

2021 Whirlwind Boom Exercise

Exercise Plan ***for MARCH 19, 2021***

The Exercise Plan (ExPlan) gives elected and appointed officials, observers, media personnel, and players from participating organizations information they need to observe or participate in the exercise. Some exercise material is intended for the exclusive use of exercise planners, controllers, and evaluators, but players may view other materials that are necessary to their performance. All exercise participants may view the ExPlan.

Version: 1.4 Mar 7 Gordon L. Gibby MD 352 246 6183

Significant Change: Correction regarding the use of SHARES communications, which should NOT be use for primary Survivor Messaging.

Significant Change: Initial explanation of the encrypted emailed INJECTS that will be sent to our incredible group of nationwide individual resource units!

This may be considered an Official Version for the Exercise.

-Notification of any significant changes from this version will be posted on the NFLSEC groups.io page and will generally be communicated by email to net control or other leadership positions.

NOTE: It was brought to my attention that we will enter DAYLIGHT SAVINGS TIME just prior to this exercise. Therefore all the times have been changed from EST to EDT.

EXERCISE OVERVIEW

Exercise Name	2021 Whirlwind Boom Exercise
Exercise Dates	Friday March 19, 2021 (7 PM-9PM EDT)
Scope	<p>This exercise is a deployment, full scale exercise, planned for 2 hours at multiple locations throughout northern Florida and including participants throughout the southeastern United States.</p> <p>Exercise play is open to a very wide array of volunteers including:</p> <ul style="list-style-type: none"> – NTS or other traffic net volunteers, --volunteers participating in the 2021 Florida Baptist Disaster Relief Jacksonville on-site training, – Florida state emergency personnel, – County personnel / volunteers, --ARES® volunteers, – SHARES personnel (federal, state, local, or volunteer), <p>and any other interested amateur radio operators.¹.</p>
Mission Area(s)	RESPONSE
Core Capabilities	<p>MASS CARE SERVICES</p> <p>OPERATIONAL COMMUNICATIONS</p>
Objectives	<p>1.0 Antenna Deployment</p> <p>2.0 Emergency Power</p> <p>3.0 Communications Planning</p> <p>4.0 Voice Communications</p> <p style="padding-left: 20px;">4.1 Command Net</p> <p style="padding-left: 20px;">4.2 Formal Status Report</p> <p style="padding-left: 20px;">4.3 Tactical Communications</p> <p style="padding-left: 20px;">4.4 (Optional) Survivor Messages</p> <p>5.0 Data Communications</p> <p style="padding-left: 20px;">5.1 Written/Status Reports</p> <p style="padding-left: 20px;">5.2 Resource Requests</p> <p style="padding-left: 20px;">5.3 Response Time</p> <p style="padding-left: 20px;">5.4 Survivor Messages</p> <p>6.0 Interoperability</p> <p>7.0 Volunteer Handling</p>
Threat or Hazard	Extreme weather event complicated by human terrorist effort, resulting in Infrastructure failure, multiple types, leading to communications failures and risk to population

¹ This exercise specifically includes a RESOURCE NET to assist unexpected volunteers with joining the exercise.

Exercise Name	2021 Whirlwind Boom Exercise
Scenario	<p>Multiple tornadoes damaging a swath across the peninsular state of Roflida from one coast to the other as a result of fast moving cold front, with large number of displaced persons seeking shelter, large power outages and communications systems outages.</p> <p>2nd event was a massive explosion near an NT&T central switching site in Johnsonville, Roflida, leading to massive loss of public switched telephone system performance and large damage to the “SuperNet” emergency-response cell-phone based emergency communications system.</p>
Sponsor	Florida Baptist Disaster Relief ² , Communications & Technology Ministry

2 Florida Baptist Disaster Relief is a non-governmental served agency with an amateur radio communications team.

Exercise Name	2021 Whirlwind Boom Exercise
Participating Organizations	<p>SHARES SE Regional Coordinator / Net Florida Div. Em Mgt (Robert Little)³ Northern Florida ARES® Net (NFAN) Northern Florida Phone Net (NFPN) Alachua County Emergency Management⁴ Flagler County Emergency Management⁵ Columbia County Emergency Management⁶ Madison County Emergency Management⁷ Taylor County Emergency Management⁸ Alachua County ARES® Columbia County ARES® Flager County ARES® Madison County ARES® Marion County EOC/ARES® Santa Rosa County ARES® Suwanee County ARES® Volusia County EOC/ARES®</p> <p>Distant Outlets: Multiple "individual resource units" in a considerable number of states. (See ICS-205 herein for current list)⁹</p>
Point of Contact	<p>Gordon L. Gibby MD, KX4Z, NCS521 docvacuumtubes@gmail.com</p>

3 FDEM is a state-level served agency.

4 Alachua County Emergency Management is a county-level served agency.

5 Flagler County Emergency Management is a county-level served agency.

6 Columbia County Emergency Management is a county-level served agency.

7 Madison County emergency management is a county-level served agency; notified by Patrick Lightcap on March 13, 2021.

8 Taylor County Emergency Management is a county-level authority having jurisdiction, notified by Mr. Louk on March 15, 2021.

9 I presume that other ARES(R) organizational leadership are in close communication with their local emergency management or other served agency, but I have tried only to list those served agencies where the approval or exercise participation, or actual input from the governmental or non-governmental agency has been made clear.

GENERAL INFORMATION

Exercise Objectives and Core Capabilities

This exercise was designed to bring together the very volunteers who are likely to volunteer for communications disasters in Florida or nearby states. It attempts to create realistic communications that would be of great value to the responding agencies and the citizens they and we serve. As a result it has several levels, from local volunteers forwarding shelter status reports to a local net & EOC, all the way to reports converging on a simulated state data input port.

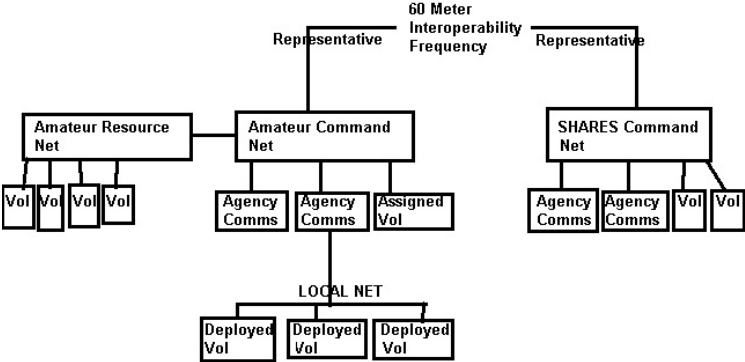

There is a place for every volunteer in this exercise!

The following exercise objectives in Table 1 describe the expected outcomes for the exercise. The objectives are linked to specific FEMA national core capabilities, which are distinct critical elements necessary to achieve the specific mission area(s). The objectives and aligned core capabilities are guided by elected and appointed officials and selected by the Exercise Planning Team.

