

2020 Florida Amateur Radio Emergency Communications Conference SUGGESTED SOFTWARE DOWNLOADS

1. WINLINK client (user) software
(version 1-5-26.0)

https://downloads.winlink.org/User_Programs/Winlink_Express_install_1-5-26-0.zip

(Includes the software TNCs for WINMOR and ARDOP, free)

If you are using a linux or similar type operating system, there is not a perfect replacement, but the PAT group has done a great job:

<http://getpat.io/>

2. Free software to do PACKET (AX.25) with a soundcard:

Soundmodem.exe from UZ7HO

http://uz7.ho.ua/modem_beta/soundmodem105.zip

3. Free terminal program to do regular keyboard QSO's over Packet (optional, but quite useful)

Terminal.exe

<http://uz7.ho.ua/apps/easyterm46.zip>

4. FLDGI (the free best-in-class broadcast modes software)

(versions available for multiple operating systems)

Windows: https://sourceforge.net/projects/fldigi/files/fldigi/fldigi-4.1.09_setup.exe/download

Please go here for other operating systems: <https://sourceforge.net/projects/fldigi/files/fldigi/>

5. JS-8 -- there is a bright future for this very recently developed system. Some of us are exploring it for weak signal long distance emergency communications and are excited about its possibilities:

There are versions available for multiple operating systems:

<http://files.js8call.com/latest.html>

IF YOU NEED FREE OFFICE PRODUCTIVITY SOFTWARE, I highly recommend LibreOffice

<https://www.libreoffice.org/>
