations in these frequency bands are operated in the geostationary-satellite orbit and no other.

AU

RESOLUTION No. 507

Relating to the Establishment of Agreements and Associated Plans for the Broadcasting-Satellite Service²

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that it is important to make the best possible use of the geostationary-satellite orbit and of the frequency bands allocated to the broadcasting-satellite service;
- b) that the great number of receiving installations using such directional antennae as could be set up for a broadcasting-satellite service may be an obstacle to changing the location of space stations in that service on the geostationary-satellite orbit, from the date of their bringing into use;

¹ Replaces Resolution No. **Sat** – 7 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

² Replaces Resolution No. **Spa2** – 2 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

- c) that satellite broadcasts may create harmful interference over a large area of the Earth's surface;
- d) that the other services with allocations in the same band need to use the band before the broadcasting-satellite service is set up;

resolves

1. that stations in the broadcasting-satellite service shall be established and operated in accordance with agreements and associated plans adopted by world or regional administrative conferences, as the case may be, in which all the administrations concerned and the administrations whose services are liable to be affected may participate;
2. that during the period before the entry into force of such agreements and associated plans the administrations and the IFRB shall apply the procedure contained in Resolution 33;

invites the Administrative Council

to keep under review the question of world administrative conferences, and/or regional administrative conferences, as required, with a view to fixing suitable dates, places and agenda.

DI

RESOLUTION No. 508

**Relating to the Convening of a
World Administrative Radio Conference
for the Planning of the HF Bands
Allocated to the Broadcasting Service**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the existing situation in the HF bands allocated exclusively to the broadcasting service is not satisfactory;
- b) that it is important to ensure that all countries are guaranteed free and equal rights to the use of these bands;

resolves

1. that the use of the exclusive and shared HF bands allocated to the broadcasting service (excluding those bands reserved for broadcasting in the Tropical Zone) should be the subject of planning by a world administrative radio conference;
2. that the planning be based on DSB (double-sideband) emissions. Consideration should also be given to the manner in which an SSB (single-sideband) system could be introduced progressively without impairing the DSB emissions;
3. that the conference referred to in paragraph 1 should be held in two sessions;

4. that the first session:
 - 4.1 is to establish the technical parameters to be used for planning and the principles governing the use of the HF bands allocated to the broadcasting service and in particular:
 - 4.1.1 the power appropriate to HF broadcasting in conjunction with the other relevant technical factors;
 - 4.1.2 the needs of each country for national and international broadcasting;
 - 4.1.3 the maximum number of frequencies to be used for the broadcasting of the same programme to the same zone;
 - 4.1.4 a specification of an SSB system suitable for future use for HF broadcasting;
 - 4.2 should also decide the planning principles to be used and the method of planning to be adopted by the second session;
5. that, at its second session, to be held not sooner than twelve months nor later than eighteen months after the first session, the conference:
 - 5.1 should carry out the planning according to the principles and the method established at the first session;
 - 5.2 should review and, where necessary, revise the relevant provisions of the Radio Regulations relating to broadcasting in the HF bands;

urges administrations,

until the conference is held, to use no greater transmitter power than that required for satisfactory reception and to ensure that the number of frequencies used is the minimum necessary;

draws the attention of the Administrative Council

to the urgency of this conference; and

invites the Administrative Council

to take all necessary steps for the convening of the conference, the first session of which shall be held as soon as possible after the next CCIR Plenary Assembly and with the least possible delay as defined in Article 58 (No. 303) of the Convention;

requests the IFRB

to carry out the necessary engineering studies and preparations, including those envisaged in No. 1771 of the Radio Regulations;

requests the CCIR

to accelerate the studies described in Recommendations 500 and 501.

CQ

RESOLUTION No. 509

**Relating to the Convening of a Regional Broadcasting Conference
to Review and Revise the Provisions of the Final Acts of the
African VHF/UHF Broadcasting Conference (Geneva, 1963)**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the last African VHF/UHF Plan was drawn up in Geneva in 1963 for Sound Broadcasting in Band II (87.5 - 100 MHz) and for Television Broadcasting in Band I (47 - 68 MHz), Band III (174 - 223 MHz), Band IV (470 - 582 MHz) and Band V (582 - 960 MHz);
- b) that some of the African countries could not participate in the African VHF/UHF Broadcasting Conference, Geneva, 1963;
- c) that many more sovereign African countries have emerged and will need to be included in a new plan;

noting

- a) that for the band 87.5 - 108 MHz an FM sound-broadcasting planning conference is foreseen for Region 1 (see Resolution 510);
- b) the extension of the primary allocation to the broadcasting service (television) in Region 1 from 174 - 223 MHz to 174 - 230 MHz;

realizing

that there is a need to update the existing Plan;

resolves

that a regional conference be convened as soon as possible, preferably by 1984, to review and revise the provisions of the existing TV Broadcasting VHF/UHF Plan (Geneva, 1963) for the African Broadcasting Area, taking into account the assignments contained in the Stockholm Plan, 1961;

invites the Administrative Council

to take all necessary steps for convening the conference and to fix the date and agenda for the conference;

requests the CCIR

to carry out the necessary technical studies;

requests the IFRB

to carry out the preparations for the conference.

BM

RESOLUTION No. 510

**Relating to the Convening of a Planning Conference
for Sound Broadcasting in the Band 87.5 - 108 MHz
for Region 1 and Certain Countries Concerned in Region 3**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the extension of the primary allocation to the broadcasting service in Region 1 from 87.5 - 100 MHz to 87.5 - 108 MHz;
- b) that in Region 1 the band 100 - 108 MHz is at present allocated to the mobile, except aeronautical mobile (R), service and in some countries also to the fixed service;
- c) that several countries in Region 3 with land boundaries adjoining Region 1 also use this band for the broadcasting service;
- d) that for those countries in Region 1 which use or intend to use the band 87.5 - 100 MHz for frequency-modulated sound broadcasting, there is a need to establish a new sound-broadcasting plan for the whole of the band 87.5 - 108 MHz;
- e) that for other countries in Region 1 there is a need to establish a sound-broadcasting plan for the band 100 - 108 MHz;
- f) that this new plan should in no way affect existing or planned assignments to television stations in the band 87.5 - 100 MHz made in accordance with the Regional Agreement, Stockholm, 1961;
- g) that this new plan in the band 87.5 - 100 MHz should not result in the deterioration of the service areas of those existing sound-broadcasting stations operating in accordance with the Regional Agreement, Stockholm, 1961, which are situated in the coordination area with countries using this band for television in accordance with the Regional Agreement, Stockholm, 1961;
- h) the requirement to introduce sound-broadcasting stations in the band 100 - 108 MHz in accordance with this plan at the earliest possible date;
- i) that radio equipment used by aircraft for automatic landing purposes, which operates in the adjacent band 108 - 112 MHz, may be subject to harmful interference from nearby broadcasting stations operating in the band 87.5 - 108 MHz if the frequencies of the respective stations are not selected with care and that such interference can put human life at risk;

resolves

1. that a regional conference shall be convened before 31 December 1983 to draw up an agreement for Region 1 and the countries concerned in Region 3 and an associated plan for sound broadcasting in the band 87.5 - 108 MHz for Region 1 and for parts of Afghanistan and Iran which are contiguous with Region 1;
2. that this conference shall take place in two sessions:
 - the first session will establish the technical bases for the preparation of the plan, including mutual criteria for sharing between sound broadcasting and other services, including television broadcasting, operating within the band 87.5 - 108 MHz;
 - the second session, preferably to be separated from the first session by a period of more than six months, but not more than twelve months, will draw up the agreement and associated plan;
3. that countries concerned in Region 3 must be given the opportunity to participate in this conference;

requests the CCIR

to study, as a matter of urgency, the necessary technical bases required for planning and determining the protection criteria between sound-broadcasting stations and television-broadcasting stations and between sound-broadcasting stations and stations in the fixed and mobile, except aeronautical mobile (R), services;

invites the Administrative Council

to fix the dates and agenda for this conference;

calls upon administrations

to bear in mind the problems of compatibility with radionavigation systems operating in the adjacent band when planning the use of the band 87.5 - 108 MHz.

CO

RESOLUTION No. 600

**Relating to the Use for the Radionavigation Service
of the Frequency Bands 2 900 - 3 100 MHz, 5 470 - 5 650 MHz,
9 200 - 9 300 MHz, 9 300 - 9 500 MHz, and 9 500 - 9 800 MHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that this Conference has adopted provisions relating to the development of shipborne transponders in the maritime radionavigation service in frequency bands 2 930 - 2 950 MHz, 5 470 - 5 480 MHz and 9 280 - 9 300 MHz;
- b) the growing demands already being made on the frequency allocations for the radionavigation service in the bands utilized for aeronautical and maritime radionavigation arising from:
 - i) the increasing number of shipborne radars which is reinforced by the demands being made for compulsory installation on an international basis;
 - ii) the increasing need for navigational aids and transponders working with primary radars;
 - iii) the need for the increasing utilization of this band by stations in the aeronautical radionavigation service noting that compulsory installation on board aircraft is also demanded on an international basis;
- c) the increase in harmful interference occurring in the 9 300 - 9 500 MHz band due to these factors;
- d) that these radar applications have important safety considerations;

noting

- a) Recommendation 605;
- b) the conclusions of the Special Preparatory Meeting of the CCIR;
- c) the need for additional operational and technical information in deciding the most effective frequency utilization;

resolves

1. that the next competent world administrative radio conference shall:
 - 1.1 review footnotes to these radionavigation bands and make such changes as deemed appropriate in the light of additional studies;
 - 1.2 prepare regulatory recommendations as appropriate;
2. that the CCIR shall continue to consider the technical factors and make Recommendations;

invites

1. the Administrative Council to ensure that radionavigation matters of concern to the mobile services are included in the agenda of the next competent mobile conference;
2. administrations to study the use of these bands by the radionavigation services, and to submit proposals for their efficient utilization;

requests the Secretary-General

to refer this Resolution to the IMCO and ICAO inviting their urgent consideration of the operational requirements for the maritime and aeronautical radionavigation services using these frequency bands, and to make appropriate recommendations to assist administrations in their preparation for the conference.

AL

RESOLUTION No. 601

**Relating to the Recommendations and Standards for Emergency
Position-Indicating Radiobeacons Operating on the
Frequencies 121.5 MHz and 243 MHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that emergency position-indicating radiobeacons operating on the frequencies 121.5 MHz and 243 MHz are intended to facilitate search and rescue operations;
- b) that the frequencies 121.5 MHz and 243 MHz are in common use by aircraft engaged in search and rescue operations;
- c) that the International Civil Aviation Organization has established recommended signal characteristics and technical specifications for aircraft equipment operating on 121.5 MHz and/or 243 MHz;

resolves

that administrations authorizing the use of emergency position-indicating radiobeacons on 121.5 MHz and/or 243 MHz should ensure that such radiobeacons comply with the relevant recommendations and standards of the International Civil Aviation Organization and the International Radio Consultative Committee.

¹ Replaces Resolution No. **Mar 7** of the World Administrative Radio Conference, Geneva, 1967.

BN

RESOLUTION No. 640

**Relating to the International Use of Radiocommunications,
in the Event of Natural Disasters, in Frequency Bands
Allocated to the Amateur Service**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that in the event of natural disaster normal communication systems are frequently overloaded, damaged, or completely disrupted;
- b) that rapid establishment of communication is essential to facilitate worldwide relief actions;
- c) that the amateur bands are not bound by international plans or notification procedures, and are therefore well adapted for short-term use in emergency cases;
- d) that international disaster communications would be facilitated by temporary use of certain frequency bands allocated to the amateur service;
- e) that under those circumstances the stations of the amateur service, because of their widespread distribution and their demonstrated capacity in such cases, can assist in meeting essential communication needs;
- f) the existence of national and regional amateur emergency networks using frequencies throughout the bands allocated to the amateur service;
- g) that in the event of a natural disaster, direct communication between amateur stations and other stations might enable vital communications to be carried out until normal communications are restored;

recognizing

that the rights and responsibilities for communications in the event of a natural disaster rest with the administrations involved;

resolves

1. that the bands allocated to the amateur service which are specified in No. 510 may be used by administrations to meet the needs of international disaster communications;
2. that such use of these bands shall be only for communications in relation to relief operations in connection with natural disasters;
3. that the use of specified bands allocated to the amateur service by non-amateur stations for disaster communications shall be limited to the duration of the emergency and to the specific geographical areas as defined by the responsible authority of the affected country;
4. that disaster communications shall take place within the disaster area and between the disaster area and the permanent headquarters of the organization providing relief;
5. that such communications shall be carried out only with the consent of the administration of the country in which the disaster has occurred;
6. that relief communications provided from outside the country in which the disaster has occurred shall not replace existing national or international amateur emergency networks;

7. that close cooperation is desirable between amateur stations and the stations of other radio services which may find it necessary to use amateur frequencies in disaster communications;
8. that such international relief communications shall avoid, as far as practicable, interference to the amateur service networks;

invites administrations

1. to provide for the needs of international disaster communications;
2. to provide for the needs of emergency communications within their national regulations.

CR

RESOLUTION No. 641

**Relating to the Use of the Frequency Band
7 000 - 7 100 kHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the sharing of frequency bands by amateur and broadcasting services is undesirable and should be avoided;
- b) that it is desirable to have worldwide exclusive allocations for these services in Band 7;
- c) that the band 7 000 - 7 100 kHz is allocated on a worldwide basis exclusively to the amateur service;

resolves

that the broadcasting service shall be prohibited from the band 7 000 - 7 100 kHz and that the broadcasting stations operating on frequencies in this band shall cease such operation.

BV

RESOLUTION No. 642

**Relating to the Bringing into Use of Earth Stations
in the Amateur-Satellite Service**

The World Administrative Radio Conference, Geneva, 1979,

recognizing

that the procedures of Articles 11 and 13 are applicable to the amateur-satellite service;

recognizing further

- a) that the characteristics of earth stations in the amateur-satellite service vary widely;

¹ Replaces Resolution No. 10 of the Administrative Radio Conference, Geneva, 1959.

- b) that space stations in the amateur-satellite service are intended for multiple access by amateur earth stations in all countries;
- c) that coordination among stations in the amateur and amateur-satellite services is accomplished without the need for formal procedures;
- d) that the burden of terminating any harmful interference is placed upon the administration authorizing a space station in the amateur-satellite service pursuant to the provisions of No. 2741 of the Radio Regulations;

notes

that certain information specified in Appendices 3 and 4 cannot reasonably be provided for earth stations in the amateur-satellite service;

resolves

- 1. that when an administration (or one acting on behalf of a group of named administrations) intends to establish a satellite system in the amateur-satellite service and wishes to publish information with respect to earth stations in that system it may:
 - 1.1 communicate to the IFRB all or part of the information listed in Appendix 3; the IFRB shall publish such information in a special section of its weekly circular requesting comments to be communicated within a period of four months after the date of publication;
 - 1.2 notify under Nos. 1488 to 1491 all or part of the information listed in Appendix 3; the IFRB shall record it in a special list;
- 2. that this information shall include at least the characteristics of a typical amateur earth station in the amateur-satellite service having the facility to transmit signals to the space station to initiate, modify, or terminate the functions of the space station.

CJ

RESOLUTION No. 700

**Relating to the Sharing Between the Fixed-Satellite Service
in Regions 1 and 3 and the Broadcasting-Satellite Service
in Region 2 in the Band 12.2 - 12.7 GHz**

The World Administrative Radio Conference, Geneva, 1979,

recognizing

- a) that an allocation has been made at this Conference to the broadcasting-satellite service in the band 12.1 - 12.7 GHz in Region 2;
- b) that in the band 12.5 - 12.75 GHz in Regions 1 and 3 the allocation to the fixed-satellite service has been maintained and an additional allocation has been made in the band 12.2 - 12.5 GHz for Region 3;
- c) that in drawing up the Broadcasting-Satellite Plan (Geneva, 1977) for Regions 1 and 3 due account was taken of the future operational needs of the fixed-satellite service in Region 2 and that, in observing these needs, it was necessary to impose constraints on the preparation of the Plan and the associated modification procedure;

resolves

1. that, prior to the coming into force of appropriate provisions and an associated plan to be prepared by the regional conference for the planning of the broadcasting-satellite service in Region 2, the provisions of Resolution 33 together with Article 11 shall continue to apply with respect to the coordination between space stations in the broadcasting-satellite service in Region 2 and space stations in the fixed-satellite service in Regions 1 and 3;
2. that in the drawing-up of a plan (and any associated modification procedure) for the broadcasting-satellite service in Region 2 the requirements for satisfactory future operation of the fixed-satellite service in Regions 1 and 3 shall be observed, and that, if constraints on the fixed-satellite service are considered necessary to ensure that no harmful interference is caused either to the fixed-satellite or the broadcasting-satellite services involved, they should not in any case be greater than those imposed on the fixed-satellite service in Region 2 by Appendix 30;
3. that, in order that the regional conference shall have the necessary guidance for achieving *resolves* 2, the CCIR should study urgently the technical provisions required, taking into account existing and proposed fixed-satellite systems for operation in the 12.5 - 12.7 GHz band in Region 1 and the 12.2 - 12.7 GHz band in Region 3.

CH

RESOLUTION No. 701

**Relating to the Convening of a Regional Administrative
Radio Conference for the Detailed Planning of the
Broadcasting-Satellite Service in the 12 GHz Band
and Associated Feeder Links in Region 2¹**

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, adopted a Plan for the assignment of frequencies and orbital positions for the broadcasting-satellite service in the 12 GHz band for Regions 1 and 3;
- b) that the 1977 Conference adopted interim provisions pending the establishment of a similar plan for Region 2;
- c) that, following a consultation by the Administrative Council with Members of Region 2, it is envisaged that a Region 2 administrative radio conference for the broadcasting-satellite service will be convened in 1983;
- d) that this Conference has adopted changes to the Table of Frequency Allocations that greatly affect the conditions on which the planning of the broadcasting-satellite service in the 12 GHz band by Region 2 will be based;
- e) that this Conference has also decided to incorporate the provisions and associated Plan adopted by the 1977 Conference into the Radio Regulations as Appendix 30;

considering

- a) that Annexes 8 and 9 of Appendix 30 contain technical data and sharing criteria used in establishing the provisions and the associated Plan;

¹ Replaces Resolutions No. Sat - 8 and No. Sat - 9 and Recommendation No. Sat - 8 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

- b) that advantage should be taken of technological advances resulting from experiments carried out on broadcasting satellites since 1977;
- c) that advantage should also be taken of recent studies by the CCIR;
- d) that with respect to space services this Conference has allocated in Region 2 the band 12.3 - 12.7 GHz to the broadcasting-satellite service, and the band 12.1 - 12.3 GHz to the fixed-satellite service and the broadcasting-satellite service in accordance with the terms of No. 841 of the Radio Regulations;
- e) that this Conference has identified the bands 14.5 - 14.8 GHz and 17.3 - 18.1 GHz for use as feeder link frequencies to broadcasting satellites;
- f) that there are significant advantages in planning the feeder links together with the planning of 12 GHz broadcasting-satellite systems;

recognizing

- a) that arc segmentation is no longer required in the band 11.7 - 12.1 GHz and will not be required in the band 12.1 - 12.3 GHz following the 1983 regional administrative radio conference;
- b) that systems of the fixed-satellite service in the band 11.7 - 12.2 GHz shall not impose restrictions on the preparation of a Region 2 broadcasting-satellite plan, but that such systems developed by the time of the 1983 regional administrative radio conference, which are in accordance with the provisions of the Final Acts of the 1971 World Administrative Radio Conference for Space Telecommunications and the 1977 World Broadcasting-Satellite administrative radio conference, should be taken into account in the decisions of the 1983 regional administrative radio conference;

resolves

1. that the regional administrative radio conference (RARC) referred to in *noting c)* be held no later than 1983 to:
 - 1.1 divide the band 12.1 - 12.3 GHz in two sub-bands and to allocate the lower sub-band to the fixed-satellite service and the upper sub-band to the broadcasting-satellite, broadcasting, mobile except aeronautical mobile, and fixed services, all services being on a primary basis (see No. 841);
 - 1.2 draw up a detailed frequency assignments and orbital positions plan for the broadcasting-satellite service for Region 2 in the band 12.3 - 12.7 GHz and in that portion of the band 12.1 - 12.3 GHz which it shall allocate to the broadcasting-satellite service;
 - 1.3 plan feeder links in a part of the band 17.3 - 18.1 GHz, of a bandwidth equal to the total bandwidth allocated to the broadcasting-satellite service in the 12 GHz band. However, administrations may use broadcasting-satellite feeder links in frequency bands other than those planned, provided that such use does not necessitate any changes in the plan;
 - 1.4 establish procedures to govern the use of the bands specified in paragraph 1.2 of this Resolution by the broadcasting-satellite service and, as necessary, procedures for the corresponding feeder links;
2. that planning shall take into account the pertinent provisions of Appendix 30, in particular those contained in Annexes 4 and 5, as well as other decisions of this Conference. In considering Annexes 6, 7 and 8 account should also be taken of the latest CCIR Recommendations and technological advances;
3. that the plan shall provide for the detailed assignment of the orbital positions and frequency channels available, ensuring that the broadcasting-satellite service requirements submitted by the various administrations are met in an equitable manner satisfactory to all the countries concerned. It should be laid down as a matter of principle that each administration in the Region should be guaranteed a minimum number of channels (4) for the operation of the broadcasting-satellite service. Above this minimum, the special characteristics of the countries (size, time zones, language differences, etc.) shall be taken into account;

4. that all administrations in Region 2 shall submit their broadcasting-satellite service requirements to the IFRB not later than one year before the start of the regional administrative radio conference responsible for planning this service in Region 2. Each administration may update these requirements as it considers necessary. "Requirements" are understood to include the number and boundaries of service areas and the number of channels requested for each of them. Six months before the deadline for submitting requirements, the IFRB shall remind administrations of the need to submit them by means of a circular letter and/or telegram;
5. that planning shall be based on individual reception, but each administration may use the reception system which best meets its requirements (individual or community reception, or both);
6. that, in planning, it shall be borne in mind that systems should be designed with a view to reducing to a minimum technical differences and incompatibilities with the systems of other Regions;
7. that planning should respect the provisions of Resolutions 31 and 700, concerning the matter of inter-regional sharing;

invites the Administrative Council

to make preparations for convening the said regional administrative radio conference using the provisions of this Resolution as a basis for the agenda of the conference;

invites the CCIR

to carry out the necessary studies with a view to presenting, at the appropriate time, the technical information likely to be required as a basis for the work of the regional conference (see also Recommendation 101);

invites the IFRB

1. to request all administrations in Region 2 to submit their broadcasting-satellite service requirements in accordance with *resolves 4* above;
2. to assemble the information submitted by administrations in a form permitting a comparative study thereof and to communicate it to the Secretary-General for publication and dispatch to administrations not later than nine months prior to the said regional administrative radio conference.

DK

RESOLUTION No. 702

**Relating to the Convening of a Regional Administrative Radio Conference
to Establish Criteria for the Shared Use of the VHF and UHF Bands
Allocated to Fixed, Broadcasting and Mobile Services in Region 3**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that frequency allocations in the VHF and UHF bands have been substantially revised at this Conference, resulting in sharing mainly between the fixed, broadcasting and mobile services;
- b) that the uncoordinated development of the services which share this spectrum throughout the Region may lead to unorderly and inefficient spectrum utilization;

- c) that there are no well-established criteria for sharing the spectrum between these services to which these bands are allocated;
- d) that within Region 3 there is no regional arrangement governing the establishment of broadcasting stations in these bands;
- e) that it is not clear at this stage whether an assignment plan for Region 3 would be needed;

noting

the priority given by the World Administrative Radio Conference, 1979, to the convening of future administrative radio conferences;

resolves

1. that a regional administrative radio conference be convened at an appropriate time;
2. that this regional conference should establish the technical criteria for sharing between the fixed, broadcasting and mobile services to which the bands concerned are allocated;
3. that, after establishing the technical criteria, the conference should also decide upon the consequential action to be taken;

invites the Administrative Council

to make preparations for convening the said regional administrative radio conference using the provisions of this Resolution as a basis for the agenda of the conference;

invites the CCIR

to carry out the necessary studies with a view to presenting, at the appropriate time, the technical information likely to be required as a basis for the work of the regional conference;

invites administrations

to make appropriate contributions to the studies of the CCIR.