Exercise Objective	FEMA Core Capability
(1.0) Antenna Deployments. Each applicable team able to deploy emergency antennas on suitable bands for their assigned communications, within 30 minutes of a declared antenna failure. ¹⁰	Mass Care Services Operational Communications
(2.0) Emergency Power. Each applicable team able to operate from alternative power, within 30 minutes of a declared power outage, including both radio, ancillary equipment (e.g. computer, antenna tuner, etc.) and suitable lighting. ¹¹	Mass Care Services Operational Communications

10 An antenna failure may happen spontaneously, or may be declared by an inject within the Exercise, delivered by paper message, radio or email communication.

11 A power failure may happen spontaneously, or may be declared by an inject within the Exercise, delivered by paper message, radio or email communication.

Exercise Objective	FEMA Core Capability
<p data-bbox="203 237 643 275">(3.0) Communications Planning.</p> <p data-bbox="297 310 956 344" style="text-align: center;"><u>Possible Voice /Data Net Structure During Exercise</u></p>  <ul data-bbox="253 810 1078 1293" style="list-style-type: none"> • Amateur Resource Net accepts incoming amateur radio based volunteers who are not already associated with a specific team, provides briefing services, and assigns roles. These unconnected volunteers are specifically welcomed in this Exercise. • Amateur Command Net coordinates between amateur-based comms teams, and provides representative to interoperability communications to SHARES-based Command Net. • SHARES Command Net accepts communications teams as well as individual resource units (volunteers) • Agency Comms team might be a local ARES® or CERT or other group which serves a local EOC or other agency, and provides volunteers for deployment, for example to local shelters. The Agency Comms team with deployed volunteers would maintain a local net, perhaps on VHF, and provide one or more representatives to the Amateur Command Net. Some Agency Comms teams may consist only of a comms group serving an EOC or other agency (such as a disaster relief agency). <p data-bbox="297 1335 1040 1549">(3.1) Groups or team whose responsibilities include deployed teams (e.g., to shelters or with search and rescue groups) <u>to create suitable ICS-205 planning materials</u> considering the possibilities of radio asset failures, and forward to the Exercise Director, c/o docvacuumtubes@gmail.com¹²</p> <p data-bbox="297 1591 1019 1734">(3.2) All groups/teams to successfully plan for communications by one or more representatives of their group to at least one Command Nets, depending on their licensure status (whether Amateur, SHARES, or both)</p>	<p data-bbox="1109 237 1373 344">Mass Care Services Operational Communications</p>

12 Purpose of this Objective is to provide practice and measure capabilities at planning communications systems.

Exercise Objective	FEMA Core Capability
<p>(4.0) Voice Communications Accomplishments.</p> <p>(4.1) Each team able to make voice contact to a suitably placed command net applicable to their licensure, despite local or ionospheric conditions.</p> <p>(4.2) Each team successfully transmits formal status report of defined structure via voice communications to RDEM@WINLINK.ORG or as requested.¹³</p> <p><u>Deployed individual resources</u> (e.g., amateur unit deployed to simulated shelter) shall submit by radio transmission, a report type chosen by their local group. A suggested reporting form is to provide the data of the SHARES SPOTREP-2 form (Version 9.5 or later; see Appendix D)¹⁴. A suggested COUNTY LEVEL DATA AGGREGATION form, is also provided in Appendix D.</p> <p><u>County or EOC or Agency Comms Team</u> (e.g., ARES® or disaster ministry group) shall submit by voice, over radio transmission, their choice of either of the following two reports.¹⁵</p>	<p>Mass Care Services Operational Communications</p>

13 Once the formal traffic has been transmitted by voice to a recipient on the Command Net, it is presumed to have exited the disaster area, and the receiving station can forward the text as an EMAIL to RDEM@WINLINK.ORG using any desired email system. Attempt to keep the basic structure of the formal traffic as transmitted.

14 A word-processor created version of this form is provided in Appendix D, followed by an example of this form used within an ICS-213 voice report. This could also be sent as a (rather long) ARRL Radiogram by inserting the relevant fields into the address, text body, and signature, and then adding an OP NOTE before the text such as “Deliver formatted as ICS-213.”

15 Note that the receiving net participant (in this Exercise, presumed to be in a non-affected area) will then forward the report by normal internet email to our proxy for a state reporting point, RDEM@WINLINK.ORG (representing the simulated “Roflida State Div of Emergency Management”)

Exercise Objective	FEMA Core Capability
<p>(4.0 Voice Communications, continued)</p> <p>Option #1: AGENCY SITUATION REPORT, which is a modified version of the British Columbia Emergency Operation Center status report..¹⁶</p> <p>Option #2: Create a voice message with the information of the WINLINK “Incident Status Report”¹⁷</p> <p>(4.3) Each team able to create, receive, and respond to immediate tactical communications.</p> <p>(4.4) (Optional¹⁸) Successful voice handling and transmission of survivor written messages¹⁹ to loved ones out of disaster area, unless their Agency directs that such communications are prohibited. (Moving outbound survivor traffic to loved ones via the NTS or other methods is an historic method of public service by radio volunteers, and this portion of the Exercise aims to reacquaint volunteers with this valuable service..[These messages can be created by the volunteers to remote friends or relatives advising them of their participation in this Exercise and/or providing well wishes.] NOTE: These should be transmitted using AMATEUR RADIO transmission channels, rather than SHARES except in extreme extenuating circumstances.</p>	

16 A blank copy of this form is presented in Appendix D, with an example inserted into the ICS-213 format immediately following.

17 This form can be accessed while using the New Message winlink procedure by choosing Select Template | Standard Templates | General Forms | Incident Status Report.txt. An image of this form is provided in Appendix D, following by an example of this information inserted into an ICS-213.

18 While data-based techniques for moving massive survivor messaging may be easier, those who prefer or enjoy voice-based disaster messaging are vital to a response and are expressly encouraged to proceed. Any volunteer on the net who is free may accept these simulated outgoing messages and deliver them by email or telephone immediately, or they may be routed thru the normal NTS/RRI channels if desired. The point is PRACTICE.

19 A suggested form is provided in Appendix D, followed by an example of this form utilized to create an ARRL Radiogram. After this form is transmitted over Radio to another volunteer in this exercise, the receiving volunteer will then deliver it via either email or telephone as soon as possible.

