para mí

Hello Jose,

currently there is no 450 bit/s mode in FreeDV and I don't have the time to implement it. But you may ask David Rowe or on the codec2 mailing list if someone is willing to implement a 450 mode (below 1 kHz bandwidth possible!).

Best regards from Europe,
Stefan

Betreff: FREEDV 450 BITS /S

Hello Jose,

of course you can test the new 450 bit/s codec. It is already in the codec2-dev
svn: <http://svn.code.sf.net/p/freetel/code/codec2-dev/>

Instead of calling 700c function like "codec2_encode_700c", replace it with
"codec2_encode_450" .

For FreeDV there is no implementation yet.

Best regards,
Stefan