CW

RESOLUTION No. 703

**Relating to the Calculation Methods and Interference Criteria
Recommended by the CCIR for Sharing Frequency Bands Between
Space Radiocommunication and Terrestrial Radiocommunication Services
or Between Space Radiocommunication Services¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that, in frequency bands shared with equal rights by space radiocommunication and terrestrial radiocommunication services, it is necessary to impose certain technical limitations and coordination procedures on each of the sharing services for the purpose of limiting mutual interference;

¹ Replaces Resolution No. Spa2 – 6 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

- b)* that, in frequency bands shared by space stations located on geostationary satellites, it is necessary to impose coordination procedures for the purpose of limiting mutual interference;
- c)* that the calculation methods and interference criteria relating to coordination procedures referred to in paragraphs *a)* and *b)* above are based upon CCIR Recommendations;
- d)* that, in recognition of the successful sharing of the frequency bands by space radiocommunication and terrestrial radiocommunication services, and the continuing improvements in space technology, each CCIR Plenary Assembly subsequent to the Xth Plenary Assembly, Geneva, 1963, has improved upon some of the technical criteria recommended by the preceding Plenary Assembly;
- e)* that CCIR Plenary Assemblies are held triennially, whereas administrative radio conferences, which are competent to modify the Radio Regulations making substantial use of CCIR Recommendations, are in practice held less frequently and with much less regularity;
- f)* that the International Telecommunication Convention (Malaga-Torremolinos, 1973) recognizes the right of Members of the Union to make special agreements on telecommunication matters; however, such agreements shall not be in conflict with the terms of the Convention or of the Regulations annexed thereto, as far as harmful interference to the radio services of other countries is concerned;

is of the opinion

- a)* that subsequent Plenary Assemblies of the CCIR are likely to make further changes in the recommended calculation methods and interference criteria;
- b)* that administrations should receive advance information of the drafts of the relevant CCIR Recommendations;
- c)* that the administrations should whenever possible apply the current CCIR Recommendations on sharing criteria when planning systems for use in frequency bands shared with equal rights between space radiocommunication and terrestrial radiocommunication services, or between space radiocommunication services;

invites the CCIR

- a)* to request its Study Groups to prepare, at their final meetings before the Plenary Assembly, a provisional list identifying relevant parts of drafts of revised and new CCIR Recommendations affecting the calculation methods and the interference criteria, and also those specific sections of the Radio Regulations to which they are applicable, relating to sharing between space radiocommunication and terrestrial radiocommunication services, or between space radiocommunication services;
- b)* to request the Director of the CCIR to forward this list together with texts of these drafts of revised and new Recommendations to administrations and to the IFRB within thirty days following the final Study Group meetings;

resolves that

1. the IFRB shall immediately distribute the information mentioned in *invites b)* above to all administrations, so that it reaches them as soon as possible before the convening of the subsequent Plenary Assembly.

This should be accompanied by a notice indicating that the enclosed texts are subject to approval at the next CCIR Plenary Assembly;

2.
 - a) each CCIR Plenary Assembly, having adopted any or all of the relevant Recommendations and approved the appropriate portions of the list mentioned in *invites a)* above, should arrange for the Secretary-General to be informed of the list and those Recommendations which affect the appropriate calculation methods and the interference criteria to be employed;
 - b) the Secretary-General shall forward this list and the appropriate texts to all administrations within thirty days, asking them to indicate within four months those CCIR Recommendations or specific technical criteria defined in the Recommendations referred to in paragraph 2.a) above to which they agree for use in the application of the pertinent provisions of the Radio Regulations;
3. the administrations which do not reply to the Secretary-General's consultation within four months shall be sent a telegram asking for their decision on the application of these Recommendations under the relevant provisions of the Radio Regulations. If no reply is received within thirty days from the date of dispatch of the telegram, it shall be concluded that the administration does not wish to express an opinion at that time;
4. should an administration, in its reply to the Secretary-General's consultation, indicate that a given CCIR Recommendation or technical criterion defined in those Recommendations is unacceptable, or should an administration not reply to the Secretary-General's consultation as in paragraph 3 above, the relevant calculation methods and the interference criteria defined in the Radio Regulations shall continue to apply with respect to cases involving that administration;
5. the Secretary-General shall publish, for the information of all administrations, a list prepared by the IFRB on the basis of the replies to the enquiry, of the CCIR Recommendations or of the relevant calculation methods and the interference criteria defined in those Recommendations, indicating the administrations to which each of those Recommendations or relevant technical criteria are acceptable or are not. This consolidated list shall also include the administrations mentioned in paragraph 3 above;
6. the IFRB shall take into account:
 - a) the applicability of the CCIR calculation methods and the interference criteria when making technical examinations with respect to cases involving only administrations to which such methods and criteria are acceptable;
 - b) the applicability of the calculation methods and the interference criteria defined in the Radio Regulations in accordance with the consolidated list referred to in paragraph 5 above, when making technical examinations with respect to cases involving the other administrations;
7. the Secretary-General of the ITU shall annually remind administrations which have not previously replied to communicate their decision in pursuance of paragraph 3 above;
8. if, at a later date, questions arise concerning the application of the relevant calculation methods and interference criteria to a case involving the administrations mentioned in paragraph 3 above, the IFRB shall enquire of the administrations concerned whether or not they would agree to the application of the methods and criteria defined in the relevant CCIR Recommendations referred to in paragraph 2 above;
9. the consolidated list published pursuant to paragraph 5 above shall be updated on the basis of the replies received in accordance with paragraphs 7 and 8 above.

RECOMMENDATIONS

Note by the Secretary-General

In accordance with the decisions of the Conference the Recommendations have been arranged in order and numbered along the lines of the grouping and numbering system below. In addition, in doing so, it was apparent that some Recommendations in one group have direct relationship to Recommendations in other groups, and this has been reflected to facilitate consultation.

	<u>Numbers</u>
<u>RECOMMENDATIONS OF GENERAL APPLICATION</u>	1 - 99
- <u>Principles, general procedures and cooperation</u>	1 - 20
- <u>Specific procedures</u>	30 - 39
- <u>Technical matters</u>	60 - 69
Also refer : Nos. 8, 31 No. 100 No. 505 No. 711	
- <u>Equipment / Terminology</u>	70 - 79
Also refer : Nos. 67, 69	
<u>FIXED SERVICE / FIXED-SATELLITE SERVICE</u>	100 - 199
Also refer : No. 12 Nos. 703, 706	
<u>MOBILE SERVICE / MOBILE-SATELLITE SERVICE</u>	200 - 299
Also refer : No. 12 Nos. 703, 706	
<u>MARITIME MOBILE SERVICE / MARITIME MOBILE-SATELLITE SERVICE</u>	300 - 399
Also refer : Nos. 7, 9 Nos. 200, 201, 202, 203, 204 No. 604	
<u>AERONAUTICAL MOBILE SERVICE / AERONAUTICAL MOBILE-SATELLITE SERVICE</u>	400 - 499
Also refer : Nos. 7, 9 Nos. 202, 204 No. 604 No. 709	
<u>BROADCASTING SERVICE / BROADCASTING-SATELLITE SERVICE</u>	500 - 599
Also refer : Nos. 9, 12 No. 101 Nos. 704, 705, 712	
<u>OTHER SERVICES</u>	600 - 699
Also refer : No. 12 Nos. 701, 703, 704, 707, 710	
<u>RELATING TO MORE THAN ONE SERVICE</u>	700 - 799

XE

RECOMMENDATION No. 1

**Relating to the Use of Space Radiocommunication Systems
in the Event of Natural Disasters, Epidemics, Famines
and Similar Emergencies¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that, in the case of natural disasters, epidemics, famines and similar emergencies, lives can be saved by prompt and effective relief;
- b) that rapid and reliable telecommunications are essential for relief operations;
- c) that, through damage or from other causes, the normal telecommunications facilities in disaster areas are often inadequate for relief operations and cannot be restored or supplemented quickly through local resources;
- d) that use of space radiocommunication systems is one of the means by which rapid and reliable telecommunications could be provided for relief operations;

noting

- a) that known planning of space radiocommunication systems makes no provision for specific frequencies or channels for emergency communications;
- b) that in the absence of such planning it is not feasible to proceed with specifications for rapidly transportable, universally operable earth stations;
- c) that CCIR Report 554-1 gives current results of studies of transportable earth stations for relief operations;

recommends

1. that administrations, individually or in collaboration, provide for the needs of possible relief operations in planning their space radiocommunication systems and identify for this purpose preferred radio-frequency channels and facilities which could quickly be made available for relief operations;
2. that administrations concerned waive the coordination procedures provided for in the Radio Regulations in the case of transportable earth stations used for relief operations;

invites the CCIR

to continue its study of the standard specifications and preferred frequencies for transportable earth stations and for compatible mobile and transportable fixed radiocommunications equipment for relief operations.

¹ Replaces Recommendation No. **Spa2** – 13 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

ZI

RECOMMENDATION No. 2

**Relating to the Examination by World Administrative Radio
Conferences of the Situation with Regard to Occupation
of the Frequency Spectrum in Space Radiocommunications ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the frequency bands available for space applications are limited in number and size;
- b) that the possible positions for a satellite whose main purpose is to establish telecommunication links are limited in number and that certain positions are more favourable than others for certain links;
- c) that all administrations should be enabled to establish the space links which they deem necessary;
- d) that the scale and cost of space networks or systems are such that their operation and development must be hindered as little as possible;
- e) that technology is steadily and rapidly evolving and that the best possible use should be made of resources in space radiocommunications;
- f) that administrations should ensure that frequency assignments for space applications are utilized in the most efficient manner possible consistent with developing technology and that such assignments are relinquished when no longer in use;
- g) that despite the provisions of Article 11 of the Radio Regulations and the principles adopted by the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971, which provide for full consultation and coordination between administrations with a view to the optimum accommodation of all space systems, it is possible that as the use of frequencies and orbital positions increases, administrations may encounter undue difficulty in one or more frequency bands in meeting their requirements for space radiocommunication;

recommends

that the next appropriate world administrative radio conference be empowered to deal with the situation described in *considering g*), if it arises;

invites the Administrative Council

in the event of such situations arising, to include in the agenda for the next appropriate world administrative radio conference specific provisions enabling it to examine all aspects of the use of the frequency band(s) concerned including, inter alia, the relevant frequency assignments recorded in the Master International Frequency Register and to find a solution to the problem.

¹ Replaces Recommendation No. **Spa2** – 1 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

XO

RECOMMENDATION No. 3

**Relating to the Transmission of Electric Power
by Radio Frequencies from a Spacecraft**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that it may become technically feasible in the future to convert some portions of the sun's radiation into electric power on board a spacecraft and to transmit that power to Earth by means of radio transmissions and that such power could augment the world's energy resources;
- b) that the possibility of such high power radiation may adversely affect the propagation of radio waves for other services through the ionosphere;

recognizing

- a) that it would be necessary to ensure that the radio transmission of electric power from space did not give rise to harmful interference to radiocommunication services;
- b) that an assessment needs to be made of any likely ecological and biological effects of radio transmissions of power from space, including in particular to aircraft passing through antenna beams used for such transmissions;

noting

that the Special Preparatory Meeting report to the World Administrative Radio Conference, Geneva, 1979, recognized the technical possibility of a solar power satellite;

noting also

the provisions of Article 6 of the Radio Regulations referring to the obligations on administrations not to cause harmful interference to radiocommunication services operating in accordance with the Regulations;

recommends the CCIR

to undertake appropriate studies on all aspects of the effects of such radio transmissions of power from space on radiocommunication services and to make appropriate recommendations taking into account the ecological and biological implications;

invites the Secretary-General

to send this Recommendation to the Secretary-General of the United Nations.

YJ

RECOMMENDATION No. 4

**Relating to the More Efficient Consolidation of National
and International Radiocommunication Circuits Operating in the
Bands Between 4 000 kHz and 27 500 kHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the ever-increasing need for frequencies particularly in the bands between 4 000 kHz and 27 500 kHz;
- b) the present structure of national and international radiocommunication networks in these bands;
- c) the relatively light traffic load on some of the circuits of these networks;
- d) the provisions of the International Telecommunication Convention (Malaga-Torremolinos, 1973) concerning the rational use of frequencies and spectrum space (Article 33);

and taking into account

- a) the fact that the efficiency of a group of circuits is higher than that of the total number of single circuits;
- b) that as a consequence the total number of frequencies needed may be reduced;
- c) that in certain parts of the world there are areas and countries interconnected by several circuits, both radio and cable;

recommends

1. that, wherever possible, administrations should contribute to reducing the pressure on bands between 4 000 kHz and 27 500 kHz by a more efficient consolidation of lightly-loaded radio circuits;
2. that countries interconnected by telecommunication circuits should, whenever practicable, conclude special arrangements on the common use of existing international radio circuits, operating in the bands between 4 000 kHz and 27 500 kHz;
3. that, as a general rule, these arrangements should give to each participating country equal benefit with regard to operational and financial conditions;
4. that in planning new radio circuits or the extension of existing radio circuits, administrations should as far as possible take into account the principles stated in paragraphs 1 to 3 above.

¹ Replaces Recommendation No. 11 of the Administrative Radio Conference, Geneva, 1959.

YI

RECOMMENDATION No. 5

**Relating to the Means of Reducing the Congestion
in Band 7 (3 - 30 MHz)¹**

The World Administrative Radio Conference, Geneva, 1979,

recognizing

- a) that there is an urgent need to reduce the pressure on Band 7 of the radio frequency spectrum;
- b) that the utilization of modern developments in telecommunication techniques, particularly those involving the use of Band 8 and higher bands, coaxial cables, etc., can contribute to this reduction;
- c) that the utilization of these improved and alternative techniques would entail considerable expenditure whereas the continued use of Band 7 techniques would be less expensive, and therefore some administrations would find it more difficult to introduce these new techniques than other administrations more favourably placed;

recommends

1. that all administrations take the necessary steps to reduce the pressure on Band 7 by adopting the new techniques to the maximum extent possible;
2. that the international organizations giving aid be requested to give special consideration to the supply of equipment to administrations which are not in a position to procure it themselves due to economic difficulties, for the purpose of enabling these administrations to change over to the alternative means of telecommunication, thus contributing towards greater economy in the use of Band 7.

XH

RECOMMENDATION No. 6

**Relating to the Practical Needs of Countries
in Need of Special Assistance²**

The World Administrative Radio Conference, Geneva, 1979,

recommends

that all administrations should make special efforts to cooperate with the administrations of countries in need of special assistance by furnishing monitoring information and such technical assistance as may aid these countries in obtaining proper frequency assignments for their operations;

invites the IFRB

to provide administrations of countries in need of special assistance with the necessary information and technical data, including the detailed explanations of the Radio Regulations, which will permit these countries to choose and obtain proper frequency assignments for their operations.

¹ Replaces Recommendation No. 10 of the Administrative Radio Conference, Geneva, 1959.

² Replaces Recommendation No. 35 of the Administrative Radio Conference, Geneva, 1959.

XK

RECOMMENDATION No. 7

**Relating to the Adoption of Standard Forms
for Ship Station Licences and Aircraft Station Licences¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the standardization of the licence forms issued to stations installed on board ships and aircraft making international voyages and flights would greatly facilitate the task of inspection of such stations;
- b) that standard licence forms for ship stations and for aircraft stations would serve as a useful guide to those administrations desiring to improve their existing national licences;
- c) that standard licence forms could be advantageously used by these administrations as the Form of Certification specified in No. 2027 of the Radio Regulations;

considering further

that the Administrative Radio Conference, Geneva, 1959, formulated:

- a) a set of principles for the draft of a standard licence form (see Annex 1);
- b) specimens of a ship station licence and of an aircraft station licence (see Annexes 2 and 3);

recommends

1. that administrations which find these forms practicable and acceptable should adopt them for international use;
2. that administrations should, as far as possible, endeavour to bring their national licence forms into line with these standard forms.

ANNEX 1 TO RECOMMENDATION No. 7

**Principles for the Formulation of Standard Ship
and Aircraft Station Licences**

The Administrative Radio Conference, Geneva, 1959, considered that, in formulating standard ship and aircraft station licences, the following set of principles should be applied:

1. The licence should, as far as possible, be prepared in tabular form, and each line and column of the table clearly numbered or lettered.
2. The licence for ship stations and the licences for aircraft stations should be as similar as possible.

¹ Replaces Recommendation No. 17 of the Administrative Radio Conference, Geneva, 1959.

3. The size of the licence should be international standard A4.
4. The licence should be designed in a form which facilitates its exhibition on board a ship or an aircraft.
5. The licence should be printed in Latin characters in the national language of the country which issues it. Those countries whose national language cannot be written in Latin characters should use their national language and, in addition, one working language of the Union.
6. The title “Ship Station Licence” or “Aircraft Station Licence” should appear at the top of the licence in the national language as well as in the three working languages of the Union.

These principles were used in formulating the two standard forms which are given in Annexes 2 and 3.

ANNEX 2 TO RECOMMENDATION No. 7
(Full Name of the Authority issuing the Licence,
in the national language)

.....*

SHIP STATION LICENCE
LICENCE DE STATION DE NAVIRE
LICENCIA DE ESTACIÓN DE BARCO

No.

Period of validity

In accordance with *(Title of the National Regulation)* and with the Radio Regulations annexed to the International Telecommunication Convention now in force, this authorization is herewith issued for the installation and for the use of the radio equipment described below:

1	2	3	4
Name of Ship	Call Sign or other Identification	Owner of Ship	Public Correspondence Category

	Equipment	a	b	c	d
		Type	Power (watts)	Class of Emission	Frequency Bands or Assigned Frequencies
5	Transmitters				**
6	Ship's Emergency Transmitters				**
7	Survival Craft Transmitters				**
8	Other Equipment	<i>(Optional)</i>			

For the Issuing Authority:

.....

Place Date Authentication

* The words "Ship Station Licence" written in the national language, if this is not one of the three working languages of the Union.

** Specifically or by reference.

ANNEX 3 TO RECOMMENDATION No. 7
(Full Name of the Authority issuing the Licence,
in the national language)

.....*

AIRCRAFT STATION LICENCE
LICENCE DE STATION D'AÉRONEF
LICENCIA DE ESTACIÓN DE AERONAVE

No.

Period of validity

In accordance with *(Title of the National Regulation)* and with the Radio Regulations annexed to the International Telecommunication Convention now in force, this authorization is herewith issued for the installation and for the use of the radio equipment described below:

1	2	3	4
Nationality and Registration Mark of the Aircraft	Call Sign or other Identification	Type of Aircraft	Owner of Aircraft

	Equipment	a	b	c	d
		Type	Power (watts)	Class of Emission	Frequency Bands or Assigned Frequencies
5	Transmitters				**
6	Survival Craft Transmitters <i>(when applicable)</i>				**
7	Other Equipment	<i>(Optional)</i>			

For the Issuing Authority:

.....

Place Date Authentication

* The words "Aircraft Station Licence" written in the national language, if this is not one of the three working languages of the Union.

** Specifically or by reference.

XN

RECOMMENDATION No. 8

Relating to Automatic Identification of Stations

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) Article 25 of the Radio Regulations which allows, where practicable, automatic identification of stations in appropriate services, and under certain circumstances;
- b) that it is not always feasible or convenient to give manual identification;
- c) that sources of harmful interference often remain unidentified for long periods, with consequential delay in measures that might be taken to minimize the interference;
- d) that automatic identification procedures, where appropriate, may help overcome some of the disadvantages of manual identification;
- e) that automatic transmission of a call sign or other signals may provide a means of identifying some stations for which identification is not always possible, e.g. radio relay and space systems;
- f) the desirability of fostering a common automatic identification method to facilitate effective implementation of the provisions of Article 25, as an alternative to the proliferation of many different systems and modulation techniques that might be used for this purpose;

recommends

that the CCIR study the matter of automatic identification of stations with a view to recommending technical characteristics and methods of implementing a common universal system, including standard modulation techniques, for application in accordance with Article 25, with due consideration to the needs of the different services and types of stations.

ZG

RECOMMENDATION No. 9

**Relating to the Measures to Be Taken to Prevent
the Operation of Broadcasting Stations on Board Ships
or Aircraft Outside National Territories¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the operation of broadcasting stations on board ships or aircraft outside national territories is in conflict with the provisions of Nos. 2665 and 3603 of the Radio Regulations;

¹ Replaces Recommendation No. 16 of the Administrative Radio Conference, Geneva, 1959.

- b) that such operation is contrary to the orderly use of the radio frequency spectrum and may result in chaotic conditions;
- c) that the operation of such broadcasting stations may take place outside the jurisdiction of Member countries, thereby making the direct application of national laws difficult;
- d) that a particularly difficult legal situation arises when such broadcasting stations are operated on board ships or aircraft not duly registered in any country;

recommends

1. that administrations ask their governments to study possible means, direct or indirect, to prevent or suspend such operations, and where appropriate, take the necessary action;
2. that administrations inform the Secretary-General of the results of these studies and submit any other information which may be of general interest, so that the Secretary-General can inform Members accordingly.

XF

RECOMMENDATION No. 10

**Relating to the Presentation of Draft Amendments
to the Radio Regulations¹**

The World Administrative Radio Conference, Geneva, 1979,

having noted

- a) that in the proposals submitted by some administrations a uniform method has been utilized for the presentation of modified texts (e.g. underlining of new texts, and crossing out of suppressed texts);
- b) that this uniform method of presentation has proved itself to be very effective during the consideration of the proposed texts;
- c) that if such a uniform method of presentation were followed in the different stages of preparing conference documents (sub-working groups, working groups) it would facilitate the work of delegations and may facilitate the work of the conference;
- d) that the Secretary-General has taken steps to provide guidelines to administrations to assist them in the presentation of their proposals to administrative conferences in accordance with the provisions of the International Telecommunication Convention and in their coordinated presentation to conferences;

recommends

1. that administrations be invited to present their proposals in a uniform manner;
2. that guidelines be issued by the Secretary-General to facilitate this presentation and that they should also be applied for future conferences;
3. that a uniform presentation be used, through the different stages of preparing texts at least up to working group level, at forthcoming administrative radio conferences.

¹ Replaces Recommendation No. **Mar2** – 20 of the World Maritime Administrative Radio Conference, Geneva, 1974.

B

RECOMMENDATION No. 11

Relating to the Marginal Numbering of the Radio Regulations

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Radio Regulations have a logical paragraph and sub-paragraph numbering system within each article and that consecutive marginal numbering is added to each provision mainly for ease of reference;
- b) that this marginal numbering is extensively used by administrations and the permanent organs of the Union;
- c) that blocks of spare marginal numbers have been made available at the end of each article of the revised Radio Regulations (Geneva, 1979) to facilitate the addition by world administrative radio conferences of new provisions and in particular of new articles;

recognizing

- a) that familiarization with new marginal numbers requires considerable effort and that, therefore, possible changes of marginal numbers by a world administrative radio conference undertaking a partial revision of the Radio Regulations could cause difficulties;
- b) the fact that revision of the marginal numbering system should only be necessary at a future world administrative radio conference convened to undertake a general revision of the Radio Regulations;

recommends

1. that a future world administrative radio conference undertaking a partial revision of the Radio Regulations should use the spare marginal numbers only when it is appropriate to insert additional provisions at the end of articles;
2. that where it is necessary to insert one or more additional provisions within an article, supplementary alpha references should be used as a suffix to existing marginal numbers;
3. that when an existing provision is suppressed, the marginal number should not be re-used.