Exercise Objective	FEMA Core Capability
<p>(5.0) Data Communications.</p> <p>(5.1) County-based teams to transmit assigned written communications when requested, including status reports of the Winlink Incident Status Report format²⁰, by one or more data techniques, all involving RADIO out of their location.²¹ These will generally be addressed to our simulated state-level watch point, RDEM@WINLINK.ORG.</p> <p>(5.2) NGO-based communications teams to transmit one or more resource requests²² (example: for food stores for meals being prepared by a disaster ministry group) , by one or more data techniques, all involving RADIO out of their location. An example of such a communication is provided in Appendix E.</p> <p>(5.3) Each team able to respond within 30 minutes to inquiries and replies.</p> <p>(5.4) Successful handling and transmission of survivor written messages to loved ones out of disaster area. ²³ NOTE: These should be transmitted using AMATEUR RADIO transmission channels, rather than SHARES except in extreme extenuating circumstances.</p>	<p>Mass Care Services Operational Communications</p>
<p>(6.0) Interoperability. Teams from different groups (FBDR, ARES®, FDEM, SHARES) to be able to coordinate via representatives to an Interoperability frequency so designated. ²⁴</p>	<p>Mass Care Services Operational Communications</p>

20 This form can be accessed while using the New Message winlink procedure by choosing Select Template | Standard Templates | General Forms | Incident Status Report.txt. An image of this form is provided in Appendix D,

21 Any data technique is allowed. Examples include APRS, broadcast peer-to-peer techniques, WINLINK, JS8.

22 These resource requests can be in normal email format or in ICS-213RR, as per the usual practice of their particular NGO

23 The suggested form is provided in Appendix D, and an example of this form turned into a standard WINLINK email as a text is provided in Appendix E.

24 Ross Merlin points out this wording mixes somewhat different entities: “SHARES isn’t a group like the other groups in this item, SHARES is resources for the those groups to meet their communications requirements. The groups listed are responders, with a presence there at the incident scene. SHARES is its networks, for some of them to use, but there is no “SHARES Team” on-site. FBDR has a mission specific to the incident, FDEM has several; ARES mission is to support those on-scene who need communications; SHARES mission is to provide federal channels and off-scene relay of messages. “I’m not quite sure how to address his correction here, but we’ll keep it in mind.

Exercise Objective	FEMA Core Capability
(7.0) Handling Volunteers. Successful integration of newcomer amateur radio volunteers on Resource Nets with suitable explanations of the Exercise and assignments of tasks to newcomer volunteers.	Mass Care Services Operational Communications

Table 1. Exercise Objectives and Associated Core Capabilities

Participant Roles and Responsibilities

The term *participant* encompasses many groups of people, not just those playing in the exercise. Groups of participants involved in the exercise, and their respective roles and responsibilities, are as follows:

Players. Players are personnel who have an active role in discussing or performing their regular roles and responsibilities during the exercise. Players discuss or initiate actions in response to the simulated emergency.

Controllers. Controllers plan and manage exercise play, set up and operate the exercise site, and act in the roles of organizations or individuals that are not playing in the exercise. Controllers direct the pace of the exercise, provide key data to players, and may prompt or initiate certain player actions to ensure exercise continuity. In addition, they issue exercise material to players as required, monitor the exercise timeline, and supervise the safety of all exercise participants.

Simulators. Simulators are control staff personnel who role play nonparticipating organizations or individuals. They most often operate out of the Simulation Cell (SimCell), but they may occasionally have face-to-face contact with players. Simulators function semi-independently under the supervision of SimCell controllers, enacting roles (e.g., media reporters or next of kin) in accordance with instructions provided in the Master Scenario Events List (MSEL). All simulators are ultimately accountable to the Exercise Director and Senior Controller.

Evaluators. Evaluators evaluate and provide feedback on a designated functional area of the exercise. Evaluators observe and document performance against established capability targets and critical tasks, in accordance with the Exercise Evaluation Guides (EEGs).

Observers. Observers visit or view selected segments of the exercise. Observers do not play in the exercise, nor do they perform any control or evaluation functions. Observers view the exercise from a designated observation area and must remain within the observation area during the exercise. Very Important Persons (VIPs) are also observers, but they frequently are grouped separately.

Media Personnel. Some media personnel may be present as observers, pending approval by the sponsor organization and the Exercise Planning Team.

Support Staff. The exercise support staff includes individuals who perform administrative and logistical support tasks during the exercise (e.g., registration, catering).

Exercise Assumptions and Artificialities

In any exercise, assumptions and artificialities may be necessary to complete play in the time allotted and/or account for logistical limitations. Exercise participants should accept that assumptions and artificialities are inherent in any exercise, and should not allow these considerations to negatively impact their participation.

Assumptions

Assumptions constitute the implied factual foundation for the exercise and, as such, are assumed to be present before the exercise starts. The following assumptions apply to the exercise:

The exercise is conducted in a no-fault learning environment wherein capabilities, plans, systems, and processes will be evaluated.

The exercise scenario is plausible, and events occur as they are presented.

Exercise simulation contains sufficient detail to allow players to react to information and situations as they are presented as if the simulated incident were real.

Artificialities

During this exercise, the following artificialities apply:

Although for a "real world emergency" participants can certainly use their cell phones, for purposes of the Exercise, they should disable both cell phone and data (including not using it for map-based navigation) by using Airplane mode or similar. (Compass use is still allowed as this is independent of cell phone networks.)

If communications methods listed in the ICS-205 are declared "inoperative" then they cannot be utilized by participants..

Time may "jump forward" by considerable amounts between the three Sessions -- this will be announced in suitable ways if applicable.

EXERCISE LOGISTICS

Safety

Exercise participant safety takes priority over exercise events. The following general requirements apply to the exercise:

A Safety Controller is responsible for participant safety; any safety concerns must be immediately reported to the Safety Controller. The Safety Controller and Exercise Director will determine if a real-world emergency warrants a pause in exercise play and when exercise play can be resumed. For this Exercise, the Safety Controller will be the Exercise Director, Gordon Gibby, (352) 246 6183, and also monitoring the COMMAND NET frequency.

For an emergency that requires assistance, use the phrase “**real-world emergency.**” The following procedures should be used in case of a real emergency during the exercise:

Anyone who observes a participant who is seriously ill or injured will immediately notify emergency services (911) and the closest controller, and, within reason and training, render aid.

The controller aware of a real emergency will initiate the “**real-world emergency**” broadcast and provide the Safety Controller, Senior Controller, and Exercise Director with the location of the emergency and resources needed, if any. The Senior Controller will notify the [Control Cell or SimCell] as soon as possible if a real emergency occurs.

Fire Safety

Participants are asked to maintain due care related to emergency power sources, and also related to installing emergency antennas. No such antennas will be installed near any power lines.

Emergency Medical Services

Dial 911.

Electrical and Generating Device Hazards

Each participant is asked to follow prudent safety procedures related to batteries and generators and any other alternative power systems.

Weapons Policy

In general, non-law-enforcement personnel are strictly not allowed to carry concealed weapons inside ANY governmental building.

Site Access

Media/Observer Coordination

Organizations with media personnel and/or observers attending the event should coordinate with Gordon L. Gibby MD (352) 246 6183 for access to the exercise site. Media/Observers are encouraged to travel to the deployment sites, maintain identification, and observe. PIO should be contacted for specific questions and information. Exercise participants should be advised of media and/or observer presence.

Exercise Identification

Exercise staff may be identified by badges, hats, and/or vests to clearly display exercise roles; additionally, uniform clothing may be worn to show agency affiliation. Table 2 describes these identification items.

Group	Color
Controllers/Evaluators	Orange or Green Vest
Media Personnel	Simply wear ID
Players	Any suitable clothing

Table 2. Exercise Identification

POST-EXERCISE AND EVALUATION ACTIVITIES

Debriefings

Post-exercise debriefings aim to collect sufficient relevant data to support effective evaluation and improvement planning.

