4. Map/Sketch (include sketch, showing the total area of operations, the incident site/area, impacted and threatened areas, overflight results, trajectories, impacted shorelines, or other graphics depicting situational status and resource assignment):

Blue counties known to have SHARES licensure;  
RED stars = known tornado touchdown

**ROFLIDA STATE MAP**

5. Situation Summary and Health and Safety Briefing (for briefings or transfer of command):

Recognize potential incident Health and Safety Hazards and develop necessary measures (remove hazard, provide personal protective equipment, warn people of the hazard) to protect responders from those hazards.

On Friday March 19\textsuperscript{th}, 2021, beginning at 7 AM, a series of devastating tornadoes were created in super-cells associated with a fast-moving cold front with a massive temperature gradient. Tornadoes caused massive infrastructure damage in a band across the state of Roflida, roughly stretching from SteinKey, Roflida across to St. Florentine, Roflida.

Multiple power generation systems from Peat Electric, Mercerville Regional Utilities, St. Jim County Utilities, St. Florentine City Utilities, and Roflida Power and Light are severely impacted with significant loss of generation and distribution of electrical power.

I-05 was damaged in multiple locations, creating massive traffic snarls and restricting the flow of supplies.

An estimated 270,000 persons were rendered temporarily homeless by structural damage and an estimated 1.9 million were without power by 4 PM Friday March 19\textsuperscript{th}.

Roflida Div. of Emergency Management was fully activated as well as EOCs across all affected counties, working to provide adequate shelter, food and water points of distribution to the citizenry. A large number of ICS responses were stood up, and request was made to the Governor of Roflida to institute Area Command for better coordination. Multiple county trunked radio systems (primarily towers) were damaged leading to delays in public service communications. Multiple EOCs called upon ARES® volunteers to staff shelters, fire stations, and other essential county service locations and assets as a result of the trunking systems failures.

At Noon, Roflida Baptist Disaster Relief trailers began deployment to Johnsville, Roflida and arrived in the early afternoon (March 19) to begin providing disaster response services to the surrounding area.
At 1308 EDT on Friday March 19, 2021, a massive blast occurred at an NT&T central switching site in Johnsonville, on the northeast coast of Roflida, causing a cascade of communications difficulties on top of the existing public service radio system issues. A cascading series of public switched telephone network failures brought 911 systems and internet connectivity to a crawl for the northeast corner of Roflida, including damage to the SuperNet (emergency response cell-based network) and other cell phone systems associated with NT&T.

RDEM has requested activation of the Southeast Region SHARES network for additional communications support, and portions of the North Roflida ARES® volunteer communications systems, and detailed status reports from all affected EOCs, counties, and utilities by any means possible, to assist Area Command.

HAZARDS INCLUDE
- Unsafe Structures
- Fires
- Downed power lines
- Leaking gas lines
- Unsafe water
- Foreign Object (debris)
**INCIDENT BRIEFING (ICS 201)**

<table>

</tbody>
</table>

7. Current and Planned Objectives

- **Life Preservation** – Transmit any Emergent Traffic immediately
- **Incident Stabilization** – Status reports from shelters to EOCs, status updates from EOCs to state RDEM to forward to Area Command Planning Section
- **Property Protection** – Prevent further fires / damage

8. Current and Planned Actions, Strategies, and Tactics:

<table>

<td>Final Exercise Documents released back to known participants Groups will receive Sealed Envelope Injects; Individual Resource Units will generally receive easily decrypted Injects, along with a PRACTICE sample. This allows them to download their secret injects NOW, but just like a birthday present, allows them to avoid looking at the contents until the actual Session begin time. The decryption system is web based, so it works with all types of computers.</td>
</tr>
<tr>
<td>Mar 13</td>
<td>Discuss with Agency filling Situation Reports. Go over and Begin filling out simulated Survivor Message forms to loved ones out of disaster (can be simple well wishes)</td>
</tr>
<tr>
<td>Mar 19 Daytime</td>
<td>Install antennas prior to Exercise if required, Either begin exercise on emergency power or be ready to move to it.</td>
</tr>
</tbody>
</table>
1. Incident Name: 2021 WhirlwindBoom Exercise
2. Incident Number: 2021-001
3. Date/Time Initiated: Date: Mar 19 Time: 7PM EDT

**Basic Theme of Reaching Outside A Disaster Area:**
Find voice or data stations that are UNAFFECTED and use them to manually or automatically relay your messages to the intended recipient, if direct connections aren't possible.