XM

RECOMMENDATION No. 12

**Relating to the Convening of Future Administrative Radio
Conferences to Deal with Specific Services**

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that item 2.10 of its terms of reference calls on the Conference to propose to the Administrative Council and to the Plenipotentiary Conference a programme for the convening of future administrative radio conferences to deal with specific services;

b) that several Resolutions and Recommendations of this Conference call for, or refer to, the convening of such future conferences;

considering

a) that, in drawing up a programme of future world administrative radio conferences, account needs to be taken of other conferences involving Members of the Union, including regional and sub-regional conferences, the Plenipotentiary Conference, and the meetings of the CCIR;

b) that conferences need to be spaced out sufficiently to allow adequate time for preparation for each conference by administrations and by the permanent organs of the Union;

c) that a number of individual subjects raised in the Resolutions and Recommendations referred to in *noting b)* should be treated by a competent conference and that it will be for the Administrative Council to take the necessary action at the appropriate time for each matter concerned to be included in the agenda of such a conference;

recommends the Administrative Council and, as appropriate, the Plenipotentiary Conference

1. to include the following world administrative radio conferences in the programme of future conferences:

- world administrative radio conference for the mobile services (see Resolution **202**);
- world administrative radio conference for the planning of the HF bands allocated to the broadcasting service (see Resolution **508** and Recommendations **500** and **501**);
- world administrative radio conference on the use of the geostationary-satellite orbit and the planning of space services utilizing it (see Resolution **3**);

2. to include the following regional administrative radio conferences, some of which are already arranged, in the programme of future conferences:

- final session, Region 2, medium frequency broadcasting conference (already arranged for November 1981);
- Region 2 broadcasting-satellite planning conference (already arranged for the second quarter of 1983 - see Resolution **701**);
- planning conference for sound broadcasting in the band 87.5 - 108 MHz for Region 1 and certain countries concerned in Region 3 (see Resolution **510**);
- conference to draw up agreements and associated plans for feeder links to broadcasting satellites operating in the 12 GHz band in Regions 1 and 3 (see Resolution **101**);
- regional administrative radio conference to establish criteria for the shared use of the VHF and UHF bands allocated to fixed, broadcasting and mobile services in Region 3 (see Resolution **702**);
- conference to revise the Plan annexed to the Copenhagen Convention, 1948, for the European Maritime Area - Region 1 (see also Recommendation **300** on this subject);
- conference to review and revise the provisions of the Final Acts of the African VHF/UHF Broadcasting Conference, Geneva, 1963 (see Resolution **509**);
- planning conference for broadcasting in the band 1 605 - 1 705 kHz in Region 2 (see Recommendation **504**);

3. to take the necessary steps to convene each of these conferences as soon as practicable after the completion, in each case, of the necessary preparatory work, bearing in mind:
- a) the timing of the conferences, as expressed in the Recommendations and Resolutions mentioned in *recommends* 1 and 2;
 - b) the need for the conferences to be adequately spaced so as to allow administrations and the permanent organs of the Union adequate time for preparation;
 - c) the programme of planned or foreseen conferences, other than administrative radio conferences, involving Members of the Union;
 - d) the resources which will need to be devoted by individual administrations and by the Union as a whole to the completion of this programme of conferences.

XP

RECOMMENDATION No. 13

**Relating to a World Administrative Radio Conference
to Carry Out a General or Partial Revision of the
Radio Regulations**

The World Administrative Radio Conference, Geneva, 1979,

considering

that it has drawn up a programme of specialized world administrative radio conferences for the coming decade;

considering

the very rapid development of telecommunication technology and the consequences of the application of that technology, particularly with regard to the efficient use of the radio spectrum;

considering

the need for a general or partial revision of the Radio Regulations to ensure the harmonious development of several services not covered by the specialized conferences scheduled by this Conference;

recommends to the Administrative Council

to consider, as from 1990, whether it is necessary to convene a world administrative radio conference to undertake a general or partial revision of the Radio Regulations.

D**RECOMMENDATION No. 30****Relating to International Monitoring ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the desirability of achieving a more effective use of the radio spectrum in order to assist administrations to satisfy their frequency requirements, and, to that end, the desirability of taking steps to make the International Frequency List reflect more accurately the actual use being made of the radio spectrum;
- b) the provisions of the Radio Regulations (Geneva, 1979), under which the International Frequency Registration Board shall review the entries in the Master International Frequency Register with a view to bringing them into conformity, to the maximum extent practicable, with the actual use being made of the radio spectrum;
- c) that monitoring information should assist the Board in discharging that function;

recognizing

- a) that an international monitoring system cannot be fully effective unless it covers all areas of the world;
- b) that, at present, in certain areas of the world, monitoring facilities are either non-existent or insufficient to provide effective coverage;

invites the CCIR

in collaboration with the Board, to study and make technical recommendations concerning the additional facilities required to provide adequate coverage of the world with a view to implementing the Radio Regulations, more especially Articles 10, 11, 12, 13, 14, and 20; and

invites administrations

1. to make every effort to develop monitoring facilities as envisaged in Article 20 of the Radio Regulations bearing in mind the means which may be made available through the appropriate technical assistance organs of the United Nations;
2. to inform the Board of the extent to which they are prepared to cooperate in such monitoring programmes as may be requested by the Board.

YG**RECOMMENDATION No. 31****Relating to a Handbook for Computer-Aided
Techniques in Radio Frequency Management**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that, due to the growing demands on the radio frequency spectrum, there is a need to improve spectrum utilization;

¹ Replaces Recommendation No. 5 of the Administrative Radio Conference, Geneva, 1959.

- b) that the solution of radio frequency management problems requires data storage, data retrieval, and analysis capabilities, and consequently is amenable to the application of computer methods;
- c) that administrations are facing increasingly voluminous and complex tasks in radio frequency management;
- d) that technological developments have made powerful computers and mini-computers available at reasonable cost;
- e) that guidance is required by many administrations with respect to computer-aided techniques in radio frequency management;
- f) that a certain degree of compatibility is desirable to facilitate coordination between administrations and the exchange of data with the IFRB;
- g) that many administrations are interested in, and some are actively developing, computer systems for use in radio frequency management;
- h) that the General Secretariat makes available computer resources and advice to all permanent organs of the Union and provides advice, as appropriate, to administrations;

recommends that the CCIR

1. prepare a handbook by 1982 describing the various aspects involved in applying computer-aided techniques to radio frequency management, discussing the approaches which have been made, providing guidelines for various levels of practical application and making recommendations for those aspects involving international cooperation;
2. periodically review and revise the handbook;

invites the General Secretariat and the IFRB

to participate in the preparation of this handbook.

Q

RECOMMENDATION No. 60

Relating to the Technical Standards of the IFRB¹

The World Administrative Radio Conference, Geneva, 1979,

recognizing

that the Technical Standards of the International Frequency Registration Board (IFRB) are in daily use in the technical examination of frequency assignment notices;

urges the CCIR

to expedite all phases of the programme of studies which will assist the IFRB in the further refinement of its Technical Standards; and

invites administrations

in their participation in the work of the CCIR and its Study Groups, to give special priority to those studies.

¹ Replaces Recommendation No. 2 of the Administrative Radio Conference, Geneva, 1959.

ZB

RECOMMENDATION No. 61

**Relating to Technical Standards for the Assessment
of Harmful Interference in the Frequency Bands Above 28 MHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the definition of harmful interference (No. 163 of the Radio Regulations), being of a qualitative nature, leads to a purely subjective estimation of the nuisance;
- b) that, for the accomplishment of its regulatory tasks, the IFRB has adopted in its Technical Standards, for the frequency bands below 28 MHz, values for the ratio between the wanted signal and the interfering signal, below which harmful interference may be expected;
- c) that "harmful interference" implies a considerable degree, or probability, of interference;
- d) that, as a consequence, it is desirable to determine the level of interference by which any emission, radiation or induction affects a radiocommunication service beyond specific limits established to ensure the quality and reliability of performance required by the nature of the service;
- e) that the assessment of interference levels is related to various factors such as the nature of the services concerned, number of interference sources, percentages of time during which the interfering signal affects the wanted signal;

noting

- a) that the IFRB has been considering the maximum allowable values of interference given in the pertinent CCIR Recommendations to be values which ensure a satisfactory service;
- b) that, however, the IFRB does not possess data on the extent to which these recommended values and the associated percentages of time may be exceeded without affecting a service beyond the specific limits established to ensure the quality and reliability of performance required by the nature of the service;

invites the CCIR

to continue to study this subject and to recommend the technical criteria for the frequency bands above 28 MHz, allocated to space radiocommunication, radio astronomy, and the terrestrial radiocommunication services concerned, in order to enable the IFRB and administrations to apply such criteria for these bands.

¹ Replaces Recommendation No. Spa2 – 12 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

K

RECOMMENDATION No. 62

**Supplementing the Additional Characteristics for
Classifying Emissions and Providing Additional Examples
for the Full Designation of Emissions,
Both as Given in Appendix 6¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that this Conference has adopted in Article 4 a new method for designating emissions based on CCIR Recommendation 507;
- b) that an essential part of this new method is the classification of emissions;
- c) that the new method of classifying emissions distinguishes between basic characteristics (first, second and third symbol) the use of which is mandatory, and additional characteristics (fourth and fifth symbol) the use of which is optional;
- d) that the full classification of emissions consists of all of these five symbols;
- e) that the list of the additional characteristics given in Appendix 6, Part A, may not be sufficiently complete to take account of future new technologies and may require relatively frequent supplementing;
- f) that a CCIR Recommendation would provide a suitable means for such supplementing;

considering further

- a) that a list of examples for the full designation of emissions is given in Appendix 6, Part B;
- b) that this list, however, is not exhaustive and that for this reason No. 265 of the Radio Regulations stipulates that further examples may appear in the latest CCIR Recommendations and that these examples may also be published in the Preface to the International Frequency List;

invites the CCIR

1. to continue its studies on the classification of emissions with a view to supplementing the list of additional characteristics in order to cater for new technologies without, however, changing those additional characteristics which have already been agreed upon and which are contained in Appendix 6, Part A;
2. to provide examples for the full designation of emissions which are not contained in Appendix 6, Part B, also taking account of the supplementing mentioned in paragraph 1 above;

requests the International Frequency Registration Board

to publish the supplementary additional characteristics and the additional examples mentioned in *invites* 1 and 2 above in the Preface to the International Frequency List as soon as they are available in relevant CCIR Recommendations;

and recommends

that administrations use the additional characteristics referred to in *invites* 1 above where appropriate.

¹ Replaces Recommendation No. 8 of the Administrative Radio Conference, Geneva, 1959.

M

RECOMMENDATION No. 63

**Relating to the Provision of
Formulae and Examples for the Calculation of
Necessary Bandwidths**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that Article 4 of the Radio Regulations requires that the necessary bandwidth be part of the full designation of emissions;
- b) that Appendix 6, Part B, gives a partial list of examples and formulae for the calculation of the necessary bandwidth of some typical emissions;
- c) that sufficient information is not available for the determination of the K-factors used throughout the table of examples of the necessary bandwidth in Appendix 6;
- d) that, especially with regard to the efficient utilization of the radio frequency spectrum, monitoring and the notification of emissions, it is required that necessary bandwidths for the individual classes of emission be known;
- e) that for reasons of simplification and international uniformity it is desirable that measurements for determining the necessary bandwidth be made as seldom as possible;

recommends that the CCIR

1. provide, from time to time, additional formulae for the determination of necessary bandwidth for common classes of emission, as well as examples to supplement those given in Appendix 6, Part B;
2. study and provide values of supplementary K-factors required for the calculation of the necessary bandwidth for common classes of emission;

invites the IFRB

to publish examples of such calculations in the Preface to the International Frequency List.

R

RECOMMENDATION No. 64

**Relating to Protection Ratios and
Minimum Field Strengths Required ¹**

The World Administrative Radio Conference, Geneva, 1979,

recognizing

that the available information on protection ratios and minimum field strengths required for each one of the services needs further refinement in order to permit the most efficient planning of the use of the radio frequency spectrum;

¹ Replaces Recommendation No. 3 of the Administrative Radio Conference, Geneva, 1959.

invites the CCIR

1. to continue to study the protection ratios which define the threshold of harmful interference for the several services;
2. to continue to study the signal-to-noise ratios and the minimum field strengths required for satisfactory reception of the different classes of emission in the several services;
3. to continue the study of fading allowances for the several services;
4. to give particular attention to those studies which will assist in the further refinement of the Technical Standards used by the IFRB.

ZM

RECOMMENDATION No. 65

**Relating to the Technology for New Spectrum Sharing
and Band Utilization Schemes**

The World Administrative Radio Conference, Geneva, 1979,

recognizing

- a) that advances in technology, particularly digital radio techniques and new encoding, modulation and access schemes, are making practicable new sharing schemes that offer economical as well as technological advantages for increasing the efficiency of spectrum sharing and band utilization;
- b) that rapid advances are being made in the associated technology;

invites the CCIR

1. to carry out studies of the digital radio techniques and new encoding, modulation and access schemes; examples of areas for such studies are packet radiocommunication, spread-spectrum and multifunction techniques;
2. to develop new concepts in the use of a carrier on a time-sharing basis for different radiocommunication services, i.e. use of the same part of the spectrum by multiple services;
3. to submit Recommendations to appropriate future world administrative radio conferences relating to:
 - the technical criteria and specifications of the most efficient spectrum sharing schemes for the various services;
 - the technical and performance criteria for ensuring compatibility and interworking of systems;
 - the criteria on which to base spectrum management for these new technology systems.

L

RECOMMENDATION No. 66

Relating to Studies of the Maximum Permitted Levels of Spurious Emissions

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that Appendix 8 to the Radio Regulations specifies the maximum permitted levels of spurious emissions, in terms of the mean power level of any spurious component supplied by a transmitter to the antenna transmission line, for the frequency bands below 17.7 GHz;
- b) that the principal objective of Appendix 8 is to specify the maximum permitted levels of spurious emissions that, while being achievable, provide protection against harmful interference;
- c) that excessive levels of spurious emissions may give rise to harmful interference;
- d) that while Appendix 8 applies only to the mean power of the transmitter and the spurious emissions, there are a variety of emissions where the interpretation of the term "mean power" and its consequential measurement are difficult;
- e) that whilst the CCIR is studying this problem, it has not yet furnished adequate Recommendations pertaining to Appendix 8 for frequency bands above 960 MHz;
- f) that spurious emissions from transmitters operating in space stations may cause harmful interference, particularly in regard to intermodulation components from wide-band amplifiers which cannot be adjusted after launch;
- g) that spurious emissions from earth stations also require particular study;
- h) that no information is available from the CCIR regarding spurious emissions from stations employing digital modulation techniques in the frequency bands above 960 MHz;

noting

that in large metropolitan areas radio spectrum usage above 960 MHz is extensive and rapidly growing and that much of this growth in urban areas is now taking place above 10 GHz;

recommends that the CCIR

1. study as a matter of urgency the question of spurious emissions resulting from space services transmissions, and, on the basis of those studies, develop Recommendations for maximum permitted levels of spurious emissions in terms of mean power of spurious components supplied by the transmitter to the antenna transmission line;
2. continue the study of spurious emission levels in all frequency bands, emphasizing the study of those frequency bands, services and modulation techniques not presently covered by Appendix 8;
3. establish appropriate measurement techniques for spurious emissions, including the determination of reference levels for wide-band transmissions as well as the applicability of reference measurement bandwidths;
4. study the categorizing of emissions and spurious emissions in terms of "mean power" and develop appropriate Recommendations to facilitate the interpretation and measurement of "mean power" as it applies to the various classes of emissions.

YH

RECOMMENDATION No. 67

Relating to the Definitions of “Service Area” and “Coverage Area”

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the terms “service area” and “coverage area” are often used in the official texts of the ITU;
- b) that these two terms are used with the same meaning or with different meanings according to the different services;
- c) that there are no definitions of the terms “service area” and “coverage area” in Article 1 of the Radio Regulations;

noting

- a) that the term “service area” is already used in the texts of the Appendices 1, 3, 4, 5 and 25 Mar2 of the Radio Regulations;
- b) that a definition of “service area” for broadcasting, based on the usable field strength, exists in CCIR Recommendation 499-1;
- c) that a definition very similar to that of Recommendation 499-1 is given in Annex 2 to the Final Acts of the Regional Administrative LF/MF Broadcasting Conference (Regions 1 and 3), Geneva, 1975;
- d) that a definition of “service area” for satellite broadcasting is given in Annex 8 to the Final Acts of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977. This definition is of an administrative nature. It is accompanied by a technical note, in which reference is made to an appropriate power flux-density and protection against interference based on the agreed protection ratio;
- e) that technical and administrative aspects are sometimes involved in the definition of “service area” and cannot easily be separated;
- f) that a definition of “coverage area” for satellite broadcasting is given in the above-mentioned Annex 8, based on the value of a certain power flux-density which permits the wanted quality of reception in the absence of interference;

recognizing

that the existing definitions of “service area” and “coverage area” are related to the definitions of usable field strength or usable power flux-density, either in the presence or in the absence of interfering signals;

invites the CCIR

1. to specify a general definition for “coverage area”;
2. to specify the technical basis for a general definition of “service area” which takes into account the present usage of this term throughout all official ITU texts in order to enable future administrative conferences to determine the administrative aspects of such a definition.

E

RECOMMENDATION No. 68

**Relating to Studies and Prediction of Radio
Propagation and Radio Noise¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the efficient utilization of radio frequencies depends upon the use of the most reliable technical data and standards, especially in those parts of the radio frequency spectrum which are most congested;
- b) that the satisfaction of new frequency requirements and the development of radiocommunication services can be facilitated by improvements, where these are necessary, in the Technical Standards at present used by the IFRB;
- c) that former Appendix A of the Radio Regulations, 1968 edition, entitled "Studies and Prediction of Radio Propagation and Radio Noise", recognized the importance of radio propagation and radio noise data as vital for the maximum utilization of radio frequencies and efficient planning of radiocommunication services;
- d) that a principal objective of that Appendix had been the establishment and operation of worldwide systems of observation stations to obtain data on radio noise and on ionospheric, tropospheric and other phenomena affecting radio propagation;
- e) that administrations provide, by the best means possible, for the study, coordination and rapid dissemination of such data and of the predictions relating to these data; and endeavour as well to promote further studies on radio propagation and radio noise through the medium of the CCIR;
- f) that the CCIR has adopted programmes of studies covering many of these problems;
- g) that no radio propagation or radio noise measurements have been carried out in some parts of the world;

requests the CCIR

1. to encourage and assist in initiating the study of radio propagation and radio noise in those areas where an adequate system of observation stations has not yet been established;
2. to continue the studies of radio propagation and radio noise and to take measures for the coordination of the results of these studies carried out in different countries;
3. to give particular attention to those studies which will assist in the further refinement of the Technical Standards used by the IFRB;
4. to report regularly on these matters, even if the studies have not been completed;
5. to continue regular consultation with other organizations undertaking studies of propagation and radio noise, such as the International Scientific Radio Union, in order to attain the maximum possible degree of coordination;

recommends that administrations

1. initiate the study of radio propagation and radio noise in those areas where an adequate system of observation stations has not yet been established, and communicate the results of their studies to the CCIR;

¹ Replaces Recommendation No. 4 of the Administrative Radio Conference, Geneva, 1959.

2. continue to establish and to operate a worldwide system of observation stations to obtain data on radio noise and on ionospheric, tropospheric and other phenomena affecting radio propagation;
3. continue to provide, by the best means possible, for the study, coordination and rapid dissemination of such data and of the predictions relating to them;
4. take note, in formulating and carrying out their radio propagation and radio noise work, of the relevant CCIR Recommendations, Reports, Questions and Study Programmes, particularly regarding the conclusions so far reached, the planning of future studies and the recommended forms of presentation contained in these documents.

P

RECOMMENDATION No. 69

Relating to the Frequency Tolerances of Transmitters¹

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that Appendix 7 to the Radio Regulations specifies the frequency tolerances for transmitters;
- b) that the principal objective of Appendix 7 has been the reduction of frequency space required per channel by means of the tightening of frequency tolerances, and that in many cases considerable improvement in spectrum utilization can continue to be obtained by further tightening of frequency tolerances;
- c) that for some services, an improvement in frequency tolerance to the most stringent value possible in keeping with the state of the technique would be useful in order to increase the signal-to-noise ratio, improve intelligibility and reduce errors;
- d) that in certain cases, a more stringent frequency tolerance would not in practice increase the number of available channels;
- e) that in particular frequency bands, the frequency tolerances specified in Appendix 7 may already approach the minimum useful value for certain categories of station when using existing techniques and methods of operation;
- f) that it will be of considerable assistance to administrations, in the future planning of services and provision of equipment, to know those frequency tolerances which can be considered to be the ultimate useful minimum value for stations when using existing techniques and methods of operation;
- g) that in certain cases, the achievement of more stringent frequency tolerances is subject to economic limitations, which should be known and taken into account;

invites the CCIR

1. to continue its study of frequency tolerances with a view to the reduction of the frequency space required for a given channel;
2. to consider whether or not in certain cases it is possible to predict ultimate values of tolerances, which it would not be necessary to make more stringent under currently known conditions of operation, and to state what these tolerance values might be;

¹ Replaces Recommendation No. 1 of the Administrative Radio Conference, Geneva, 1959.

3. to report upon the possibility of achieving such ultimate values of tolerances consistent with economic and design requirements and other practical considerations;
4. to indicate which, if any, of the tolerances specified in Appendix 7 have already attained these ultimate values.

S

RECOMMENDATION No. 70

**Relating to Studies
of the Technical Characteristics of Equipment ¹**

The World Administrative Radio Conference, Geneva, 1979,

recognizing

that the available technical information concerning the various types of apparatus used for the reception of the different classes of emission in the several services needs to be more complete and more precise in order to permit the most efficient planning of the use of the radio frequency spectrum;

invites the CCIR

1. to continue to study, and to make Recommendations for the bandwidth, selectivity, sensitivity and stability characteristics of various types of apparatus used for the reception of the different classes of emission in the several services;
2. to continue to study practical methods of achieving the recommended characteristics;
3. to study the minimum practicable spacing between adjacent channels for the different classes of emission for the several services in the various bands;
4. to study other desirable conditions to be fulfilled by the complete systems employed by the different services in order to determine the required technical performance of the equipment, including the station terminal apparatus and the antennae;
5. to study methods for determining whether the equipment satisfies the recommended requirements;
6. to give particular attention to those studies which will assist in the further refinement of the Technical Standards used by the IFRB.

ZN

RECOMMENDATION No. 71

**Relating to the Standardization of the Technical and
Operational Characteristics of Radio Equipment**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that administrations are confronted with the necessity of allocating increasing resources to the regulation of radio equipment performance;

¹ Replaces Recommendation No. 6 of the Administrative Radio Conference, Geneva, 1959.

- b) that administrations, and in particular those in developing countries, often have difficulty in providing such resources;
- c) that it would be of advantage to apply, as far as practicable, any mutually agreed standards and associated type approvals;
- d) that a number of international bodies including the CCIR, ICAO, IMCO, CISPR and the IEC already provide recommendations and standards for technical and operating characteristics applicable to equipment performance and its measurement;
- e) that in this context the specific requirements of developing countries have not always been taken fully into account;

recommends

1. that administrations endeavour to cooperate with a view to establishing international performance specifications and associated measuring methods that could be used as models for domestic standards for radio equipment;
2. that such international performance specifications and associated measuring methods respond to widely representative conditions including specific requirements of developing countries;
3. that when such international performance specifications for radio equipment exist administrations, as far as practicable, adopt these specifications as a basis for their national standards;
4. that administrations consider as far as practicable mutual acceptance for the type approval of equipment which conforms to such performance specifications.

ZR

RECOMMENDATION No. 72

Relating to Terminology

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the discussions concerning certain technical terms and definitions in Article 1 have shown the existence of various problems which it has not been possible to settle in a fully satisfactory manner during this Conference;
- b) that technological development and modes of expression may call for the addition, amendment or possibly the deletion of particular definitions;

invites the CCIR and the CCITT,

each in its own field, to examine the definitions of technical terms in Article 1 and to propose any amendments they deem useful;

instructs the Secretary-General

to send the proposals prepared by the two organs to the administrative conferences concerned for consideration within the framework of their terms of reference.

J

RECOMMENDATION No. 73

Relating to the Use of the Term "Channel" in the Radio Regulations

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the term "channel" has been used extensively in the Radio Regulations in the frequency allotment plans of Appendices 16, 18, 25 Mar2, 26, 27, 27 Aer2, 32, 33 and 34;
- b) that the term "channel" has a different meaning in other provisions of the Radio Regulations and for the various radiocommunication services;
- c) that there should not be any ambiguity in the meaning of the term "channel" in its usage throughout the Radio Regulations;

invites the CCIR

to define the term "channel" so that it may be used consistently and without confusion in the Radio Regulations in all working languages of the ITU.

ZO

RECOMMENDATION No. 74

**Relating to the Use of the Rationalized
"Système International d'Unités" (SI)¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that many difficulties associated with older systems of units are remedied by the SI system;
- b) that the International Organization for Standardization has approved the SI system and recommends it for general adoption;

recognizing

- a) that the SI system, already adopted by many international organizations, is recommended by the CCIR and the CCITT and widely used by the permanent organs of the Union;
- b) that the SI system has the status of a national standard in many countries;

¹ Replaces Recommendation No. 9 of the Administrative Radio Conference, Geneva, 1959.

- c) that, in countries where the SI system has not yet been adopted as the national standard, the SI system is also widely used by radio engineers, scientists and authors of radio publications;
- d) that the use of the SI system is continuing to spread in all parts of the world;

recommends

that administrations should use the SI system in their relations with the Union and its organs.