Hot Wash

At the conclusion of exercise play, controllers facilitate a Hot Wash to allow players to discuss strengths and areas for improvement, and evaluators to seek clarification regarding player actions and decision-making processes. All participants are encouraged to attend! **This will be a brief (30-45 minute) ZOOM conference via immediately following the exercise. The ZOOM link will be announced prior to the Exercise.**

Controller and Evaluator Debriefing

Controllers and evaluators are encouraged to attend a facilitated Debriefing via ZOOM at a date and time following the exercise to be announced.

Participant Feedback Forms

Participant Feedback Forms provide players with the opportunity to comment candidly on exercise activities and exercise design. A Google Form is available for participant feedback for the Exercise:

https://docs.google.com/forms/d/e/1FAIpQLScI3FE2IKs52uFN_C5Z2q-LpdQecUg_Te9LU82WQsqadW5AWg/viewform?vc=0&c=0&w=1&flr=0&usp=mail_form_link

Evaluation

Exercise Evaluation Guides

EEGs assist evaluators in collecting relevant exercise observations. EEGs document exercise objectives and aligned core capabilities, capability targets, and critical tasks. Each EEG provides evaluators with information on what they should expect to see demonstrated in their functional area. The EEGs, coupled with Participant Feedback Forms and Hot Wash notes, are used to evaluate the exercise and compile the After-Action Report (AAR).

After-Action Report

The AAR summarizes key information related to evaluation. The AAR primarily focuses on the analysis of core capabilities, including capability performance, strengths, and areas for improvement. AARs also include basic exercise information, including the exercise name, type of exercise, dates, location, participating organizations, mission area(s), specific threat or hazard, a brief scenario description, and the name of the exercise sponsor and POC.

Improvement Planning

Improvement planning is the process by which the observations recorded in the AAR are resolved through development of concrete corrective actions, which are prioritized and tracked as a part of a continuous corrective action program.

After-Action Meeting

The After-Action Meeting (AAM) is a meeting held among decision- and policy-makers from the exercising organizations, as well as the Lead Evaluator and members of the Exercise Planning Team, to debrief the exercise and to review and refine the draft AAR and Improvement Plan (IP). The AAM should be an interactive session, providing attendees the opportunity to discuss and validate the observations and corrective actions in the draft AAR/IP.

Improvement Plan

The IP identifies specific corrective actions, assigns them to responsible parties, and establishes target dates for their completion. It is created by elected and appointed officials from the organizations participating in the exercise, and discussed and validated during the AAM.

For this Exercise, a brief AAR/IP will be produced by the Communications and Technology Ministry of the Florida Baptist Disaster Relief, and made available via the world wide web.

PARTICIPANT INFORMATION AND GUIDANCE

Exercise Scenario

“On Friday March 19th, 2021, beginning at 7 AM, a series of devastating tornadoes were created in super-cells associated with a fast-moving cold front with a massive temperature gradient. Tornadoes caused massive infrastructure damage in a band across the state of Roflida, roughly stretching from SteinKey, Roflida across to St. Florentine, Roflida.

Multiple power generation systems from Peat Electric, Mercerville Regional Utilities, St. Jim County Utilities, St. Florentine City Utilities, and Roflida Power and Light are severely impacted with significant loss of generation and distribution of electrical power.

I-05 was damaged in multiple locations, creating massive traffic snarls and restricting the flow of supplies.

An estimated 270,000 persons were rendered temporarily homeless by structural damage and an estimated 1.9 million were without power by 4 PM Friday March 19th.

Roflida Div. of Emergency Management was fully activated as well as EOCs across all affected counties, working to provide adequate shelter, food and water distribution points of distribution to the citizenry. A large number of ICS responses were stood up, and request was made to the Governor of Roflida to institute Area Command for better coordination. Multiple county trunked radio systems (primarily towers) were damaged leading to delays in public service communications. Multiple EOCs called upon ARES® volunteers to staff shelters, fire stations, and other essential county service locations and assets as a result of the trunking systems failures.

At Noon, Roflida Baptist Disaster Relief trailers began deployment to Johnsonville, Roflida and arrived in the early afternoon (March 19) to begin providing disaster response services to the surrounding area.

At 1308 EDT on Friday March 19, 2021, a massive blast occurred at an NT&T central switching site in Johnsonville, on the northeast coast of Roflida, causing a cascade of

communications difficulties on top of the exiting public service radio system issues. A cascading series of public switched telephone network failures brought 911 systems and internet connectivity to a crawl for the northeast corner of Roflida, including damage to the SuperNet (emergency response cell-based network) and other cell phone systems associated with NT&T.

RDEM has requested activation of the Southeast Region SHARES network for additional communications support, and portions of the North Roflida ARES® volunteer communications systems, and detailed status reports from all affected EOCs, counties, and utilities by any means possible, to assist Area Command. “

Exercise Rules

- The following general rules govern exercise play:
- In general, cell phones and cell-phone based navigation are not allowed during the Exercise. Paper maps!
- Real-world emergency actions take priority over exercise actions.
- Exercise players will comply with real-world emergency procedures, unless otherwise directed by the control staff.
- All communications (including written, radio, telephone, and e-mail) during the exercise will begin and end with the statement TEST EXERCISE MESSAGE or similar.

Players Instructions

Players should follow certain guidelines before, during, and after the exercise to ensure a safe and effective exercise.

Before the Exercise

Review appropriate organizational plans, procedures, and exercise support documents.

Leadership for each participating group should provide The Controllers with information on proposed frequency assignments or corrections to suggested ICS-205 entries. (Please carefully study Appendix A, Exercise Schedule)

You may wish to follow a "checklist" of preparation to become more ready for this exercise. Some suggested items include:

Check Off	Preparation Item
<input type="checkbox"/>	If part of a group, have you received an

	assignment?
<input type="checkbox"/>	If part of a local group, have you received an ICS-205 giving any local frequencies that will be utilized? (The Exercise Plan focuses on state-level communications.)
<input type="checkbox"/>	Do you have suitable antennas plus the ability to replace them in timely fashion?
<input type="checkbox"/>	Do you have backup power available? Will it include LIGHTING?
<input type="checkbox"/>	Are you able to check your output power?
<input type="checkbox"/>	Are you able to create the necessary voice or digital modulations?
<input type="checkbox"/>	For data operations, can you successfully operate your computer simultaneously with your radio, or are there lockup or interference issues?
<input type="checkbox"/>	Are you familiar with the FORMS that are requested to be used in this Exercise?
<input type="checkbox"/>	Are you familiar with the software and systems that may be required during this Exercise?
<input type="checkbox"/>	If you are fulfilling a leadership or county-level role, can you monitor both HF and VHF/UHF comms simultaneously if necessary?
<input type="checkbox"/>	Have you acquired the Survivor Message forms and possibly already completed one or more, or had family/friends complete one? This is a useful familiarization process.
<input type="checkbox"/>	Do you have a copy of band plans (amateur) or net channels (SHARES) available to you?
<input type="checkbox"/>	Do you understand how to embed an ICS-213 into a Radiogram or how it might come to you?
<input type="checkbox"/>	Have you or your local leader registered your planned participation?
<input type="checkbox"/>	If you are the leader of a local group, did you receive INJECT materials by two days prior to the Exercise? If not, you may wish to contact the Exercise Director to check.
<input type="checkbox"/>	Last minute review of the Exercise Plan or Incident Action Plan?