With widespread damage to the Internet from the tornadoes and the terrorist blast, situational reports and survivor outbound messaging will need to go to DISTANT voice/data volunteers, or DISTANT Winlink RMS stations for delivery.

**Example:** KA4AAA took your outbound Situation Report from your damaged county, and put it on gmail to the Roflida State EOC, when the State EOC was unavailable for direct connections.

**Example:** Winlink-equipped volunteer comms station in a damaged county send outbound Survivor Messages via an Alabama Winlink RMS, causing the message to be quickly delivered to the email address of the distant loved one.

**RESPONSES**
When State level responses need to return to affected EOCs, the process will reverse -- Distant Volunteers will help to pick up and relay BACK the responses by any means necessary.

**Example:** State EOC emailed back a response to KA4AAA, addressed to your county Emergency Manager. KA4AAA then reaches back via a voice net to relay the response back to the station in the damaged county.

DO WHATEVER WORKS TO GET THE MESSAGE THROUGH! If direct connections aren't available for whatever reason, use relays!

</thead>
</table>

**EXERCISE BEGINS**

**SESSION ONE:** 7 PM – 7:45 PM  
*If you received an INJECT ENVELOPE for Session One, open it at this time.*  
*If you received emailed (encrypted) INJECTS, decrypt your Session ONE Injects now:*  
web page: [http://telmo.pt/xecryption/](http://telmo.pt/xecryption/)  
The encryption key is **SessionOne**

Known groups open local VHF nets, send representation to HF Resource and/or HF Command Nets, begin filing Status Reports via voice and data. New volunteers directed to HF Resource Net for briefing. (EOC’s file their reports to address RDEM@WINLINK.ORG) For further details, see Exercise Plan.

Take appropriate action for any events (as guided by your actual or simulated Emergency Manager, Shelter Manager, or other authority).

---

**NOTE:** Stations outside the state of Florida, or who are FAR REMOVED from the disaster (at discretion of the net control) can serve a very valuable role by ACCEPTING voice or peer-to-peer traffic from "disaster location stations" and then forwarding that traffic to the intended recipient by simple email or winlink email -- for example, to the RDEM@WINLINK.ORG Roflida Div of Emergency Management, or to a loved one addressed in a Survivor Message. While we are not accepting INBOOUND replies from addressed out-of-state survivor message recipients, we DO expect responses from the Roflida Div. of Emergency Management and those will go to the RELAYING STATION and will need to be then communicated back via the Nets (either on voice or peer-to-peer data techniques) to the beleagured disaster station needing help. If you are OUT OF STATE, your participation in SHARES or Amateur Nets is badly needed!

Out of state participants can also practice initiating Survivor Messages by using the suggested form to send a friendly greeting to friends or family, using any technique (such as listing the message on the Command Net or any other NTS net, or using Amateur WINLINK to send).

Out of state participants can also practice initiating Survivor Messages by using the suggested form to send a friendly greeting to friends or family, using any technique (such as listing the message on the Command Net or any other NTS net, or using Amateur WINLINK to send).

---

**SESSION TWO:** 7:45- 8:30 PM  
Open INJECT ENVELOPE for Session Two  
*If you received emailed (encrypted) INJECTS, decrypt your Session Two Injects now:*  
web page: [http://telmo.pt/xecryption/](http://telmo.pt/xecryption/)  
The encryption key is **SessionTwo**

Being forwarding Survivor Messages by data and optionally voice techniques.  
*NOTE: These should be transmitted using AMATEUR RADIO transmission channels, rather than SHARES except in extreme extenuating circumstances.*

Take appropriate action for any events (as guided by your actual or simulated Emergency Manager, Shelter Manager, or other authority).