YX

RECOMMENDATION No. 100

**Relating to Preferred Frequency Bands for Systems
Using Tropospheric Scatter**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971, requested the CCIR to study the preferred frequency bands for tropospheric scatter systems and proposed that a future world administrative radio conference should consider this matter;
- b) the technical and operational difficulties pointed out by the CCIR (Report of the Special Preparatory Meeting, Geneva, 1978) in the bands shared by tropospheric scatter systems, space systems and other terrestrial systems;
- c) the additional allocation of frequency bands which this Conference has made for the space services in view of their increasing development;
- d) that the IFRB requires administrations to supply specific information on systems using tropospheric scatter in order to verify compliance with certain provisions of the Radio Regulations (such as Nos. 763, 2560 and 2564);

recognizing nevertheless

that, to meet certain telecommunication requirements, administrations will wish to continue using tropospheric scatter systems;

noting

that the proliferation of such systems in all frequency bands and particularly in those shared with the space systems is bound to aggravate an already difficult situation;

recommends the CCIR

1. to continue studies, as a matter of urgency, of the frequency bands presenting more appropriate propagation features for systems using tropospheric scatter;
2. to continue studying the possibilities and criteria for sharing between systems using tropospheric scatter and other systems, particularly space systems;
3. to prepare, on the basis of these studies, and if possible before its next Plenary Assembly, a Recommendation concerning the specific frequency bands found preferable for such systems. The choice of these bands should take into account allocations to other services, particularly allocations to the space services;

recommends administrations

1. to collaborate with the CCIR, as a matter of urgency and within the limits of their possibilities, by sending it contributions relating to the aforementioned studies;
2. for the assignment of frequencies to new stations in systems using tropospheric scatter, to take into account the latest information prepared by the CCIR to ensure that systems established in the future use a limited number of certain frequency bands;
3. in frequency assignment notifications to the IFRB, to indicate expressly whether they relate to stations of tropospheric scatter systems;

invites the Administrative Council

to make the necessary arrangements for a future world administrative radio conference to consider the frequency bands of the fixed service which shall be used in preference by the new tropospheric scatter systems, taking into account the allocations to the space radiocommunication services and the relevant CCIR Recommendations.

ZE

RECOMMENDATION No. 101

**Relating to Feeder Links for the
Broadcasting-Satellite Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the need for ample information on the characteristics of feeder links for planning the broadcasting-satellite service;
- b) the studies being pursued by the CCIR under the appropriate Study Programme;
- c) that the carrier-to-noise ratios for the feeder links to broadcasting satellites should be of the order of ten times greater than those for the down-links;
- d) that, as regards feeder link interference between broadcasting satellites at different orbital positions, adequate up-link protection ratios (approximately 10 dB greater than those in the down-link) would appear to be readily achievable by antenna pattern discrimination in earth station transmitting antennae which would clearly have to be larger in diameter than the receiving antennae used in the down-links;
- e) that, where planning is based on isolation parameters such as radiation patterns for space station transmitting antennae, carrier interleaving, or polarization discrimination in meeting the down-link carrier-to-interference requirements between service areas served from a single orbital position, the increased carrier-to-interference requirements in the up-links serving the satellite(s) at that same orbital position will have to use the same isolation parameters provided that this produces an improvement of about 10 dB in net isolation. The characteristics of the transmitting earth station will clearly not affect this isolation, apart from the purity of their on-beam polarization;

¹ Replaces Recommendation No. Sat - 5 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

f) that in the implementation of broadcasting-satellite systems, consideration must be given to all aspects of associated space operation service functions (tracking, telemetry, telecommand and ranging) in connection with the operation of broadcasting satellites;

invites the CCIR

1. to continue the study of those radiation characteristics of receiving antennae of space stations in the broadcasting-satellite service which, singly or in combination with other means of discrimination, would give the necessary protection ratios for the feeder links of systems in the broadcasting-satellite service for (a) satellite(s) occupying a given position in the geostationary-satellite orbit;
2. to continue the study of those polarization characteristics of receiving antennae of space stations in the broadcasting-satellite service which, singly or in combination with other means of discrimination, would give the necessary protection ratios for the feeder links of systems in the broadcasting-satellite service for (a) satellite(s) occupying a given position in the geostationary-satellite orbit;
3. to continue the study of the technical feeder link characteristics required to implement the Plan for this service;
4. to study the technical and design characteristics and requirements which affect the provision of "space operation service functions" of space stations in the broadcasting-satellite service;
5. to study the requirements for adjacent-channel isolation in feeder links for (a) satellite(s) in the broadcasting-satellite service occupying a given position in the geostationary-satellite orbit.

X

RECOMMENDATION No. 102

**Relating to the Study of Modulation Methods
for Radio-Relay Systems in Relation to Sharing
with Fixed-Satellite Service Systems ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that Article 8 of the Radio Regulations permits the sharing of certain frequency bands by the fixed-satellite service and the fixed service;
- b) that the sharing criteria to avoid mutual interference between the stations in these two services have been established in Articles 27 and 28;
- c) that among many factors of over-all efficiency of utilization of frequency bands it seems that the reduction of interference between two services is most important;

¹ Replaces Recommendation No. Spa 4 of the Extraordinary Administrative Radio Conference, Geneva, 1963.

noting

- a) that the over-all efficiency of utilization of the frequency bands shared by the two services depends on the methods of modulation used by the systems concerned;
- b) that studies of the preferred modulation characteristics for fixed-satellite service systems are to be carried out under Study Programme 2D-1/4 of the CCIR;

recommends

that the CCIR should study especially, under the general framework of Question 2-3/4, modulation methods (such as pulse-code modulation using phase or frequency modulation) in particular for line-of-sight radio-relay systems in relation to sharing with fixed-satellite service systems.

ZA

RECOMMENDATION No. 103

**Relating to Carrier Energy Dispersal in Systems
in the Fixed-Satellite Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that use of carrier energy dispersal techniques in systems in the fixed-satellite service can result in a substantial reduction of interference to stations of a terrestrial service operating in the same frequency bands;
- b) that the use of such techniques can result in a substantial reduction in the level of interference between systems in the fixed-satellite service operating in the same frequency bands and in a corresponding increase of efficiency in the utilization of the geostationary-satellite orbit;
- c) that such techniques are being regularly and successfully employed in systems in the fixed-satellite service without noticeable deterioration of the quality of operation;

recommends

1. that systems in the fixed-satellite service employing angle modulation by analogue signals should use carrier energy dispersal techniques as far as is practicable with a view to spreading energy at all times and in a manner consistent with the satisfactory operation of the systems;
2. that systems in the fixed-satellite service employing digital modulation should use carrier energy dispersal techniques when this becomes technically feasible and is practical.

¹ Replaces Recommendation No. Spa2 - 11 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

ZZ

RECOMMENDATION No. 200

**Relating to the Date of Entry into Force of the
10 kHz Guardband for the Frequency 500 kHz in
the Mobile Service (Distress and Calling)**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the radio frequency spectrum should be used in the most efficient possible way;
- b) that this Conference has adopted a guardband from 495 kHz to 505 kHz for the frequency 500 kHz, which is the international distress and calling frequency in radiotelegraphy in the mobile service;

recognizing

- a) that an adequate amortization period should be allowed for the radio equipment currently in service;
- b) that technical progress has led to the production of more stable and reliable equipment;

recommends

that the next competent world administrative radio conference decide on the date of entry into force of this new arrangement;

requests the Secretary-General

to forward this Recommendation to the Inter-Governmental Maritime Consultative Organization (IMCO) with a request to examine this subject as part of its study of the maritime distress and safety system and to submit to the above-mentioned conference a recommendation relating to the date of entry into force of the new guardband.

YS

RECOMMENDATION No. 201

Relating to Distress, Urgency and Safety Traffic ²

The World Administrative Radio Conference, Geneva, 1979,

having noted

that the Inter-Governmental Maritime Consultative Organization (IMCO):

- a) has adopted a Resolution ¹ on the subject of the maritime distress system;
- b) has under development a future global maritime distress and safety system, proposed improvements for the near future and the definition of requirements and proposed transitional measures for the distant future;

¹ IMCO Resolution A.420 (XI).

² Replaces Recommendation No. Mar2 – 16 of the World Maritime Administrative Radio Conference, Geneva, 1974.

further noting

that studies having a bearing upon distress and safety measures as part of a maritime-satellite radiocommunication system form the subject of CCIR Questions and Study Programmes;

considering

- a) that the IMCO requirement for the possible future fitting of automatic distress alerting, followed by the automatic transmission of additional information concerning the distress case, is of particular importance;
- b) that automatic distress alerting, followed by the automatic transmission of additional information concerning the distress case, should take place on one or more frequencies reserved for distress traffic;
- c) that adequate frequencies must be made available for associated requirements for safety calling and communications;
- d) that the transmission and the recorded reception of distress, urgency and safety messages should be able to take place without interruption and irrespective of human attendance;

recommends

1. that IMCO be invited to continue its studies with a view to early implementation of the future distress system;
2. that CCIR continue its studies to determine the role of maritime-satellite radiocommunications in a coordinated distress system as well as in safety applications;
3. that administrations consider, in the light of continuing technological developments, the need to reserve one or possibly more frequencies for distress purposes;
4. that administrations consider, in the light of advancing techniques, the introduction of more automated telecommunication systems for the dissemination of distress, urgency and safety messages on a continuous basis, to replace Morse telegraphy and possibly radiotelephony;
5. that administrations have as an objective the taking of a decision in this matter at the next competent world administrative radio conference.

F

RECOMMENDATION No. 202

**Relating to the Improvement of Protection of Distress and Safety
Frequencies, and Those Related to Distress and Safety,
Against Harmful Interference**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the importance of minimizing the danger of harmful interference to frequencies used for the safeguarding of human life;
- b) the unanimous agreement by this Conference, in its consideration of Article 18 concerning interference, that improved protection against harmful interference should be given to distress and safety frequencies and those related to distress and safety;

- c) that such improved protection could be achieved, inter alia, by including provisions in the Radio Regulations ensuring that all tests on these frequencies should be carried out on artificial antennae or with reduced power, wherever practicable;
- d) that these provisions pertain to Article 38 concerning frequencies for distress and safety;

noting, however,

that this Conference is not competent to revise Article 38;

invites administrations

to study this matter and to submit proposals for consideration by the next competent world administrative radio conference.

YA RECOMMENDATION No. 203

**Relating to the Future Use
of the Band 2 170 - 2 194 kHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the frequency 2 182 kHz is the international distress frequency for radiotelephony;
- b) that, except for transmissions authorized on the carrier frequency 2 182 kHz, all transmissions on the frequencies between 2 173.5 kHz and 2 190.5 kHz are forbidden;
- c) that, in Region 1, the adjacent bands 2 170 - 2 173.5 kHz and 2 190.5 - 2 194 kHz are used, respectively, by coast stations calling ship stations (including selective calling), and by ship stations calling coast stations;

noting

- a) that this Conference has amended the Table of Frequency Allocations in order to reduce the guardband around the frequency 2 182 kHz to ± 8.5 kHz and has allocated the bands 2 170 - 2 173.5 kHz and 2 190.5 - 2 194 kHz exclusively to the maritime mobile service on a worldwide basis;
- b) that a need now exists to replan the entire band 2 170 - 2 194 kHz and to review the regulatory provisions, with particular reference to Articles 38 and 60;

recommends

that the next competent world administrative radio conference be invited:

1. to examine the allocations within the band 2 170 - 2 194 kHz;
2. to review the relevant technical and operational parameters with a view to reducing further the guardband around the frequency 2 182 kHz;
3. to develop any necessary regulatory provisions;
4. to develop from these considerations plans for the implementation of any new arrangement;
5. to determine the date of coming into force of such plans and provisions;

requests the Secretary-General

to send a copy of this Recommendation to the Secretary-General of the Inter-Governmental Maritime Consultative Organization (IMCO) for study by the competent body and for making recommendations;

invites administrations

to study this matter and to submit proposals for consideration by the next competent world administrative radio conference.

C

RECOMMENDATION No. 204

**Relating to the Application of Chapters NX, NXI and NXII
of the Re-Arranged Radio Regulations ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Radio Regulations provide the basic regulatory framework for all the mobile services and that the provisions of the Radio Regulations should correspond as closely as possible with the needs and operational realities of these services;
- b) that this Conference has adopted the Re-Arrangement of the Radio Regulations as proposed by the Group of Experts, taking into account proposals made by a number of administrations for further refinement of the Re-Arrangement;
- c) that the separation of the previous mobile service provisions into specific chapters dealing with individual mobile services has highlighted certain anomalies in relation to each of the mobile services, and particularly in their applicability to the aeronautical mobile service and the land mobile service;
- d) that certain of these anomalies raise substantive operational issues with which this Conference is not competent to deal;
- e) that the aeronautical mobile service is concerned with the communications to ensure safe and regular operation of aircraft;
- f) that towards this objective the International Civil Aviation Organization has agreed upon standards and recommended practices adapted to the needs of aircraft operation which have been proven in practice and are well established in current use;

recommends

that the next competent world administrative radio conference revise Chapters NX, NXI and NXII ¹ to bring them into accord with the current needs and practices of the services concerned;

instructs the Secretary-General

to communicate the text of this Recommendation to ICAO and IMCO and to request the attention of these organizations to a study of the material contained in Chapters NX and NXI ², respectively, with a view to assisting administrations in their preparations for that conference.

¹ Chapters X, XI and XII of the Radio Regulations (1979).

² Chapters X and XI of the Radio Regulations (1979).

YD

RECOMMENDATION No. 300

**Relating to Planning the Use of Frequencies by the
Maritime Mobile Service in the Band 435 - 526.5 kHz in Region 1**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the allocations to the maritime mobile service in the 415 - 526.5 kHz band have been modified by this Conference;
- b) that this Conference has adopted Recommendations **200** and **309** concerning this band;
- c) that certain technical standards used in the maritime mobile service have been revised by this Conference;
- d) that some of the technical standards upon which the Assignment Plan for European countries contained in the Final Acts of the European Maritime Conference, Copenhagen, 1948, was based, have become out-of-date;
- e) that ships using frequencies within this band travel worldwide;
- f) that some countries have already assigned frequencies for other services operating in this band that may place constraints on the planning for the maritime mobile service;
- g) that there is consequently a need for detailed examination regarding the use and planning of this band which takes into account the latest technical developments and standards;

noting

that this Conference has recommended the convening of an administrative radio conference for the mobile services;

recommends to the Administrative Council

to ensure that the conference for mobile services is competent to take decisions regarding the planning and use of frequencies in this band in Region 1;

requests the CCIR

to undertake, as a matter of urgency, the study of the technical and operational aspects of these matters including the need for criteria for sharing with other services;

invites

1. the Secretary-General to send this Recommendation to the Inter-Governmental Maritime Consultative Organization (IMCO) with a request for the urgent consideration of the operational requirements for the maritime mobile service using this frequency band, and to make such recommendations as may be appropriate;
2. administrations of Region 1 to study this matter and to submit proposals for consideration by the conference for mobile services.

YE

RECOMMENDATION No. 301

**Relating to Planning for the Use of Frequencies in the
Bands Between 1 606.5 kHz and 3 400 kHz Allocated to the
Maritime Mobile Service in Region 1**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the allocations to the maritime mobile service in the bands between 1 606.5 kHz and 3 400 kHz have been modified by this Conference;
- b) that this Conference has adopted Recommendation 203 and Resolution 38 concerning these bands;
- c) that it is desirable to achieve the most efficient use of these bands in the implementation of the revised Table of Frequency Allocations;
- d) that ships using frequencies within these bands travel worldwide;
- e) that existing plans are limited to regional use;
- f) that there is consequently a need for detailed examination regarding the use and planning of these bands;

noting

that this Conference has recommended the convening of an administrative radio conference for the mobile services;

recommends to the Administrative Council

to ensure that the conference for mobile services is competent to take decisions regarding planning and use of frequencies in these bands in Region 1;

requests the CCIR

to undertake, as a matter of urgency, the study of the technical and operational aspects of these matters including the need for criteria for sharing with other services;

invites

1. the Secretary-General to send this Recommendation to the Inter-Governmental Maritime Consultative Organization (IMCO) with a request for the urgent consideration of the operational requirements for the maritime mobile service using these frequency bands, and to make such recommendations as may be appropriate;
2. administrations of Region 1 to study this matter and to submit proposals for consideration by the conference for mobile services.

YM

RECOMMENDATION No. 302

**Relating to the Improved Use of the HF Radiotelephone
Channels for Coast Stations in the Bands Allocated Exclusively
to the Maritime Mobile Service¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that a large number of requests for HF radiotelephony allotments was submitted to the World Maritime Administrative Radio Conference, Geneva, 1974;
- b) that the number of channels resulting from the revision of Appendix 16 is not sufficient to satisfy these requirements in optimum conditions;
- c) that the resulting sharing patterns have been formed mainly by operational considerations;
- d) that after the present Conference the optimal use of the HF radiotelephony channels in the bands allocated exclusively to the maritime mobile service will be of even greater importance;
- e) that, on each channel, administrations should afford one another an equivalent quality of service;
- f) that the efforts to develop technical means to facilitate the common use of frequencies by neighbouring coast stations of different administrations, or by a coast station operating on behalf of more than one administration, should be continued;

recommends administrations

- 1. to make every effort to reach mutually satisfactory operational arrangements, which may include:
 - different time-sharing arrangements;
 - differentiated hours of opening;
 - on a voluntary and regional basis, the use of HF radiotelephone channels in an order of overflow priority;
- 2. to employ every practicable means, which may include those mentioned above, to ensure that the best possible use is made of the HF coast radiotelephone channels in the bands allocated to the maritime mobile service;

invites administrations

- 1. when assigning frequencies in the HF bands to coast stations, to take into account the special rules contained in No. 954 and the provisions of No. 1804 of the Radio Regulations;

¹ Replaces Recommendation No. Mar2 – 7 of the World Maritime Administrative Radio Conference, Geneva, 1974.

2. to ensure that coast stations:
- use the frequency band and the minimum power appropriate to the propagation conditions and the nature of the service;
 - use directional antennae whenever possible;
 - give appropriate instructions to ship stations in accordance with No. 5056 of the Radio Regulations;

requests the CCIR

to continue its study with a view to improving all technical and operational sharing criteria relating to the use of HF coast radiotelephone channels in the bands allocated exclusively to the maritime mobile service, including the choice of available channels by electronic or other means to facilitate multiple access to the channels.

XJ

RECOMMENDATION No. 303

**Relating to the Use of the Carrier Frequencies 4 125 kHz
and 6 215.5 kHz to Supplement the Carrier Frequency 2 182 kHz
for Distress and Safety and for Call and Reply Purposes
in the Zone of Regions 1 and 2 South of Latitude 15° North,
but Including Mexico, and in the Zone of Region 3
South of Latitude 25° North¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that in some areas of the world it is not practicable to provide reliable coverage for distress and safety purposes on the international radiotelephony distress frequency 2 182 kHz, because of the great distances between coast stations keeping watch on this frequency;
- b) that a large number of ships equipped only for radiotelephony make voyages in these areas during which they are often out of range of coast stations keeping watch on the carrier frequency 2 182 kHz;
- c) that to overcome this problem many administrations in the above-mentioned zones have established watches at their coast stations for distress and safety and for call and reply purposes on the carrier frequencies 4 125 kHz and 6 215.5 kHz; and that these watches have proved to be effective supplements to those kept on 2 182 kHz;
- d) that provision is made in the Radio Regulations for the carrier frequency 4 125 kHz to be used in the zone of Regions 1 and 2 south of latitude 15° North, including Mexico, and in the zone of Region 3 south of latitude 25° North and also for the carrier frequency 6 215.5 kHz to be used in the zone of Region 3 south of latitude 25° North as supplementary frequencies to 2 182 kHz for distress and safety and for call and reply purposes;
- e) that it could be in the interests of ships equipped only for radiotelephony and operating in these zones to have facilities to send and receive on the carrier frequencies 4 125 kHz and 6 215.5 kHz when calls on 2 182 kHz might be ineffective;

¹ Replaces Recommendation No. Mar2 – 4 of the World Maritime Administrative Radio Conference, Geneva, 1974.

recommends

1. that administrations bring to the notice of the operators of ships under their jurisdiction which are equipped only for radiotelephony that certain land stations as indicated in the List of Coast Stations provide facilities for distress and safety and for call and reply purposes on the carrier frequency 4 125 kHz to supplement the carrier frequency 2 182 kHz in the zone of Regions 1 and 2 south of latitude 15° North, including Mexico, and in the zone of Region 3 south of latitude 25° North and also for the carrier frequency 6 215.5 kHz to be used in the zone of Region 3 south of latitude 25° North;
2. that administrations whose ships are equipped only for radiotelephony consider that, although it is not mandatory for ship and coast stations to provide facilities for sending and receiving on the carrier frequencies 4 125 kHz and 6 215.5 kHz, it may be essential for the safety of radiotelephony ships operating in the above-mentioned zones to have such facilities.

YP

RECOMMENDATION No. 304

**Relating to the Frequencies in Appendix 16, Section B,
of the Radio Regulations, Provided for Worldwide Use by
Ships of All Categories and by Coast Stations ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the frequencies indicated in the table of single-sideband transmitting frequencies for simplex (single-frequency) operation and for intership cross-band (two-frequency) operation are not yet in worldwide use for communications between ship and coast stations;
- b) that there is a worldwide need for ocean-going vessels to be able to communicate with coast stations of any administration;

recommends

that, as far as possible, administrations provide a service on these frequencies at their main coast radiotelephone stations and notify to the Secretary-General the particulars of these services for publication in the List of Coast Stations.

¹ Replaces Recommendation No. Mar2 – 6 of the World Maritime Administrative Radio Conference, Geneva, 1974.

ZW

RECOMMENDATION No. 305

**Relating to the Use of Channels 15 and 17 of Appendix 18
by On-Board Communication Stations ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that channels 15 and 17 of Appendix 18 were provided by the World Administrative Radio Conference, Geneva, 1967, for use for internal operational communications on board ships within territorial waters and with an effective radiated power not in excess of 0.1 W, and that this power limit was raised to 1 watt by the World Maritime Administrative Radio Conference, Geneva, 1974;
- b) that considerable use is made of these channels by a number of administrations;
- c) that some administrations have not used these channels for on-board communication because of the shortage of VHF channels for other maritime mobile needs;
- d) that, for the same reason, these administrations wish to have the use of these channels for on-board communication discontinued;
- e) that the present Conference has retained the relevant provisions in the Table of Frequency Allocations;

noting

that the CCIR has adopted Recommendation 542 and Report 589-1;

recognizing

- a) that several common channels for on-board communication are necessary internationally to meet world-wide requirements in the future;
- b) that there may be a need for frequencies to provide for the use of repeater stations on large vessels, such as container ships, tankers, etc.;
- c) that additional experience concerning the application and effectiveness of the UHF channels maintained for this purpose by the present Conference may be required;

recommends

1. that the next competent world administrative radio conference determine whether the use of channels 15 and 17 of Appendix 18 is still necessary for on-board communication and, if it is not, the date by which such use should cease;
2. that the same conference review the UHF channels being used for on-board communication stations to determine whether the number of channels and their location in the radio spectrum are satisfactory and meet the requirements of such stations;
3. that the same conference consider the need for additional allocations for use by on-board communication stations on a worldwide basis, including the territorial waters of all countries;
4. that due consideration be given by administrations to the technical standards and functioning of such stations to ensure their mutual compatibility in an effective international system of operation.

¹ Replaces Recommendation No. Mar2 – 11 of the World Maritime Administrative Radio Conference, Geneva, 1974.

YQ

RECOMMENDATION No. 306

**Relating to the Establishment of a Watch by Coast Stations
for Distress Purposes on the Frequency 156.8 MHz¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the frequency 156.8 MHz has been designated as the international distress frequency for stations in the maritime mobile service operating in the authorized bands between 156 MHz and 174 MHz;
- b) that this frequency is most useful for short range communication and its use in distress situations will materially improve the safety of life at sea, particularly in areas of heavy traffic where an efficient listening watch can be maintained;
- c) that many administrations already provide radio coverage of their coasts on frequencies in the band 156 - 174 MHz;
- d) that, however, it would be impracticable or unnecessary for some administrations in their prevailing circumstances to provide sufficient coverage of their coasts in the band 156 - 174 MHz to enable an effective watch to be kept on 156.8 MHz for distress purposes;

recommends

that administrations, where they consider it necessary and practicable, take steps to establish a watch for distress purposes on the coasts of their countries on the frequency 156.8 MHz.

YL

RECOMMENDATION No. 307

**On the Choice of a Frequency in the Maritime Mobile Bands Between
1 605 kHz and 3 800 kHz to Be Reserved for Safety Requirements²**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that MF radiotelephony is of increasing usefulness for the safety of ships since:
 - i) the International Convention on Safety of Life at Sea (London, 1960) requires that cargo ships of 300 tons gross tonnage and upwards but less than 1 600 tons gross tonnage, unless fitted with a radiotelegraph station, shall be fitted with a radiotelephone station;

¹ Replaces Recommendation No. **Mar2** – 10 of the World Maritime Administrative Radio Conference, Geneva, 1974.