During the Exercise

Respond to exercise events and information as if the emergency were real, unless otherwise directed by an exercise controller.

Controllers will give you only information they are specifically directed to disseminate. You are expected to obtain other necessary information through existing emergency information channels.

Media: If you are asked an exercise-related question, give a short, concise answer. If you are busy and cannot immediately respond, indicate that, but report back with an answer as soon as possible.

If you do not understand the scope of the exercise, or if you are uncertain about an organization's participation in an exercise, ask a controller.

Parts of the scenario may seem implausible. Recognize that the exercise has objectives to satisfy and may require incorporation of unrealistic aspects. Every effort has been made by the exercise's trusted agents to balance realism with safety and to create an effective learning and evaluation environment.

All exercise written communications will begin and end with the statement "**This is an exercise.**" (or similar); voice radio communications will include this at least as often as identifications. This precaution is taken so that anyone who overhears the conversation will not mistake exercise play for a real-world emergency.

Speak when you take an action. This procedure will ensure that evaluators are aware of critical actions as they occur.

Maintain an ICS-214 log of your activities. Many times, this log may include documentation of activities that were missed by a controller or evaluator.

Maintain an ICS-309 (or be able to have one or parts of one created by a computer) to document messages received or transmitted.

After the Exercise

Participate in the Hot Wash at your venue with controllers and evaluators.

Complete the Participant Feedback Form. This form allows you to comment candidly on emergency response activities and exercise effectiveness. Provide the completed form to a controller or evaluator. (This will be a Google Form)

Provide any notes or materials generated from the exercise to your controller or evaluator for review and inclusion in the AAR. Your ICS-214 and ICS-309 (or copies thereof) should go to your local leader or if you are not part of a group, directly to the Exercise Director by either email or postal mail, at

docvcuumtubes@gmail.com

15216 NW 41st Ave

Simulation Guidelines

Because the exercise is of limited duration and scope, certain details will be simulated. The physical description of what would fully occur at the incident sites and surrounding areas will be relayed to players by simulators or controllers.

Appendix A: Exercise Schedule

First Due Date	Personnel	Activity	Location
NOW	<ul style="list-style-type: none"> ■ Leadership of groups ■ Exercise leaders (e.g. NCS) ■ INDIVIDUALS who are NOT part of any organized group 	<p>Register yourself (so I may be able to send you INJECTS) on this Google Form: https://docs.google.com/forms/d/e/1FAIpQLSfeOZg8chrWL_Brg45aKAq3ImlVgIvgrgY98bwup2ycwMF3BQ/viewform?vc=0&c=0&w=1&flr=0&gxids=7628</p>

Exercise Plan (ExPlan)

First Due Date	Personnel	Activity	Location
Thursday Mar 4 7 PM Zoom	Any interested participant	An optional zoom conference to go over the entire Exercise briefing, and answer any questions.	https:// us02web.zoom.us/j/ 89530741792 Meeting ID: 895 3074 1792 Find your local number: https://us02web.zoom.u s/j/89530741792

Exercise Plan (ExPlan)

Second Due Date	Personnel	Activity	Location
On or before Noon, March 10, 2021	Leadership from participating organizations	<p>Each group planning organized radio communications will forward a <u>proposed ICS-205 for their group, and a completed ICS-205A giving contact information for significant personnel</u> to a central Exercise <u>COML (To Be Determined)</u> by Noon, March 10, 2021 c/o docvacuumtubes@gmail.com</p> <p>The information on these forms will be used to make exercise injects to involved groups and should include</p> <ul style="list-style-type: none"> - frequencies, modes - alternates - leadership contacts, including call signs, names, phone numbers, emails (and winlink emails if possible) <p>IF YOUR GROUP WILL UTILIZE LOCAL NETS TO HANDLE DEPLOYED PERSONNEL BE CERTAIN TO INDICATE THAT ON YOUR SUBMITTED ICS-205</p> <p>SEE ATTACHED APPENDIX D for representative Forms</p>	Forward planning information to docvacuumtubes@gmail.com

Exercise Plan (ExPlan)

Final Exercise Materials Date	Personnel	Activity	Location
Saturday March 13 2021	Exercise Director	<p>Final Exercise Documents including group ICS-205 / ICS-205A document(s) will be sent by email to all known participant groups. (You can also provide me with contact information through the Google Form: https://docs.google.com/forms/d/e/1FAIpQLSfeOZg8ehrWL_Brg45aKAq3ImlVgIvgrgY98bwup2ycwMF3BQ/viewform?vc=0&c=0&w=1&flr=0&gxids=7628)</p> <p>INJECTS: Groups will generally receive sealed envelope INJECTS sufficient for all the teams they have indicated.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Individual Resource Units will generally receive easily decrypted Injects, along with a PRACTICE sample. This allows them to download their secret injects NOW, but just like a birthday present, allows them to avoid looking at the contents until the actual Session begin time. The decryption system is web based, so it works with all types of computers.</p> </div>	By email to all known participants
Saturday March 13 2021	All group leaders	<p>Discuss with your agency / leadership your choice of how to respond on the Situation Reports. Fill out your initial reports for Objectives 4.2 and 5.1/5.2 as appropriate.</p> <p>You can choose either the</p> <ul style="list-style-type: none"> • Agency Situation Report, page 32, or the • Winlink Incident Status Report, page 34.) 	At your agency or group.

Exercise Plan (ExPlan)

Final Exercise Materials Date	Personnel	Activity	Location
Saturday March 13, 2021	All group leaders	Go over the Survivor Messaging Form (page 36) and be sure you understand how to have copies <u>filled in at your location</u> to provide simulated outbound messages for transmission. You may wish to go ahead and have members fill some of these out. Be certain that addressee email and phone number are provided.	At your group
Thursday Mar 18 7 PM Zoom	Any interested participant	An optional zoom conference to go over the entire Exercise briefing, and answer any questions. (Largely a repeat of the March 4th Conference, but it is possible new information will be available.)	https://us02web.zoom.us/j/89530741792 Meeting ID: 895 3074 1792 Find your local number: https://us02web.zoom.us/j/89530741792

Exercise Date / Time	Personnel	Activity	Location
Friday March 19 2021 Deytime BEFORE the Exercise	All participants	<u>ANTENNA</u> Each group is encouraged to begin the exercise with any suitable antennas normally present at their location, but if in a deployed position, to have already erected suitable antennas. ALL groups are warned to be ready to erect replacement antennas as Injects are likely to indicate that existing antennas are unusable.	Exercise participant location.

