

ADJUSTABLE VOLTAGE AND CURRENT REGULATOR

- ADJUSTABLE OUTPUT CURRENT UP TO 2 A (GUARANTEED UP TO $T_j = 150^\circ\text{C}$)
- ADJUSTABLE OUTPUT VOLTAGE DOWN TO 2.85 V
- INPUT OVERVOLTAGE PROTECTION (UP TO 60 V, 10 ms)
- SHORT CIRCUIT PROTECTION
- OUTPUT TRANSISTOR S.O.A. PROTECTION
- THERMAL OVERLOAD PROTECTION
- LOW BIAS CURRENT ON REGULATION PIN
- LOW STANDBY CURRENT DRAIN

DESCRIPTION

The L200 is a monolithic integrated circuit for voltage and current programmable regulation. It is available in Pentawatt® package or 4-lead TO-3 metal case. Current limiting, power limiting, thermal shutdown and input overvoltage protection (up to

60 V) make the L200 virtually blow-out proof. The L200 can be used to replace fixed voltage regulators when high output voltage precision is required and eliminates the need to stock a range of fixed voltage regulators.

Note: Connecting point A to a negative voltage (for example - 3V/10 mA) it is possible to extend the output voltage range down to 0 V and obtain the current limiting down to this level (output short-circuit condition).

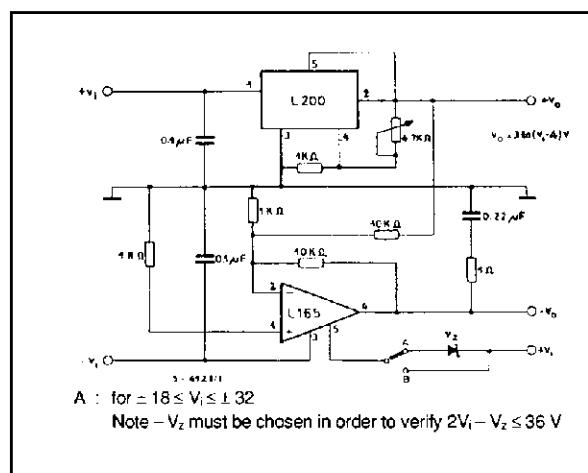

Figure 26. High Input and Output Voltage.

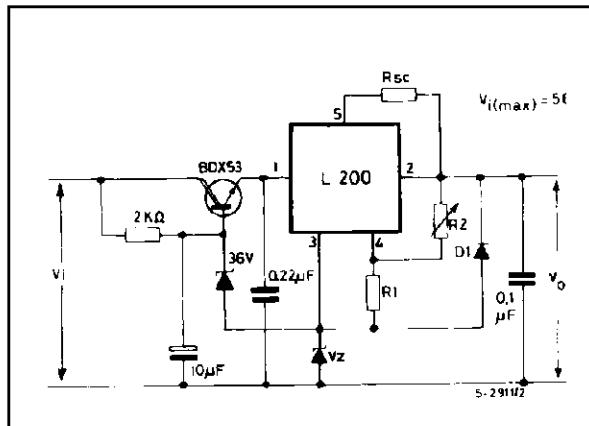

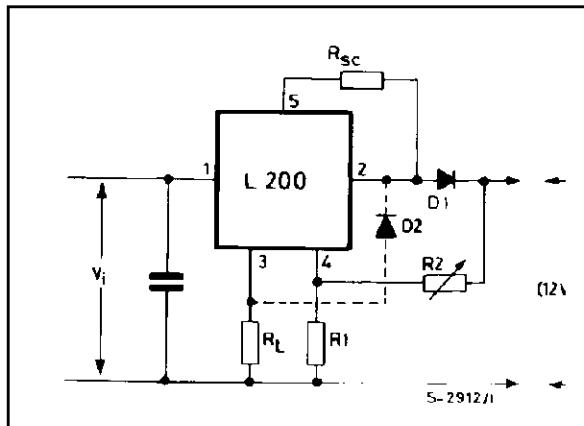

Figure 27. Constant Current Battery Charger.

The resistors R_1 and R_2 determine the final charging voltage and R_{SC} the initial charging current. D_1 prevents discharge of the battery through the regulator.

The resistor R_L limits the reverse currents through the regulator (which should be 100 mA max) when the battery is accidentally reverse connected. If R_L is in series with a bulb of 12 V/50 mA rating this will indicate incorrect connection.