² Replaces Recommendation No. **Mar2** – 2 of the World Maritime Administrative Radio Conference, Geneva, 1974.

- ii) the Inter-Governmental Maritime Consultative Organization recommends¹ that ships compulsorily fitted with either a radiotelegraph (i.e. 1 600 tons gross tonnage and upwards) or a radiotelephone installation shall have in addition facilities for listening continuously, while at sea, on the radiotelephone distress frequency; that the fitting of radiotelegraph ships with a radiotelephone transmitter capable of operating in the 2 MHz band should be encouraged; and that each administration should consider introducing a national requirement that ships to which the Convention on Safety of Life at Sea (London, 1960) does not apply should be fitted with a radiotelephone distress frequency watch receiver;
- b) that, notwithstanding, in many areas the watch on the MF radiotelephone distress frequency is very difficult because of the large number of routine traffic calls sent on that frequency;
- c) that similar difficulties would occur even if watch and alarm systems more advanced than those used at present were adopted;
- d) that in some areas MF radiotelephone traffic is constantly increasing;

requests the CCIR

to undertake, as a matter of urgency, the study of the technical and operational aspects of these matters;

recommends

that the next appropriate world administrative radio conference determine, in the light of the results of the work of the CCIR:

1. a frequency reserved for transmitting – to the exclusion of any routine traffic calls – distress calls and messages and, possibly, urgency signals and messages, safety signals and certain safety messages;
2. a frequency, different from the preceding, for voice or selective calling for routine traffic;
3. suitable guardbands for both these frequencies.

YO

RECOMMENDATION No. 308

**Relating to the Designation of Common Frequencies
in the Medium Frequency Bands for Use by
Coast Radiotelephone Stations for
Communicating with Ships of Other Nationalities²**

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that, on small ships fitted with single-sideband equipment, a crystal-controlled fixed frequency receiver is essential to facilitate correct tuning;

¹ IMCO Resolution A.217 (VII).

² Replaces Recommendation No. Mar 5 of the World Administrative Radio Conference, Geneva, 1967.

- b) that, if such ships make international voyages and communicate with coast stations of other nationalities, they need to be provided with a considerable number of additional crystals;
- c) that, by reducing the number of receiver crystals required, the cost of single-sideband receivers can be kept to a satisfactory level;

considering

- a) that international working frequencies should be assigned to all coast stations for working with ships of other nationalities, without precluding their use for national purposes;
- b) that, according to the Master International Frequency Register, no frequencies appear to be available for common use by all coast stations for working with ships of other nationalities, either on a worldwide or on a regional basis;

recommends

1. that administrations study this question at the earliest opportunity with a view to formulating proposals for consideration by the next administrative radio conference competent to deal with the matter;
2. that, in the meantime, countries should explore the possibility of concluding regional, bilateral or multilateral arrangements to provide common frequencies for coast stations working with ship stations of other nationalities.

YB

RECOMMENDATION No. 309

**Relating to the Designation of a Frequency in the Bands
435 - 495 kHz or 505 - 526.5 kHz (525 kHz in Region 2) on a
Worldwide Basis for the Transmission by Coast Stations
of Navigational and Meteorological Warnings to Ships,
Using Narrow-Band Direct-Printing Telegraphy**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that for the purpose of improving the existing provisions of the present maritime distress and safety system the Inter-Governmental Maritime Consultative Organization (IMCO) has recommended¹ that administrations should introduce narrow-band direct-printing telegraphy broadcasts for the purpose of promulgating navigational and meteorological warnings to shipping;
- b) that such transmissions would enhance the safety of life at sea;
- c) that the CCIR has recommended² an automated direct-printing telegraph system for transmission of navigational and meteorological information to ships;

¹ See IMCO Resolution A.420 (XI).

² See CCIR Recommendation 540.

- d) that in some countries in Europe, administrations are already providing such transmissions on an experimental basis, using the frequency 518 kHz;
- e) that a number of administrations have proposed to this Conference that the frequency 518 kHz be designated on a worldwide basis for this purpose;
- f) that this conference considers this to be a matter for the next competent world administrative radio conference;
- g) that there is a continuing need for transmission of navigational and meteorological warnings to ships by means of normal Morse telegraphy;

recommends

that the next competent world administrative radio conference should consider this matter and take action as required to designate a suitable international frequency for the purpose of promulgating navigational and meteorological warnings to shipping using narrow-band direct-printing telegraphy, whilst maintaining provisions for the continuation of existing normal Morse telegraphy for promulgating such warnings;

invites administrations

to study this matter with a view to submitting appropriate proposals to the next competent world administrative radio conference;

requests the Secretary-General

to send this Recommendation to the Inter-Governmental Maritime Consultative Organization (IMCO) with a request to continue its study on this matter and to make such recommendations as may be desirable.

ZY

RECOMMENDATION No. 310

**Relating to an Automated UHF Maritime Mobile
Radiocommunication System**

The World Administrative Radio Conference, Geneva, 1979,

recognizing

- a) the continued growth of world population and the associate need for safe and efficient transportation of foodstuffs and other essential goods;
- b) the need for a rapid and effective worldwide economic growth;
- c) that the maritime fleets are increasingly engaged in trade and these fleets are growing substantially;

considering

- a) that the international maritime mobile VHF band (Appendix 18) has become congested in many areas of the world;

- b) that the future requirements for additional UHF radio telephone channels for port operations, ship movements and public correspondence in the maritime mobile service have been estimated to be as many as 200 - 240 duplex channels in some congested areas;
- c) that it is highly desirable for the UHF maritime and other international mobile public correspondence systems to become fully automated to ensure the efficient utilization of the channels and the economic operation of the services, to the benefit of the users;
- d) that standardization is of great importance in the international mobile services;
- e) that administrations may wish to use some or all of the channels designated for maritime use for other automated mobile services. Examples of such usage are joint or combined radiocommunications in ports, waterways and adjacent piers. In other areas where there is no need for mobile services, these channels could be used for other radio services;

noting

- a) CCIR Report 587-1 on this subject in response to Question 23-2/8;
- b) CCIR Decision 30 directing Interim Working Party 8/5 to study this subject further on the basis of Question 23-2/8, taking into account the results of studies in Report 587-1;
- c) Inter-Governmental Maritime Consultative Organization (IMCO) COM Circular 73 stating short range telecommunications requirements for 10 MHz of bandwidth for automated international maritime services;

recommends

that the next competent world administrative radio conference:

1. designate suitable bands having sufficient spectrum for a maritime mobile radiocommunication system, including public correspondence, from those allocated on a worldwide basis to the mobile service.
2. identify the means for establishing, as required, regional assignment plans which take into account the worldwide needs of the maritime mobile service and allow for compatibility with other radio services;

invites the CCIR

1. to study, as a matter of urgency, bands which are preferred from operational and sharing aspects and to issue a Recommendation or a Report before the next competent world administrative radio conference;
2. to study, in consultation with the CCITT, the technical and operational aspects of an integrated and automated maritime and land mobile system;

request the Secretary-General

to communicate this Recommendation to the Inter-Governmental Maritime Consultative Organization (IMCO) for consideration and comments.

XL

RECOMMENDATION No. 311

**Relating to the Introduction of an Additional Tone
After the Radiotelephone Alarm Signal Transmitted by
Coast Stations ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that coast stations receive numerous radiotelephone alarm signals which cannot be identified because no voice announcement follows the alarm or because the announcement is unintelligible owing to low modulation or interference;
- b) that coast stations have an obligation to take action to identify all alarm signals received and to alert search and rescue services for subsequent action;
- c) that many radiotelephone alarm signals which precede the MAYDAY RELAY announcement are from coast stations at considerable distances from the receiving coast stations;
- d) that it could be of considerable value if the radiotelephone alarm signal transmitted by coast stations were distinguishable from that transmitted by ship stations;

recognizing

- a) that no characteristics introduced to distinguish the radiotelephone alarm signal transmitted by coast stations from that transmitted by ship stations should affect the normal reception of the radiotelephone alarm signal;
- b) that proposals were made to the World Maritime Administrative Radio Conference, Geneva, 1974, to add a single tone following the radiotelephone alarm signal transmitted by coast stations, and that practical tests conducted in the North Sea area during that Conference indicated a 1 300 Hz tone for a period of 10 seconds to be suitable;
- c) that the cost of the necessary changes to existing equipment on coast stations would probably be small;

recommends

that the radiotelephone alarm signal transmitted by coast stations be followed by a single tone of 1 300 Hz, for a period of 10 seconds (see No. 3272).

¹ Replaces Recommendation No. Mar2 - 5 of the World Maritime Administrative Radio Conference, Geneva, 1974.

YT

RECOMMENDATION No. 312

**Relating to Studies of the Interconnection of Maritime Mobile
Radiocommunication Systems with the International
Telephone and Telegraph Networks¹**

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that this Conference has adopted, and included in Article 62, provisions for the use of a digital selective calling system;
- b) that the CCIR has adopted Question 9-3/8 on the subject of a selective calling system for future operational requirements of the maritime mobile service;
- c) that the operational and technical characteristics for a digital selective calling system are in an advanced state of study by the CCIR;
- d) that the CCIR has adopted Question 23-2/8 relating to automated VHF maritime mobile telephone systems;
- e) that the CCITT has under study the interconnection of the different international mobile telephone services – mainly of the maritime mobile and the maritime mobile-satellite services – and the international telephone network;
- f) that the study of new Questions 7/I and 4/X relating to the interconnection of maritime satellite communication services with the international telex network is proposed to the CCITT;

considering

- a) that it is desirable that there be interconnection of radiocommunication systems in the maritime mobile service with the international public telephone and telegraph networks to permit automatic routing of ship-shore traffic to and from national networks;
- b) that such interconnection would greatly improve maritime radiocommunications;

urges the CCIR and the CCITT

to undertake all required studies relating to compatibility between the maritime mobile radiocommunication systems and the international telephone and telegraph systems, including various quality-of-service criteria, to permit the full interconnection of the maritime mobile services with the international telephone and telegraph networks; and

invites administrations

to give priority to these studies in their participation in the work of the CCIR and the CCITT.

¹ Replaces Recommendation No. Mar2 – 19 of the World Maritime Administrative Radio Conference, Geneva, 1974.

YR

RECOMMENDATION No. 313

**Relating to Temporary Provisions Covering the
Technical and Operational Aspects of the
Maritime Mobile-Satellite Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that a minimum number of provisions to introduce the maritime mobile-satellite service in an orderly manner has been adopted;
- b) that administrations have, as yet, little or no experience in operating a maritime mobile-satellite service;
- c) that, consequently, it is impossible at the present time to establish comprehensive regulatory provisions covering in detail the technical and operational aspects of such a service;
- d) that, nevertheless, temporary administrative, technical and operational provisions may become necessary before the next competent administrative radio conference;

recommends

that, whilst gaining experience to provide a basis for the adoption of detailed regulations by the next appropriate administrative radio conference, administrations participating in the maritime mobile-satellite service should agree to temporary administrative, technical and operational provisions, notify them to the Secretary-General, and invite other administrations to adopt them, without prejudice.

ZK

RECOMMENDATION No. 400

**Relating to the Transition from the Present to
the New Frequency Allotment Plan in the
Bands Allocated Exclusively to the
Aeronautical Mobile (R) Service Between
2 850 kHz and 22 000 kHz ²**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Final Acts of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, entered into force on 1 September 1979;
- b) that the new Frequency Allotment Plan contained in Appendix 27 Aer2 will enter into force at 0001 hours UTC on 1 February 1983;

¹ Replaces Recommendation No. Mar2 – 15 of the World Maritime Administrative Radio Conference, Geneva, 1974.

² Replaces Recommendation No. Aer2 – 4 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

- c) that some administrations may wish to implement certain provisions of the new Frequency Allotment Plan in advance of the latter date when this may be done without causing harmful interference to stations working in accordance with the present Frequency Allotment Plan;
- d) that, following the Extraordinary Administrative Radio Conference, Geneva, 1966, the International Civil Aviation Organization (ICAO), under the provisions of No. 27/20 of Appendix 27 and within the spirit and framework of Resolution No. Aer 6 of that Conference, developed a transition programme for the aeronautical mobile (R) service to convert the Frequency Allotment Plan in Appendix 26 to that in Appendix 27;
- e) that the ICAO transition programme was subsequently provided to the International Frequency Registration Board for distribution to ITU Member administrations;
- f) that it will be useful again to adopt a programme to facilitate transition from the existing to the new Frequency Allotment Plan;

recommends

1. that the ICAO be invited to develop a transition programme, within the framework of Appendix 27 Aer2, for the operational use by aeronautical stations of the frequencies contained in the Frequency Allotment Plan except for those Regional and Domestic Air Route Areas which are not involved in international operations;
2. that the ICAO be invited to forward the transition programme for the new Frequency Allotment Plan to the IFRB for distribution to administrations;
3. that administrations implement the provisions of the transition programme in coordination with ICAO and in conformity with the principles set forth in No. 27/20 of Appendix 27 Aer2;

requests the Secretary-General

to bring this Recommendation to the attention of the International Civil Aviation Organization.

YN

RECOMMENDATION No. 401

**Relating to the Efficient Use of
Aeronautical Mobile (R) Worldwide Frequencies ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

that the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, allotted a limited number of worldwide frequencies for exercising control over regularity of flight and for safety of aircraft;

recommends to administrations

1. that the number of HF aeronautical stations on the worldwide channels should be kept to a minimum consistent with the economic and efficient use of frequencies;
2. that, if possible and practicable, one such station should serve aircraft operating agencies in adjacent countries and there should not normally be more than one station per country.

¹ Replaces Recommendation No. Aer2 – 2 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

ZJ

RECOMMENDATION No. 402

**Relating to Cooperation in the Efficient Use
of Worldwide Frequencies in the Aeronautical Mobile (R) Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the need to make the most efficient use of worldwide frequencies in the aeronautical mobile (R) service;
- b) that a Plan has been adopted for the allotment by areas of worldwide frequencies in the aeronautical mobile (R) service;
- c) the desirability of coordination between administrations within the areas to which the Allotment Plan applies;
- d) the right of an administration to select and notify to the IFRB for recording in the Master International Frequency Register any frequency assignment in a channel allotted to the area in which its country is located;
- e) the role played by the IFRB in regulatory procedures under Article 12 of the Radio Regulations;
- f) the role played by the International Civil Aviation Organization (ICAO) in the field of international aeronautical operations;

invites

1. administrations within a worldwide allotment area, as they consider it appropriate, and the ICAO, to seek the advice of the IFRB in determining the best choice of frequencies from a technical viewpoint in order to make the most efficient use of aeronautical mobile (R) worldwide frequencies;
2. administrations within a worldwide allotment area, as they consider it appropriate, to coordinate mutually the use of these frequencies from the viewpoint of aeronautical operations and, in this connection, to bear in mind the benefit that could be gained by obtaining the advice of ICAO in this process;
3. the IFRB to assist any administration or group of administrations in a worldwide allotment area wishing to coordinate their requirements for worldwide frequencies and to continue its cooperation with ICAO for this purpose;

requests the Secretary-General

to bring this Recommendation to the attention of the International Civil Aviation Organization.

¹ Replaces Recommendation No. Aer2 – 3 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

V

RECOMMENDATION No. 403

**Relating to the Development of Techniques which
Would Help to Reduce Congestion in the High Frequency Bands
Allocated to the Aeronautical Mobile (R) Service¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that several administrations are actively engaged in the development of communication techniques the wider use of which, in the aeronautical mobile (R) service, would help to reduce congestion in the high frequency bands allocated to that service; such developments include the use of higher frequencies with remotely controlled stations, directional antennae, space radiocommunication techniques and automatic data transmission;
- b) that knowledge of these developments would be useful to other administrations in considering the application of these techniques to their aeronautical mobile (R) communication services;
- c) that the International Civil Aviation Organization (ICAO) is actively engaged in coordinating the operational development of such techniques;

recommends

administrations engaged in the development of techniques which would help to reduce congestion in the HF bands to inform the IFRB periodically of the progress achieved;

instructs the IFRB

to circulate periodically the information so obtained to administrations and to the ICAO.

ZX

RECOMMENDATION No. 404

**Relating to the Use of the Band 136 - 137 MHz by the
Aeronautical Mobile (R) Service²**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Table of Frequency Allocations as modified by this Conference includes allocations to the aeronautical mobile (R) service on a primary basis, and to the fixed and mobile, except aeronautical mobile (R), services on a secondary basis, in the band 136 - 137 MHz;

¹ Replaces Recommendation No. Aer2 – 1 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

² Replaces Recommendation No. Spa 7 of the Extraordinary Administrative Radio Conference, Geneva, 1963.

b) that provision is also made for allocations to the space operation service (space-to-Earth), the meteorological-satellite service (space-to-Earth) and the space research service (space-to-Earth) on a primary basis up to 1 January 1990, and thereafter on a secondary basis, and that the aeronautical mobile (R) service can be introduced on a primary basis only after 1 January 1990, in conformity with internationally approved plans for that service;

c) that on that date the aeronautical mobile (R) service may well be subject to interference harmful to the safety of air navigation and that it is of the utmost importance to protect this service against interference from stations in the fixed service, the mobile except aeronautical mobile (R) service, the space research service (space-to-Earth), the space operation service (space-to-Earth) and the meteorological-satellite service (space-to-Earth);

recommends

1. that administrations of all Regions operating, or intending to operate, stations in the fixed service, the mobile except aeronautical mobile (R) service, the space operation service (space-to-Earth), the meteorological-satellite service (space-to-Earth) and the space research service (space-to-Earth) in the band 136 - 137 MHz after 1 January 1990 take all possible steps to give the required protection to the aeronautical mobile (R) service and to cease operation of stations of the other services to which the band is allocated on a secondary basis as and when the stations of the aeronautical mobile (R) service come into operation;

2. that administrations notify the International Frequency Registration Board (IFRB) of their plans to bring into operation the aeronautical stations of the aeronautical mobile (R) service;

3. that administrations notify the IFRB, preferably in advance of the date when stations authorized to operate on a secondary basis will cease operations, referring specifically to this Recommendation;

and requests the IFRB

to publish this information every six months as from 1 January 1985.

Y

RECOMMENDATION No. 405

**Relating to a Study of the Utilization of
the Aeronautical Mobile-Satellite (R) Service¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

a) the continuing efforts of the aeronautical mobile (R) service to obtain improvements in communications commensurate with increases in the number, size and speed of aircraft;

b) the efforts of the International Telecommunication Union to reduce congestion in the bands between 4 MHz and 27.5 MHz;

c) the need to effect conservation in the use of the high frequency spectrum;

¹ Replaces Recommendation No. Aer 2 of the Extraordinary Administrative Radio Conference, Geneva, 1966.

noting

- a) that successful application of space radiocommunication techniques to the communication needs of international civil aviation offers the possibility of substantially improving aeronautical mobile (R) service communications while avoiding congestion in the bands between 4 MHz and 27.5 MHz;
- b) that tests have demonstrated the capability of effecting communication between aircraft and aeronautical stations by relay via a geostationary satellite;
- c) that the state of the art in space radiocommunication techniques is rapidly advancing;
- d) that the technical potential is such that space radiocommunication techniques could provide a capability for accommodating, in the near future, many of the aeronautical mobile (R) service communication requirements over major world air routes on all but the polar routes;
- e) that before administrations will be willing to undertake a programme to implement space radiocommunication techniques they will need a comprehensive investigation into those techniques and a statement of the measures that need to be taken;
- f) that the ability of administrations to undertake such a programme is intimately linked to the economic implications involved;
- g) that the International Civil Aviation Organization (ICAO) is the international body primarily concerned with the establishment of standards and recommended practices governing radiocommunication systems and techniques used to support international civil aviation;
- h) that the CCIR has studied the application of space radiocommunication techniques in the aeronautical mobile (R) service but these studies may need revision;

invites the CCIR

to continue its studies on the application of space radiocommunication techniques in the aeronautical mobile (R) service in cooperation with ICAO;

recommends

- 1. that administrations, bearing in mind the economic and operational aspects involved, should take account of the possibilities of satisfying the communication needs of the aeronautical mobile (R) service on major world air routes by the use of space radiocommunication techniques;
- 2. that administrations should give further study to these questions taking as a basis for their consideration the factors listed in the Annex hereto.

ANNEX TO RECOMMENDATION No. 405

(Note: The list of factors which follows is not claimed to be exhaustive nor is it intended to limit consideration of any other aspects pertinent to the use of space radiocommunication techniques by the aeronautical mobile (R) service.)

- 1. The technical parameters of the satellite and aircraft receiving and transmitting system, including:
 - a) required received (carrier) power at the satellite (from the aircraft)
 - b) required received (carrier) power at the aircraft (from the satellite)
 - c) satellite effective radiated power (per channel)
 - d) aircraft effective radiated power (per channel)
 - e) type of emission which should be employed
 - f) bandwidth of each channel

- g)* channelling arrangement
 - h)* polarization requirements
 - i)* need for omni-directional aircraft antennae; sea/ground reflections
 - j)* required separation between transmit and receive frequencies at the satellite
 - k)* requirement on the satellite for capability of aircraft to use each channel independently (multiple/random access)
 - l)* requirements in relation to system reliability
 - m)* other considerations.
2. The number and location of satellites, including:
- a)* in regard to provision of service, disposition of air routes and the number of flights over each air route
 - b)* group of air routes which may be served via a common satellite
 - c)* number of satellites needed to provide service to each group of air routes
 - d)* location of each of the satellites
 - e)* number of channels needed aboard each satellite
 - f)* other considerations.
3. Technical performance requirements for aeronautical earth stations, including:
- a)* suitable transmitting and receiving antennae characteristics: gain, beamwidth, siting, etc.
 - b)* minimum effective radiated power
 - c)* development and utilization of low-cost earth station (terminal) facilities
 - d)* need for a selective calling system (SELCAL)
 - e)* other considerations.
4. Method of operation and location of aeronautical earth stations, including:
- a)* the method of operation: where multiple frequencies are provided on the satellite, the need, or absence of need, to continue the present practice of providing route separation by use of different/separate frequencies; that is:
 - should all (R) frequencies on the satellite be available at all earth stations; *or*
 - should the communication load be distributed between available frequencies, each of which is limited to a specific geographic area; *or*
 - some other arrangement
 - b)* as appropriate, to list (by frequency) each of the earth stations which should employ each satellite frequency
 - c)* other considerations.
5. Provisions for handling aeronautical point-to-point communications:
- a)* technical system performance parameters of the terminal equipment
 - b)* technical system performance parameters of the satellite equipment
 - c)* requirement on the satellite for capability of terminals to have independent access to relay channels through the satellite (multiple/random access)

- d) frequency bands to be used
 - e) required separation between transmit and receive frequencies on the satellite
 - f) development and utilization of low-cost terminal facilities
 - g) the entity or entities which should provide, own or operate the satellites and terminal facilities as well as the extent to which aeronautical point-to-point communications should be handled
 - h) other considerations.
6. Estimated costs of a satellite system to include: land-based, airborne and satellite-borne facilities.
7. Operational aspects of a satellite system, including all facilities mentioned in paragraph 6 above, particularly:
- a) the environment within which the system must work
 - b) the evolutionary process of introducing the system.

YF

RECOMMENDATION No. 406

**Relating to the Revision of the Frequency Allotment
Plan for the Aeronautical Mobile (OR) Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the Frequency Allotment Plans for the aeronautical mobile service prepared by the International Administrative Aeronautical Radio Conference (IAARC), Geneva, 1949, and adopted by the Extraordinary Administrative Radio Conference, Geneva, 1951, were substantially adopted by the Administrative Radio Conference, Geneva, 1959, and included in the Radio Regulations;
- b) that the Extraordinary Administrative Radio Conference responsible for revising the Allotment Plan for the Aeronautical Mobile (R) Service, Geneva, 1966, decided to include this Plan as Appendix 27;
- c) that the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978, adopted technical principles for establishing the Frequency Allotment Plan for the Aeronautical Mobile (R) Service, in particular the use of the 3 kHz separation between carrier frequencies for certain classes of emission and powers which can be directly applied in establishing the allotment plan for the aeronautical mobile (OR) service;
- d) that the Allotment Plan for the Aeronautical Mobile (OR) Service has not been revised since the Administrative Radio Conference, Geneva, 1959;
- e) that, since 1959, many countries have become Members of ITU;
- f) that this Conference has adopted Resolution 403 relating to the use of the frequencies 3 023 kHz and 5 680 kHz common to the aeronautical mobile (R) and (OR) services;

¹ Replaces Resolution No. 13 of the Administrative Radio Conference, Geneva, 1959, and Recommendation No. Aer2 – 8 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

g) that the International Telecommunication Convention, (Malaga-Torremolinos, 1973) in Article 7, No. 44, provides that a world administrative radio conference may partially revise the Radio Regulations;

is of the opinion

that the Plan for the Aeronautical Mobile (OR) Service contained in Appendix 26 to the Radio Regulations will have to be reviewed and that administrations should urgently study the communication requirements of their national and international air operations in order to establish when, in the best interests of aviation, such a review shall be carried out;

recommends

that the Administrative Council should convene a world administrative radio conference to review Appendix 26 and the related provisions of the Radio Regulations.