Exercise Plan (ExPlan)

Exercise Date / Time	Personnel	Activity	Location
Friday March 19 2021 Daytime BEFORE the beginning of the exercise 7 PM	All participants	<p>EMERGENCY POWER Each group is encouraged to begin the exercise either on emergency power (including lighting) or to be ready to move expeditiously to emergency power if Injects down their existing power.</p> <p>Note: participants working from their home locations should be ON or prepared to go to full EMERGENCY POWER for all radio communications including lighting.</p>	Exercise participant location.
<p>EXERCISE BEGINNING EXERCISE SESSION ONE: 7PM – 7:45 PM</p> <p>Note: Typically groups are left relatively unscathed in the 1st Session and merely have to deal with their own equipment and training issues....be ready for things to fail that you didn't expect!</p>			
<p>INJECTS <i>If you received an INJECT ENVELOPE for Session One, open it at this time.</i> <i>If you received emailed (encrypted) INJECTS, decrypt your Session ONE Injects now: web page : http://telmo.pt/xecryption/ The encryption key is SessionOne</i></p>			

Exercise Date / Time	Personnel	Activity	Location
		<p>Basic Theme of Reaching Outside A Disaster Area: Find voice or data stations that are UNAFFECTED and use them to manually or automatically relay your messages to the intended recipient, if direct connections aren't available.</p> <p>With widespread damage to the Internet from the tornadoes and the terrorist blast, situational reports and survivor outbound messaging may need to go to DISTANT voice/data volunteers, or DISTANT Winlink RMS stations for delivery.</p> <p><i>Example:</i> KA4AAA took your outbound Situation Report from your damaged county, and put it on gmail to the Roflida State EOC, when the state EOC was not available on voice channels.</p> <p><i>Example:</i> Winlink-equipped volunteer comms station in a damaged county send outbound Survivor Messages via an Alabama Winlink RMS, causing the message to be quickly delivered to the email address of the distant loved one.</p> <p><u>RESPONSES</u></p> <p>When State level responses need to return to affected EOCs, if voice comms aren't available, the process will reverse -- Distant Volunteers will help to pick up and relay BACK the responses by any means necessary.</p> <p><i>Example:</i> State EOC emailed back a response to KA4AAA, addressed to your county Emergency Manager. KA4AAA then reaches back via a voice net to relay the response back to the station in the damaged county.</p> <p>DO WHATEVER WORKS!!</p>	

Exercise Plan (ExPlan)

Exercise Date / Time	Personnel	Activity	Location
Friday March 19 2021 7 PM	Leadership of each group.	<p><u>Initiate Net Control</u> Leadership constitute Command Nets and Resource Net(s) as assigned and commence activities.</p> <p>NOTE For the entire exercise there will be Resource and Command Nets on HF frequencies. However, if a local group has deployed assets within their county, VHF control would be more appropriate locally, and information should have been provided within their ICS-205 planning materials submitted earlier; such local nets are expected and encouraged, but be certain to have representation in the Exercise HF net.</p>	Exercise participant location
Friday March 19 2021 7 PM	Non-leadership participants without any other assignment	<p><u>Check into Nets</u> Check into assigned HF Resource Net (if extant) and receive information and assignment. If unable to locate Resource Net, check into applicable Command Net.</p>	Exercise participant location

Exercise Date / Time	Personnel	Activity	Location
		<p>OUT OF STATE VOLUNTEERS</p> <ol style="list-style-type: none"> 1. Please be familiar with the Exercise to avoid having net controls needing to spend time explaining it to you. 2. As of March 14, we now have a PSK NET constituted on the PSK Frequency (see the ICS-205) that will commence at 7 PM EDT. You can check into the RESOURCE NET (see ICS-205) or the PSK NET, whichever you think you'll be better received by (which depends on your transmitter, antenna, experience, and distance) -- and offer your help, and see where you get assigned. If your signal is good, you'll likely be taking outgoing traffic from Florida stations within the disaster area -- and possibly handling replies from Roflida State also. <p style="text-align: center;">IMPORTANT</p> <p>REMEMBER to send a normal email to a WINLINK address (e.g. RDEM@WINLINK.ORG), preface your SUBJECT LINE of your email with</p> <p>//WL2K</p> <p>to make sure your message isn't going right to the spam folder!</p> <p>Example Subject Line:</p> <p>//WL2K EXERCISE MESSAGE TO RDEM</p> <ol style="list-style-type: none"> 3. Carry out other duties as sent to your in INJECTS (if you got them in my mass email of last weekend). 4. CERTAINLY give a try at the Survivor Message Form, sending a nice friendly greeting by WINLINK or other methods (including your local Traffic Net) as a way to familiarize yourself or others in your family with this form and how it can serve those in a disaster, the traditional service of Amateur Radio direct to the Public. <p style="text-align: center;">BACKGROUND INFORMATION</p> <p>NOTE: Stations outside the state of Florida, or who are FAR REMOVED from the disaster (at discretion of the net control) can serve a very valuable role by ACCEPTING voice or peer-to-peer traffic from "disaster location stations" and then forwarding that traffic to the intended recipient by simple email or winlink email -- for example, to the RDEM@WINLINK.ORG Roflida Div of Emergency Management, or to a loved one addressed in a Survivor Message. While we are not accepting INBOOUND replies from addressed out-of-state survivor message recipients, we DO expect responses from the Roflida Div. of Emergency Management and those will go to the RELAYING STATION and will need to be then communicated back via the Nets (either on voice or peer-to-peer data techniques) to the beleaguered disaster station.</p>	
<p>Appendix A: Exercise Schedule</p>		<p>19</p>	<p>Florida Baptist Disaster Relief</p>

Exercise Date / Time	Personnel	Activity	Location
	<p>Participants with data communications capability</p>	<p><u>Data Communications Status Report</u> Each participant or group capable of data communications (e.g. WINLINK, JS8, cellular data, satellite) will test all possible data communications systems beginning at 7 PM and send a formal STATUS REPORT (per Objective 5.1/5.2) denoting their (fictitious) status, with the proviso “THIS IS AN EXERCISE” prominently displayed. See Objectives 5.1/5.2 for details of the status report and observe examples in Appendix D.</p> <p>Note: participants may request a brief exit from Resource or Command Net as appropriate if another operator is not available to conduct this activity but attempt to conclude within 15 minutes.</p> <p>Note: Local groups standing up local nets will typically move traffic in steps from deployed volunteers to county-level, (for example, the SHARES SPOTREP-2 Ver 9.5 form, page 30 might be used)and then onward, or may move traffic direct from deployed assets as appropriate.</p>	

Exercise Plan (ExPlan)

Exercise Date / Time	Personnel	Activity	Location
	Participants without data communications capability	<p><u>Voice Status Report</u> Send via voice communications a formal STATUS REPORT denoting their (fictitious) status, with the provision “EXERCISE MESSAGE” prominently displayed. See Objective 4.2 for specific information on the form to be used and Appendix D for examples. Participants may use any voice protocol suitable for their communications system (e.g., Radiogram, ICS-213, etc).</p> <p>Note: Local groups standing up local nets may choose to move traffic in steps from deployed volunteers to county-level, (for example, using the SHARES SPOTREP-2 Ver 9.5 page 30) and then onward, or may move traffic direct from deployed assets as appropriate.</p>	