XB

RECOMMENDATION No. 407

**Relating to No.27/123
of Appendix 27 Aer2 – Sub-Area 5B¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a)* the discussions which took place on the proposed modification of No. 27/123 of Appendix 27 Aer2;
- b)* that the interested administrations have agreed to continue consultations between themselves on the matter of Sub-Area 5B;

recommends

1. that consultations should be carried out by the interested administrations in order to arrive at a satisfactory solution;
2. that the administrations concerned report on the results of their consultations to the next competent world administrative radio conference in order to enable that conference to arrive at a definitive solution on No. 27/123.

¹ Replaces Recommendation No. Aer2 – 7 of the World Administrative Radio Conference on the Aeronautical Mobile (R) Service, Geneva, 1978.

H

RECOMMENDATION No. 500

**Relating to the Preparation of the Technical Information
Necessary for the World Administrative Radio Conference
for HF Broadcasting**

The World Administrative Radio Conference, Geneva, 1979,

considering

that a considerable amount of technical information relating to HF broadcasting is already available in CCIR texts, nevertheless there are some subjects needing further studies and, in some cases, adaptation to make them suitable for use in planning;

noting in particular

- a) that the CCIR has recommended a method of estimating field strength and transmission loss in Band 7 (HF) based on the best information available, and is developing a new computerized method which incorporates the special elements considered necessary for improving the accuracy of these estimations at medium and long distances and in equatorial and high latitude regions;
- b) that there is insufficient information relating to propagation predictions in many equatorial areas;
- c) that the use of directional antennae is essential for efficient use of the spectrum in Band 7 (HF) and that radiation in directions other than the desired direction may cause interference;

requests the CCIR

- 1. to complete its work in respect of the improved computerized prediction method (Recommendation 533) paying special attention to medium and long distance transequatorial paths and to high latitude regions;
- 2. to adapt the present method of propagation predictions in order to make it more suitable for use in planning broadcasting and to recommend suitable values of solar indices;
- 3. to make Recommendations where these do not already exist concerning appropriate protection ratios to be adopted, including cases where the unwanted signals are of a different type, and the appropriate values of channel spacing; and the minimum signal-to-noise ratio required for satisfactory reception;
- 4. to ensure that the CCIR Book of Antenna Diagrams includes all principal types of antennae in common use;
- 5. to prepare and present data on the practical performance of directional antennae in a form suitable for planning purposes;

invites administrations

to participate actively in these studies and to provide the CCIR with available data on the questions listed above and especially on field strength observations in Band 7 (HF) for comparison with predicted values.

I

RECOMMENDATION No. 501

**Relating to Studies for the Introduction of Single-Sideband (SSB)
Techniques in the HF Bands Allocated to the Broadcasting
Service, in Preparation for the World Administrative
Radio Conference for HF Broadcasting**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the use of SSB leads to a more efficient utilization of the spectrum;
- b) that the introduction of these techniques for broadcasting in the HF bands creates both technical and economic problems;

requests the CCIR

to accelerate the appropriate studies regarding the introduction of SSB techniques for broadcasting in the HF bands and the specification of a suitable SSB system, paying particular attention to the economic problems associated with transmitters and receivers;

invites administrations

to provide the CCIR with information on this subject.

ZP

RECOMMENDATION No. 502

Relating to Specifications of Low-Cost Television Receivers

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the potential of the television medium as an instrument for national development is being increasingly recognized;
- b) that direct reception of television broadcasting from satellites is demonstrated to be technically feasible and economically attractive;
- c) that, within the limited resources available to them, many developing countries might wish to exploit the television medium to the maximum advantage;
- d) that the availability of an efficient, low-cost television receiver would be an important factor in the setting up and expansion of television broadcast services in developing countries;
- e) that the need for both monochrome and colour receiver sets can be foreseen for receiving terrestrial and satellite transmissions;
- f) that the CCIR is already studying specifications for low-cost monochrome television receivers for home and community use, as well as the characteristics of a receiving system for a broadcasting-satellite service (television);
- g) that general agreement on the performance of suitable television receivers would considerably assist TV receiver manufacturers to produce suitable receivers of the desired types and adequate standards of performance at the lowest possible cost;

h) that the design and production of television receivers has to take account of rapid advances in technology as well as obsolescence;

invites the CCIR

1. to draw up performance specifications for one or more types of low-cost television receivers as in *considering e)* above, suitable for quantity production;
2. to collaborate as necessary, with other international bodies working in this field, with a view to finalizing the specifications for such low-cost sets in the shortest possible time;

requests the Secretary-General

to send the results of this work, together with suggestions as to the action to be taken, to the Secretary-General of the United Nations, in particular for the attention of the Director of the United Nations Industrial Development Organization, as well as to the Director-General of UNESCO for information.

ZS

RECOMMENDATION No. 503

Relating to HF Broadcasting

The World Administrative Radio Conference, Geneva, 1979,

considering

- a)* the congestion of the HF broadcasting bands;
- b)* the extent of adjacent channel interference;

noting

the possibility of improving the situation by implementing pertinent CCIR Recommendations;

recommends that administrations

1. pay special attention to the provisions for “out-of-band spectrum” contained in CCIR Recommendation 328-4;
2. encourage, to the maximum extent possible, manufacturers to design and build HF broadcasting receivers that conform to CCIR Recommendation 332-4 concerning the selectivity of receivers;

invites administrations

to take advantage, to the maximum extent practicable, of synchronized frequency transmitter operation, taking into account CCIR Recommendation 205-1;

invites the CCIR

to carry out further studies in relation to the Recommendations mentioned above, taking into account the requirements of HF broadcasting, with a view to updating these three Recommendations whenever necessary.

YC

RECOMMENDATION No. 504

**Relating to the Preparation of a Broadcasting Plan
in the Band 1 605 - 1 705 kHz in Region 2**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the band 1 605 - 1 705 kHz has been allocated to the broadcasting service in Region 2 by this Conference;
- b) that in accordance with No. 480, the use of this band by the broadcasting service is subject to a broadcasting plan to be established by a regional administrative radio conference;
- c) that, in the Table of Frequency Allocations in Region 2, the band 1 605 - 1 625 kHz is allocated exclusively to the broadcasting service, and the band 1 625 - 1 705 kHz is allocated to the broadcasting service on a shared basis with other services;

recognizing

the provisions of No. 346 of the Radio Regulations;

recommends

1. that a regional administrative radio conference be convened to establish a plan for the broadcasting service in the band 1 605 - 1 705 kHz in Region 2;
2. that such a conference be convened in 1985 at the latest;
3. that the exact dates of coming into force of the plan be decided at the said regional administrative radio conference. Nevertheless, the use of these bands by the broadcasting service should not commence before 1 July 1987 for the frequencies between 1 625 kHz and 1 665 kHz, and 1 July 1990 for the frequencies between 1 665 kHz and 1 705 kHz;

invites

1. the Administrative Council to take the necessary steps for the convening of a Region 2 administrative radio conference to plan the use of the band 1 605 - 1 705 kHz by the broadcasting service;
2. the CCIR to perform the necessary technical studies relating to the Region 2 broadcasting conference bearing in mind the allocations to other services in Regions 1 and 3 and the need for sharing criteria;

encourages administrations of Region 2

to promote the development and availability of receivers suitable for the broadcast band extended to 1 705 kHz.

ZL

RECOMMENDATION No. 505

**Relating to Studies of Propagation at 12 GHz
for the Broadcasting-Satellite Service¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the technical criteria adopted at the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977, which drew up an assignment plan for the broadcasting-satellite service in Regions 1 and 3, included a maximum margin of 2 dB, at an elevation angle of 45°, for rainfall attenuation;
- b) that some studies have indicated that the necessary margin in the Tropical Zone could be higher than 2 dB;
- c) that the Special Preparatory Meeting of the CCIR (Geneva, 1978) recognized that, for the application of the technique suggested in CCIR Report 721, the available rain rate data are likely to underestimate the attenuation which will occur in tropical regions;
- d) that there is also a need for ample information on the various other propagation factors to be taken into account in the planning of the broadcasting-satellite service;

recommends that the CCIR

1. expedite the studies of the effects of rainfall attenuation in the tropical regions and specify, as early as possible, the attenuation values necessary for ensuring a satisfactory broadcasting-satellite service;
2. continue the studies of the effects of precipitation attenuation at low angles of incidence in all rain-climatic zones;
3. continue the studies of the effects of sand and dust storms;
4. examine the relationship between the propagation characteristics for 99% of the worst month and those for the year;
5. examine, for emissions using circular polarization, the level of the depolarized component relative to the polarized component;

requests that the Director of the CCIR

bring such values of rainfall attenuation as may be specified to the notice of all administrations.

¹ Replaces Recommendation No. Sat – 3 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

ZC

RECOMMENDATION No. 506

**Relating to the Harmonics of the Fundamental Frequency
of Broadcasting-Satellite Stations¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the frequency band 23.6 - 24 GHz is allocated to the radio astronomy service on a primary basis;
- b) that the second harmonic of the fundamental frequency of broadcasting-satellite stations operating within the band 11.8 - 12 GHz may seriously disturb radio astronomy observations in the band 23.6 - 24 GHz if effective steps are not taken to reduce the level of this harmonic;

in view of

the provisions of No. 306 of the Radio Regulations;

recommends

that, when defining the characteristics of their space stations operating in the broadcasting-satellite service, particularly within the band 11.8 - 12 GHz, administrations take all necessary steps to reduce the level of the second harmonic below the values indicated in the relevant CCIR Recommendations.

ZF

RECOMMENDATION No. 507

**Relating to Spurious Emissions
in the Broadcasting-Satellite Service²**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that space stations in the broadcasting-satellite service operating at high power levels are likely to cause interference to services in adjacent and in harmonically related frequency bands due to spurious emissions;

¹ Replaces Recommendation No. Sat - 2 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

² Replaces Recommendation No. Sat - 6 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

- b) that, in the planning of the broadcasting-satellite service, account must be taken of the need to reduce to acceptable levels the interference to:
- the services operating in the bands adjacent to the lower and upper edges of the 12 GHz band allocated to the broadcasting service;
 - the radio astronomy service which has an allocation at 23.6 - 24 GHz;
- c) the studies being pursued by the CCIR under the appropriate Study Programme;

invites the CCIR

to continue, as a matter of urgency, the study of the technical and operational aspects of spurious emissions from space stations in the broadcasting-satellite service.

ZD

RECOMMENDATION No. 508

**Relating to Transmitting Antennae
for the Broadcasting-Satellite Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the need for ample information on transmitting antennae for the planning of the broadcasting-satellite service;
- b) the studies being pursued by the CCIR under the appropriate Questions and Study Programmes;

invites the CCIR

1. to continue the study of reference patterns for the co-polar and cross-polar components of transmitting antennae for the broadcasting-satellite service for both individual and community reception, and in particular the practicable means of achieving various degrees of improved side-lobe suppression and the economic implication thereof;
2. to continue the study of the technical characteristics designed to achieve a pointing accuracy for transmitting antennae such that:
 - the deviation of the antenna beam from its nominal direction of pointing shall not exceed 0.1° ;
 - the angle of rotation of the transmitting beam about its axis shall not exceed $\pm 2^\circ$.

¹ Replaces Recommendation No. Sat – 4 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

YZ

RECOMMENDATION No. 600

Relating to the Use of the Frequency Band 9 300 - 9 500 MHz^{1, 2}

The World Administrative Radio Conference, Geneva, 1979,

noting

- a) that there are in existence two main classes of airborne weather radar, using the bands 5 350 - 5 460 MHz and 9 300 - 9 500 MHz respectively;
- b) that there is in existence a very considerable number of shipborne radars, the majority in the band 9 300 - 9 500 MHz;
- c) that there are also ground-based radars of the maritime and aeronautical radionavigation services and of the meteorological service in the band 9 300 - 9 500 MHz;
- d) that the use of the band 5 350 - 5 460 MHz allocated on a primary basis exclusively to the aeronautical radionavigation service is limited to airborne radars;
- e) that shipborne radars share only with land-based radars the use of the bands 2 900 - 3 100 MHz and 5 470 - 5 650 MHz which are allocated on a primary basis solely to the radionavigation service and the maritime radionavigation service, respectively;
- f) that it has proved necessary to allocate the band 9 300 - 9 500 MHz on an equality basis to both the aeronautical and the maritime radionavigation services;
- g) that in the band 9 300 - 9 320 MHz, the use of shipborne radars is no longer permitted with a view to facilitating development of fixed-frequency radar beacons in this band;
- h) that in the band 9 320 - 9 500 MHz in the maritime radionavigation service, the use of fixed-frequency radar beacons on land or at sea is not permitted;

considering

- a) that it is of the utmost importance to ensure that harmful interference is not caused to radionavigation services providing a safety of life function;
- b) that the operating conditions of a safety of life service should be uniform throughout the world;
- c) that an uncoordinated increase in the use of the band 9 300 - 9 500 MHz can only lead to an increase in the probability of harmful interference between the aeronautical and maritime radionavigation services;

recommends

1. that administrations, the International Civil Aviation Organization (ICAO) and the Inter-Governmental Maritime Consultative Organization (IMCO) study this matter at the earliest opportunity; and especially
2. that they determine whether, and to what extent, interference which is recognized to be technically possible between the two services becomes harmful in operational circumstances;

¹ See also Resolution 600.

² Replaces Recommendation No. 12 of the Administrative Radio Conference, Geneva, 1959.

3. that they investigate, in the event that it is established that there may be harmful interference between the two services, the possibility of reducing such interference by technical, operational and procedural means, including the principle that new equipments should always be of the highest technical standard;

invites

administrations, the International Civil Aviation Organization and the Inter-Governmental Maritime Consultative Organization to communicate to the Union the results of their studies together with their views and proposals resulting therefrom.

YK

RECOMMENDATION No. 601

**Concerning the Matter of Providing a Suitable Frequency
Allocation for a Collision Avoidance System
in the Aeronautical Radionavigation Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the ever-increasing speed of modern aircraft and taking into account that an adequate collision avoidance system providing a means of enhancing safety in the air has not been developed but is urgently required;
- b) that if such a collision avoidance system, when developed, requires the use of radio frequencies, it should be accommodated in one of the frequency bands allocated to the aeronautical radionavigation service;
- c) that it is impossible to forecast at this time whether the bands allocated to the aeronautical radionavigation service will prove to be suitable for such a system;

recommends

that administrations and the International Civil Aviation Organization (ICAO) pay especial attention to the progress being made in developing a suitable collision avoidance system, noting that if radio frequencies are required, and if the bands allocated to the aeronautical radionavigation service are not suitable for such a system, international consideration of this matter will be necessary.

¹ Replaces Recommendation No. 20 of the Administrative Radio Conference, Geneva, 1959.

XD

RECOMMENDATION No. 602

Relating to Maritime Radiobeacons

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that maritime radiobeacons in the European Maritime Area are governed by the "Regional Arrangement for Maritime Radiobeacons in the European Area of Region 1, Paris, 1951", hereinafter referred to as the "Paris Arrangement, 1951";
- b) that the Paris Arrangement, 1951, is largely based on the geographical disposition of radiobeacons existing before 1939 and on the state of maritime navigation at that time;
- c) that since the conclusion of the Paris Arrangement, 1951, the geographical disposition and certain characteristics of maritime radiobeacons have been changed by bilateral or multilateral agreements, particularly to take into account the changes which have occurred in the habits and rules of maritime navigation in the area in question;
- d) that the Paris Arrangement, 1951, is based essentially on the use of aural direction-finding receivers;
- e) that for several years there has been a considerable increase in the number of automatic direction-finding receivers which depend solely on the radiobeacon carrier and which do not use modulation to separate radiobeacons operating on the same frequency;
- f) that it is therefore desirable that, following a review of the technical operating characteristics of maritime radiobeacons to be conducted by a competent world administrative radio conference, a specialized conference should be convened under Article 32 of the International Telecommunication Convention (Malaga-Torremolinos, 1973), in order to revise the Paris Arrangement, 1951;
- g) that this review should concern both the extent of the area covered by the Arrangement and the technical characteristics and field-strength value of the service range, the adjacent channel separation, the modulation depth and any other provision deemed necessary;

noting

- the existence in Chapter VIII of the Radio Regulations, (Article 35, Section IV, paragraph C "Maritime Radiobeacons"), of provisions 2860 to 2866;
- the existence in Chapter III, (Article 8, Section 1), of No. 405 which defines the European Maritime Area;

recommends

1. that the administrations concerned examine the question of the limits of the area covered by the Arrangement and submit relevant proposals to the next competent world administrative radio conference;
2. that all administrations and the CCIR study as a matter of urgency the technical characteristics of maritime radiobeacons and submit their conclusions to the next competent world administrative radio conference;

invites the Administrative Council

to take the necessary steps to arrange for questions relating to maritime radiobeacon stations, which are of interest to the mobile services, to be included in the agenda of the next world administrative radio conference for the mobile services, in such a way that the conference could envisage a modification of the relevant articles of the Radio Regulations;

requests the Secretary-General

to communicate this Recommendation to Inter-Governmental Maritime Consultative Organization (IMCO) and International Association of Lighthouse Authorities (IALA).

ZH

RECOMMENDATION No. 603

**Relating to Technical Provisions for Maritime Radiobeacons
in the African Area ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

the need to facilitate the planning for new maritime radiobeacons in the band 283.5 - 315 kHz particularly in the neighbouring localities of the European and African Areas;

recommends

that the administrations of the countries of the African area adopt provisions similar to those contained in the "Regional Arrangement for Maritime Radiobeacons in the European Area of Region 1", Paris, 1951.

XI

RECOMMENDATION No. 604

**Relating to the Future Use and Characteristics of
Emergency Position-Indicating Radiobeacons ²**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that according to Article 39 of the Radio Regulations the essential purpose of the emergency position-indicating radiobeacon (EPIRB) signals is to facilitate determining the position of survivors in search and rescue operations;
- b) that Inter-Governmental Maritime Consultative Organization (IMCO) Resolution A.91 (IV) provides that EPIRBs are intended primarily for homing; however, they may be used for alerting in appropriate circumstances;
- c) that IMCO Resolution A.217 (VII) recommends that administrations require all ships and vessels, where appropriate, to be equipped with EPIRBs operating on the most appropriate radio frequencies;
- d) that IMCO is considering compulsory fitting of EPIRBs on all passenger ships and cargo ships of 300 tons gross tonnage and upwards;

¹ Replaces Recommendation No. 21 of the Administrative Radio Conference, Geneva, 1959.

² Replaces Recommendation No. Mar2 – 12 of the World Maritime Administrative Radio Conference, Geneva, 1974.

considering in particular

that IMCO has stressed in Resolution A.279 (VIII) the urgent need for unification of the characteristics of EPIRBs;

recognizing

- a) that there are provisions in the Radio Regulations for EPIRBs on the frequencies 2 182 kHz, 121.5 MHz and 243 MHz;
- b) that the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971, in the case of EPIRBs, reserved the frequency band 406 - 406.1 MHz for the mobile-satellite service solely for the use and development of low-power EPIRB systems using space techniques;
- c) that IMCO Resolution A.91 (IV) recommends the carrier frequency 2 182 kHz as the first choice operational frequency for EPIRBs;
- d) that the technical characteristics of EPIRBs operating on the carrier frequency 2 182 kHz are contained in Article 39 and Appendix 37 of the Radio Regulations and CCIR Recommendation 439;
- e) that Resolution 601 resolved that EPIRBs operating on the frequencies 121.5 MHz and 243 MHz shall comply with the relevant CCIR Recommendations and the standards and recommended practices of the International Civil Aviation Organization (ICAO);

recommends

- 1. that, in view of their inter-relationship in this matter, IMCO and ICAO be invited, as a matter of urgency, to review their concepts for EPIRBs in regard to search and rescue operations and the safety of life at sea;
- 2. that the CCIR be requested, when IMCO and ICAO have stated their concepts, to study technical and operating questions for EPIRBs, including the preferred frequencies, in particular relation to the prime requirement for homing and the technical characteristics of such beacons with regard to the requirement for unification.

XA

RECOMMENDATION No. 605

**Relating to Technical Characteristics and Frequencies
for Shipborne Transponders^{1, 2}**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that merchant ships of the world are increasing in size and speed;
- b) that every year a significant number of collisions occur involving merchant vessels with resultant loss of life and property and that collisions have a high potential for endangering the natural environment;

¹ A receiver-transmitter which emits a signal automatically when it receives the proper interrogation.

² Replaces Recommendation No. Mar2 - 14 of the World Maritime Administrative Radio Conference, Geneva, 1974.

- c) that there is a need to correlate radar targets with vessels making VHF radiotelephone transmissions;
- d) that studies and experiments have shown that shipborne transponders can enhance and supplement radar target images as compared with normal radar images;
- e) that current studies and experimentation relating to shipborne transponders indicate that development of equipment can be expected in the near future which will offer adequate radar image enhancement and target identification and, possibly, data transfer capabilities;
- f) that such shipborne transponders may require protection from interference;
- g) that the selection of technical characteristics for these transponders should be coordinated with other users of the radio frequency spectrum whose operations might be affected;

requests the CCIR

to recommend, after consultation with appropriate international organizations, the most suitable order of frequencies and bandwidth required for this purpose, and the technical parameters to be met by such devices taking into account electromagnetic compatibility with other services having allocations in the same frequency band;

invites

administrations and the Inter-Governmental Maritime Consultative Organization (IMCO) to continue to evaluate the operational benefits which could result from the widespread use of transponders on ships and to consider whether there would be advantage in adopting an internationally approved system for future implementation;

recommends

that, pending further technical and operational developments and evaluation, administrations be prepared at the next competent world administrative radio conference to make the necessary provisions for the use of such devices.

ZT

RECOMMENDATION No. 620

**Relating to the Meteorological Aids Service
in the Band 27.5 - 28 MHz¹**

The World Administrative Radio Conference, Geneva, 1979,

recommends

that administrations whose stations in the meteorological aids service operate in the band 27.5 - 28 MHz should arrange, as soon as possible, for the transfer of these operations to higher frequency bands which are allocated to the meteorological aids service;

invites the World Meteorological Organization

to study this question and to proceed with such coordination among administrations as appears necessary.

¹ Replaces Recommendation No. 33 of the Administrative Radio Conference, Geneva, 1959.

XC

RECOMMENDATION No. 700

**Relating to the Utilization and Sharing of Frequency Bands
Allocated to Space Radiocommunications¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

Resolutions 1721 (XVI) part D and 1802 (XVII) part IV para. 3 of the United Nations General Assembly which refer, inter alia, to the unanimous belief of the Members of the United Nations that communication satellites should be organized on a global basis with non-discriminatory access for all nations;

considering further

the economic and social implications for all nations of global communications by satellites expressed in the report prepared for Members and Associate Members of the UNESCO in accordance with the decision of the 12th session of its General Conference in December 1962;

recognizing

that all Members of the International Telecommunication Union have an interest in and right to an equitable and rational use of frequency bands allocated to space radiocommunications;

recommends to the Members of the Union

that the utilization and exploitation of the frequency bands allocated to space radiocommunications be subject to international agreements based on principles of justice and equity permitting the use and sharing of these bands in the mutual interest of all nations.

YY

RECOMMENDATION No. 701

**Relating to the Use of the Frequency Band 1 330 - 1 400 MHz
by the Radio Astronomy Service**

The World Administrative Radio Conference, Geneva, 1979,

considering

a) that the observations of radiations from neutral hydrogen atoms within the band 1 330 - 1 400 MHz are of prime importance in understanding the structure of distant galaxies, and subsequently of the evolution of the universe;

¹ Replaces Recommendation No. Spa 10 of the Extraordinary Administration Radio Conference, Geneva, 1963.

- b) that recognition has been given to the radio astronomy service in the band 1 330 - 1 400 MHz within the Table of Frequency Allocations;
- c) that the radio astronomy service is devoted to the reception of extremely low-level electromagnetic radiations of extraterrestrial origin, and needs therefore to be protected from radiations of man-made origin, to the maximum degree practicable;
- d) that the ability of the radio astronomy service to share frequency bands with other radio services is limited;

recommends

1. that administrations, when preparing for the next competent administrative radio conference, should consider the question of making provisions in the 1 330 - 1 400 MHz band to provide the radio astronomy service with increased protection from services that radiate;
2. that administrations when drawing up frequency assignment plans should bear in mind radio astronomy observations being carried out in the band 1 330 - 1 400 MHz.

YU

RECOMMENDATION No. 702

**Relating to the Use of the Frequency Bands 1 400 - 1 727 MHz,
101 - 120 GHz and 197 - 220 GHz for Search for Intentional
Emissions of Extraterrestrial Origin**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that it is of special importance to mankind to determine the existence of extraterrestrial civilizations;
- b) that there is a maximum probability of detecting radiation from extraterrestrial civilizations in the frequency bands 1 400 - 1 727 MHz, 101 - 120 GHz and 197 - 220 GHz because these frequency bands contain the spectral lines of basic physical interest and are related to the universal phenomena;
- c) that in the bands mentioned in *considering b)* there is a probability of detecting radiation, with a maximum signal-to-noise ratio, from extraterrestrial civilizations;
- d) that recognition has been given to the search for extraterrestrial civilizations in the bands 1 400 - 1 727 MHz, 101 - 120 GHz and 197 - 220 GHz within the Table of Frequency Allocations;
- e) that the attempt to recognize signals from extraterrestrial civilizations requires the reception of extremely low-level radiations and that such reception needs to be protected, to the maximum degree practicable, from radiations of man-made origin;
- f) that, for receiving radiations from extraterrestrial civilizations, the possibilities of sharing frequency bands with active radio service are limited;

recommends

that, when preparing for the next competent administrative radio conference, administrations should consider the desirability of making provisions so as to provide a controlled environment suitable for the reception of extraterrestrial radiations in the 1 400 - 1 727 MHz, 101 - 120 GHz and 197 - 220 GHz bands;

invites

organizations concerned with the search for extraterrestrial civilizations to take into account the following:

1. the relevant provisions of the Radio Regulations;
2. the need to maintain close coordination with their national administrations on matters of frequency usage;
3. the need to select, for observations, locations for receiving facilities that are as remote as possible from sources of radio interference;
4. the appropriate Reports and Recommendations of the CCIR.

ZU

RECOMMENDATION No. 703

**Relating to the Need to Cease Operations of the Fixed and
Mobile Services in the Bands 149.9 - 150.05 MHz
and 399.9 - 400.05 MHz Allocated to the
Radionavigation-Satellite Service ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the frequency bands 149.9 - 150.05 MHz and 399.9 - 400.05 MHz have been allocated to the radionavigation-satellite service on an exclusive worldwide basis;
- b) that many administrations require an extended period of time to re-accommodate existing fixed and mobile operations in other appropriately allocated bands;
- c) that early implementation of the radionavigation-satellite service will be of benefit to all administrations, particularly in its application to marine navigation;
- d) that interference to users of the radionavigation-satellite service could constitute a hazard to the safety of life and property;
- e) that the CCIR is studying the feasibility of sharing frequency bands between the radionavigation-satellite service and terrestrial services but has not yet been able to reach a conclusion in this regard;

recommends

1. that, pending an affirmative determination by the CCIR that sharing is possible and practicable between stations of the radionavigation-satellite service and the fixed and mobile services, administrations take all possible steps to protect from harmful interference the operations of mobile earth stations using the radionavigation-satellite service;
2. that, in the light of paragraph 1 above, administrations be urged to cease operation of their fixed and mobile stations in the bands 149.9 - 150.05 MHz and 399.9 - 400.05 MHz as soon as practicable, with particular emphasis on those stations located in coastal areas.

¹ Replaces Recommendation No. **Spa** 8 of the Extraordinary Administrative Radio Conference, Geneva, 1963.

ZV

RECOMMENDATION No. 704

**Relating to the Compatibility Between the
Broadcasting Service in the Band 100 - 108 MHz and the
Aeronautical Radionavigation Service in the Band 108 - 117.975 MHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) the increasing use of VHF broadcasting, with relatively high powers, in the band 100 - 108 MHz;
- b) that the band 108 - 117.975 MHz is used on a worldwide basis for internationally agreed aeronautical radionavigation systems;
- c) that the portion of the band 108 - 111.975 MHz is used for Instrument Landing Systems (ILS) which are used by aircraft for automatic landing purposes;
- d) that the band 108 - 117.975 MHz is used for the VHF Omnidirectional Radio Range (VOR) system;
- e) that interference problems between the broadcasting and aeronautical radionavigation services have occurred in parts of Regions 2 and 3;

recognizing

- a) that intermodulation products from combinations of broadcasting transmissions may fall in the aeronautical radionavigation band 108 - 117.975 MHz;
- b) that intermodulation products may be formed in the radionavigation receiver;
- c) that high power broadcasting transmissions could result in blocking of the radionavigation receivers;
- d) that the emissions of the aeronautical radionavigation service may cause interference to the broadcasting service;

requests the CCIR

1. to study, as a matter of urgency, the problem of interference between the two services;
2. to establish suitable criteria for the protection of both services;

invites

the International Civil Aviation Organization (ICAO) and other appropriate international organizations to study the problem, as a matter of urgency, and communicate the results of these studies to the CCIR;

recommends

that administrations, in assigning frequencies to the broadcasting service in the band 100 - 108 MHz and to the aeronautical radionavigation service in the band 108 - 117.975 MHz, should take note of the potential interference problems that could exist and apply appropriate protective measures.

T

RECOMMENDATION No. 705

**Relating to the Criteria to Be Applied for Frequency Sharing
Between the Broadcasting-Satellite Service and the Terrestrial
Broadcasting Service in the Band 620 - 790 MHz ¹**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that, within the band 620 - 790 MHz, assignments may be made to television stations using frequency modulation in the broadcasting-satellite service;
- b) that it is necessary to have a power flux-density limit which will provide adequate protection to the terrestrial broadcasting service;

taking into account

- a) that the conclusions of the Special Joint Meeting of the CCIR (Geneva, 1971), indicated that the following power flux-density limits are necessary to protect the terrestrial broadcasting service:

$$\begin{array}{ll} -121 \text{ dB(W/m}^2\text{)} & \delta \leq 20^\circ \\ -121 + 0.4 (\delta - 20) \text{ dB(W/m}^2\text{)} & 20^\circ < \delta \leq 60^\circ \\ -105 \text{ dB(W/m}^2\text{)} & 60^\circ < \delta \leq 90^\circ \end{array}$$

where δ is the angle of arrival above the horizontal plane (in degrees);

- b) that additional tests carried out by one administration after the Special Joint Meeting of the CCIR, indicated that the following more conservative power flux-density limits may be necessary:

$$\begin{array}{ll} -130 \text{ dB(W/m}^2\text{)} & \delta \leq 20^\circ \\ -130 + 0.4 (\delta - 20) \text{ dB(W/m}^2\text{)} & 20^\circ < \delta \leq 60^\circ \\ -114 \text{ dB(W/m}^2\text{)} & 60^\circ < \delta \leq 90^\circ \end{array}$$

where δ is the angle of arrival above the horizontal plane (in degrees);

- c) that CCIR Report 631-1 gives the results of studies carried out up to 1978;
- d) that additional information is required on the protection ratio for interference from an FM television signal into a VSB television signal for both the 625- and 525-line systems;
- e) that with terrestrial television receiving systems using current technology, the minimum field strength to be protected may in some cases be less than the values included in CCIR Recommendation 417-2;
- f) that account may have to be taken of ground reflections;
- g) that energy dispersal techniques may reduce the required protection ratio and should be used if shown to be effective;

¹ Replaces Recommendation No. Spa2 - 10 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

recommends

1. that in view of the absence of sufficient information on tests under operational conditions and in order to provide sharing criteria, on a provisional basis, the maximum power flux-density produced at the surface of the Earth within the service area of a terrestrial broadcasting station (see CCIR Recommendation 417-2), by a space station in the broadcasting-satellite service in the band 620 - 790 MHz should not exceed:

$$\begin{array}{ll}
 -129 \text{ dB(W/m}^2\text{)} & \delta \leq 20^\circ \\
 -129 + 0.4 (\delta - 20) \text{ dB(W/m}^2\text{)} & 20^\circ < \delta \leq 60^\circ \\
 -113 \text{ dB(W/m}^2\text{)} & 60^\circ < \delta \leq 90^\circ
 \end{array}$$

where δ is the angle of arrival above the horizontal plane (in degrees);

2. that these limits be not exceeded on the territory of a country except with the agreement of its administration;

3. that the transmission of unmodulated carriers should be avoided;

4. that the CCIR urgently study the sharing criteria to be applied to frequency sharing between the broadcasting-satellite service, and the terrestrial broadcasting service in the band 620 - 790 MHz and prepare a Recommendation on power flux-densities to be used in lieu of the above provisional limits;

5. that in its studies the CCIR consider in particular the following aspects:

5.1 the required protection ratio for both 525- and 625-line systems for interference from an FM television signal into a VSB television signal;

5.2 the minimum field strength to be protected for the terrestrial television service taking into account the current state of the art;

5.3 the effect of ground reflections;

5.4 the number of broadcasting satellites that may be visible from a terrestrial broadcasting receiver;

5.5 the effect of polarization discrimination;

5.6 the effect of antenna directivity;

6. that in its studies the CCIR should consider the advantages of energy dispersal techniques in the broadcasting-satellite service (television).

YW

RECOMMENDATION No. 706

**Relating to Frequency Sharing by the Earth Exploration-Satellite Service
(Passive Sensors) and the Space Research Service (Passive Sensors)
with the Fixed, Mobile Except Aeronautical Mobile, and
Fixed-Satellite Services in the Band 18.6 - 18.8 GHz**

The World Administrative Radio Conference, Geneva, 1979,

considering

a) that allocations have been made in various frequency bands to the earth exploration-satellite and space research services for the operation of passive sensors on board spacecraft;

- b) that the allocations made in the band 18.6 - 18.8 GHz are shared with the fixed, mobile except aeronautical mobile and fixed-satellite services;
- c) that application of the sharing criteria contained in CCIR Report 694 could restrict the development of the fixed, mobile except aeronautical mobile and fixed-satellite services;

invites the CCIR

1. to review the content of CCIR Report 694 by all the Study Groups concerned (particularly Study Groups 4 and 9);
2. to continue the studies which gave rise to Report 609-1, taking into account the requirements of the earth exploration-satellite service (passive sensors) and the space research service (passive sensors);
3. to study the minimum restrictions which could be applied to the fixed, mobile except aeronautical mobile, and fixed-satellite (space-to-Earth) services in order to ensure the satisfactory operation of passive sensors;
4. to study the maximum restrictions which might be tolerated by the fixed, mobile except aeronautical mobile, and fixed-satellite services without jeopardizing the operation of all the services likely to use this frequency band.

YV

RECOMMENDATION No. 707

**Relating to the Use of the Frequency Band 32 - 33 GHz Shared
Between the Inter-Satellite Service and the Radionavigation Service**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the band 32 - 33 GHz is allocated to the inter-satellite service and the radionavigation service;
- b) that there are safety aspects associated with the radionavigation service;
- c) that footnote 893 has been incorporated into Article 8;

recommends

that, as a matter of urgency, studies should be made of the sharing criteria for these two services in the frequency band listed above;

requests the CCIR

to carry out these studies;

recommends further

that a future competent world administrative radio conference review the CCIR Recommendations with a view to the inclusion of such sharing criteria in Article 28.

ZQ

RECOMMENDATION No. 708

**Relating to Frequency Bands Shared Between Space
Radiocommunication Services and Between Space and
Terrestrial Radiocommunication Services ¹**

The World Administrative Radio Conference, Geneva, 1979,

recognizing

- a) the value to the Conference of the material contained in the Report of the CCIR Special Preparatory Meeting (Geneva, 1978);
- b) that further studies on a wide range of problems dealing with space radiocommunications form the subject of CCIR Questions and Study Programmes approved by the XIVth Plenary Assembly;

considering however

- a) that certain CCIR Recommendations, listed below, call for further work and study:

- Recommendation 355-2* “Frequency sharing between systems in the fixed-satellite service and terrestrial radio services in the same frequency bands”
- Recommendation 465-1* “Reference earth station radiation pattern for use in coordination and interference assessment in the frequency range from 2 to about 10 GHz”
- Recommendation 466-2* “Maximum permissible level of interference in a telephone channel of a geostationary satellite network in the fixed-satellite service employing frequency modulation with frequency-division multiplex, caused by other networks of this service”;

- b) that the deliberations of this Conference, particularly in relation to the provisions of Articles 27, 28 and 29, and of other relevant Articles of the Radio Regulations, have shown that further information is required to reply to the following current Questions and Study Programmes of the CCIR:

- Question 1-2/4* “Antennae for systems in the fixed-satellite service”
- Question 2-3/4* “Technical characteristics of systems in the fixed-satellite service”
- Study Programme 2A-3/4* “Feasibility of frequency sharing between systems in the fixed-satellite service and terrestrial services”
- Study Programme 2J-2/4* “Technical factors influencing the efficiency of use of the geostationary-satellite orbit by radiocommunication satellite networks sharing frequency bands allocated to the fixed-satellite service”;

¹ Replaces Recommendation No. Spa2 – 15 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

c) that it would be useful to have specific numerical values of power flux-density from space stations of the broadcasting-satellite service which would permit differentiation between "individual reception" and "community reception" in the broadcasting-satellite service;

d) that frequency sharing between the radionavigation service and the fixed-satellite service (Earth-to-space) has been adopted in the frequency band 14.0 - 14.3 GHz;

recommends

1. that administrations, recognized private operating agencies, and other participants in the work of the CCIR, consider as a matter of priority, the submission of contributions on these subjects, so that draft Recommendations on them can be prepared at the meetings of the relevant Study Groups for consideration by the Plenary Assembly of the CCIR;

2. that the CCIR study or, as appropriate, continue to study:

2.1 the reference antenna patterns for earth station antennae, which may be appropriate for setting minimum standards of performance with a view to recommending specific patterns for this purpose, in order to improve utilization of the bands shared between the fixed-satellite service and terrestrial radiocommunication services, and of the bands shared by space radiocommunication services, and to improve the utilization of the geostationary-satellite orbit;

2.2 the reference antenna patterns for satellite antennae, which may be appropriate for setting minimum standards of performance, particularly outside the main beam, in order to improve the utilization of the geostationary-satellite orbit and to increase the possibilities for frequency re-use;

2.3 the reference cross-polarization antenna patterns which may be appropriate for setting minimum standards of performance and, in this connection, further study:

2.3.1 the portions of the spectrum within which linear-orthogonal or circular-orthogonal polarizations might be most appropriate;

2.3.2 the relative desirability, taking into account technical and orbit utilization factors, of using orthogonal polarizations within a single satellite as against with two satellites;

2.4 the necessary limitation of spurious emissions and the frequency tolerances to be observed in both the terrestrial and space radiocommunication services insofar as they may affect sharing of frequency bands;

2.5 the criteria of permissible interference for the various space radiocommunication services and terrestrial radiocommunication services sharing the frequency bands allocated by this Conference, in order to permit the determination of:

2.5.1 the coordination distance and the probability of interference between stations within that distance;

2.5.2 the necessary limits of power flux-density set up at the Earth's surface by space stations;

2.6 the maximum permissible level of interference into a geostationary-satellite link from any other single interfering geostationary-satellite network and from the aggregate of all other geostationary-satellite networks, particularly in the case of:

2.6.1 frequency-modulated telephony signals;

2.6.2 frequency-modulated television signals;

2.6.3 digitally-modulated signals;

and the most appropriate manner in which permissible interference should be specified in these and other cases;

2.7 the interference criteria applicable to frequency sharing between non-geostationary-satellite networks and geostationary-satellite networks;

2.8 the possibility of establishing a technical criterion for expressing the efficiency of use of the geostationary-satellite orbit;

2.9 the possibility of improving and simplifying the method of determining the coordination area as described in Appendix 28 to the Radio Regulations;

2.10 the conditions for frequency sharing in those bands allocated to the broadcasting-satellite service by this Conference with a view to issuing appropriate Recommendations as soon as possible so that administrations and the IFRB shall have the necessary technical data required to carry out examination procedures, in particular regarding Articles 11, 12 and 13 of the Radio Regulations and those in Resolution 33;

2.11 the power flux-densities required for individual and community reception in the broadcasting-satellite service, with a view to specifying numerical values which will differentiate between these types of reception;

2.12 the criteria for frequency sharing between the radionavigation service and the fixed-satellite service (Earth-to-space) in the frequency band 14.0 - 14.3 GHz.

O

RECOMMENDATION No. 709

**Relating to Sharing Frequency Bands Between the
Aeronautical Mobile Service and the Inter-Satellite Service**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the bands 54.25 - 58.2 GHz, 59 - 64 GHz, 116 - 134 GHz, 170 - 182 GHz and 185 - 190 GHz are allocated to the inter-satellite service and the mobile service;
- b) that the foregoing bands are located in parts of the radio frequency spectrum close to peaks of atmospheric absorption;
- c) that, nevertheless, the atmospheric absorption alone may not prevent harmful interference to stations of the inter-satellite service from stations on aircraft flying at high altitude;
- d) that for this reason, aircraft stations in the aeronautical mobile service may be operated subject to not causing harmful interference to the inter-satellite service (see No. 909, the text of which is reproduced below)¹;

recommends

that, as a matter of urgency, studies should be made of the sharing criteria for these two services in the frequency bands listed above;

requests the CCIR

to carry out these studies;

recommends further

that a future competent world administrative radio conference review the allocations of these bands, taking into account the results of the CCIR studies.

¹ 909 In the bands 54.25 - 58.2 GHz, 59 - 64 GHz, 116 - 134 GHz, 170 - 182 GHz and 185 - 190 GHz, stations in the aeronautical mobile service may be operated subject to not causing harmful interference to the inter-satellite service (see No. 435).

N

RECOMMENDATION No. 710

**Relating to the Use of Airborne Radars
in the Frequency Bands Shared Between
the Inter-Satellite Service and the Radiolocation Service**

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that the bands 59 - 64 GHz and 126 - 134 GHz are allocated to the inter-satellite service and the radiolocation service;
- b) that the foregoing bands are located in parts of the radio frequency spectrum close to peaks of atmospheric absorption;
- c) that, nevertheless, the atmospheric absorption alone may not prevent harmful interference to stations of the inter-satellite service from radars operating on aircraft flying at high altitude;
- d) that for this reason airborne radars in the radiolocation service may be operated subject to not causing harmful interference to the inter-satellite service (see No. 910, the text of which is reproduced below)¹;

recommends

that, as a matter of urgency, studies should be made of the sharing criteria for these two services in the frequency bands listed above;

requests the CCIR

to carry out these studies;

recommends further

that a future competent world administrative radio conference review the allocations of these bands, taking into account the results of the CCIR studies.

Z

RECOMMENDATION No. 711

Relating to the Coordination of Earth Stations²

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that under the terms of Article 11 of the Radio Regulations, frequency assignments to earth stations in certain bands shared with equal rights between terrestrial radiocommunication services and space radiocommunication services must be coordinated with a view to preventing mutual harmful interference;

¹ 910 In the bands 59 - 64 GHz and 126 - 134 GHz, airborne radars in the radiolocation service may be operated subject to not causing harmful interference to the inter-satellite service (see No. 435).

² Replaces Recommendation No. Spa2 - 9 of the World Administrative Radio Conference for Space Telecommunications, Geneva, 1971.

- b) that the calculation method described in Appendix 28 to the Radio Regulations applies solely to frequencies in the 1 - 40 GHz range;
- c) that Tables I and II of this Appendix do not show numerical values for all the necessary parameters of certain space radiocommunication services and terrestrial radiocommunication services sharing frequency bands with equal rights;

invites the CCIR

to continue as a matter of urgency its study:

- of data not included in Tables I and II of Appendix 28 to the Radio Regulations, relating to the space radiocommunication services and terrestrial radiocommunication services sharing frequency bands with equal rights;
- of the formulation of calculation methods for determining the coordination area of earth stations at frequencies below 1 GHz and above 40 GHz;

recommends to administrations

that until the next competent world administrative radio conference they should use:

- any CCIR Recommendation, if applicable, for the values missing from Tables I and II of Appendix 28 to the Radio Regulations;
- the methods of determining the coordination area for frequencies below 1 GHz and above 40 GHz, which may be the subject of a CCIR Recommendation.

U

RECOMMENDATION No. 712

Relating to the Interdependence of Receiver Design, Channel Grouping and Sharing Criteria in the Broadcasting-Satellite Service¹

The World Administrative Radio Conference, Geneva, 1979,

considering

- a) that receiver design, channel grouping and sharing criteria are interrelated and have a considerable influence on the development of a plan for the broadcasting-satellite service;
- b) that, so far, insufficient attention may have been given to these factors and to their influence on the implementation of such a plan;

invites the CCIR

to study the problem of the interdependence of receiver design, channel grouping and sharing criteria, together with the effects of these factors on the operation of the broadcasting-satellite service.

¹ Replaces Recommendation No. Sat – 7 of the World Broadcasting-Satellite Administrative Radio Conference, Geneva, 1977.

ANALYTICAL INDEX

RESOLUTIONS AND RECOMMENDATIONS

This Analytical Index consists of two parts :

PART A - RESOLUTIONS and

PART B - RECOMMENDATIONS.

Each part contains two sections :

Section I - a list of the Resolutions/Recommendations in numerical order together with the corresponding subjects (key words) used in Section II. The subjects (main) in capital letters denote those under which the explanatory texts of the Resolutions/Recommendations are found. The subjects in small letters denote those under which there is a cross-reference to the main subject(s).

Section II - a grouping of the Resolutions/Recommendations under specific subjects (key words) in alphabetical order.

ANALYTICAL INDEX - PART ARESOLUTIONSSECTION I

<u>Resolution No.</u>	<u>Analytical Index Subjects (Key Words)</u>
1.	NOTIFICATION OF FREQUENCY ASSIGNMENTS Frequency Management Radio Regulations
2.	GEOSTATIONARY-SATELLITE ORBIT SPACE SERVICES International Telecommunication Union (IFRB) Master International Frequency Register (MIFR)
3.	GEOSTATIONARY-SATELLITE ORBIT Administrative Conferences International Telecommunication Union (Administrative Council, CCIR, IFRB)
4.	GEOSTATIONARY-SATELLITE ORBIT Administrative Conferences International Telecommunication Union (Administrative Conferences, IFRB) Master International Frequency Register (MIFR) Radio Regulations
5.	PROPAGATION TECHNICAL COOPERATION International Organizations (APTU, PATU, URTNA) International Telecommunication Union (Administrative Conferences, Administrative Council, CCIR, Secretary-General)
6.	RADIO REGULATIONS Frequency Management International Telecommunication Union (IFRB, Secretary-General)
7.	FREQUENCY MANAGEMENT TECHNICAL COOPERATION Administrative Conferences International Telecommunication Union (Administrative Council, CCIR, IFRB, Plenipotentiary Conference, Secretary-General)
8.	ALLOCATION OF FREQUENCY BANDS FIXED SERVICE International Telecommunication Union (IFRB) Mobile Services Radio Regulations
9.	FIXED SERVICE International Telecommunication Union (IFRB) Master International Frequency Register (MIFR)
10.	RELIEF OPERATIONS/ORGANIZATIONS Allocation of frequency bands
11.	SHIPS/AIRCRAFT NOT PARTIES TO AN ARMED CONFLICT International Organizations (ICAO, IMCO) International Telecommunication Union (Administrative Conferences, Administrative Council, Secretary-General) Aeronautical Mobile (R) Service Maritime Mobile Service

<u>Resolution No.</u>	<u>Analytical Index Subjects (Key Words)</u>
12.	IDENTIFICATION OF STATIONS International Telecommunication Union (Administrative Conferences, Secretary-General) Radio Regulations
13.	IDENTIFICATION OF STATIONS International Telecommunication Union (Administrative Conferences, Secretary-General)
14.	TECHNICAL COOPERATION International Organizations (UN) International Telecommunication Union (Administrative Conferences, Administrative Council, Secretary-General)
15.	SPACE SERVICES TECHNICAL COOPERATION International Telecommunication Union (Administrative Conferences, Administrative Council)
16.	TECHNICAL COOPERATION International Organizations (UN) International Telecommunication Union (Administrative Conferences, Administrative Council, CCIR, CCITT, Secretary-General)
17.	ADMINISTRATIVE CONFERENCES International Telecommunication Union (Administrative Council, CCIR, IFRB, Secretary-General)
30.	MASTER INTERNATIONAL FREQUENCY REGISTER (MIFR) International Telecommunication Union (IFRB)

ANALYTICAL INDEX - PART A

RESOLUTIONS

SECTION II

Resolution No.