Exercise Date / Time	Personnel	Activity	Location
	<p>Participants from service organizations that are public facing (e.g., shelters, feeding stations, etc) who have no specific prohibition from their agency structure to process messages from the public should practice this technique during this exercise. (But check with their Agency before proceeding in an incident!).</p>	<p>Collect Survivor Messaging Each group capable of data communications and assigned to a location facing the public, will begin to capture in written form, multiple simulated survivor messages from friends, family, or participants themselves, to be delivered to known relatives.²⁵</p> <p><i>(Groups without data communications are also optionally invited to participate although this will require voice communications of these messages.)</i></p> <p>NOTE: These should be transmitted using AMATEUR RADIO transmission channels, rather than SHARES except in extreme extenuating circumstances.</p>	
		<p>Out of state participants can also practice initiating Survivor Messages by using the suggested form to send a friendly greeting to friends or family, using any technique (such as listing the message on the Command Net or any other NTS net, or using Amateur WINLINK to send).</p> <p>Out of state participants should first check into the RESOURCE NET and list their traffic or availability for relay, to have their signal evaluated and/or questions answered; they can then be directed to the Command Net as appropriate.</p>	
<p>EXERCISE SESSION TWO: 7:45-8:30 PM EDT Things May Get More Interesting!</p>			

25 NOTE: *This means you will have volunteers or nearby persons literally fill out simulated survivor messaging forms, to give you practical experience at this activity. See the suggested Form in Appendix D; you may use this or any suitable form. Messages must either be marked TEST EXERCISE or otherwise be of a personal and non-concerning nature.*

Exercise Plan (ExPlan)

Exercise Date / Time	Personnel	Activity	Location
Friday March 19 2021 7:45 PM	All leadership or participants who have received sealed envelopes, or emailed injects.	<p>Open Session Two sealed envelope to learn INJECT(s) for Session Two and take appropriate action.</p> <p><i>If you received emailed (encrypted) INJECTS, decrypt your Session Two Injects now: web page : http://telmo.pt/xecryption/ The encryption key is SessionTwo</i></p>	Dispersed
	Participants with Survivor Messages	<p>Groups or participants who have accumulated Survivor Messaging Forms (page 36) should begin to forward those messages for delivery by any useful combination of data and (optionally) voice techniques. Record transmissions on ICS-309 form.</p> <p><i>NOTE: These should be transmitted using AMATEUR RADIO transmission channels, rather than SHARES except in extreme extenuating circumstances.</i></p>	Dispersed
	All participants	<p>Remain alert for possible additional INJECTS delivered by voice or data; remain available as much as possible on Command or Resource Net, and check any incoming data communications systems listed for your group on the Exercise ICS-205A You will want to check any Winlink address at least every 30 minutes.</p>	
<p>EXERCISE SESSION THREE: 8:30 -8:59 PM EDT</p>			

Exercise Plan (ExPlan)

Exercise Date / Time	Personnel	Activity	Location
Friday March 19 2021 8:30 PM	All leadership or participants who have received sealed envelopes or emailed injects.	<p>Open Session Three sealed envelope to learn INJECT(s) for Session Three and take appropriate action.</p> <p><i>If you received emailed (encrypted) INJECTS, decrypt your Session Three Injects now: web page : http://telmo.pt/xecryption/ The encryption key is SessionThree</i></p>	Dispersed
Friday March 19 2021 8:30 PM	All participants	Remain alert for possible additional INJECTS delivered by voice or data; remain available as much as possible on Command or Resource Net, and check any incoming data communications systems listed for your group on the Exercise ICS-205A	Dispersed

Hotwash	Personnel	Activity	Location
Friday March 19, 2021, 9PM-9:30 PM	All Participants	Participate if possible in brief post-Exercise Hotwash.	https://us02web.zoom.us/j/89530741792

APPENDIX E: SUGGESTED NET CONTROL SYSTEM OBJECTIVES

<p>Why two different nets?</p>	<p>Goal here is to experiment with the ARRL EC-001 suggested technique of having a "RESOURCE NET" that functions to a) brief unprepared volunteers on the details of the incident, and b) provide new volunteers with a "mission" once matched up to an appropriate mission.</p> <p>As you can see, the Exercise Plan is quite a long document! Although our Exercise might be numerically small, it gives us a chance to test the concept of having lengthy explanations (such as an incident status, or this Exercise Plan) be communicated AWAY from the Command Net (which needs to stay generally OPEN for emergent traffic, etc.</p> <p>This is our first time trying the Resource Net. We will evaluate afterward its usefulness.</p>
<p>Resource Net Control</p>	<ul style="list-style-type: none"> • KEEP TALKING. If you don't keep up a "yammer" on the frequency, you will LOSE IT or miss persons who might have found you and participated. • OFTEN <i>invite new participants.</i> You are our Advertisement! <p style="text-align: center;">THREE POSSIBLE IMPORTANT VOLUNTEER POSITIONS</p> <p>1. Originating Stations</p> <ul style="list-style-type: none"> A. simulated Agency Situation Reports B. simulated Survivor Messages <p>(If your volunteer has WINLINK HF capabilities they can do either function without needing to put the message onto the voice net.)</p> <p>2. Out-Of-State Ordinary Email Relay Stations. Out of state stations who can simply receive a voice transmission of an Agency Situation Report or a Survivor Message, and put it onto email (or telephone, if suitable).</p> <p>NOTE: ordinary email directed to</p>

	<p>RDEM@WINLINK.ORG must have //WL2K as the first characters in the SUBJECT: line of the email message to escape the spam whitelist filter! <i>You probably want to be very familiar with this yourself!</i></p> <p>3. In-State WINLINK Relays: In-State stations with HF WINLINK capabilities, who can send/receive traffic from voice-only stations to Winlink RDEM@WINLINK.ORG or similarly send outbound SURVIVOR MESSAGES. (We are NOT accepting inbound replies to survivor messages.)</p> <ul style="list-style-type: none"> • Provide a thorough briefing to any new participants of the overall exercise goals and layers. • Determine a good "fit" for any new participants and missions, <u>keeping in mind any INJECTS that are sent to you by the Exercise Director.</u> [Exercise Director will start you off with a series of unfilled missions.] For example: <ul style="list-style-type: none"> ◦ Are they roughly near or within the "disaster area" and could create survivor messages, or Situation Reports? You could tell them their Internet and cell phone no longer work, and they are to create a Situation Report of a tornado or other dire problem within their simulated post addressed to RDEM@WINLINK.ORG , and to manufacture some outgoing Survivor Messages to distant friends/family.. ◦ Or are they far from the "disaster area" and could be a receiver station of outgoing Survivor Messages, or help relay Status Reports? You could instruct them that they can go help receive Survivor Messages or Status Reports and use their still-working Internet to forward them to the proper recipient. • Once you have determined a good fit for the new volunteer, as Resource Net Control, if the Exercise Director has gotten behind in providing you with further unfilled missions, you have delegated authority within this Exercise, to commission them (as if you were handing out Mission Orders) to go perform that mission, possibly joining the Command Net as a result.
--	--

	<ul style="list-style-type: none"> Record assignments that you make, such as on your ICS-214.
<p>Command Net Control</p>	<p>An old teaching about the duty of Net Controls is to clear all of the traffic, as soon as possible, to an appropriate recipient, respecting the Precedence of the listed traffic in making connections.</p> <p>Keep up Talking so that you keep your net control Frequency. Explain this is an Exercise. - Over and Over and Over! This is the Command Net for the Whirlwind Boom 2021 Exercise.</p> <p>Be on the lookout for Emergency or Priority traffic, or any urgent informal messages ("tactical traffic"). Make the proper connection for all of these.</p> <p style="text-align: center;">THREE POSSIBLE IMPORTANT VOLUNTEER POSITIONS</p> <p>1. Originating Stations</p> <ul style="list-style-type: none"> A. simulated Agency Situation Reports B. simulated Survivor Messages <p>(If your volunteer has WINLINK HF capabilities they can do either function without needing to put the message onto the voice net.)</p> <p>2. Out-Of-State Ordinary Email Relay Stations. Out of state stations who can simply receive a voice transmission of an Agency Situation Report or a Survivor Message, and put it onto email (or telephone, if suitable).</p> <p>NOTE: ordinary email directed to RDEM@WINLINK.ORG must have //WL2K as the first characters in the SUBJECT: line of the email message to escape the spam whitelist filter! <i>You probably want to be very familiar with this yourself!</i></p> <p>3. In-State WINLINK Relays: In-State stations with HF WINLINK capabilities, who can send/receive traffic from voice-only stations to Winlink RDEM@WINLINK.ORG or similarly send outbound SURVIVOR MESSAGES. (We are NOT accepting inbound replies to survivor messages.)</p>

	<p>Match up persons listing traffic (e.g. Status Reports from a County or EOC, or Survivor outbound messages ("health and welfare") with potential person(s) who can move that traffic (typically by sending it on to the addressee by email, or by telephone -- once the message have moved "out of disaster theater" we assume the full resources of the Internet are available can be used)</p> <p>Any (radio) means possible Traffic can be moved by ANY RADIO TECHNIQUE THAT BOTH PARTICIPANTS KNOW HOW TO DO. Our Exercise is designed to give participants the chance to try as many methods as possible -- move traffic by voice; move traffic by peer-to-peer PSK31; move traffic by peer to peer RTTY; move traffic by peer to peer WINLINK; move traffic by peer to peer JS8; even direct persons to try to hit an RMS out of the disaster area if you have no one who could take that traffic.</p> <p>If possible, familiarize yourself with as many of these various ways to move traffic, so that you can give assistance if the participants are confused. For example, many may not realize that with PSK or RTTY or JS8, you can specify the dial frequency (phantom carrier frequency) and the mode (upper sideband) -- but THEY can choose the audio offset frequency, and generally find each other even if they choose different audio offsets, since these modes typically present a browser that shows portions of ALL communications within the passband.</p> <p>Your WINLINK peer-to-peer participants may never have done peer-to-peer winlink before and may not realize:</p> <ol style="list-style-type: none"> a message has to be created as peer-to-peer message, not a normal winlink one; it must be addressed to the callsign of the person they are going to transfer it to – or it won't transfer! This callsign will likely be different from the actual addressee the message will finally reach... the Session type has to be peer-to-peer the two stations have to choose the same DIAL
--	---

	<p>frequency (or the same CENTER frequency, which will always be 1500 Hz Higher)</p> <p>These digital techniques can offer error-correction, high speeds, and ease of transfer – but they can also require higher levels of understanding by the participants!</p> <p>Track Capabilities Learn which capabilities each of your resources knows how to do so that you can match them up optimally.</p> <p>Side Frequencies IF you have the ability to watch surrounding frequencies, such as a panadapter on your radio, attempt to direct traffic" movement on "side frequencies" off the main net channel to keep it free. Do the best you can if you do not have a panadapter. An A/B VFO setup can allow you to periodically monitor a particular side frequency.</p> <p>Keep Net Frequency Available AVOID having your net frequency "overwhelmed" by a person moving a lengthy piece of traffic right on net frequency. If you must move traffic on the net frequency (which is fine), ask the participants to stop at intervals so you can inquire if there is Emergency or Priority traffic to be listed. E.G., have them stop after the preamble, again after the Address, and after each couple of minutes of text.</p> <p>Tough Traffic! Recognize that modern disaster management involves DATABASES and STRUCTURED INFORMATION. This is why the Exercise has participants moving structured formats for status reports. These tend to be lengthy! Some of your participants will be unfamiliar with the ICS-213. Some will not know that it could be encapsulated within a RADIOGRAM to give it better tracking and reliability. Assist them to move the traffic as best as they can and AVOID REMONSTRATING volunteers for any lack of knowledge or procedure. This is an Exercise to LEARN.</p> <p>Injects Keep track of any INJECTS that your receive (typically by a back channel, such as a telephone call or email) from the</p>
--	---

	<p>Exercise Director.</p> <p>Coverage If you have to leave for a brief period (e.g., to visit the restroom or to go check winlink email or study an INJECT) appoint an interim NET CONTROL to keep the net moving while you are away.</p> <p>Alternate/Assistant Try to have some assistant, best in a different geographical area, to help with communications to persons whose signal is difficult for you.</p> <p>Track Traffic Use some means to keep a track of what traffic was listed, and what traffic was moved on your net. If possible, keep track of the technique by which it was moved (voice, psk, etc). You can use a handwritten ICS-309 for this purpose if it works adequately for you. If you prefer a different form, you might consider pasting the result into an ICS-214 form to turn in later.</p> <p>BE NICE! This can be STRESSFUL. Volunteers are embarrassed. For many, this is the first time they have ever participated in something moving this much traffic, and this level of COMPLICATED traffic. They are GOING to make mistakes. Be gracious! And if you lose your cool (which I've been known to do) just apologize quickly and move on. One of the goals of this Exercise is to get people who WILL be working with each other during real Incidents, a chance to rub shoulders in an Exercise, so we learn each others' strengths, weaknesses, capabilities, and personalities. It will help you later!</p>

VERSION	Date of Release	Significant Changes
1.4	March 5, 2021	Initial explanation -- We have SO MANY individual resource units that U.S. Postal Mail injects to the individual resource units all other USA would be a daunting task -- so I'll be sending encrypted injects along with the decryption information (also reprinted above) -- this uses a web based very simple decryption system. Allows them to download the entire injects -- but makes "peeking" more difficult!
1.3	March 5 2021	Correction to explain that SHARES should not except in very extenuating circumstances, be used for citizen-input H&W traffic.
1.2	March 2 2021	Corrections to EDT
1.0	Feb 21 2021	First "final" copy in HSEEP copy and carefully reviewed.