ADMINISTRATIVE CONFERENCES

Determination of possible Committee Structure on the basis of the Agenda 17

Plenipotentiary Conference, action by 7, 68

Other Resolutions concerning Conferences :

- See Broadcasting Service (508, 509, 510, 702
- See Broadcasting-Satellite Service (504, 505, 507, 700, 701
- See Distress and Safety 305
- See Equipment 63
- See Fixed-Satellite Service 101
- See Geostationary-Satellite Orbit 3, 4
- See Maritime Mobile Service (300, 301, 310, 314
- See Mobile Services 202
- See Propagation 60
- See Radiodetermination Services 600

AERONAUTICAL MOBILE (R) SERVICE

Frequency bands allocated exclusively to the Aeronautical Mobile (R) Service between 2850 and 22000 kHz :

- Treatment of Notices concerning frequency assignments ... 400
- Implementation of Frequency Allotment Plan in Appendix 27 Aer2 401
- Implementation of New Arrangement applicable to these bands and conversion from DSB to SSB operation 402

Frequency bands allocated exclusively to the Aeronautical Mobile (R) Service between 21924 and 22000 kHz :

- Implementation of New Arrangement (addition to Appendix 27 Aer2) 404

Frequency bands higher than HF bands :

- Use for Communications and for meteorological broadcasts in the Aeronautical Mobile (R) and Aeronautical Mobile-Satellite Services 406

Resolution No.AERONAUTICAL MOBILE (R) SERVICE (continued)

Unauthorized Use by other Services of Frequencies in bands allocated to the Aeronautical Mobile (R) Service	407
Use of Frequencies 3023 and 5680 kHz :	
- by both Aeronautical Mobile (R) and (OR) Services	403
Use (improved utilization) of frequencies in the Aeronautical Mobile (R) Service	405
See also <u>Emergency Position-Indicating Radiobeacons (EPIRBs)</u>	601
See also <u>Radiodetermination Services</u>	600
See also <u>Ships/Aircraft not Parties to an Armed Conflict</u>	11

AERONAUTICAL MOBILE (OR) SERVICE

Use of Frequencies 3023 and 5680 kHz :	
- by both the Aeronautical Mobile (R) and (OR) Services ...	403

AERONAUTICAL MOBILE-SATELLITE SERVICE

Frequency bands higher than HF bands :	
- Use for communication and meteorological broadcasts in the Aeronautical Mobile (R) and Aeronautical Mobile-Satellite Services	406

ALLOCATION OF FREQUENCY BANDS

Removal of Fixed and Mobile Services from certain bands of the 4000-27500 kHz range, and transitional procedures for the selection and approval of replacement assignments	8
Revision of the Division of the World into Regions for the purpose of allocating frequency bands	66

AMATEUR SERVICE

Broadcasting Stations prohibited from using the Amateur Service 7000-7100 kHz band	641
Use of bands allocated to the Amateur Service, for purposes of international communications in the event of natural disasters	640

AMATEUR-SATELLITE SERVICE

Information to be sent to the IFRB relating to the bringing into use of Amateur Earth Stations	642
------------------------------------------------------------------------------------------------------	-----

Resolution No.

BROADCASTING SERVICE

Convening of Conferences :

- Planning of the HF bands 508
- Planning of Sound Broadcasting in the band 87.5-108 MHz in Region 1 and for certain countries concerned in Region 3 .. 510
- Review and revision of the Final Acts of the African VHF/UHF Conference (Geneva, 1963) 509
- To establish criteria for the shared use of the VHF and UHF bands allocated to Fixed, Broadcasting and Mobile Services in Region 3 702

Examination by the IFRB of Notices concerning stations of the Broadcasting Service in the band 535-1605 kHz in Region 2 501

Modification of carrier frequencies of LF broadcasting stations in Region 1 500

Prohibited Use of the 7000-7100 kHz Amateur Service band 641

BROADCASTING-SATELLITE SERVICE

Convening of Conferences :

- Planning in the 12 GHz band and for associated feeder links in Region 2 701
- To establish Agreements and associated Plans 507

Procedures prior to the Entry into Force of Agreements and Plans :

- Application of certain provisions of the Final Acts of the World Broadcasting-Satellite Conference, 1977, to take into account changes made by the WARC-1959, to the Table of Frequency Allocations for Region 2 in the band 11.7-12.7 GHz 31
- Bringing into Use of Space Stations in the Broadcasting-Satellite Service; coordination procedures between these Space Stations and Terrestrial Stations and Space Systems of other administrations; and the notification, examination and recording in the MIFR of assignments to Space Stations of the Broadcasting-Satellite Service 33
- Coordination, notification and recording in the Master International Frequency Register of assignments to stations in Region 2 503
- Establishment of the Broadcasting-Satellite Service in Region 3 in the 12.5-12.75 GHz band and sharing with Space and Terrestrial Services in Regions 1, 2 and 3 34

	<u>Resolution No.</u>
<u>BROADCASTING-SATELLITE SERVICE</u> (continued)	
- Experiments and studies relating to the Broadcasting-Satellite (Sound) Service in the frequency range 0.5-2 GHz .	505
- Interim procedures pending the annexing to the Radio Regulations of the Plan and Provisions adopted by the World Broadcasting-Satellite Administrative Radio Conference (Geneva, 1977)	502
- Interim procedures relating to the 11.7-12.2 GHz band in Region 2	504
- Sharing between the Fixed-Satellite Service in Regions 1 and 3 and the Broadcasting-Satellite Service in Region 2 in the 12.2-12.7 GHz band	700
Space Stations in the 12 GHz band allocated to the Broadcasting-Satellite Service to operate in the Geostationary-Satellite Orbit, and no other	506
See also <u>Fixed-Satellite Service</u>	(100 (101 (102
 <u>CHANNEL ARRANGEMENTS</u>

 <u>COMPUTER UTILIZATION</u>	
See <u>Frequency Management</u>	37
 <u>DISASTER COMMUNICATIONS</u>	
See <u>Amateur Service</u>	640
 <u>DISTRESS AND SAFETY</u>	
Monitoring :	
- Unauthorized use of frequencies in the Maritime Mobile Service bands	309
- See also <u>Aeronautical Mobile (R) Service</u>	407
Use of class R3E and J3E emissions* :	
- on carrier frequency 2182 kHz	200
- on carrier frequencies 4125 and 6215.5 kHz	305
See also <u>Aeronautical Mobile (R) Service</u>	403

*previously A3A and A3J

Resolution No.

DIVISION OF THE WORLD

Into climatic zones for the purpose of calculation of propagation parameters	61
Revision of the division of the World into Regions for the purpose of allocating frequency bands	66

EMERGENCY POSITION-INDICATING RADIOBEACONS (EPIRBs)

EPIRBs on 121.5 MHz and/or 243 MHz are to comply with Recommendations and Standards of ICAO and the CCIR	601
-------------------------------------------------------------------------------------------------------------------	-----

EMISSIONS

Explanatory information to be prepared by the IFRB on the implementation of the new method of designating emissions	36
See also <u>Aeronautical Mobile (R) Service</u>	402
See also <u>Maritime Mobile Service</u>	306, 307

EQUIPMENT

ISM :	
- Protection of radiocommunication services from inter- ference by ISM equipment	63
Radio :	
- Improvement in the design of.....	67
- Lightning protection of.....	64

FEEDER LINKS

See <u>Fixed-Satellite Service</u>	101, 102, 701
------------------------------------------	---------------

Resolution No.FIXED SERVICE

Assistance to developing countries in securing access to the HF bands for their Fixed Services	103
Convening of Conferences to establish criteria for shared use of VHF and UHF bands allocated to the Fixed (and Broadcasting and Mobile) Service in Region 3	702
Re-Assignment of frequencies to stations in the Fixed and Mobile Services in certain bands allocated to Radiolocation and Amateur Services in Region 1	38
Removal of Fixed and Mobile Services from certain bands of the 4000-27500 kHz range, and transitional procedures for the selection and approval of replacement assignments	8
Revision of entries in the MIFR in the bands allocated to the Fixed Service between 3000 and 27500 kHz	9
See also <u>Fixed-Satellite Service</u>	31

FIXED-SATELLITE SERVICE

Application of certain provisions of the Final Acts of the World Broadcasting-Satellite Conference, 1977, to take into account changes made by the WARC-1959, to the Table of Frequency Allocations for Region 2 in the band 11.7-12.7 GHz	31
Convening of a Conference to plan the Broadcasting-Satellite Service in the 12 GHz band and associated Feeder Links in Region 2	701
Coordination, notification and recording in the MIFR of assignments to stations in the Fixed-Satellite Service with respect to stations in the Broadcasting-Satellite Service in Region 2	100
Coordination of Technical Characteristics of Feeder Links to Space Stations of the Broadcasting-Satellite Service in the 11.7-12.5 GHz band (Region 1) and the 11.7-12.2 GHz band in Region 3, during the transitional period	102
Drawing up of Agreements and Plans for Feeder Links for Broadcasting-Satellite Stations operating in the 12 GHz band	101
Sharing between the Fixed-Satellite Service in Regions 1 and 3 and the Broadcasting-Satellite Service in Region 2 in the band 12.2-12.7 GHz	700
See also <u>Broadcasting-Satellite Service</u>	503

Resolution No.

FREQUENCY MANAGEMENT

Assistance in the Use of Computers for	37
Development of national radio frequency management	7
Procedure to be followed in solving disputes with respect to Technical Standards or Rules of Procedure of the IFRB	35
See also <u>Emissions</u>	36
See also <u>Notification of Frequency Assignments</u>	1
See also <u>Radio Regulations</u>	6
See also <u>Technical Cooperation</u>	7

GEOSTATIONARY-SATELLITE ORBIT

Equitable Use by all countries with equal rights, and of frequency bands for Space Radiocommunication Services	2
Period of validity of frequency assignments of Space Stations using it	4
Use of, and planning Space Services using it	3
Use by Space Stations operating in the 12 GHz band allocated to the Broadcasting-Satellite Service, of the Geostationary-Satellite Orbit, and no other	506

IDENTIFICATION OF STATIONS

Call Signs :	
- New Rules for the formation of	12
- Possibilities of a new International Series	13
Introduction of a new system for identifying stations in the Maritime Mobile and Maritime Mobile-Satellite Services (Maritime Mobile Identities)	313
See also <u>Maritime Mobile Service</u>	311

INTERNATIONAL ORGANIZATIONS

Resolutions of interest to :

- International Civil Aviation Organization (ICAO) :
 - See Broadcasting Service 500
 - See Emergency Position-Indicating Radiobeacons 601
 - See Radiodetermination Services 600
 - See Ships/Aircraft not Parties to an armed Conflict 11

INTER-SHIP FREQUENCIES

See Maritime Mobile Service 303

IONOSPHERIC RESEARCH

Experimental use of radio waves by ionospheric research
satellites 62

MARITIME MOBILE SERVICE

Channel Spacing of frequencies in the band 156-174 MHz 308

Conversion to SSB techniques of stations in radiotelephone bands
between 1605 and 4000 kHz 307

Establishment of a world-wide system for the collection of data
relating to Oceanography 314

Eventual abolition of mobile station charges for public
correspondence, deadline for 315

Frequency provisions for development and future implementation
of ship movement telemetry, telecommand and data exchange systems . 310

IFRB treatment of notifications for frequency assignments to
Oceanographic stations 302

Implementation of new channelling arrangements for ALA Morse
telegraphy in bands between 4000 and 27500 kHz 304

Inter-ship frequencies in bands between 1605 and 3600 kHz in
Region 1, review of areas of operation of 303

Introduction of a digital selective-calling system 311

Introduction of new calling procedures for HF ALA Morse telegraphy
and related distribution plan of channels 312

Maritime Mobile Service Identities - see Identification of
Stations 313

Notification of non-paired ship station frequencies used for
narrow-band direct-printing telegraph and data transmission
systems 301

Unauthorized use of frequencies in the bands allocated to the
Maritime Mobile Service 309

Use and notification of paired frequencies for narrow-band
direct-printing telegraph and data transmission systems in HF
bands 300

Use of SSB techniques in radiotelephone bands between 1605 and
4000 kHz 306

See also Distress and Safety 200, 305

ANALYTICAL INDEX - PART BRECOMMENDATIONSSECTION IIRecommendation No.ADMINISTRATIVE CONFERENCES :

Convening of future Administrative Radio Conferences on Specific Services.....	12
Examination by World Administrative Radio Conferences of the occupancy of the frequency spectrum in Space Radiocommunications.....	2
Marginal Numbering of the Radio Regulations.....	11
Preparation of technical information for a World Administrative Radio Conference on HF Broadcasting.....	500
Presentation of Draft Amendments to the Radio Regulations.....	10
Studies on Single-Sideband Techniques for a World Administrative Radio Conference on HF Broadcasting.....	501
Other Recommendations concerning Conferences :	
- See <u>Aeronautical Mobile (OR) Service</u>	406
- See <u>Aeronautical Mobile (R) Service</u>	407
- See <u>Broadcasting Service</u>	504
- See <u>Distress and Safety</u>	200, 201
- See <u>Emissions</u>	202, 307, 309
- See <u>Inter-Satellite Service</u>	702
- See <u>Maritime Mobile Service</u>	707, 709, 710
- See <u>Maritime Mobile-Satellite Service</u>	203, 300, 301, 305, 308, 309, 310
- See <u>Maritime Mobile-Satellite Service</u>	313
- See <u>Radio Astronomy Service</u>	701
- See <u>Radiodetermination Services</u>	602, 605
- See <u>Radio Regulations</u>	13, 204
- See <u>Terminology</u>	72
- See <u>Terrestrial Services</u>	711
- See <u>Tropospheric Scatter</u>	100

AERONAUTICAL MOBILE (R) SERVICE :

Application of Chapters NX, NXI and NXII of the Re-Arranged Radio Regulations.....	204
Cooperation between administrations in the efficient use of world-wide frequencies.....	402
Drafting of techniques for reducing congestion in HF bands.....	403
Efficient use of world-wide frequencies.....	401
Measures to be taken to prevent the operation of Broadcasting Stations on board Ships or Aircraft outside National Territories.....	9
No. 27/123 of Appendix 27 Aer2 - Sub-Area 5B.....	407
Sharing frequency bands between Aeronautical Mobile Service and the Inter-Satellite Service.....	709

Recommendation No.

AERONAUTICAL MOBILE (R) SERVICE (continued) :

Standard forms for ship station licences and aircraft station licences.....	7
Transition to the new Frequency Allotment Plan in the bands 2850 kHz and 22000 kHz.....	400
Use of frequency band 136 - 137 MHz.....	404
See also <u>Distress and Safety</u>	604

AERONAUTICAL MOBILE (OR) SERVICE :

Revision of Frequency Allotment Plan - Appendix 26.....	406
---------------------------------------------------------	-----

AERONAUTICAL MOBILE-SATELLITE (R) SERVICE :

Study of the utilization of this Service.....	405
-----------------------------------------------	-----

BANDWIDTHS :

Calculation of Bandwidths.....	63
--------------------------------	----

BROADCASTING SERVICE :

Broadcasting Plan in 1605 - 1705 kHz band in Region 2.....	504
Compatibility between the Broadcasting Service in the 100 - 108 MHz band and the Aeronautical Radionavigation Service in the 108 - 117.975 MHz band.....	704
HF Broadcasting.....	503
Measures to be taken to prevent the Operation of Broadcasting Stations on board Ships or Aircraft outside National Territories.....	9
Preparation of technical information for a World Administrative Radio Conference on HF Broadcasting.....	500
Sharing criteria for Terrestrial Broadcasting and Broadcasting-Satellite Services - 620 - 790 MHz band.....	705
Specifications of low-cost TV receivers.....	502
Studies on Single-Sideband Techniques for a World Administrative Radio Conference on HF Broadcasting.....	501

BROADCASTING-SATELLITE SERVICE :

Feeder Links for space broadcasting stations.....	101
Harmonics of the fundamental frequency.....	506
Interdependence of receiver design, channel grouping and sharing criteria.....	712
Propagation at 12 GHz.....	505
Sharing criteria for Terrestrial Broadcasting and Broadcasting-Satellite Services - 620 - 790 MHz band.....	705
Spurious Emissions.....	507
Transmitting Antennae.....	508
See also <u>Administrative Conferences</u>	12

Recommendation No.

COMPUTER UTILIZATION :

Handbook for computer-aided techniques in radio frequency management..... 31

DISASTER COMMUNICATIONS :

Use of space radiocommunication systems in the event of natural disasters, etc..... 1

DISTRESS AND SAFETY :

Additional tone after radiotelephone alarm signals transmitted by coast stations..... 311

Date of entry into force of the 10 kHz guardband for 500 kHz in the Mobile Service (Distress and Calling)..... 200

Designation of a frequency in the bands 435 - 495 kHz or 505 - 526.5 kHz for the transmission by coast stations of navigational and meteorological warnings by narrow-band direct-printing telegraphy..... 309

Distress, Urgency and Safety Traffic..... 201

Future use and characteristics of EPIRBs..... 604

Future use of the 2170 - 2194 kHz band..... 203

Protection against harmful interference of Distress and Safety frequencies..... 202

Reservation for safety requirements of a frequency in the Maritime Mobile bands between 1605 and 3800 kHz..... 307

Supplementation of carrier frequency 2182 kHz for Distress and Safety..... 303

Watch by Coast Stations on 156.8 MHz for distress purposes.... 306

EMISSIONS :

Search for intentional emissions of extraterrestrial origin... 702

Spurious Emissions

- in the Broadcasting-Satellite Service..... 507
- studies of maximum permitted levels of Spurious Emissions 66

Supplementing the Additional Characteristics for Classifying Emissions (Appendix 6)..... 62

EPIRBs :

Future Use and Characteristics of EPIRBs..... 604

EQUIPMENT :

Frequency tolerances of transmitters..... 69

Standardization of technical and operational characteristics of radio equipment..... 71

Studies of technical characteristics of-..... 70

Recommendation No.

FEEDER LINKS :

Feeder Links for Space Broadcasting Stations.....	101
See also <u>Administrative Conferences</u>	12

FIXED SERVICE :

Frequency sharing by the Earth Exploration-Satellite Service (Passive Sensors) and the Space Research Service (Passive Sensors) with the Fixed, Mobile except Aeronautical Mobile and Fixed-Satellite Services in the 18.6 - 18.8 GHz band.....	706
See <u>Administrative Conferences</u>	12
See <u>Radiodetermination Services</u>	703

FIXED-SATELLITE SERVICE :

Carrier Energy dispersed in the Fixed-Satellite Service.....	103
Feeder Links for Space Broadcasting Stations.....	101
Frequency sharing by the Earth Exploration-Satellite Service (Passive Sensors) and the Space Research Service (Passive Sensors) with the Fixed, Mobile except Aeronautical Mobile and Fixed-Satellite Services in the 18.6 - 18.8 GHz band.....	706
See <u>Radio-Relay System</u>	102

FREQUENCY MANAGEMENT :

Meteorological Aids Service.....	620
----------------------------------	-----

Recommendation No.MOBILE SERVICES :

Application of Chapters NX, NXI and NXII of the Re-Arranged Radio Regulations.....	204
Cessation of operations of the Fixed and Mobile Services in the 149.9 - 150.05 MHz and 399.9 - 400.05 MHz bands allocated to the Radionavigation-Satellite Service.....	703
Frequency Planning in the 435 - 526.5 kHz band in Region 1....	300
Frequency Planning in the bands between 1606.5 kHz and 3400 kHz in Region 1.....	301
See <u>Administrative Conferences</u>	12
See <u>Distress and Safety</u>	200

MONITORING :

International Monitoring.....	30
-------------------------------	----

PROPAGATION :

Studies and prediction of radio propagation and radio noise..	68
See also <u>Broadcasting-Satellite Service</u>	505

RADIO ASTRONOMY SERVICE :

Use of the frequency band 1330 - 1400 MHz by the Radio Astronomy Service.....	701
-------------------------------------------------------------------------------	-----

RADIOCOMMUNICATION CIRCUITS (4000 - 27500 kHz) :

More efficient consolidation of national and international radiocommunication circuits operating in the bands between 4000 and 27500 kHz.....	4
-----------------------------------------------------------------------------------------------------------------------------------------------	---

RADIODETERMINATION SERVICES :

Aeronautical radionavigation - collision avoidance system....	601
Cessation of operations of the Fixed and Mobile Services in the 149.9 - 150.05 MHz and 399.9 - 400.05 MHz bands allocated to the Radionavigation-Satellite Service.....	703
Compatibility between the Broadcasting Service in the 100 - 108 MHz band and the Aeronautical Radionavigation Service in the 108 - 117.975 MHz band.....	704
Maritime Radiobeacons.....	602
Technical Provisions for Maritime Radiobeacons in the African Area.....	603
Transponders.....	605
Use of Airborne Radars in the frequency bands shared between the Inter-Satellite Service and the Radiolocation Service....	710

	<u>Recommendation No.</u>
<u>RADIODETERMINATION SERVICES (continued) :</u>	
Use of frequency band 9300 - 9500 MHz.....	600
Use of the frequency band 32 - 33 GHz shared between the Inter-Satellite Service and the Radionavigation Service.....	707
See also <u>Administrative Conferences</u>	12
 <u>RADIO REGULATIONS :</u>	
Application of Chapters NX, NXI and NXII of the Re-Arranged Radio Regulations.....	204
Marginal numbering of the Radio Regulations.....	11
Use of channels 15 and 17 by on-board communication stations- Appendix 18.....	305
World Administrative Radio Conference for general or partial revision of the Radio Regulations.....	13
See <u>Aeronautical Mobile (OR) Service</u>	406
See <u>Aeronautical Mobile (R) Service</u>	407
See <u>Distress and Safety</u>	202, 203
See <u>Radiodetermination Services</u>	707
See <u>Space Services</u>	2, 711
See <u>Terminology</u>	73
 <u>RADIO-RELAY SYSTEMS :</u>	
Modulation methods for Radio-Relay Systems in relation to sharing with Fixed-Satellite Service Systems.....	102
 <u>RELIEF OPERATIONS :</u>	
See <u>Disaster Communications</u>	1
 <u>SINGLE-SIDEBAND TECHNIQUES :</u>	
See <u>Broadcasting Service</u>	501
 <u>SI UNITS :</u>	
Use of rationalized "Système International d'Unités" (SI)....	74
 <u>SPACE SERVICES :</u>	
Coordination of Earth Stations.....	711
Examination by World Administrative Radio Conferences of occupation of frequency spectrum in Space Radiocommunications.	2
Frequency bands shared between Space Radiocommunication Services and between Space and Terrestrial Radiocommunication Services.....	708

Recommendation No.SPACE SERVICES (continued) :

Frequency sharing by Earth Exploration-Satellite Service (Passive Sensors) and the Space Research Service (Passive Sensors) with the Fixed, Mobile except Aeronautical Mobile and Fixed-Satellite Services in 18.6 - 18.8 GHz band.....	706
Use of space radiocommunication systems in the event of natural disasters, epidemics, famines and similar emergencies.	1
Utilization and sharing of frequency bands allocated to space radiocommunications.....	700
See <u>Administrative Conferences</u>	12
See <u>Feeder Links</u>	101

TECHNICAL COOPERATION AND ASSISTANCE :

Practical needs of countries in need of special assistance...	6
See <u>Frequency Management</u>	5

TECHNICAL STANDARDS :

Technical Standards for the Assessment of Harmful Interference in frequency bands above 28 MHz.....	61
Technical Standards of the IFRB.....	60
See <u>Equipment</u>	70
See <u>Frequency Management</u>	64
See <u>Propagation</u>	68

TERMINOLOGY :

Definitions of "Service Area" and "Coverage Area".....	67
General.....	72
Use of the term "Channel" in the Radio Regulations.....	73

TERRESTRIAL SERVICES :

Frequency bands shared between Space and Terrestrial services.....	708
--------------------------------------------------------------------	-----

TRANSMISSION OF ELECTRIC POWER :

Transmission of electric power by radio frequencies from a spacecraft.....	3
----------------------------------------------------------------------------	---

TROPOSPHERIC SCATTER :

Preferred frequency bands for systems using tropospheric scatter.....	100
-----------------------------------------------------------------------	-----
